CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 17, 1860.

NUMBER 2.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 139 Washington street (opposite), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$4 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

Report on Keeping Apples in Oregon.

The following report on the keeping qualities of Apples in Oregon, we copy from the Oregon Farmer, as it will be of some interest, if not of value, in this State. The report is dated:

Benton Court, Jan. 15, 1860.

Having been appointed one of a committee to report on Keeping Apples, I submit the following:

Baldwin.—They are now in good keeping order, and are plump and sound. The tree thrives well with me, and the apples do not "spot" in my orchard. They will keep a long time.

Winesap.—This apple is in good keeping order, and its time is much later than this. The tree does well with us. It is a strong grower; forms a neat head; very productive, and is a number one winter apple.

White Water Pears.—Is yet in good order and is classed among the best keepers. The tree is a strong grower, hardy and very productive.

Winter Queen.—Keeps well yet. Is a good winter apple, and will keep for some time to come. The tree grows well; is very productive; forms a very compact head, and requires considerable thinning.

Maiden's Blush.—A fine large apple, very handsome. Flesh fine-grained, tender, with a sub-acid flavor; a number one apple. Tree rather spreading; is very productive and forms a very neat head.

Ladies' Sweeting.—This is a fine large sweet apple, the best sweet winter apple we have. Tree rather a slow grower, but very hardy and productive. Should be more generally cultivated.

Canada Reinette.—A very large apple. Is tolerably handsome, fine flavored, and will keep some time yet. Tree hardy; forms a neat upright head, and is very productive.

Tulpehocken.—Is a fine large saleable apple. It is now in good keeping, and will remain so two or three months yet. I ate one last July that was grown in 1858, which looked sound and nice at the time. The tree makes as fine a top as any I ever saw.

Blue Pearmain.—Is in good keeping order, sound and plump, and will keep a month or so yet. The tree thrives well on our soil; forms a neat upright head, but is a shy bearer.

Winter Sweet Pears.—In good keeping, sound in every respect, and promises to keep for some time yet. The tree thrives well with me, but on one or two farms I have seen it winter-killed.

Teekebury Winter Blush.—Keeps well yet, and is perfectly sound and plump. The apple is rather small compared with descriptions given in fruit books, but otherwise comes up to the mark very well. The tree does well in our soil; is a very strong grower, and forms a neat and compact head. Is very productive.

Ross Nonpareil.—A very fair apple, of medium size; fine flavor; but will be out of season soon. Tree of strong upright growth, forming a neat head, with little trouble. Is hardy; never known to winter-kill.

Gentle.—In fine keeping order. The apple is rather handsome, of fine flavor, and I think a first-rate market fruit. Tree very hardy, productive, and an upright grower; wants considerable thinning out and cutting back.

Roxbury Russet.—Is a very fine apple; medium size, tolerable handsome, and of fine flavor; very productive. On my place, where there is almost a constant west wind, the tree inclines to the east; but by staking and cutting back, can be made to form a fine head. The apple gets mellow a little too soon.

English Russet.—In good keeping order. Is a handsome apple, and of fine flavor. The tree has rather a spreading head and requires cutting back to enable it to bear up against the wind. Some say this variety is identical with the Roxbury Russet, but I think not.

Snow.—This is the apple of all apples for me. It is handsome, of a golden yellow color, and one of the finest flavored apples I have ever tasted; rich, aromatic, and a spicy smell. The tree forms a handsome head; is of a very thrifty growth, and I think no orchard should be without twenty-five or more trees.

Ripens Spitzenberg.—Is remarkably handsome; first-rate flavor; fair size, and a good keeper. It is a number one apple in every respect, and should be more generally cultivated.

Vanderburg.—Is a handsome apple; fine flavor, and good size; a good keeper, and merits general cultivation. Tree tolerably hardy; rather slender growth, and must be headed back to make a fine tree.

Pick's Pleasant.—A fine apple; rather larger than usually described; is tolerable handsome. It is now as hard as ever it was, and bids fair to keep four or five months yet. The tree is a strong upright grower, and is very hardy.

Yellow Bellflower.—Is large, fine-shaped, golden yellow color; flesh yellow, juicy, with a fine flavor. A good [home] market fruit. The tree is hardy, but a hard customer to manage in making a fine tree.

I wish to say a word or two about grain, weather, etc. Grain in the ground looks well. Wheat that was sown in September last has completely covered the ground, and I have some that was

sown the last of October, that looks first-rate for late sowing. Oats, sown in the fall, or what has come volunteer, on low wet ground, is not winter-killed, while that on high rolling ground is all killed out. We have very fine weather here now. The sun is shining to-day, and it feels quite warm and nice. Grain and grass are starting finely. I intend starting the plow this week, if the weather remains the same as to-day.

J. P. F.

Restore your Land to Fertility.

We have received from a subscriber of Sierra County the following letter containing an inquiry which we have reason to believe could be made with truth in many portions of our State, as there are many farms that are not yielding at the present time a tithe of their former crops:

"I have a small place near the head waters of the North Yuba. There are about twelve acres enclosed, a great part of which has been under cultivation since 1853, mostly in potatoes each year. The soil on the flatter portions is a black loam, but the strength of the soil is gone, though I raised about half a crop on it the past season. Now, I wish you would explain to me through the columns of your paper some means by which I might improve the soil without permitting it to remain idle. There is no possibility of getting common barn-yard manure. Guano, I presume, is a good substitute, but I know nothing about applying it to the soil. In the East I have seen plaster used. How would it answer here?"

The cause of this deterioration arises from the simple fact that the *skinning process* has been carried on for years, i. e. crops have been taken from the soil without giving it anything back, and this is like asking our work-horses and oxen to plow the land, harrow it, haul fencing-stuff, and labor hard, while feeding them on *shavings*, or what they chance to find if confined to a dry and barren land. Every crop taken off reduces the strength of the soil, and succeeding crops must grow less and less until perfect sterility is the result.

In a new country like ours, with the soil naturally rich like that described by our correspondent—a *black loam*—we do not wonder that "the strength of the soil is gone." Seven years' cropping without any return, is surely enough to impoverish any soil, and especially a continuous crop. Our recommendation would be first, to subsoil it as deep as possible. By this we do not mean merely to plow it deep, but really subsoil it by transporting the soil as much as possible. Bring up the new and virgin soil below and mix it with the surface-soil. By subsoiling, the sour and unwholesome matters which have collected in the former plowings and coverings will have a chance to pass away. Light, air and heat will penetrate deeper into the soil and produce entire renovation. When thus thoroughly sub-soiled, a diagonal cross-plowed and harrowed, the soil would almost be restored. After that a top-dressing of guano, if stable manure cannot be had, of from 200 to 400 pounds an acre, would richly pay, and guano can now be had of Messrs. Fay & Hill, on Front street, for \$30 a ton. These gentlemen kindly offer to supply any person with small samples for scientific experiment gratis. The same cause of sterility as described by our correspondent of Sierra County, will be found all over our State. Over-cropping, skinning the land, and taking from it without a return, are the poorest kinds of farming that ever was devised. We hope the practice will give place to a better system.

Large arrivals of Merino Sheep.

The recent arrivals of so many of the very best kind of sheep, French and Spanish Merino's, Southdowns and Cotswolds, causing many persons to believe that the market might possibly be overstocked by such arrivals, and that like every other branch of business, like the "bee business," it would be "overdone," has induced us to open a correspondence with those parties that have an experience of the rise and progress of sheep-raising in other States, on the prospect of such an event in California as overstocking our market; not that we believed such an event could occur, but that we could give other opinions besides our own.

In a letter we received from one sheep raiser in New York, well known to the world (which we quote from, though private) is a valuable array of facts which will prove true to the very letter. This is our belief as the letter will show. The letter says: "California is to be the great wool-growing country, and the best sheep will be wanted there. Not by the tens and twenties, but by the hundreds and thousands; therefore let those who have bought sheep of me take good care of them, raise them well and if they are not wanted at good paying prices, it will then be time enough to complain; but I did not expect the few sheep I sold there, would deprive me from sending more if I thought it best to do so. I cannot send sheep from here to California with men to sell them, without the expenses costing me \$100 for each sheep sold. Then can I compete with those who breed them there? Is not the \$100 expense of itself a good profit saved by the California breeder, to say nothing about risk, which is a large one, and the advantage of their being raised in that climate where they are really better and in better condition to sell than they can be when taken from here under the most favorable circumstances?"

A PAIR OF BERKSHIRE SWINE.

Improved Breeds of Swine.

Now that we are having many valuable breeding animals of this species imported into our State, it is important that those who desire the best should know them. We refer to the Suffolk, Essex, and Berkshire, of which some of the very best have recently been brought to parties here, and of which we have spoken. The cut above represents a pair of Berkshire breeders.

Mixed Husbandry.

Some valuable letters are published by the Oregon Farmer, from Mr. J. B. Knapp, of this city. We make an extract from one of them, which contains some sensible remarks on the above subject. He writes:

Another great fault of farmers, both in California and Oregon, they want to do everything by wholesale, on a magnificent scale; they want to see a fortune in one crop; they are constantly changing from one crop to another, hoping to hit something that will "pay big." One year, they all raise potatoes, consequently they won't pay for the sacks and freight to market; and thousands of tons are left in the ground, and plenty more shipped from the wharves into the bay. Next, barley takes a rise, and all raise barley the following year, which produces a similar glut in the market, so that it will hardly pay freight and charges. Beans, wheat, etc., follow in like manner with like results. While the attention of the mass is directed to one thing, other products are neglected, become scarce, and bear a good price in the market. So long as farmers direct their attention to only one thing, they will be liable to similar results. We believe the true policy should be to cultivate a variety of crops. If one thing fails from drought, blight, or an overstocked market, he will have something else to rely upon, and his year's labor will not prove a failure. I have said that the farmers want some stimulus, some inducement—they dislike to commence anew with a prospect of low prices ahead. If our Legislature would make a liberal appropriation to be divided into prizes to be awarded by a State Agricultural Society for the best exhibit of the different products of the farm, it would present a stimulus which would do much towards arousing a proper spirit among our farmers.

Loss of Fertility in Soils.

The question on the loss of fertility by sending off the produce of the soil, being lately before the Farmers' Club of the American Institute, Mr. Fuller said he believed it was a principle of nature of all plants to deposit on the earth enough to keep up its fertility. It is the case with forests. If all the straw grown on land be restored to it, the grain from the straw may be removed. The Secretary said, that lands in Virginia and North Carolina had been rendered barren by sending off the crops, and again restored by restoring the straw to the land, after thirty bushels of wheat to the acre were taken off. He read, that Great Britain maintained her fertility by importing fertilizers, and consuming at home her own products. We are far behind Russia in Agricultural Schools. The people need such schools. If the excrements of all the animals in the country could be returned to the soil, it would do much to restore the fertility reduced by grain crops. But, taking from the soil a crop of wheat, year after year, soon incapacitates it for producing wheat. Compared with previous years, wheat is decreasing and rye is increasing. Barley is usually consumed at home; this grain and oats, as well as corn, do not deteriorate soil as wheat does. Tobacco exhausts the soil; its exportation takes off an immense amount of fertilizing material. It needs strong soil and large quantities of manure to raise tobacco; every part of the plant is removed from the soil. Other members remarked, that they added to the bulk of manure everything at hand—any vegetable matter, all muck and scrapings, drainings from the road, etc.—anything to increase the quantity. When necessary, pabulum is added, to sandy soil—plants grow well on it. Then, why not take muck from worthless swamps to sandy soils, and produce useful vegetation?

Enrich Your Garden Soil.

Our City Gardens would be much improved at this season by a top-dressing of fine manure, and nothing is better than *guano* or *bone dust*, or a mixture of both. Both these very excellent materials may be had now at little expense in our market. *Guano* at Fay, Hill & Co.'s on Front street, and *bone-dust* at Hussey, Bond & Hale's on Sansome street (from the sugar-refinery), and to these valuable articles we desire to call particular attention.

Washington Market.

Almost all the old Atlantic States boast of their Markets. New York, Philadelphia and Boston—each boasts of its Market; they pride themselves in each of the seasons of their beef, mutton, poultry, fish, oysters, fruits and vegetables; and yet we do not believe there is but one single article in which they can excel us—and that is oysters. It is probable they can also boast of mutton and lamb a little larger, but we will show them in a few years, or perhaps months, that our Markets can vie with them even in our Southdown or Leicester chops, equal even to the luscious samples on the Strand, in London.

Let it be remembered that we are so young a State, that even a single decade of years has hardly passed since the tide of emigration set to these shores; let it also be remembered that where the fine Market House stands of which we now speak, once floated the ships that bore the thousands of new-comers in 1849, and that some distance above it the jolly sailors, in their hurry to reach the Golden Land, bent lustily to the oar, as they shouted, "Row brothers, row," let us quickly make the shore. We're now in California, and we'll dig the golden ore; So, "row brothers, row," behold this Sunny Isle. We long to touch its golden sands; we soon will make "our pile."

Those of us that can remember when the high tides wafted the boats even up to where Montgomery street now is, can realize that "California has made rapid progress, as we walk through Washington Market, in 1859-60, and pass from stall to stall and see the products at all the seasons of the year."

We venture to assert, without fear of contradiction, that take every month of the year 1860, examine the beef, mutton and lamb, the game of various descriptions, the scale and shell fish; look at the complete array of the vegetable kingdom, unparalleled in any part of the world—even in its winter display; the stands of cured meats, the stalls of French preparations, that would tickle the palate of a Parisian gourmand, the display cannot be excelled, if it can be equaled, in any country.

Then the luscious Fruits of our Sunny Climate: whoever has seen the markets of all the principal cities of our country, and the great markets of Paris and London, will dare deny that we can equal them and even surpass them now. There is no market in the world, where in the month of January so splendid an array of Apples can be shown, as in the San Francisco market. True, in London and Paris, they may parade a few pine-apples, peaches and pears, and even grapes, grown and produced at great cost; but for a natural display, save the famous show of Pears, in the Parisian markets, there is not or cannot be a superior exhibition than at our own markets. To prove this assertion we can bring the visitors to the Washington Market, who will agree with us, let them come from what part of the world they may. To those who may not be familiar with the stalls in Washington Market, we will name some who pride themselves upon being always ready to show the best, and to answer any demand for the luxuries of the season. To such we invite families who wish the best. Among those who always have their stalls well filled we would name, for

DEEF STALLS.
Waller & Fisher, No. 12; M. O'Brien, No. 11;
R. O'Neil, Nos. 15 and 16; Edward Barron, No. 14.

SHOEED MEATS.
Dietrich & Bowen, No. 54; Charturie, No. 24.

GAME AND POULTRY.
Loudenback & Anderson, Nos. 5 and 6.

FRUIT AND VEGETABLES.
Leverett & Swan, No. 1; Hall & Brigham, No. 42;
Savory & Co., No. 8.

BUTTER, CHEESE AND EGGS.
F. W. Shattuck & Co., No. 48; T. H. Hatch, No. 44;
Ring & Boswell, No. 53; C. H. Rumrill, No. 47.

FISH.
Switzer, No. 19.

OYSTERS AND CLAMS.
Potter & Co., No. 32.

There are others we should be happy to name, if time and space would permit.

NEW VEGETABLES IN OUR MARKETS.—The past week Washington Market presented green peas, asparagus, cucumbers and new potatoes. How many markets can boast of these things in February?

Arrival of More Stock.

Every steamer that arrives brings more valuable stock for our State. The steamers previous to the last brought another lot of bees, which we omitted to notice by reason of mislaid notes. They were as follows:

Mr. Reed of Sacramento.....	130 hives.
Mr. Veeder of New York.....	88 "
Mr. Champion of San Francisco.....	240 "
Mr. Gregory of New York.....	48 "
Scattering lots.....	11 "

Total.....670 hives.

About one-third to one-half were lost. The lots by Veeder came in very neat hives, carefully arranged and in very fine order, nearly all safe. Mr. Hoy's lot next best, and Mr. Reed's third best. Other lots in bad order.

A greater portion of this importation of bees were taken to Sacramento.

Now for sheep: J. D. Patterson, of New York, had by same steamer twenty-five Merinos and Southdowns—very superior sheep. Messrs. Bingham, of Vermont, also had about the same number. Two died on passage—others came well, and were fine sheep.

By the last steamers some three hundred hives of bees arrived, but in poor order. Some sixty more Merino sheep from Vermont, by new importers. They were very fine—French and Spanish breeds, and of high repute.

These last were brought to this country by Messrs. Jones & Rockwell, distinguished sheep raisers of Vermont. These sheep, we believe, will be taken away to ranch, but they will benefit the State.

While we announce the arrival of such repeated lots of fine sheep—and all of one season—let it be understood that sheep raisers here need not be alarmed about the quantity. We refer them to the letter of that distinguished sheep raiser, J. D. Patterson, Esq., of New York (whose splendid stock of Merinos and Southdowns are now at San Antonio), wherein he gives a true and mainly exposition of the true condition of the wants of California as a sheep raising State. His words will be found true.

Valuable Sheep Ranches.

The famous flocks of Merino Sheep recently brought to this country by the Messrs. Bingham of Vermont, consigned to Samuel Brannan, Esq., are now upon the large ranch of Mr. Brannan, on the Feather river, where we learn Messrs. Bingham having leased the Brannan Farm, will permanently locate as sheep-raisers.

Mr. Jewett, also of Vermont, we learn has taken a large farm on the Fremont estate, to which he will take his large and valuable flocks recently brought hither; and thus we have another valuable stock-ranch to increase the wealth of California.

Agriculture at Los Angeles.

The Star of the 28th ult. says: The farmers are busily engaged in field operations. The season has been favorable for plowing, and advantage has been taken of it to the fullest extent. A great breadth of grain has been sown, which is already making its appearance in a vigorous growth. Wheat and barley give promise of an early crop; we have heard of several farmers who have sown rye, which is in a more forward condition than other grain sown at the same time. It is a more hardy plant than the others, and will mature on soil where barley would fail. It is as remunerative as either wheat or barley, some preferring rye-bread to wheat. For feeding purposes, it is equal to any grain; and it thrives well in this climate. Our informant prefers raising rye to barley, and he has a large quantity of it sown.

In the vineyards, pruning has been commenced; we have been informed that many of the vine-growers will not plow this season so early as formerly, to prevent the approach of the cut-worm on the vines. Last year it was found that the best-cleaned vineyards were most attacked, and that those in which grass and weeds were allowed to grow, escaped. As an experiment, it is intended by some to allow the grass to remain, so that the worm, having vegetation to feed upon, will not be compelled to resort to the vine. The theory is at least reasonable, and we hope it may prove successful.

PLANT ALFALFA.—The present is the time to prepare the land for Alfalfa. Remember and sub-soil the land. Let it be a deep, rich alluvial soil, made fine and thoroughly prepared. Sow about sixteen pounds to the acre. Cut it before it grows too rank, and wilt it, not dry it. Let it be dried green so as to retain the rich aroma of the clover. With proper soil, well prepared, and cut at the proper time, six, eight, or ten, tons per acre can be harvested, according to the soil and the care given to it.

ROOT CROPS FOR STOCK.—Stock raisers should remember that it is much cheaper for them to sow a few acres of Sugar-Beet, and Rutabaga Turnip, than to loose their stock by starvation; and our dairy stock will make much better returns, when fed by a plenty of the sugar-beet and other roots.

THE DOVE.—This beautiful poem will be found to be a real gem, and we are proud to lay it before our readers. Doubly glad it emanates from our own fair land, a California poet.

(From the Water-cure Journal.) Diseases of the Throat and Lungs.

BY L. T. TRAIL, M. D.

PRELIMINARY REMARKS.

Is treating of the diseases of the throat and lungs. I shall comprehend all the ordinary forms of acute and chronic inflammation, usually known and described under the names of *throat-ill*, *quincy*, *croup*, *bronchitis*, *dysphtheria*, *putrid sore-throat*, *canter or epith*, *pneumonia*, *influenza*, and all forms of consumption.

They are all peculiarly the maladies of what is called civilization, and the scourges of fashionable society. Comparatively rare in the ruder and cruder states of society, they increase and multiply with the enervating habits and unphysiological refinements of artificial life.

Altogether, the group of diseases we are about to consider, constitutes the sources of nearly one-fourth of the mortality of the country. Inflammation of the lungs alone is the cause of about one-fifth of all the deaths; while consumption is everywhere sweeping the young and middle-aged in droves to their graves. Mortuary statistics show that the mortality from this disease embraces about one-seventh of the whole amount. In New York city there are not far from three thousand deaths annually of consumption, averaging more than one death in nearly ten per day. This is a fearful picture; and the picture becomes appalling in view of the fact that it is growing worse instead of better.

It is true that the medical profession has no lack of remedies; that it professes to have in its ample *MATERIA MEDICA* many valuable medicines for consumption; but there is one prominent fact which seems to stamp delusion, if not deception, on their pretensions: *they never cure; they frequently kill.*

Their dispensaries, pharmacopoeias, and medical journals, do indeed abound with prescriptions. Physicians are always ready with the "latest fashion" of a remedy. Chemists and apothecaries are continually putting forward new specifics, which the doctors endorse and recommend as obsequiously as the American milliners and mantua-makers respond to the latest Parisian fashion-plate. And no sooner is one vantage-specific or nostrum—be it digitalis, prussic-acid, sarsaparilla, cod-liver oil, inhalation, blood-food, hypophosphite, ready-resolve, tincture of credu-lity, or essence of moonshine—run out, and thrown aside as useless, or worse than useless, than some other equally detestable poison or nuisance is ready to take its place in professional favor and popular experience, have a similar run, and meet a similar fate. History has, however, recorded one fact in relation to all of the consumptive nostrums of the past, as true science can infallibly predict the history of all future ones: *they never cure a single case, and they never will.*

For the irregular physicians—quacks they are sometimes called—less diligent in driving a profitable trade in the matter of selling worthless and injurious nostrums to poor miserable and dying consumptives. These enterprising speculators in human gullibility very well know that this class of invalids will catch at promises as drowning men do at straws. They are aware that they have but to concoct some flavored compound of alcohol, opium and sugar, which will temporarily stimulate the blood and deaden the sensibilities, and then advertise, repeat, reiterate, declare, and, if need be, swear, that they have marvellously, miraculously, superhumanly, and preternaturally, discovered a wonderful and infallible preventive and curative of all kinds of consumption, and of all predispositions thereto, and which never fails in any stage; or to proclaim that, by some very strange and, for the cause of suffering humanity, most opportune and lucky adventure, they have stepped in the shoes or been invested with the mantle of some Indian "wild man of the woods," or gipsy-doctor, to enable them to rifle the pockets of the swarms of desperate and dying consumptives, as effectually as leeches and rascals draw the life-blood of the slumbering traveler.

Did we go where Thugs slow creep,
Murthering men while yet they sleep;
This gives poison. Doth not he,
Who for poisoning takes a fee,
Softly cure those heathen Thugs,
While by race is steeped in drugs?

The newspapers all over the country are continually displaying long columns of nostrums vended to cure consumption; and no sensible person, it seems to me, can fail to be disgusted with their self-evidently false assertions and absurd pretensions. I have known eight hundred and fifty dollars paid for a single insertion of one of these quack advertisements, filling eight or ten columns of one of our city papers. If such investments are profitable to the nostrum-venders, what immense sums of money must be paid by the credulous dupes of these cunning knaves!

And every specious pretense, every perversion of truth, every falsification of science, as well as every outrageous lie that can be made to subserve the sale of the fraudulent merchandise, is resorted to with a heartiness that ought to bring a blush to the fire-branded face of Satan himself.

FORMS OF CONSUMPTION.

Medical authors are neither clear nor precise as to what disease or diseases they apply the term consumption. Some authors recognize only one form of consumption proper; other authors recognize two, three, and even more.

There are, however, no less than seven distinct and prominent forms of this disease. Many physicians do not regard an affection of the lungs as really consumption, until disorganization has progressed to a fearful, if not fatal stage. But this method of diagnosis is practically useless; for, unless we can detect it in its incipient stages, we have very little chance to effect a cure.

Some writers limit the term consumption to the formation of tubercles in the lungs. Although this is the most common form of consumption, and although most forms of the disease are liable to be complicated with more or less of tuberculation, during some stage or stage of its progress, this condition is by no means a uniform nor necessary accompaniment.

Consumption may be said to exist wherever the patient has the following aggregate of symptoms: Cough, pain or sense of weight in the chest, emaciation, and hectic fever. There is usually more or less emaciation, and the hectic fever may be so slight as to be unnoticed. Very frequently, in the early stages, the patient will complain of a disposition to cough frequently, with a scanty expectoration of a tenuous phlegm, with a scanty exertion of breathing on sudden exertion, a sense of chilliness in the fore part of the day, and a feeling of feverishness about the face toward evening. If these symptoms are attended with general decline of health and strength, there is no time to lose. The case should be regarded and treated as consumption.

The term consumption properly applies to all forms of chronic inflammation of the lungs, at-

tended with ulceration, tuberculation, or any kind of disorganization, and it presents the following varieties:

1. *Catarrhal*.—This is the result of frequent colds "settling on the lungs." It is known by a violent and constant cough, and very decided paroxysms of hectic fever. There is great chilliness, sometimes, and at others the surface is hot and feverish. In this form the night sweats are apt to be severe. The cough is severe, and the expectoration copious. The local condition of the lungs is that of an open ulcer, extending deeper and wider, in one or both lungs. As the ulceration progresses, the cough becomes deep and hollow, but the breathing is not very greatly disturbed.

2. *Tubercular*.—This form affects more particularly persons of a scrofulous diathesis. It consists in the formation of myriads of little tumors, or hardened lumps, in the substance of the lungs, generally commencing in the upper portion and extending downward. As the tumors or tubercles enlarge, they coalesce, soften, and ulcerate, and form variously shaped cavities, from which more or less purulent matter is expectorated.

The incipient stage of this form of consumption is denoted by short breath, sense of weight or oppression in the upper part of the chest, tickling cough, slight expectoration of tenacious pus or mucus, and frequent pulse.

The nature or origin of tubercles has very much perplexed medical writers; and all the ideas advanced on the subject seem to be little more than vague hypotheses. By the term, dyspeptic consumption, is understood the extension of disease from the liver to the lungs, by means of the portal system, or tuberculation of the lungs supervening on a primary disease of the digestive organs. It is named, not in reference to any peculiar state or condition of the lungs, but in reference to the primary malady. It may take the form of catarrhal or tubercular—usually the latter—and is known by the symptoms already mentioned as pertaining to those forms.

4. *Laryngeal*.—In this variety the local inflammation fixes upon the mucous or lining membrane of the larynx (upper portion of the wind-pipe), constituting *chronic laryngitis*. It is usually preceded by some form of dyspepsia or liver complaint. It presents very mild symptoms in the early stage, but is really one of the most difficult forms to cure. It is characterized by an almost constant soreness in the vicinity of the projecting portion of the trachea or windpipe, a tickling cough and peculiar roughness or hoarseness of the voice. The expectoration is often copious, and sometimes streaked with blood. This affection, and also the common "throat-ill," is commonly, though erroneously, called *bronchitis*.

5. *Apostematous*.—This is the form of consumption in which abscesses are said to form and break in the lungs. It differs from the catarrhal form in being an abscess in the lungs instead of an ulcer. It is attended with violent paroxysms of coughing, fixed pain and soreness in the chest, and, when the abscess opens, copious expectoration. Abscesses sometimes gather, suppurate, discharge, and heal successively, for months and years.

6. *Hemorrhagic*.—Frequent attacks of *hemoptysis*, or spitting of blood, are the distinguishing features of this form of consumption. Persons of frail, lax fiber are most liable to it. Enlargement of the liver often induces hemorrhages from the lungs, which may be followed by rapid disorganization. Hemorrhagic consumption is generally complicated with tubercles in the lungs; and if these occupy any considerable portion of the lungs, the result is always fatal.

7. *Bronchial*.—This form of consumption is the *bronchitis* of medical authors. It is evinced by a diffused sense of soreness through the chest, increased on deep inspirations, and attended with frequent cough and moderate expectoration. It may be confined to one lung, but usually affects both more or less. The seat of the local inflammation is the mucous membrane of the bronchial ramifications. In its early stages, its symptoms resemble a mild influenza or a severe cold; without, however, the catarrhal complication of influenza, or of the catarrhal variety of consumption. In severe cases, and in the later stages, there is considerable difficulty of breathing, sometimes amounting to crepitus—rattling, or wheezing, sometimes simulating a slight croup, and at other times resembling a mild paroxysm of asthma.

OTHER AFFECTIONS OF THE THROAT AND LUNGS.

The "throat-ill," frequently termed "clergyman's sore throat," is an inflammation of the mucous membrane of the mouth, and fauces, often affecting the tonsils, and frequently attended with a relaxed *uvula*. On looking into the mouth, the ulcerous specks or cavities are apparent. It is usually connected with a similar condition of the *duodenum*, or some other portion of the alimentary canal.

The *quincy* is an acute inflammation of the tonsils—almonds of the throat. They are red, swollen, and very painful. There is great difficulty of swallowing, and in severe cases the sense of suffocation is extremely distressing. If not soon checked, the inflamed organs suppurate. This disease is always accompanied with fever.

The *croup* is an acute inflammatory affection of the mucous membrane of the trachea or windpipe, attended with the secretion of a glairy, tenacious fluid which, in severe cases, concretes into a membranous coating, obstructing respiration, and causing death by suffocation. This concreted hardened substance when once formed is extremely difficult to expel through the narrow opening of the glottis, hence the great fatality of the disease unless checked in its early or forming stages. The croup is easily known by the shrill ringing cough, the thick, heavy, adhesive matter expectorated, and the great difficulty of breathing which attends. It is always accompanied with a fever of a low typhoid character.

Bronchitis in the acute form is not distinguishable from pneumonia. In the chronic form it is the *bronchial* consumption already mentioned. *Acute bronchitis*, *pleurisy*, and *pneumonia*, for all practical purposes, may be regarded as essentially the same disease.

The term *dysphtheria* has been applied to some forms of croup, but more frequently to that form of malignant scarlet fever in which the violence of the throat affect prevents or supersedes the ordinary rash or eruption from appearing on the skin. We shall regard it in this article as identical with the common *putrid sore throat*, and both as the malignant form of scarlatina alluded to.

Canter or epith is another form of the "throat-ill," already mentioned. Most persons are familiar with its appearances. *Influenza* seems to be compounded of acute catarrh and pneumonia. It is an acute inflammation of the lungs, extending to and involving the mucous membrane of the nose. It is always attended with a low typhoid fever. With the cough, soreness of the chest, difficult breathing, and more or less expectoration, there is great depression of strength, feeble pulse, great congestion of the lungs as indicated by the oppressed respiration, and copious or constant sweating.

Pneumonia or inflammation of the lungs, is indicated by cough, pain in the chest, difficult breathing, and general fever. The pulse is variable, according to the form of the accompanying fever; and this may either be the inflammatory, the putrid typhus, or the nervous typhus; and the latter forms may present all degrees of severity, from very mild to extremely malignant. When there is much blood expectoration, the disease has been called *bloody pneumonia*, the disease has been called *bloody pneumonia*, the disease has been called

peri-pneumonia notha, or *bastard pneumonia*; when the fever has been of a low diathesis without either of these complications, it has been denominated *typical pneumonia*; and when attended with high fever, *simple pneumonia*. These distinctions are, however, founded on erroneous pathological notions.

Love of Nature—Birds—The Chick-a-Dee.

BY C. S. REMENT.

It is impossible that we should be other than an admirer of Nature. In all our solitary rambles, whether upon the wild and lonely hill-side, or in the heart of the pastoral valley; at the edge of the mirror-like lake, the bank of the babbling brook, or along the border of the mountain rivulet—our eye is always filled with beautiful and picturesque objects. Our ears soon become familiar with the light carol of every bird which inhabits the thicket or the forest; and our eye is soon made acquainted with the whole lovely family of flowers, which enamel the earth, and enrich the air with their perfume. There is not a wild flower that nods to us from the top of the verdant bank, or the vine-covered precipice, or a bird that salutes us with its voluble overture from its leafy dome, that we cannot recognize and call by name.

We have ever been lovers of birds, the denizens of the air. They have ever appeared to us almost too fair and pure for this groveling sensual world. In our boyhood we were taught that it was wrong to harm some kinds of birds; but there was a large class that were proscribed as doing injury to the farmer (while they were innocently employed in seeking their daily food), and he that killed the most was the best fellow. For many years past, we have supposed that the birds were rapidly decreasing, for their numbers in the fields and groves were few. A few years ago we moved on to Springside, our present habitation, where the cottage is surrounded with beautiful trees, and we soon found the birds made it their home, as they arrived from their southern journey. They were not allowed to be disturbed, and they built their nests and reared their young in the immediate vicinity of the cottage. In the month of June more than twenty varieties of birds made their homes on the premises, to whose songs we could listen in the lawn and surrounding fields. No birds are allowed to be killed on the place, not even the saucy and impudent Cherry-bird that steals our fruit, or the Sparrow that robs us of our strawberries; the consequence is, their numbers have greatly increased.

Treat the birds kindly, and they will become almost domesticated, follow the plow and pick up every straggling worm or grub that is turned up from his dark dwelling. For doing so they deserve well of the farmer, and no honest man will cheat them out of their part of the crop, much less kill them for trying to get it.

There is reason to believe, that although most birds live on a variety of food, yet each particular species of birds have a greater partiality or fondness for some particular kinds of insects or reptiles. This evinces a plan. Many species of birds follow civilization. The same may be said of several kinds of insects; or, at least, they multiply under its influence. Hence, the birds follow in order to reduce the number of insects. This, also, evinces a plan. Let us then study and observe. No man can study "Nature's works and ways," without becoming wiser and better.

"Birds," says an elegant writer, "are the best of entomologists. No ornithologist ever hunted specimen birds with more industry and perseverance than is exhibited by birds themselves in their researches. They disport in the air, penetrate every nook and corner of thicket, hedge and shrubbery; they search the bark, pierce the dead wood, glean the surface of the soil, watch for the spade, trench, and follow the plowman after worms and larvae. A single bird in one season destroys millions of insects for its own food and for that of its own nest. No computation can be made of the insects which birds devour."

"Birds are the best of scavengers, the nimblest hunters and adroit butchers. They have no Grammatical scruples to agitate this worm and bug-loving tribe. They do not show their teeth to prove that they were designed for meat. They eat what they like, wipe their mouth on a limb, return thanks in a song, and wing their way to a quiet nook to dose or meditate, sung from the hawk that sails above in the air above. To be sure, birds, like men, have a relish for variety. They are the best of pomologists. We charge every man and boy with positive cruelty and dishonesty who drives the birds from the garden in fruit time. On investigation it has been discovered that they never disturb sound cherries, and none but those that have worms in them." We say, therefore, spare the birds, and they will destroy millions of your worst enemies—the worms.

We are not writing the history of birds; we are not writing methodically; we aim at no order. Ours is the humble task of recording a few observations called forth by the phases of the months; we may therefore be pardoned for introducing the little birds, our favorites, whose visit to our section appear to be irregular.

Look up into that branch whose beauteous spray sweeps to and fro, responsive to every breathing of the wind. See you that merry, lively little Chick-a-dee, hopping about from branch to branch in the ecstasy of joyous freedom—now pecking pertly at the dun-colored cuticle of the tree; now seizing coyly in its beak some grub or aphid? Most varied are the attitudes which they now assume: not an instant of repose do they know; restless, creeping, calling, pendent, but ever in progress, advancing with the cautious watcher. Beautiful birds are the Chick-a-dees, whose action we now stop for a moment to contemplate, and who are now displaying their characteristic restlessness and vivacity in rose-bush or fruit-tree, to obtain a supply of hibernating insects. Most graceful and easy are their actions. Hovering on the wing, over and anon lightly darting away and as lightly returning.

Oh! it is not the deed of a noble heart which can ruthlessly slaughter the little feathered songsters of our lawns and groves—those brilliant Psalmists of Nature, who are ever reiterating their jubilant songs of praise, and thanksgiving, and love—whose sweet melodious voices come wafted like incense to us upon the summer zephyrs, and, floating onward and upward through the grand old woods, are caught and re-echoed with new power and new beauty, and varying tones, by myriad tuneful chorists, until the air seems filled with the very essence of harmony, and the embowered branches of the overspreading trees are converted into a grand, orchestral temple.

We love little birds. We delight, when suffering and care and sorrow have left their impress upon our mind, or some dark shadow of Evil or Spirit of Gloom has crossed the brightest path of life, dimming our faculties, destroying our perception of enjoyment, and filling our very soul with the impress of Melancholy, to stroll into the woods, leaving the artificial world behind us, turning our backs upon our fellow-men, and shutting ourselves up in a close communion with the mysteries, and wonders, and beauties of Nature.—[N. Y. Hort.

How to PREPARE FAVOR POSTS.—At a recent meeting of the Farmer's Club, in Hudson, N. Y., one of the members exhibited a post which, previous to being placed in the ground, had been soaked in a solution of blue vitriol—one pound of vitriol being used to twenty quarts of water. The post was pine, and when taken up was as sound as when first put down eight years since. This solution is good for all kinds of timber exposed to the weather—spouts, shingles, stakes, bean poles, etc.

About Wintering Stock.

WHILE so much is said relative to the loss of Cattle and other stock for want of food, let us look to the following fact, for all such facts tell. A vast amount of stock dies from want of care. Neglect and cruelty lose as much stock as want of food, and although the following was written for the Rural New Yorker, much of it will apply to our State. Be advised: raise root-crops, save your straw, and you will be the gainer largely thereby.

As much is being said about the scarcity of fodder, I wish to give the public, through your paper, a sure way to help it "hold out." It has been my experience that stock kept warm and dry, will do well with one-fourth less feed than when exposed to "the fury of a winter's storm." Now, farmers, if you are short of fodder, instead of buying hay at exorbitant prices to feed out of doors and perhaps be trampled in the mud, just expend a trifling sum for lumber, and batten up all the crevices about your stables, and make some good managers, and underpin your barn, making it, as the sailors say, "all taut," then keep your cattle in there most of the time while the snow is on the ground. Having done this, go and expend two, three or five dollars more for blankets for your horses, and employ an idle hour in fastening on straps and buckles to keep them on, and you are rigged to brave a hard winter with thirty tons of hay, where before you needed forty. But, I will add that you had better get a good feed-cutter and use it as much as you can. Don't say you can't afford it, or that it "won't pay." Take my assertions, and figure up, and see if it won't pay.

Cultivating Hops.

The London Star says on this subject: A valuable discovery in the cultivation of hops has just been communicated to the Academie. Like most agricultural improvements it has been the result of observations made by a laboring peasant. It consists in making the plant run in a horizontal direction instead of climbing up the pole. This is managed by means of a low trellis of the simplest construction. The advantages of this mode of culture are numerous. In the first place, it enables the grower to investigate the plant while growing, and cleanse it from the numerous insects which injure it to so vast an extent; then it is protected from the sun which always destroys the upper shoots; it obviates the great destruction of hops in stormy weather, when the winds lay low whole hop grounds from the height of the poles; and, most of all, it enables the gathering of the cones to take place without uprooting the plant, besides permitting the selection of the ripest ones at first and preventing the great loss which arises from the necessity of tearing down the whole plant to get at the ripest blossoms.

We have no storms at the harvest season in this State, yet the above seems worthy of trial.

THE BEST FUEL.—Wood is the healthiest, because it contains a large amount of oxygen; coal has none, hence, in burning it the oxygen necessary for its combustion must be supplied from the air of the room, leaving it "closely" oppressive. A coal fire will go out unless it has a constant and large supply of air, while wood, with comparatively little, having a large supply within itself, turns to "live" coals. Close-grained heavy woods, like hickory and oak, give out the most heat; while pine and poplar, being open-grained, heat up the quickest. The value of fuel, as a heating material, is determined by the amount of water which a pound will raise to a given temperature; thus, one pound of wood will convert forty pounds of ice to boiling water, while a pound of coal will thus heat near eighty pounds of ice-cold water; hence, pound for pound, coal is as good again for mere heating purposes, and wood is as good again as peat, which is the product of sedges, sedges, rushes, mosses, etc. But if a ton of coal, that is, twenty-eight bushels, or twenty-two hundred and forty pounds, cost five dollars, it is about equal to the best wood at two dollars and a quarter a cord. Coal at twelve dollars and a half a ton, is as cheap as wood at five dollars and a half a cord. It would be more equitable, if wood was dry, to sell it by the pound. For heating sleeping apartments, wood should be used.

TO INCREASE THE GROWTH OF TREES.—It may be depended upon as a fact, says a writer, that by occasionally washing the stems of trees, their growth will be greatly increased; for several recent experiments have proved that all the ingredients of vegetation united, which are received from the roots, stem, branches, and leaves, of a mossy and dirty tree, do not produce half the increase either in wood or fruit, that another gains with clean stem. It is clearly obvious that proper nourishment cannot be received from rain, for the dirty stem will retain the moisture longer than when clean; and the moss and dirt will absorb the finest part of the dew, and likewise act as a screen, by depriving the tree of that share of sun and air which it requires. A common scrubbing-brush, and clean water, are all that is necessary, only care must be taken not to injure the bark.

BUNCH GRASS.—The San Jose Reporter says: On the Wasatch Mountains, and also upon the hilly portions of Western Utah, abounds a species of grass, called by immigrants bunch-grass. On many portions of the Northern route to California, this grass supplies the only food for cattle. The grass grows in bunches, having from ten to twenty stalks to a single root. In good soil, it will attain a height of three feet. Its head, or seed, is not unlike that of the dog's-foot, or herd's grass. It is exceedingly nutritious, and will stand drought better than any grass in the world. It is indigenous to Utah, but it would doubtless do well in California. Will not some of our enterprising farmers give it a trial?

KIDNEY-WORMS IN SWINE.—The Germantown Telegraph says this disease may generally be known by the animal appearing weak across the loins, and sometimes by a weakness in one or both hind legs. As soon as these symptoms appear, give the animal corn that is soaked in lye of wood ashes or strong turpentine. An Ohio farmer cures this disease by giving one ounce of coppers daily, for six or eight days, dissolved in warm water, and mixed with two quarts of corn meal and dish water.

THREE hundred sparrows, carefully selected, were recently sent from England to Australia, to be naturalized in the latter country, and to assist the farmers in keeping down the caterpillars and other grubs that occasionally devour the harvests.

It is said that sugar candy is a narcotic, when taken on going to bed. To use it, put two or three pieces of sugar candy of the size of a hazel-nut into your mouth, on going to bed, and before they are melted away, you will be asleep.

A correspondent of the Maine Farmer cured warts upon cows' teats by a few applications of spirits of turpentine; in a few weeks the warts all disappeared, and they were never troubled afterwards.

Rev. James Peeler, of Tallahassee, Fla., has sold the patent right of a plow, of his own invention, for \$250,000, and has given away for church purposes \$200,000 of it. So it is stated.

WHAT MAKES A MAN.—A man never knows what he is capable of until he has tried his powers. There seems to be no bound to human capacity. Insight, energy and will, produce astonishing results. How often modest talent, driven by circumstances to undertake some formidable-looking work, has felt its own untapped and hitherto unconscious powers rising up to grapple and to master, and afterward stood amazed at his own unexpected success.

Those circumstances, those people, enemies and friends, that provoke us to any noble undertaking, are our greatest benefactors. Opposition and persecution do more for a man than any seemingly good fortune. The sneers of critics develop the latent fire of the young poet. The anathemas of the angry church inflame the zeal of the reformer. Tyranny, threats, fagots, torture, raise up heroes and martyrs, who might otherwise have slept away slothful and thoughtless lives, never dreaming what splendid acts and words lay buried in their bosoms. And who knows but the wrongs of society are permitted, because of the fine gold which is beaten out of the crude ore of humanity.

Here is the truth worth considering. Are you a poverty? Have you suffered wrong? Do circumstances oppose you? Are you beset by enemies? Now is your time! Never lie there depressed and melancholy! Spend no more time in idle whining. Up, like a lion! Make no complaint, but if difficulty fights you, roar your defiance. You are at school, this is your necessary discipline, poverty and pain are your masters—but use the powers God has given you, and you shall be master at last. Fear of failure is the most fruitful cause of failure. Stand firm and you will not fail. What seems failure at first is a discipline. Accept the lesson; trust the grand result; up and up again; strike and strike again; and you shall always gain, whatever the fortune of to-day's or to-morrow's battle.

THE DEATH OF DR. QUINCY, THE OPIUM-EATER.—The Asia brings us intelligence of the death of Thomas De Quincy, which happened on Thursday, the 8th of December, at Edinburgh, having considerably passed the term of three score years and ten. For many months past he has resided in Edinburgh, preferring the town to his house at Lasswade, mainly for the convenience of superintending the passage through the press of the collected edition of the works, now issuing by Messrs. Hogg, and of which the fourteenth and last volume is nearly ready for publication. For some weeks past his health had been seriously affected; but, as he was frequently an invalid, alarm was not excited as to his condition till very lately, and the end, though it could not be said to be either sudden or premature, was yet so far unexpected.

Two of Mr. De Quincy's daughters were with him at the time of his death. The Scotsman says that almost till the very last his perceptions were as vivid, his interest in knowledge and affairs as keen as ever; and while his bodily frame, wasted by suffering and thought, day by day faded and shrank, his mind retained unimpaired its characteristic capaciousness, activity and acuteness. Within a week or two before his death he talked readily, and with all that delicacy of discrimination of which his conversation partook equally with his writings, of such matters as occupied public attention; displaying so much of elasticity and power that even those who had the rare privilege of seeing him in those latter days were startled and shocked by the seeming suddenness of his death.

WHY DON'T YOU LEARN A TRADE?—This question was propounded, in our hearing, a few days since, to a young man who had been for several months unsuccessfully seeking employment as a clerk or salesman in some of our leading houses. Complaining of his ill luck, one of his friends, who knew he had a mechanical talent, but doubtful whether he could make himself useful either as a clerk or salesman, put the interrogatory to him which we have placed as the caption of this article. The reply was, that a mechanical trade was not so respectable as a mercantile occupation.

Under this delusive idea, our stores are crowded with young men who have no capacity for business, and who, because of the fancied respectability of doing nothing, waste away their minority upon salaries which cannot possibly liquidate their expenditures. Late, too late, they discover their error, and, before they reach the age of thirty, many of them look with envy upon the thrifty mechanic, whom, in the days of their boyhood, they were accustomed to deride.

WHAT CAUSES THE HAIR TO TURN GRAY.—An English writer has recently asserted that an undue proportion of time in the system is the cause of premature gray hair, and advises to avoid hard water, either for drinking pure or when converted into tea or coffee, or soup, because hard water is always impregnated with lime. Hard water may be softened by boiling it; let it become cold, then use it as a beverage. It is also stated that liquid that will color the human hair black, and not stain the skin, may be made by taking one part of bay rum, three parts olive oil, and one part of good brandy, by measure. The hair must be washed with the mixture every morning, and in a short time the use of it will make the hair beautifully black, without injuring it in the least. The articles must be of the best quality, mixed in a bottle, and always shaken before applied.

THE petition against Coolism in California, recently sent to Sacramento from this city, is 240 feet in length, and is estimated to contain about eleven thousand signatures.

What One Great Man can Accomplish.

The "great ones" of the earth have been justly designated as such for having achieved ends and objects unattained by their fellow-men. If we trace the rise and progress of them, we shall see, that not only has their success been owing to a new idea or suggestion, but in a far greater measure to the systematic mode of carrying out the projects and bringing them to a successful issue. In no instance has this fact been more truly exemplified than in the career and lightning-speed progress to fame of THOMAS HOLLOWAY, and the proportionate universal dissemination of his PILLS and Ointment, as a specific for nearly every disease of the human frame. We have been fortunate enough to learn from his own lips the *modus operandi* of this wonderful working system, which evinces its superiority not only in having reached the acme of perfection, but in keeping ahead this mighty organization, a "harp of a thousand strings," to keep in tune!

Let the reader conceive to himself the possibility of creating and continuing in working order, a business from whose focus two articles, with the simple components easily extracted from the vegetable kingdom, are kept perpetually in the hand and within the reach of one in every hundred of the community, and that community contained in no less limits than the circle of the EARTH'S broad surface. Now this is not only accomplished, but done with ease and harmony withal: these almost ubiquitous remedies, called originally (as we are assured) from the vegetable productions of that soil which gave birth, are moreover so compounded, from careful study and research, as to act with divers tendencies, but wondrously uniform in effect; the individual properties of Holloway's medicines become passive or active, to suit the exigencies of the case, the Pills containing both tonic, as well as detergent qualities, develop the one or the other, as the symptoms of the particular case may demand, the Ointment being an "excellent" for a healing application, takes a similar mode of attaining the desired end, thus mutually assisting nature to cast off the common enemy, and subduing the temporary reign of evil disease.

Much more could be said on this point than can well come within the scope of this short article, which we have thought it our duty to devote to a subject, and a great undertaking, that may have escaped the observation, and consequently the due appreciation of a great portion of our readers; a system conceived as it was, and carried out as it is, by a master mind! We will at some future time render some further interesting particulars with regard to this marvelous and unprecedented enterprise.—[Milwaukee News.

[For the California Farmer.]
THE DOVE.

BY DELTA.

When the day was fast declining,
Sitting in the crimson west,
In my study I was sitting,
Visions thick were round me flitting;
Busy once the fields were quivering,
For their homes and hearths so blessed;
Even the stars were out and shining
Sweetly on the world at rest.

I was silent, pondering, thinking
Of the past, the buried years!
Gone from whence there's no returning,
Gone with human hopes and learning,
Gone with hearts for light, love yearning—
Seeking hope, but finding fears!
Every cop of life we're drinking
Mingled is with gall and tears!

While I mused, instead of plying
Over tomes of varied lore,
Sympathizing with the weary,
With the stricken, sad and dreary,
Answering each suggested query—
"Find they homes with open door?"
Through my open window flying
Lit a Dove upon my floor!

"Not a single cloud is darkling
In the star-lit heavens above;
Not a gale disturbs the ocean—
What strange freak or wild commotion,
At this hour of night's devotion,
Brought thee here, thou timid dove?
Heaven and earth with gleams are sparkling,
Thou shouldst seek thy mate, thy love!"

But no answer, no good reason
Could it give for coming thus;
Much I pondered, wondering, guessing;
Cursing not, but still not blessing;
Never once the bird caressing;
Thing so strange, mysterious!
At this late, untimely season
Seeking place so perilous.

Yet I did not harm or scare it,
Undisturbed I bade it stay;
Lost I was again in soaring
Through the fields of thought, now poring
Over classic works, now storing
Spirits of the ancient day.
Will believe me? I declare it—
Stirred it not till morning ray!

"Tell me, stricken one, pray tell me,
What mishap has brought thee here?
Coming thus so boldly fearless,
Why art thou so sad and cheerless?
Are thy mates so heartless, careless?
Thy distress they will not bear?
What is it which late befell thee?
Tell me while I drop a tear."

Still it sat there never flitting,
Never quitting once the spot;
All my wild conjectures hearing,
Never answering, never fearing,
Narrowly around it peering
Eying closely its new role;
Nothing but its soft "coo" muttering,
Well contented with its lot.

Then I did not mind or heed it,
Did not throw it even a crumb;
Yet it went and came thus nightly,
When the stars were shining brightly
And the flocks were winging lightly
Homeward whence this one had come.
Though I did not coax or feed it,
Still it came—and still was dumb.

But I grew impatient, tired
Of what seemed a stupid bore;
I was rough and cross then to it,
Though the window that I loved so,
Saying "Come not back, or rue it!
Come not in my presence more!"
Still it came when not desired,
Sitting nearer than before!

Burned my soul with indignation,
But the bird was patient still;
When I studied, it sat by me;
When I walked, it followed high me—
Did it mean to tempt me, try me?
Did it mean good or ill?
Though it brought me sore vexation,
Never said it "Peace! good will!"

Lit it then upon my borders,
Walked my flower-beds o'er and o'er;
Then, at length, becoming bolder,
Perched upon my very shoulder!
In plain English then I told her
"Leave me! hither come no more!
For your safety heed my orders—
Darling ne'er again my door!"

But the bird was calm, undaunted,
Gentlest when I threatened most;
When the sun's last rays were gleaming,
When the stars' first lights were streaming,
And the silver moon was beaming
Over the sea and o'er the coast,
Then this bird my study haunted—
Haunted like a nightly ghost!

Daily round my cot it hovered
Till I drove it from my side;
Every day 'twas tamer, fonder,
Coming from the green hills yonder
Where the wild birds gayly wander
Over wood-lands, far and wide;
Scenes with food and pleasure covered,
Where no want could be denied.

Months passed by: no more I drove her
From my presence to the wood;
Now I sought her, gladly wooing,
Loved to hear her softly cooing,
All my frowns to smiles subsiding
From my stern, impatient mood;
I had learned to love—love her,
Of her kindness, care and food.

Thus my cold, hard heart relented,
And I loved to see her come;
Now I offered her caresses,
Teased her not with awkward guesses,
Vexed her soul not with distresses—
But she now desired to roam!
When my coldness I repented,
Then she sought another home!

Yes, she scorned my proffered kindness,
Scorned my tenderness and love;
Left me when I wished her near me,
When I called she did not hear me,
When I moaned she did not cheer me—
I was then the stricken dove!
I by kindness, in my blindness,
Drove her to the distant grove!

SACRAMENTO, Feb. 1860.

The new telegraphic instrument, lately arrived here, that prints dispatches in capitals on a slip of paper, and as rapidly as a man can work the keys, which are arranged like those of a piano. New lines of telegraph are to be established throughout the State, the wires, says the Call, being on the way here. They will connect with the Salt Lake telegraph at Placerville.

Dr. Jewett has left with the Boston Traveller an ounce or two of fine starch, extracted from only eight horse-chestnuts picked up in the street; the experiment shows this nut to be so abundant in starch that it may readily be turned to valuable account.

A New England writer says that it has been found that negroes can be better trusted than white men, not to betray secrets. We suppose this is upon the principle that they always keep dark.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Hamilton, Ohio, do 4 and 6 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question,

The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;

WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES AND RAKES.

SKELTON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of us.

THOS. OGG SHAW,
38 SACRAMENTO STREET,
San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

NURSERY CIRCULAR.

FOREIGN AND NATIVE GRAPES, AND GENERAL NURSERY STOCK,

OFFERED THE PRESENT SEASON OF 1859 AND 1860, BY

A. P. SMITH,

AT THE

POMOLOGICAL GARDEN AND NURSERIES,

SACRAMENTO. Two-and-a-half Miles from the City,

AND AT THE

OFFICE AND DEPOT FOR TREES, 44 J Street, between Second and Third streets,

SACRAMENTO CITY.

THE CULTIVATION OF THE GRAPE, AND THE PLANTING OF VINEYARDS UPON AN extensive scale, is at the present time exciting a lively interest among the people of our State.

The congeniality of our soil and climate, and the success which has thus far attended the operations in the vineyard, are exciting the attention of hundreds to this subject, and destined to make vine-growing and wine-making one of the great interests of our State. With the world for a market, who can estimate the wealth that will hereafter accrue to our people in the manufacture and exportation of wine. This State and this interest yet in infancy, and this great interest is of such magnitude that it is of the first importance to begin aright. To do this, we should now ascertain what is to be the most desirable GRAPE TO CULTIVATE, especially for wine-making. The California or Los Angeles grape makes a good and pleasant wine, and while some claim it to be as good as any for making wine, the majority of experienced growers pronounce it inferior, and some assert that it will be superseded by some other and a much better grape. Among our own hundred varieties of grape cultivated by us, the CALIFORNIA GRAPE has always proved to be the most tender, while the French and German grape invariably resist the frosts that have been so very destructive to our California grape. This is a very important point to establish, as the loss by frost in some wine-districts alone, would be very great, and therefore the attention of the cultivator should be directed to attaining a hardy class of grapes. Experiment alone must determine this, and whatever experience we have already attained should be carefully noted and improved upon.

For some years we have been most carefully experimenting upon and propagating from a very large stock of the finest kinds of foreign grapes, and while most of these have proved perfectly hardy, the CALIFORNIA grape has been entirely killed. At the same time no two opinions exactly agree as to their superiority in other respects over our native grape. Thus it will be seen that the wine-grapes of Europe have so far proved to possess a very decided advantage over the grape now being cultivated and known as the Los Angeles grape.

With these points established, and with the opinions of practical wine-growers of Europe to sustain us, there can be no reasonable doubt of the superiority of this State of the finest wine-grapes of Europe. The foreign grapes having a world-wide reputation as wine, table, and raisin grapes, and having been proved to be hardier than our own grape, and better adapted to our soil and climate, they must and will become very extensively cultivated. We cannot sufficiently impress upon those about to plant vineyards, our own opinions and preferences for this class of grapes, believing as we do, that the varieties to be eventually selected from this class will be grown to the exclusion of all others. We would not by any means wish to discourage the planting of the CALIFORNIA GRAPE, which is indeed a useful and valuable grape, and of which we sell largely; but when it has to come in competition with varieties of superior merit, it must necessarily give place to them.

From many of the foreign grapes we have experimented in wine making, and while all have proved to be good wine-grapes, some of the kinds have produced wine of such superior quality as to leave no doubt in the minds of competent judges of this class of grapes being ripe grapes from which we may hope to manufacture an article of wine that will improve by age and be fit for exportation. The present season we have made wine from TWENTY DIFFERENT KINDS of this class of grapes, as well as a large quantity from the California grape, and another season we hope to be able to report more fully. We have also made some very interesting experiments in the grapes for raisins, and notwithstanding our process has been crude and imperfect, our success was very flattering, and we have no doubt but that the very finest quality of raisins can be profitably prepared in this country. We wish to draw the attention of parties to our extensive stock of this class of grapes which are very select, and which we have been propagating for several years at large expense, having heretofore limited our sales till the stock now in hand is the largest in this State. Such varieties as we have specified we can furnish by the hundred or thousand, and when taken in large lots we will put them at much lower rates than heretofore offered.

We wish it to be distinctly understood that our stock has been all grown by ourselves from bearing vines in our own vineyard, and we enumerate only such as we can furnish in large quantities.

When a thousand or more vines are ordered, the selection of kinds will partly rest with us, but will be comprised within the following assortment:

WE would suggest to our customers that they should name to us the proportions they desire for TABLE and for WINE grapes. The following is the list for the present season:

Black Hamburg—An immense bearer, a large and purple berry, one of the finest and most luscious of black grapes known.

Willmott's Black Hamburg—Extraordinary bearer, and fruit with immense sized berries, differing in shape from other berries.

Black Prince—Large, very productive, rich and very delicious.

Black Morocco—Very prolific, large clusters, and gives promise of being a very fine wine grape.

Black St. Peters—Long and large clusters, a late fruit, sweet and very delicious.

Black Frontignan—A good grape with a sweet and musky flavor.

Cannon Hall Muscat—One of the largest white grapes known. From our experience this year we think it a fine wine grape.

Chasselas of Fontainebleau—A white, very productive grape, medium size.

Early White Sweet-water—A well known early sweet grape, being more than three weeks earlier than the California grape, and a great bearer.

Early White Malvoison—Early, and sweet, and good.

Frontignan Muscat—Very fine.

Syrian—An immense bearer, very large, a late sort.

Grizzly Frontignan—A good bearer, fine flavor, good table grape.

Lashmer's Seedling—White, good size, medium bearer, high flavor, believed to be good for wine.

Large Rose of Peru—A large and superior grape, and very prolific.

McKeady's Early White—Very prolific, and a fine white grape.

Muscat of Alexandria—Large and fine, the very finest of table grapes, and of exquisite flavor.

Royal Muscadine—A delicious grape, great bearer, incomparable as a table grape, and promises to be first rate as a wine grape.

Red Frontignan—A very fine grape.

White Frontignan—A very delicious grape.

Our native grapes consist of the California grape from one to three years, Isabella, Catawba, Ollinton, Concord, and Rebecca. Some of the latter are new sorts, and of these we are not largely stocked this season. We particularly ask planters of vineyards to review our remarks in this card.

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common Native or Oregon stock of this Coast.

Apple, Plum, Peach, Nectarine, Apricot, Fig, and Almond,

Beides a miscellaneous collection of other small fruits. Particular regard has been paid to the growing of the trees in good shape, and purchasers of two-years-old trees will find that they have been well "cut back," and are now firm, symmetrically shaped trees. We guarantee no finer healthier trees, will be found in the market this season.

We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and Greenhouse Plants,

Embracing all the old and well known varieties, as well as a great many others both good and new. Also, a very fine lot of different sizes, of that very popular shade tree, so full of reminiscence of home, the good old-fashioned Elm Tree of many varieties, but most of the American and Scotch Elms, which are of good size and when well established in the soil, they are of very rapid growth. Also,

Locust; LABURNUM, or GOLDEN CHAIN; MAPLE, in variety; LINDEN, European and American; CATALPA; CHINA, and other Trees.

We call particular attention to our collection of THE CAMELLIA, now so well acclimated as to be growing finely in our open grounds, and blooming as elegantly out of doors here, as possible with the tenderest care in a conservatory. It is no longer a house-plant, but one of the gems of the pleasure grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c., see CATALOGUES, which are sent by mail to all applicants.

VEGETABLE SEED—We invite attention to our very large and general assortment, the crop of THIS YEAR, which is very fine. We are now prepared to supply THE TRADE in quantities to suit, and at lower prices than can be found at any other establishment in the State. We have now been growing SEED of GOOD FRESH SEED at very low rates. These seeds will be done up prepared to supply large quantities for sale or Retail Trade and will always be in readiness at our GARDEN, and at City Office, 44 J Street Sacramento.

Our Trees and Shrubs will be sold for CASH ONLY, and Orders must be accompanied with the Cash to insure attention.

The California Farmer.

SAN FRANCISCO:
FRIDAY, FEBRUARY 17, 1880.

Direct our Letters and Exchanges.
Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct letters to "Col. Warren, California Farmer Office," as there are frequent miscarriages for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

To CORRESPONDENTS AND READERS.—We acknowledge the receipt of a communication from a distinguished writer of New York, "Miriam's Memories," ("A Story of an incomplete Life," by Mary C. Vaughn, which will commence in our next number. This lady stands high as a writer, and we are proud to know we shall be favored by her valuable aid.

Rosa's letters received, will be responded to, as well as all our other valued correspondents. We rejoice to know of the restoration of one on whom the hand of disease has so long been laid. We hope we shall hear often from her.

Agricultural Convention.

On Friday next, the 24th, a Convention of the *Tillers of the Soil* will meet in this city to take into consideration the subject of a State Agricultural Fair, the present year, in this vicinity. This call for a Convention has been demanded by the voice of the people interested in Agriculture, because they feel that their rights and privileges have been abused and violated by the late Agricultural meeting which was held under the auspices of the late State Agricultural Society at Sacramento.

As the State Agricultural Society was an incorporated Society, organized for the good of the whole State, and not of a particular county, and as at that meeting the voice and wishes of fifteen out of sixteen counties were set aside, these counties feel themselves aggrieved, and a portion of them have resolved not to take any part or lot with the present acting State Agricultural Society, but to take measures to present their case to the Legislature, and ask for a new Charter and Constitution that shall be free from the former and present control, and the debts now hanging over them, and by this means rise and act with freedom and a greater good for the whole State. To this end, San Joaquin district, and Alameda district, and San Francisco district have taken measures to hold a Convention as named above, and they invite all the Farmers and Stock-raisers everywhere, who desire to organize anew, to join them in this Convention, and unite with them in the formation of a better Constitution and better system of action, one that shall be free from the numerous objections that have hung as a cloud over the old organization for years, and to give this Society into the management and influence of the agriculturists who alone should and can secure and protect the interests of their own profession.

The importance of this movement can best be appreciated when it is remembered that the old Society is now embarrassed with a debt of six or seven thousand dollars unless the county of Sacramento is willing to assume it, which is not very probable. And if the Legislature should act as it ought by reason of the violation of the charter, and take it away or withhold the \$5,000 appropriation, the Society is then embarrassed with a load of debts sufficient to destroy it, and no other section of the State would be willing to receive the books and set under it, and assume their heavy responsibilities. It is for these reasons that a new organization is now demanded, and to this end the invitation is now given for all the friends of a good institution to assemble at San Francisco on the 24th instant, and act as the case may require. It is earnestly hoped that where no county meeting has been called, individuals who have at heart the great cause of agriculture in any of its branches, should come forward and give their influence to this meeting. We speak from authority when we say that if a proper spirit is but shown now, the noble sum of \$20,000 can be had to insure a grand and glorious State Fair in this vicinity the present year, and in accordance with the will of the people. Farmers who have business near San Francisco next week, should make it a point to so arrange as to be at the Convention on the 24th instant.

Washington's Birth-Day.

Where every the weary eye repose,
When gazing on the great,
Where neither guilty glory glow,
Nor despised blue!
Yes—one—the first—the last—the best,—
The Cincinnati of the West,
Whom every day's not base—
Beneath the name of Washington,
To make men think there was but one.

O'er all our land—even on the sea, and even in foreign lands, under monarchical and despotic governments, wherever the air of Heaven is wafted in its freedom, there will this day be remembered, and kept in honor of one whose memory will be sacred through all time. How like a Beacon light amid the stormy waves of a surging world the spotless name and fame of the immortal Washington stands out above all other names of mortal men—spotless in his patriotism and love of country—pure and holy in all the deep devotion of the heroic leader of our army, and as a statesman and chief councillor of our nation, what a bright example for mankind to follow.

Keep, then, this day glorious; make it bright with the purest and holiest of all associations in our country's annals, and bid our children and children's children copy the life and example of the immortal Washington.

OREGON WINTER.—The Farmer of that State says that the weather for the past month of January was quite mild, the mercury at no time being below 20 degrees. The people to the east of the Rocky Mountains will certainly think this is mild weather, compared with their similar latitudes.

A Noble Californian.

Amid all the calamities of the Golden State, amid all the charges made against her citizens for their "love of gold," there will appear upon the pages of California's history as many noble deeds—as many manly actions—as many magnificent charities, and as many unselfish and self-sacrificing deeds, as has ever illumined the pages of a like number of people the world over.

California is made up of people from all parts of the world, and in all parts of the world will stand recorded the generous deeds of noble-hearted Californians, and while the hearts of parents may have often been called to mourn in sad bereavement the loss of loved ones, and husbands and wives and kindred and friends may have also been deeply afflicted. Yet there have also been thousands of hearts made joyous and happy, and years of life added to many by the noble and generous deeds of Californians.

We have before us the proof of one true Californian, whose generous and manly soul has not only gladdened many hearts in his early New England home, but whose generous deeds in the early history of this State were proverbial. The author of so much happiness to others as we shall show by letters received from the Atlantic States, was a resident of Sacramento in '49, '50, and '51—well and truly known as among her most enterprising merchants, and although he suffered the usual fate of the Pioneer by fire, flood, wreck and ruin, yet with undaunted faith he always braved adversity with a strong heart and manly courage, and defied all adversity, always scattered his bounty with a lavish hand.

Like the many young men of early days, his was a gay and swift life; money was valueless. Yet his generous soul always remembered the absent and "loved ones at home," and constantly, even amidst the adverse winds, contrived to send sunshine into other hearts, while his own met the storm. After many years of a changeful fortune, we find our hero a man of active business in another territory, active as ever and generous to a fault, and incidentally drew from him those facts which will always sustain a man under all the bitter stings of adversity—"the doing good to others"—and we learned too, indirectly, that our friend had been for years contributing most bounteously to many of his kindred elsewhere, and the return he received in love and gratitude was his incentive and support in the hour of trial. A young bachelor—he must love something, and so he loved good wine, as his friends well knew. But by one of the letters we shall give, he has become a *Dashaway*, to the joy of his aged mother and many friends—and now not loving wine he loves still more his mother and father, uncles and cousins, and by his noble deeds wins their love to him, which he richly deserves, as will be seen by the two following letters we are permitted to publish without names.

The first letter is from his mother, seventy years of age; a letter written in a neat and pretty hand, clear and distinct, and its tone speaks as only a mother's heart could speak. To that mother, father and household he had been all a son and a man.

The second letter is from a niece, and its tone speaks for itself. It tells of the generous deeds of her uncle, and surely such a letter even is a rich reward. We only regret we are not at liberty to give the name of the author of such deeds, for it is one, were we to name him, would recall "a host of friends." May this little sketch of one of our early pioneers stimulate all to spend their means while living in scattering blessings around them. It is so much better than to hoard up wealth to be bequeathed after death, and for which monuments are raised. Far better is it to do all the good possible while in life and see the fruits thereof. Well do we remember the words of the generous man of whom we have been speaking. Said he: "I do not wish to die rich—I only want enough to live comfortably and make those I love happy around me while I do live," and this he will do, as we have the evidence of it in the letters we publish. We hope this example will induce many to imitate Uncle John, and win the reward he has won.

Monday evening, Feb. 16th.
Dear Son: I must write you a few lines to thank you for your kindness to Anna, poor blind woman, yet rich in faith and cheerful and hopeful, under all her trials, she will bless you in her heart, and may you be blessed here and hereafter. Also, how your dashing away the cup has gladdened my heart; dash away till the serpent and adder have no more power to bite or sting. Oh John, I have trembled for you lest you with all that was good and generous and noble in your nature, your heart and soul might be ruined by that terrible demon, fire water; but John don't buy nor give away, that will be wronging yourself and others by tempting yourself and them. Discard the whole thing, it is the only safe way; persevere and you will ennoble yourself and send a ray of sunshine across my poor old heart. Would that some other dear to me would do the same thing. And now, John, as you have made one good move, I trust you will go on, retrace your steps and try to get where you was once, a good Christian in heart and life. And you may yet, live to do a great deal of good in the world. If you live a few years longer, you will have to stop and think for all the pleasures of this world, will be nothing that will satisfy, and a dark cheerless old age, God in his mercy save you from. I don't forget the birth-days of any of you, and my own has just past. It don't seem possible I have entered my 70th year, but so it is. I am well. Good-by till Spring. From your mother and best friend.

JANUARY 19th, 1880.
DEAREST UNCLE JOHN: What shall I say to you in return for your very kind letter, which reached me yesterday morning? Could you but know all the joy it brought our hearts, you perhaps would feel in a measure repaid; but words are inadequate to express how we feel. It came like the warm sunshine breaking through the clouds that had for a long time obscured its light. It came like the beautiful rising of the morning sun after a long night of darkness and gloom. Truly "sunshine follows darkness as it travels round the world." It came, Uncle, just in the time of need, for with New-Year's-day you know comes pay-day, and could you have seen the cloud leave father's face and the cheerful smile settled there, you would have rejoiced with us; but mother she began to cry, and Charlie put his arms around her and said "I would not cry until Uncle John did something not of sorrow." This satisfied him, but more than one tear filled his eyes as he said, "I am going to be just such a man as Uncle John is, and have people cry because I am so good. I wish my name was John." That night we all went to bed with

thankfulness that we had an uncle with such a heart. You did so much for us last spring and even your assisting kindness was so great, in contributing to us the place as our home, that we dare not expect more. But that was not enough for your kind, noble heart, and this New Year follows another gift. How kind in you, uncle. Be sure at this moment our hearts are overflowing with gratitude towards you. In our life's history are pleasant war marks; there are bright pages following the darker ones, made bright by some lofty, noble deed of yours illumining it. It is a pleasure for us, and ever will be, to turn back to those sweet pages and read them o'er and o'er again—our hearts drawing closer and closer to yours the while. Were there more hearts like yours in the world there would be less sorrow. O that in some way we might repay you for your many and great kindnesses. If works alone would save the soul, then, indeed, your many good deeds would make your salvation sure. May God watch over you, and guide you safe through your toils and dangers there, and bring you again safe to your New England home, where kind and loving hearts are waiting to receive you; where lips are waiting to give the kiss of welcome to you, and may he also guide you safe through life's thorny pilgrimage and bring you at last in safety to your Heavenly home, where the spirits of those who have known and loved you on earth, will be waiting to welcome you to that more glorious than an earthly abode.

Would, uncle, that were not a dream, that you were indeed with us; but I will keep a clean towel in readiness, whenever you come.

We are all well as usual; mother improving a little. Grandfather—has been very sick, so that his life was for a long time despaired of, but God has kindly spared him yet a little longer, to cheer our hearts.

Uncle John, please imagine your own feelings were you in our places, and perhaps then you may form some idea of the great joy you have given us. We will not forget you, and I would that we could thank you sufficiently. May God reward you tenfold for your kindness toward us; may a long life of joy be yours here, and a life everlasting beyond the grave. Love of all is yours and thanks of overflowing hearts. Write soon.

Action of the State Agricultural Society.

"Almost with entire unanimity, the press of our State have condemned the course pursued by the State Agricultural Society, in locating the Fair again at Sacramento."

We published the above some weeks since, and it seems it has called out some feeling from the Bee and Union of Sacramento City. This might have been expected from that place. The Bee responded, defending Sacramento, yet it will find a broader feeling of dissatisfaction than it supposed. We can name numerous journals that have condemned the action of the Society. The manner of response of the Union was beneath the dignity of a journal of its standing. To its allusion to ourselves simply reply, we removed our office to Sacramento in 1855, at the urgent request of the Board of Managers of the State Agricultural Society, gave them the free use of our museum, exchanges, and all the influence of our press and personal efforts to further the cause of the State Society and State Fair then to be held there, and after two years' labor and a sacrifice of several thousand dollars by the removal, we returned to San Francisco. In that removal of our office up and down, our foreman had the entire charge of the office, as he always has, moving when suited his convenience and the issue of the paper. We were not present nor directed it, and the innuendo about moving on Sunday was as unkind as it was unjust. We had made sacrifices to serve Sacramento, and had labored for her; and this attack comes with an ill-grace from that purse-proud journal. If necessity compelled the removal on that day to gain time, it was not so bad as to play poker all Saturday night till the Sunday sun shone through the cabin lights. No one can charge us with want of love for Sacramento. In the labor of seven or ten years past, it has been so deeply burned into us that even the floods could not wash it away. And yet we will not uphold them in the wrong they have done to the great cause of Agriculture. This evil could have been avoided if all the officers of the State Agricultural Society had acted as nobly as did General Redington. We remember Mr. Crocker also protested against the wrong. But every officer should have done so, and had this been done their influence would have changed the action of the meeting and we shall always hold that there was a secret influence at work to retain the Fair, right or wrong, moved by those who were to be the personal gainers by holding lucrative offices; time will reveal all this, and on them let the responsibility fall.

A Chief Magistrate Exalted.

Aspiring politicians all seem to think that the highest honor has been attained in our State when they are seated in the gubernatorial chair. But we can point to a recent example of a case where a Chief Magistrate has taken a much higher office without leaving the State. Ex-Governor John B. Weller has been elected to the ownership of a splendid farm and orchard in Eden Valley, Alameda County, and is now at work with his own hands planting trees and attending personally to the duties of his estate, laboring with his men daily. Now we ask in all truth, if this is not a much higher office than that of the Governor? and yet he is the Governor of his own farm, a prouder title than can be purchased at any "ballot-box" in the world. And we venture the assertion that however much Mr. Weller's mind may heretofore been given to politics and engrossed by it, he will say that in his present occupation there is a greater pleasure, a sweeter satisfaction, and vastly more real happiness given to his heart and mind, added to a better health, than he ever before enjoyed. The estate, which he purchased of Mr. Luciling, is in a highly cultivated condition and one of the finest locations in Alameda County.

INVESTMENTS FOR SMALL CAPITALISTS.—We invite public attention to the Card of Messrs. Ploche & Bayerque, the well known bankers, who are very large owners of real estate in this city and the suburbs around it. They are ready to offer lots, and acres, on the most liberal and easy terms, and such chances should be improved by the man of small means. Mechanics and laborers can by that means secure a "homestead" on easy terms, and they should now improve the opportunities offered to them.

Spring Returns to us Again.

"Merry nature bounds as from her birth,
The sun is in the heavens, and life on earth;
Flowers in the valley, splendor in the beam,
Health in the gale, and freshness in the stream."

How the veins swell! how swiftly the blood flows through the heart, and to the extremes of our physical frames, as the balmy breath of Spring touches our cheek. We inhale its life-giving, soul-reviving power, and feel the same renewing of our existence as the birds and blossoms feel when the warm sun touches them or the dew of heaven rest upon them.

Who that has a mind capacious enough to contemplate the renewal of earth's beauties in Spring-time, can fail to be inspired with the order and perfection of all Nature's laws. They speak to us in everything that meets our vision—the tender grass that sends up its green points at our feet, or the little "wee" blossoms that come out early in the spring-time, peeping out like a little playful child that thrusts its rosy cheeks from beneath its cradle-covering on a cool morning—the early bird that hops from bough to bough, looking for a place for its nest—the frolicsome lamb that, feeling the genial sunshine sports and gambols by its mother's side—the song of praise from every living creature but man, as they see, feel, and act, while they acknowledge the return of Spring as the immortal part of the year, when new life is infused into all the things that God has created. Wherever we go, after leaving the thronged city, as we enter the rural districts, we behold the signs of returning Spring.

The hills are dressed in living green,
The early flowers appear;
Nature speaks out—her smiles are seen,
For God is everywhere.

How much of life is lost by the dull round of duties that confine men to our cities, while engaged in accumulating wealth that in a few years they must leave for others to squander perhaps. Why not live now? Why does not man awake to life as other plants do, at the return of Spring-time?

A single trip to Sacramento ought to inspire the human mind with the great truth revealed in nature at the "Return of Spring." Look at the beautiful green hills above Benicia! The heart must be dead indeed that will not throb with delight at such a scene, reminding us of those glorious strains in the melodious song:

"With verdure clad."

The river-banks, too, bursting out with the signs of early vegetation, while the eye looks off in the distance to the ice-cold Sierras, the contrast to the sight proving the reality that it is the "Return of Spring" with us. These scenes upon the Sacramento river, and from thence to the Levee City, and from thence to her beautiful gardens and flower-covered prairies, should serve to awake better thoughts and better feelings than those which urge men to waste life, health and happiness in the mere pursuit of wealth.

Then let us awake to the beauty around us,
Aye, live while we do live, as Spring comes again,
And welcome these bright little flowers that hath found us—
These types of the soul's spring eternal to judge.

PROGRESS IN THE LEGISLATURE.—We learn with much pleasure that a bill granting \$5,000 to the San Francisco Protection and Relief Society, has passed to be engrossed. We also notice the introduction of a bill granting bonds for \$10,000 to J. W. Marshall, for life, the first discoverer of gold in California. This is right, and we hope the same Legislature will do a greater deed of justice and grant a bounty of \$100,000 to General Sutter, one whose once princely domain has been stripped from him to enrich others, and without whose efforts to improve his own farm, the gold of California might have remained buried another century. We do hope our Legislature will view this subject in its true light. England has granted a life-bounty to the man who first discovered gold in Australia! A princely gift of \$50,000 per annum for life, and shall General Sutter be forgotten and suffer now in his old age? Let a just liberality speak for him, the good old Pioneer of California.

SOUTHERN RURAL MAGAZINE.—We have received No. 1, new series, of the Southern Rural Magazine and American Cotton Planter and Soil of the South. This Magazine comes to us in an enlarged size and much improved, for we find a "Ladies' Department" added to it; and who should we find as the editors but our very accomplished and talented correspondent "Lizette Linn," whose happy letters have graced the columns of the FARMER until her advent into the Editorial Chair. Most sincerely do we welcome the lady into the circle. Long may her life and strength be wielded to bless mankind with her sprightly and truthful delineations of character, and pictures of truth. The Southern Rural Magazine, edited by Dr. Cloud for so many years so ably, may indeed be said to shine now in its advent with the Ladies' Department, for a star of more than ordinary brilliancy will illumine the Clouds, and thus bear the Magazine into a higher atmosphere of usefulness and fame. It is published at Montgomery, Alabama.

PLANT CURRANTS.—We hope every person who has a garden will plant currants. This excellent fruit grows so quickly, and the tree bears so very abundantly, and the fruit is so excellent as a desert fruit at a morning meal, and for pies and tarts, that every family should have it. Currant trees can now be had at very low prices, and should be planted very generally.

FIRST BLOOM ON PEACH TREES.—In a trip to Oakland the past week, we found a large peach tree in full bloom in the garden of A. W. White, the large grower of Raspberries. It was a beautiful sight. We bore away a few branches of the early and fragrant blossoms as a memento of the first flowering of this luscious fruit, Feb. 11th.

VERMIN CATCHERS.—We ask attention to the card of Ferrets advertised in our columns. These animals are worth their weight in gold to parties who are troubled with any visitors like squirrels and particularly gophers. Farmers should remember that Ferrets will destroy this king of pests, the gopher.

Flowers! Bright Flowers!

The Editors of this journal desire to acknowledge the very handsome present of a large and beautiful plant of the Camellia Japonica from A. P. Smith, Esq., of the Pomological Gardens, Sacramento. Laden with buds and flowers, this gorgeous plant has now in perfection three of those pure white blossoms which to the human eye speak of innocence and purity. How appropriately they tell of the exalted calling of the florist from whom she has received this valuable present. Her kindest wishes are tendered to Mr. Smith, hoping his life may be full of happiness and prosperity, and like the flowers always better and brighter when two or more blossoms grow upon one tree.

Also, to acknowledge from L. Prevost, Esq., of San José, a liberal parcel of Roses and Lilacs from his delightful garden. We hardly know how to return thanks for so liberal a bounty. Fourteen varieties of the very choicest Roses, and six of Lilacs. Our words must be brief when we have a heart full of gratitude. May his pathway in life ever be crowned with flowers, and may they be sweet with fragrance, and thornless too. Having seen both these gardens, we say, lovers of the Camellia should not fail to visit Smith's Garden now and see the show of "Camellias." What a gift for friends! Also, Prevost's Garden to purchase "Roses," for these two places are famous for these two gems of their species; both are truly Queens in Flora's fair domains.

ANOTHER GIFT OF FLOWERS.—From that beautiful spot across the bay, Shell-Mound, came a large cluster of rich and fragrant Hyacinth blossoms in spikes of flowers, and Roses blue and white. These, with other flowers, and a choice shrub or two, we acknowledge in the name of the editors, from Mr. Patterson of the Shell-Mound Nursery, to whom is offered grateful acknowledgements. While passing over this Nursery lately, we felt the truth of the compliment paid to its proprietor for the fine lot of trees sent to the mountains recently, for we saw trees of all kinds, Apple, Pear, Cherry, Plum, and Peach, with Vines and Shrubs, all finely grown, such as must please every purchaser.

A GIFT FROM "POMONA."—From E. L. Beard, Esq., we have to acknowledge a very handsome parcel of choice grape-vines, figs, etc., of very rare kinds. We know them to be rare, as they were the product from the very choicest kinds we imported from France direct in the year 1853, and from which we supplied the vineyard of Capt. Macondray at San Mateo, whose splendid grapes have been the theme of praise everywhere; and also from the same importation we supplied Smith's gardens, from whence his very choicest kinds now emanate. These grapes will soon be scattered over our State, and we shall have the proud satisfaction of eating this delicious fruit in almost every county.

CELEBRATION OF WASHINGTON'S BIRTH DAY AT THE SANTA CLARA COLLEGE.—We have received an invitation from the President and Faculty of the Santa Clara College to the celebration of this memorable day, at this distinguished institution by the students. We accept the courteous invitation and regret we cannot be present, for we know that it will be an exhibition that will reflect credit and honor upon the Institution as well be highly complimentary to the students.

The Santa Clara College is now in a flourishing condition, having a large number of pupils who are making great progress in all departments of learning. This Institution is supplied with the best philosophical apparatus in the State, and with every facility for a complete education.

BEES-HIVES.—A Sacramento paper—we presume it was the Bee of course—is now boasting of using 50,000 feet of lumber, in three months, for bee-hives. This is well, and we rejoice at it. But we can call attention to the well known establishment of Messrs. Hobbs, Gilmore & Co., on Market street, of this city, that can eclipse them all hollow. This firm are making hives for San Jose, Santa Clara, Alameda, and all the neighborhood around, and they manufacture them in splendid order, turning out 100, 200 or 300 a day, as they are wanted. Messrs. H., G. & Co. have added largely to their machinery. They have many new improvements, and their mills are a wonder worth visiting; and what is real, they can and do work to the complete satisfaction of all who give them contracts.

OREGON APPLES.—Messrs. Hull, Knapp, of the Oregon Fruit Warehouse, on Washington street, have lately been receiving several lots, some 12 or 1500 boxes of splendid apples from Oregon; a few pears also came with them—this fruit all found ready sale to our retail dealers, the principal purchasers being Messrs. Bryant, Hill, & Co., whose sales the past year would reach far above \$50,000 in this trade.

Messrs. H. K. & Co., will receive about 1000 boxes in the next steamer. Apples in good order now sell, wholesale 9, 10, 12. Extra, 13, and a few still higher. Messrs. Bryant, Hill & Co. hold now the best lot in the market.

STANFORD BROTHERS.—This old and well known firm, manufacturers of oil and camphine, have taken the spacious block on the corner of Front and California streets. This extensive warehouse will now give them an opportunity to respond to the calls of their large and rapidly increasing business. Messrs. Stanford Brothers have been so long and so favorably known over the State, that all that is required is to announce the fact of their removal and their readiness to fill orders to any extent, in their line. Their manufactory is the largest in the State, and the quality of their oils and camphine the very best offered.

T. OSGOOD SHAW'S AGRICULTURAL WAREHOUSE.—Every farmer who visits our city should make it a special duty to go to the workshop and warehouse of this manufacturer. It will pay them well to examine the fine implements now made and making.

STATE SUMMARY.

The Red Bluff Beacon of 15th says: We have now had two days rain, which is causing our farmers to wear smiling faces, in the hopes of a bountiful harvest.

The Contra Costa Gazette mentions the discovery of a coal mine four miles from Martinez, and states that the coal has been tested and proved of excellent quality. The vein is said to be extensive and easy of access.

The engineers have completed the preliminary survey of a railroad route between Auburn and Nevada, and say that the grade will not exceed eighty feet to the mile on any part of the road, and that the deepest cutting will not be more than thirty feet.

The Governor has approved the following joint resolutions of the Legislature: Resolution asking for 20,000 stand of arms and four batteries of heavy artillery; an extension of pro-emption privileges to March, 1860; asking for a new land district to be composed out of the 1st and 3d district.

Discoveries of rich quartz near Hornitos are reported. "On the first of last month a Mexican discovered a rich and inexhaustible quartz vein between that town and Quartzburg. No discovery has ever been made in this country that will equal it in value and extent. Every piece of rock contains visible gold, some of it being nearly two-thirds gold."

We learn from the Butte Record that a town plot is laid off at Maj. Bidwell's Ranch. The location of the town is on the north side of Chico creek, and is favorably situated for irrigation. Chico has long been an important business point in the upper country, and the new town may, at some time in the future, become the shire town of a wealthy agricultural county. Success to the new town.

New and important discoveries in Calaveras county, of rich veins of gold and silver ore, at a place a few miles beyond Railroad Flat, are reported. Three veins of silver have been opened, and they are reported to be of fabulous richness. Much excitement has been caused by these discoveries, and many of the miners who had determined to go to Carson Valley, are preparing to locate themselves in the new region.

Iron Valley, the pretty foothill valley in Amador, is progressing healthily. The Ledger publishes a list of fourteen farms which have an aggregate of 1,700 acres seeded to wheat and barley, and this is but a fraction of the whole amount. A great deal of the best land has been reserved for spring crops, corn, potatoes, &c. Very many fruit trees are being set out, and one person is setting out 1,200 apple trees.

The STOCKTON AND SAN FRANCISCO STAGE LINE. A Stockton paper says this despatching company have conveyed the mail between Stockton and San Francisco through the bad weather of the winter without making a single failure, and we think that when the roads are good, it is the duty of the Stocktonians traveling south, to patronize the Stage Company. All connected therewith are worthy men.

While a Mexican *seguro* was herding cattle in the valley, a short distance above Livermore's ranch, he accidentally discovered an extensive vein of rich cinnabar. The San Jose Reporter says, the discovery was immediately done to the Mission, and like Esau of old, sold his fortune for a mess of pottage. In other words he sold his right of discovery for about twenty dollars worth of clothes. The ore is said to be extremely rich, and specimens have already been sent to San Francisco to be assayed.

KEEP IT GOING.—Says the San Joaquin Republican: Keep the District Fair proposition going to complete organization. Let us have no agricultural show monopoly like the State combination at Sacramento. Marysville has a district society and the first annual fair took place splendidly last year. We would call the new societies "Industrial" rather than agricultural, and have all trades—all work—every species of industrial product interested.

A DANCING master at Mariposa lately introduced a novelty into his schools. The Gazette says: The sets were formed as if for a quadrille, with the lady of the first couple was called to "sashay" with the gent having the biggest foot in the set, or the gent with red hair, or with the long nose, or was the fattest or handsomest, homeliest, best dancer, &c. The performance occasioned a good deal of fun, and as might be expected an occasional show of ill-temper by those unfortunate individuals who cannot take a joke.

LIME IN NEVADA COUNTY.—The Hydraulic Press has a specimen of carbonate of lime from the quarry of Mr. O. Darst, which is situated on the south bank of the South Yuba, at Illinois Bar, and says: The quarry is a vein of dark grey marble, about two hundred feet wide, extending from the river into Gopher Hill, and of unknown depth. Lines of cleavage mark it into oblong blocks, and it would be valuable for building purposes were there any home demand for marble fronts or mantels. At present it is burned for lime, and sold in considerable quantities at the kiln for one cent and a half a pound. Last summer it was sold as low as one cent. The quarry has been leased by the proprietor.

The RAILROAD CONVENTION at SACRAMENTO adjourned finally on Friday last, after making various recommendations and upon coming almost unanimously to the opinion that the following resolution should embody the views of the Convention:

Resolved, That the Legislature be recommended to adopt such measures as will enable the State to lend her aid, as it may be required, to the construction of the Pacific Railroad, to the extent of not more than \$15,000,000. That for this purpose measures should be adopted to remove the operation of the restriction expressed in section eight, of the Constitution. That the legislation of the State should be so framed that the amount of money furnished by the State in aid of the Pacific Railroad should be secured to the State so that in no event should the same become a State charge.

SPLENDID NURSERY AND VINEYARD.—The Marysville Express says: A friend laid on our table, a bunch of almond flowers plucked from the nursery of Mr. Claude Chenat, near Johnson's Ranch. He informs us that the nursery consists of about twenty acres filled with every description of fruit trees, grape-vines, &c. The nursery is neatly enclosed, and is beautifully laid off and adorned. The peach trees are beginning to bloom. Chenat also has a very large vineyard. He has eighty acres in his vineyard, has set out one hundred thousand vines this season and intends planting fifty thousand more. He has not manufactured wines on a large scale heretofore, but intends to enter largely into it in the coming season. His place is about fifteen miles from this city, and is situated a few rods above Liver crossing on the other side. This beautiful place is visited frequently by parties from this city and Sacramento on pleasure excursions, and is represented as being one of the most delightful spots in this country.

A Good Deed.

We notice with much pleasure a memorial upon the counter of the banking house of Brumagim & Co., signed by a goodly list of merchants and citizens, asking our Legislature to bestow \$5,000 in aid of a "Home of the Inebriate." This would be a noble deed for our Legislature, and one that would be truly wise legislation. Yes, every Senator and Assemblyman must know that to save men from the infamy of intemperance is to save the cost of crime and pauperism to the State, and the goodly work of the Dashways is one of the causes operating to fill the now overflowing treasury of our State, which cannot be better employed than in aiding our orphan and relief societies, and all like charitable institutions.

BOND VOLUMES OF THE FARMER.—We were highly gratified last week, when visiting the Mechanics' Institute and Library rooms, to find upon their shelves among their valuable collection of books now comprising nearly 3,500 volumes, our own journal very handsomely bound. This set of the CALIFORNIA FARMER comprises ten volumes, and in a few days two more volumes will be added, so that the Mechanics of San Francisco can look back over every volume of the FARMER and see that there is one journal in this State that has been the constant and firm friend of the working mechanic. The Reading-room of the Mechanics' Institute is now furnished with one of the very best and most select libraries on this coast; we will not except any in point of a select and choice variety of the best standard works. It is worthy a visit from all persons who feel an interest in the welfare of the working classes, and most honorable to those donors who have aided the Institute, and to the Institute itself. May the greatest success ever attend it.

SEED WAREHOUSE.—The recent gentle rains have started planters to work in earnest, and our several seedsmen have been quite busy. Mr. S. W. Moore & Co., J. P. Sweeney & Co., and C. L. Kellogg & Co., have each and all a very valuable stock of seeds of all kinds, and to their houses we can refer our readers, with full confidence that they will be attended to, and their orders faithfully executed.

TO OUR READERS.—We desire to call the attention of our readers to the article we have taken from the Water Cure Journal. The great loss of life, and the wide spread of this class of diseases, induces us to publish what will be esteemed a valuable essay. We feel confident we shall be approved by many suffering ones for the light we shall throw in their path.

DOCUMENTS FROM CONGRESS.—We are under obligations to Hon. Wm. M. Gwin for documents from Washington, which we received per last mails.

MRS. LIZZIE WILEY WARREN, M. D., Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she practices through the columns of this Journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of doctoring the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with it. Its therapeutic uses are reasonable and wise, and may be relied upon wherever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. M. C. SIKES, M. D., ELECTRICIAN AND HYDROPATHIST.

Would offer her services to the community in the practice of her profession. To those suffering from nervous and chronic diseases, she can confidently commend her method of treatment, as being safe, natural and effective. Dismissing the use of drugs or poisons, she relies upon nature's remedies, and especially recommends her own manner of applying electricity to nervous and inflammatory diseases. As a therapeutic agent, it is invaluable, when rightly understood and applied. Electricians have succeeded in performing cures, by even a random and purely experimental use of it, because electricity being the most potent and all-pervading element, which we can bring into our service, any reasonable use of it cannot fail to prove beneficial to life and health. Therefore whenever a cure or improvement is possible, we offer our services, with a knowledge, based upon scientific principles.

Particular attention will be given to Obstetrics and the Diseases of Women and Children.

Residence—South-east corner of Mason and Pacific streets, San Francisco.

The Bascom Institute, San Jose.—The Summer session of the Bascom Female Institute, will commence on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

IMPORTANT TO SHEEP-OWNERS!

POWDERED TOBACCO, AT TEN CENTS PER POUND.—The best article known for WASHING SHEEP. Also—

CHEAP LEAF TOBACCO, For the same purpose, in quantities to suit. Orders, accompanied by the money, will be promptly filled and forwarded to any part of the State. Address—

ADOLPH SUTRO & CO., Tobaccoists, Northeast corner of Sacramento and Montgomery streets, 1-1m San Francisco.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$3 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the New VOLUME.

Bees, Bee-hives, Honey! REV. L. L. LANGSTROTH'S MOVABLE-COMB HIVE! HIRAM HAMILTON, of SANTA CLARA, APIARIST AND AGENT For the above named Patent Hive, for California, Oregon and Washington.

Persons wishing can obtain Individual RIGHTS within said States and Territory by sending \$25, by Wells, Fargo and Co.'s Express, to the undersigned. HIRAM HAMILTON. Santa Clara, Feb 15, 1860. 2-3m

J. D. ARTHUR & SON, AGRICULTURAL STORE.

PITTS' & HALL'S THRASHERS. BOSTON STEEL CLIPPER PLOWS.

Flows, Harrows, Cultivators, Grain-cradles, Scythes, Saws, Horse-rakes, Hay-rakes, Thrashers, Carts, etc. HARROWS, SHOVELS, GRINDSTONES, ETC. Nos. 3, 4, and 5, Washington street, Between Davis and Front. [2] SAN FRANCISCO.

Ferrets. VERMIN DESTROYERS.

A PAIR OF SUPERIOR FERRETS (Male and Female) for sale by Taylor and Greenleaf streets, San Francisco. The attention of Farmers troubled by Rats, Gophers, or Squirrels, is invited. They instinctively follow into the holes, attack and exterminate all burrowing animals. Apply at the Office of the California Farmer, 21m 130 Washington street.

TO SHEEP FARMERS. THE undersigned, having had many years' experience as a PRACTICAL SHEEP FARMER (in Australia and California), offers his services either to CURE Diseased Sheep affected with Scab, Foot-rot, or to build a situation to Superintend a Sheep Ranch. Having cured some badly diseased sheep in California, he can give satisfactory reference. Address, by express, WM. H. T. KIRBY, Taylor and Greenleaf streets, San Francisco. Reference—L. Haskell, Jr., California and Front streets; Col. Warren, Ed. Cal. Farmer; Chas. Boquet, No. 33 Merchant street.

RANCH WANTED. Any person having a GOOD RANCH in a pleasant location, already stocked, with Orchard, Vineyard, &c., who wishes to rent the same to careful and responsible parties, can hear of such, who have the means to improve the same further, by addressing G. W. B. Farmer Office.

PATENT RIGHTS FOR SALE. The following Patent Rights of very new and valuable inventions (of which we have models to show their value) are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories. No. 1. A New Rotary Subsoil Plow. Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator. Patent now pending; papers expedited.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly fills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar. Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a Sewing Machine; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level. Patented September 13, 1859.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market. Just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Mule-toe Bar. This will be much wanted in California. It is simple in its construction, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver. A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns. Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to COL. WARREN, Editor Farmer.

Extra Size Lawton Blackberry Plants. By the late steamer we have received 1500 True Lawton Blackberry Vines, of very extra size, such as will show fruit the present year. We shall sell by the hundred or dozen, as are wanted, or the entire lot. Inquire at FARMER'S Office.

MRS. ANNIE L. AVERY, HOMEOPATHIC PHYSICIAN, Residence, 249 Pacific Street (two doors from Stockton street), SAN FRANCISCO.

Special attention paid to diseases of women and children.

Orders from the Country, promptly attended to.

HOME MANUFACTURES!!

TUBS, PAILS, AND CHURNS.

Nine Reasons for using Parrish & Co.'s Cedar Tubs, Pails, and Churns.

1st. They will not shrink like Pine or Basswood.

2d. They are much sweeter than Pine or Basswood.

3d. They are more easily cleaned than Pine or Basswood.

4th. They will last nine times as long as Pine or Basswood.

5th. They are better made than Pine or Basswood.

6th. They'll not fall down in the sun like Pine or Basswood.

7th. The handles are riveted on, and are not on Pine or Basswood.

8th. Keep your money in the country, and not send it East for Pine or Basswood Tubs.

9th. You encourage the laboring man of your country in stead of encouraging the sale of soft Pine and Basswood Pails, Tubs, &c. of the Eastern importation.

Those who desire to see and prove the above statements are invited to call at the warehouse of the Selling Agent of the Manufacturer, where they will be satisfied.

C. WADSWORTH, Selling Agent, Battery near Washington street, San Francisco.

ALEXANDER H. TODD, Produce and General Commission Agent, No. 43 CLAY STREET, NEAR DAVIS, SAN FRANCISCO.

ALEXANDER H. TODD has been engaged in selling Grain and Produce for five years past in this market as the Pioneer Expressman of California in 1849—has an extensive acquaintance, and possesses advantages unknown to many of our most substantial merchants to the city, and also to a large number of farmers throughout the country.

N.B.—My terms for buying and selling produce are: For amounts under \$5,000, 2 1/2 per cent; for \$5,000 and upwards, 2 per cent.

SEED, PLANTS, &c.

HAVANA, pure; VIRGINIA; CONNECTICUT, Seed Leaf; FINE TURKISH.

THE FIRST BLOSSOM IS FEBRUARY.

The following beautiful lines we copy from the San Francisco Press. The writer whose spirit thus commingles with nature can enjoy life, for he is dwell with the beautiful.

Up among the snowy ranges
Where the stately pine is standing;
And the Yuba's stream is winding;
Where silver clouds are rising
From cañons deep beyond
Up where winter swiftly lingers
Into bright and balmy spring;
Where yellow-bellied robins sing,
And the hand of fate has wrought
Beauties worth a golden thought;
There, above the desert mold,
Laid I saw a very hour,
Blue it was, a very heaven,
When seen its brow at even
Fleeting clouds gleam in gold;
Sweet, a bloom of mignonette,
Or garden bed of clover
Just April shower wet
Which the drowsy bee hums over:
A delicate young violet
With diamond in its bosom set.

As to a human soul I spoke,
Although no words the silence broke—
"Lonely blossom, why so early,
Why so early sprang up?
Opening thy purple cup
To the dew-drops so early?
Farest not that winter early,
Rushing rudely, howling past
With his fierce and icy blast?
Will thy leaves with hoar-frost tip,
And thy darling beauties nip—
Farest not, sweet, lonely blossom?"
Meekly towards the glorious sun
Turned that little floral head;
Odorously then it said:
"Why was the fairy earth begun?
Believeth not, depending one,
God protects while he or forms,
Shelters it from blighting storms,
Gives it strength with loveliness,
Worship of His mightiness—
Sees He not the lonely blossom?
First of all the flowers train
On a mission here and
Telling—Winter soon will die,
And Summer o'er each hill and glen
Resume her brilliant way again.
Buds are swelling on the bough,
Woodpeckers are tapping now;
Bobolinks, on briars swinging,
Fill the air with merry singing;
And see! the grass is springing green
Where leaps the fountain's silver sheen,
And from the mountain's azure line
There comes the spicy breath of pine,
Greeting me, the primal blossom!"
Here the stilly whisper ceased,
Like a spirit just released,
Or an odor lost in breathing,
Or a flower that fades in wreathing;
And I kept along my stroll
With this memory in my soul.

MORAL FORTUNE TELLING.—Despicable as the practice which goes by the name of fortune-telling is, we believe there is a kind of fortune-telling which is not only possible but easily practiced upon correct principles. Thus, to begin with the young, when we see a child obedient to his or her parents or teachers, or any one else towards whom the subordinate relation has become necessary, we have no hesitation in predicting that good fortune will accompany such a child into early manhood or womanhood, and insure a fair start in adult life. If the case be that of an honest, energetic young man, who has successfully advanced from the position of apprentice and journeyman into that of a master mechanic or boss, we can tell his fortune without much difficulty. So with regard to those who have chosen a profession as the means of livelihood. Let us see how they conduct their business. If they do this intelligently, industriously, and honestly at the start, they will be very apt to continue to do so, and success will be sure in the long run. Unprincipled men, in the same line, may get ahead of them at the beginning, but they will fare best in the end, and so illustrate the truth of the maxim, that honesty is the best policy. We will confess that we are no fortune teller, if it does not so turn out.

The first Arab newspaper ever published in the Turkish empire, and out of Constantinople, has been commenced at Beyrout.

HOLLOWAY'S PILLS AND OINTMENT.—UNIVERSAL PAIN-RELIEVER. Nearly one million boxes of Pills are every month distributed throughout the towns and villages of the United States and Canada, and an almost equal amount of Ointment accompanies these orders. It may be said with truth, that Holloway's medicines are "Messengers of Joy, carrying healing on their wings" to millions oppressed by every form and type of disease. Sold by all Druggists at 25 cents, sixty-two cents, and one dollar a box or pot.

The Oxygenated Bitters.—For the cure of Dyspepsia or Indigestion, Liver Complaint, Asthma, Catarrhs, loss of Appetite, Freckles and Age, Hysteria, Water Bristles, Acidity, Sea Sickness, Rheumatism, Headache, Ennui, and General Debility, or any disease having its origin in imperfect digestion.

These Bitters, as all classes of our fellow citizens, including Members of Congress, Lawyers, Physicians, Clergymen, Planters, Farmers and others testify, are the only safe, certain and sure remedy for the immediate relief and permanent cure of the many cruel complaints which, in some phase or other of Dyspepsia, afflict our race. In testimony of the many cures effected by this Remedy, reference is had to the numerous certificates from distinguished individuals known all over the land.

SETH W. FOWLE & Co., Proprietors, 15 Tremont street (Museum Building), Boston, Mass.
For sale by—Charles Morrill, Henry Johnson & Co., and Redington & Co., San Francisco; C. H. Morrill and R. H. McDonald & Co., Sacramento; Smith & Davis, Portland, Oregon; and by all good druggists in medicine every where. 23

Catalogue of our Surveysmen.—We are always supplied with the Catalogue and Circulars of the best Surveysmen of our own and other States and Europe. We have the following now on hand: Vilmaria, Andrus & Co., Paris; Bollerell, Son, Rhode; A. Frost & Co., Rochester, N. Y.; Elvington & Barry, Rochester, N. Y.; F. Trowbridge & Co., New Haven, Conn.; Thurston & Co., New York; Saul & Co., Washington, D. C.; A. P. Smith, Sacramento, Cal.; Fox & Co., San Jose; R. W. Walker, Shell Mound, Alameda county; W. C. Walker, Golden Gate Survey, San Francisco; L. Provost, and A. Delmas, San Jose.

The above Nursery Catalogues are ready for distribution or reference to all who are in want of information or who honor us with their business and please send us their catalogue there. As we advertise only for gardens of the highest standard, purchasers can rely upon those in our columns.

Washington House, corner of Pennsylvania Avenue and Third Street, Washington, D. C. Mrs. A. F. Beveridge begs to inform her former patrons and customers that her well-known establishment having been greatly enlarged, is now fully furnished and improved by the introduction of the aqueduct water, bathing rooms, hot and cold water, and other modern comforts, will be thoroughly in order by the first of May. Its location is most agreeable, its distance being moderate. Members of Congress can be accommodated with the convenience of a new ordinary for a Congressional Mess, while the traveling public in general will find every accommodation the city affords, at the usual moderate terms. 173m

HOTEL INTERNATIONAL.

James Graves. H. F. Williams. GRAVES & WILLIAMS.

Jackson street, above Montgomery, SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE UNIVERSALLY ACKNOWLEDGED TO BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with SPRING AND CURED HAIR MATTRESSES AND LINENS than any other House in the State. It is one of the largest Hotels in California; a fire-proof building, and provided with Bensley Water throughout the House. It has a frontage on Jackson street of 57 1/2 feet, by 173 feet deep. There are no dark rooms in this house, all having fire and open frontage, with pure air, which is of great advantage to a California climate, there being no large buildings adjacent thereto.

The undersigned invites the attention of the Traveling Public, and Strangers in particular, to the merits of this House. It was established under the present Management, on the 1st of January, 1887, as a

First-Class Hotel,

IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to encroach upon the merits of other Houses, cannot but recall the marked favor with which his enterprise has been received by a discriminating public, in a constantly increasing patronage of the FIRST RESTAURANT, which is conducted exclusively in the SUPERIOR MODE in which the Hotel is conducted.

It is Contiguous to all of the most Popular

Places of Amusement, the Principal

Thoroughfares, the Fashionable

Promenades and Steam-

boat Landings;

Thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR

FAMILIES AND SINGLE GENTLEMEN,

During their sojourn in this city.

For a year past we have studied how we can maintain a FIRST-CLASS HOTEL, and at the same time effect some reduction of price below three dollars per day to our friends. We are happy to announce to you that we have succeeded in our efforts.

We have obtained a reduction of our heavy rental; and we have now under cultivation, in the suburbs, a Rancho, which produces our Vegetables fresh from the ground; with a Dairy that secures us the purest Milk and Cream, and a stock of Fowls that supplies Eggs and Poultry always fresh; with many other economical advantages. By this means we can promise our friends that we shall ever improve upon the proverbial excellence of our Table; and the same marble Beds, and solicitous attention to the comfort of our Guests, will continue to be the pride of the Hotel International.

We have Elegant Suites of Apartments for Families or Single Gentlemen, single, together with the unfailing energy of the Proprietor, makes this House one of the most Popular Hotels in the United States. For comfort and luxury this house is not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the landing of the steamers, to carry passengers to the Hotel. 115

WHEELER & WILSON'S

FIRST PREMIUM

FAMILY

SEWING

MACHINES!

AT

REDUCED RATES!

The character of Wheeler & Wilson's Sewing Machine is too well established to admit of any controversy in regard to its merits. They have received the commendation of all the papers in the country. Notice what the Scientific American says—the leading mechanical and scientific paper of the age:

"We are having a great many inquiries for Sewing Machines, from all parts of the country, and as we cannot conveniently reply to them all by mail, we have thought proper to state our opinion of them in this public manner. We have used Wheeler & Wilson's Patent, manufactured by the Wheeler & Wilson Manufacturing Company, No. 95 Broadway, and we can say in regard to it, that it is without a rival. It is simple, not easily put out of order, and in point of effectiveness and finish, no other Machine stands ahead of it. We state this much in regard to the excellent Machine on our own responsibility."

We state this much in regard to the excellent Machine on our own responsibility."

"We are having a great many inquiries for Sewing Machines, from all parts of the country, and as we cannot conveniently reply to them all by mail, we have thought proper to state our opinion of them in this public manner. We have used Wheeler & Wilson's Patent, manufactured by the Wheeler & Wilson Manufacturing Company, No. 95 Broadway, and we can say in regard to it, that it is without a rival. It is simple, not easily put out of order, and in point of effectiveness and finish, no other Machine stands ahead of it. We state this much in regard to the excellent Machine on our own responsibility."

Self-adjusting Post-Driver.

A valuable Implement for Farmers.

HYDE'S PATENT SELF-ADJUSTING POST DRIVER is now offered to Farmers, as a valuable assistant in FENCE-BUILDING. The hammer works in a swinging frame, rendering it self-adjusting on uneven or hilly land. It has been used on hills where it had to be hauled up with a tackle; any common carpenter can construct one. The two pulleys, one on the drum, and the other on the crank, are so covered with leather or rubber belting, and when pressed together by the foot lever, the friction of one on the other is sufficient to raise the hammer, and on lifting the foot from the lever the drum is free and the weight drops; and so on, setting posts far better and much more expeditiously than can be done by digging and ramming.

A score of other Machines can be seen at the FARMER office, where RIGHTS are for sale. Price of Right for single machine, \$10; and County Rights according to population, etc.

OLIVER HYDE, Patentee.

Benicia.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,

No. 100 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS:

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Farmer and a Doctor, and rather more so between those who have picked up the Drug Business and those who

From the Atlantic Side.

LETTER BY OUR REGULAR CORRESPONDENT.
New York, January 10th, 1890.
EDITOR FARMER: Time passes. Congress lingers without a speaker. The wheels of government are yet at a dead lock. The men chosen to represent the people have forgotten to do anything they were sent to do, and are striving to see who can do the most to render themselves and their country the most ridiculous in the eyes of foreign nations. Some cute New Yorker would do well to get them painted singly, and in groups, as a model (heaven save the mark) Congress. It could not be painted, or photographed, don't know how the thing could be fixed, but if our good old father Adams could add the whole lot to his menagerie, and possess its curiosities, he could travel North and South and make his fortune, if he could only contrive to manage the "seamstitch." I do not think they need any more notice at the present time. Do you?

The great event of the last two weeks has been the terrible tragedy at Lawrence, by which some one hundred persons were killed, and between two and three hundred more wounded, many of them fatally. This was one of the most serious accidents of the kind that ever happened in the country. The scene was one of the most painful that could be witnessed by man. Parents bereft of their children—children, whose parents were crushed beneath the mass of ruins. Husbands, whose wives were numbered with the dead, and wives whose husbands' mangled bodies were so fearfully mutilated by fire and bricks and mortar, that they could not be recognized, were gathered around the blazing ruins in mournful, frantic groups, hoping, yet fearing to see the loved forms of dear ones. Humanity shudders at the horrid butchery, for it can be considered nothing else. Oh, how many households have been suddenly broken up! How many families have become desolate? How many children made orphans? How many parents childless, in a single hour? How many others are maimed for life, compelled to drag out a life of misery and sorrow? Who is to blame for all this? Who should bear the responsibility of this wholesale slaughter, the architect, the builder, or the company, or all? It must rest somewhere. Some one or more must be amenable to the stern requisition of public opinion, and to the laws of the land. Let Californians take heed and continue to do all her work not only on the grandest scale, but in the very best manner possible.

The trade of the city is at a stand still at present, or nearly so. This is our dull season, and our trading, trucking, threadbare politicians are doing all in their power to make it worse. They have tried to get up a little episode from the general, pointless, aimless, namby pamby *palaver*, in the way of dueling. Members carry pistols into the House probably to shoot any rats or mice that might nibble around their desks. But when if those pistols fall upon the floor they might frighten all the rats with four legs or two, away. They talk saltpetre and lead, hence the weight of their remarks, and the order of their patriotism, but they cannot get up a duel, for their landlords would be after them for their bills for board, washing and whisky punches. If bread and butter depend upon Congress, the new clerk of the weather snaps his fingers at both Houses, the President, the mail steamship, the Brown raid, the Union and its dissolution, and deals out just the kind of wrath he chooses North and South, and even if the South should be wrenched from the sparkling gems composing the diadem of our national glory, it would have to be content with the same sun that shines at the North and depend almost entirely upon the North for the water to fill up the Mississippi river that they justly feel so proud of. I am sure it would bother them to prevent all ingress from the North by this noble stream. That is one link binding the Union together, that it will be hard to break; and if it does break it will be sure to hurt them more at the South, than those in the North, and then grow together again.

FROM EUROPE.
We have late news. It is thought that there may be no European Congress after all—time will show. They appear to be rapidly drifting upon something no one can yet tell what, until the result itself shows.

The general news of the country is unimportant. The winter throughout the East has been unusually mild and we begin to hope it will yet so continue, that we may compare notes favorably with Californians about weather, politics, finance, &c.

The rush to your State has somewhat subsided since the rumors of the sale of the old line to Vanderbilt, as they are afraid that they may be lured there, and then find the fare suddenly run up to the old prices. What folly California manifested in not carrying forward the enterprise commenced by Capt. Randall. The State would have been with millions more to day than it is, had they assisted him in his noble work. I fear they will still more sadly repeat their inaction in that great work, but more anon. I have much to say in my next, so look out for a long letter, or a short one. Yours as ever. B.

SCHREIBER'S PULU DEPOT.

THE DEMAND for this article of BEDDING is increasing more than ten fold every year. The more it is used, the better it is liked.

FOR CHEAPNESS AND DURABILITY

It Has No Equal.

In consequence of the increased demand, I have made arrangements to have a constant supply direct from the Islands. I am also receiving by every Clipper invoice a

CORDED HAIR, BED-LACE, N. O. MOSS, SOFA-SPRINGS, CORN HUSKS, MATTRESS-SPRINGS, TWINE, ETC., ETC.

And Upholsters' Needles, assorted sizes. Dealers in Furniture and Bedding, wanting anything in my line, are respectfully invited to give me a call.

Hotels and Families commencing Housekeeping, supplied at very reasonable rates.

M. B.—All orders from the country promptly attended to. Pulu Warehouse, 104 Battery street, SAN FRANCISCO. JACOB SCHREIBER.

IT IS UNIVERSALLY ADMITTED THAT NEWELL'S COUGH SYRUP IS EQUAL TO ITS ADVERTISED MERITS.

WANTED, BY AN AMERICAN FARMER, WHO UNDERSTANDS Stock-raising and dairy business, a SITUATION to take charge of a large Ranch; or would be willing to take a home-dairy on shares, in a locality suitable for business. CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, FEBRUARY 22, 1860.

NUMBER 3.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 139 Washington street (op stairs), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$6 a year in advance.
Advertisements and Subscriptions must be paid for in advance.

CALIFORNIA NOTES.

BY ALEX. S. TAYLOR.

THE INDIANOLGY OF CALIFORNIA.

CONVERSING with an old Indian of the Mission of Carmelo a short time ago, he gave us the following account of the Indians of Monterey and vicinity. This information agrees with that of others of the most aged Indians and several old native Californians brought up in this county, to whom I have inquired on the subject.

The Salinas, Sakbones, Chalones, Kallendarukas, the Poytoquis, the Mutunes, the Thamiens, and many other clans and affixes, all speaking different dialects of the Runsenes language of Monterey, roamed through the valleys and mountains of the Carmelo, Salinas, Pajaro, San Juan, Gilroy, Santa Cruz, Santa Clara and up to San Francisco, which were all pretty thickly populated. The Indians inhabiting this stretch of country, of some 170 miles long by 80 miles breadth, were enabled more or less to converse with each other; as though the dialects were infinitesimal and puzzling, their vocal communications were intelligible enough when brought together in the different Missions. Those of San Miguel and San Antonio spoke another language from those further North or South, but it is not known how far East the language extends. The Indians are still numerous to the East, on the lakes and rivers from the Mariposa river to the Tejon Pass and in the surrounding unexplored mountains, and which by the by offers one of the most interesting fields of inquiry in the Philology and Ethnology of Utah and California. They had a kind of worship of the Sun and Moon, and entertained a faint belief in a God who lived among the stars.

From the records of the old padres, it appears that the Indian name of the site of San Luis Obispo Mission was, Tixilini; of that of San Diego, Nypagudy; of San Luis Rey, Icayme; of San Juan Capistrano, Quanis Savit; of San Gabriel, Tobiscanga; of Santa Clara, Thamiens; of Soledad, Sakbones; of San Carlos Carmelo, Salinas; of the town of Stockton, Yachicunmes or Yachebunmes. These names were likely those of the most thickly populated rancherias in the vicinity of each place.

The old Indian above mentioned is about 60 years old, and was baptized when a child, by Padre Juan Amoros, at Carmelo. He says that the Indians who came from the Santa Cruz country to Carmelo when he was a boy, used to talk to his parents and the old people, about the remains of old buildings thereaway constructed by "Gente Antiqua," about whom they nor the Indians of Monterey knew nothing whatever. This notion however may have been suggested to the old man by the late excavations on the so called ruins of Santa Cruz, but such as it is, it is offered to the believers in the "Casas Grandes" question of our neighbors. Probably some tradition assuming a different form, might by diligence be extracted from the oldest remaining Indians, which would throw light on this curious matter. They are only a few leagues from the sea shore.

[Note. Since this was written, it seemed to us, the best way to account for these so called ruins is on the hypothesis of a series of extinct Gayas or Infirmitas. Some of the pillars or columns are hollow, others solid, and contain remains of moluscous animals.]

The entire Indian population of California, Lower and Upper; of the Western division of Utah Territory and New Mexico, and of the Eastern slopes of Oregon (exclusive of the range of the half-civilized Moquis, the Pimos, and other similar tribes), appear to have been, from their habits of life, nothing other than the dismembered fragments of a former great Indian nation, crazed by famine of droughts and grasshoppers, or some great eruptive, volcanic change of the earth's surface, or demoralized and degraded by some ancient, intense political convulsion, the links of whose past history exist only in rotting fragments impossible of consecutive adherence, even for the purposes of speculation—the analogous of many burnt-out nations of Asia. The following general habits prevail among them: They live on roots, grass-seeds, acorns, pine-nuts, and the puts of many other fruit-bearing trees—on grasshoppers, lizards, snakes, and similar animals—at intervals when near the sea, on shell-fish, whales, and seals stranded on the beach, or anything got from the ocean without trouble of time or labor. Throughout the whole extent of country designated, may be found their moriar-holes made in the ledges of hard rock for the purpose of reducing seeds and nuts to powder for food. They are but little addicted to the occupations of the chase, as it ap-

pears to be esteemed too laborious; but they are frequenters of fresh-water fisheries, as it is a matter of great facility to capture the fish abounding in the interior lakes and rivers. They all live on roasted grasshoppers when these insects are abundant, though this food is known by them to be pernicious to health when persisted in. Their leading characteristics are heaviness, stupidity, fickleness and inconstancy to the last degree; indolent and easy of subjection by men of European descent. Their features of face assimilate remarkably as preserved in engravings in the works of various explorers, historians, chroniclers, and priests, describing the country included within the boundaries between the Columbia River to Cape Saint Lucas, and running eastward to the longitude of the Great Salt Lake of Utah, and south-west to the Great Colorado River. Their country of inhabitation may be called either desert plains or naked mountains, or it is open prairie, i. e., mountain, or plain grass-land, with intervals of forest, but not of tangled under-brush. They constitute with the old trappers, the race of Digger Indians, and very seldom have been found in populations or clans of more than one and two hundred souls. When enemies or strangers enter their country, an impromptu telegraph is immediately established by making fires on the hills, and by smothering the flame, causing the smoke to ascend in a thick, straight, and distinct column; such signals are visible at immense distances in the clear, thin atmosphere of these regions. No kind of accounts we have seen, make mention of their having subjected any of the inferior animals to domestication (except as the Indians do the dog in parts of California). They all use the Temescal or vapor bath; half cover themselves with rush-mats and skins of foxes, deer and rabbits, and live in wigwags made of brush and flags. Their boats for fishing and crossing lakes and rivers, or cruising along the sea-shore, are made of sticks and bullrushes or reeds and sometimes of wood. The Indians of the coast near Santa Barbara and San Buenaventura Missions also used canoes made of logs, and still do so.

It will be seen from the above, that this dismembered and scattered nation of Diggers, occupied, and still exist within the boundaries of, an immense district of our country; immediately among our very people for the last ten years. And yet very little inquiry has been made into their ethnological history by savans or observers. This lost people are actually found covering a superficial surface in our territory of more than a million of square miles of land.

Almost all the California Tribes use for smoking, a species of indigenous tobacco. We have never met with accounts, manuscript or printed, of any of the Diggers having been found by Spaniards or Americans, cultivating the ground in any manner or form, except after being influenced by European civilization, such as is supposed of the Mohaves and Yumas. In the summer they live in straw or brush wigwags, and move about from place to place, where acorns, pine-nuts, grass-seeds, fish, or shell-fish most abound. They generally live in great filthiness, and the rancherias are populous of active fleas and black lice of an extravagantly large breed. When these become too unpleasant they move off to a new site and burn the old lodges. In the rainy season they live in stronger and more compact built huts or in underground cabins, in which are stored their baskets of ground acorn-meal, grasshopper meal, grass-seeds, and the various variety of a Digger's cuisine. They may be said to be extravagantly addicted to two of the white man's vices—rum and cards; and to one of his virtues, the love of sugar. The roots of the mesquit plant, those of a small species of carliso or wild reed called panochita, and of a small variety of the Amole or Soap plant, all containing considerable saccharine matter, are used by those tribes inhabiting California, since before the arrival of the Spaniards. Some of the tribes are said to make rough earthen-ware, but we have never met with the fabric. They make baskets of various shapes to hold water, boil in, and preserve acorns and grains, but none of them, as far as is known, ever knew the use of metals. Their arms are clubs, spears of hard wood, and the bow and arrow. The bow and arrow is carried in the skin of a coyote, fox, or wolf, and suspended from the shoulder. The bow is made of different kinds of wood, which is covered on the back with break pieces of deer or elk ligaments and sinews, and with its stout string of they, give it a wonderful elasticity of propulsion. The arrows are mostly made of reeds, feathered at the handle, and generally tipped with obsidian, flint, colored quartz, or even broken glass, and set into the arrow in a most ingenious and durable manner. They adorn their heads with the feathers of the eagle, the California condor, the raven, the tufted quail, the tail-feathers of the mallard duck, the breast-joint feathers of the red-winged starling or black-bird, the neck-feathers of the red-headed woodpecker, and that of many other birds. Their dress in camp-life is simply, both with men and women, an apron-covering, made of the leaves of bullrushes, or of rabbit, deer, and other skins, hung round the loins and falling down to the knees. When in the vicinity immedi-

ately of white people, they dress in their cast-off clothes. They have games of amusement and games of chance, of grief, of love and of war, of a very rude and simple nature, in which they sit around in a circle and begin to chant in a loud and animated strain, with boisterous laughs, shouts or groans, sweating from every pore and stinking from every sweat, until they are exhausted from exertion and fatigue.

They are generally about five feet high, stout and squabby in body, with large splay feet, and generally of a curious obscure mahogany color; sometimes they are blackish brown; sometimes nearly jet black; sometimes quite light yellow. The head is very large and bulging, covered with a thick growth of long, rough, stiff black hair, almost as hard as that of the horse, and looking more like a mop than the thatching over a human cranium. The face usually is heavy, melancholy and stupid, with the nose broad, rounded and projecting curiously from the face; the cheek bones also project considerably. The mouth is wide, with thick lips, the lower one sticking out in a peaked-up form in the centre; the teeth full, regular and as white as ivory; very little beard and mostly on the upper lip; the ears spreading; the eyes are small, and slightly canted as it were, up towards the corners, and sleepy and inexpressive of thought; the iris is very broad, and of a light chocolate color, finely speckled with small brownish spots. The whole appearance of the man is rather that of stupidity and fickleness, than of ferocity or savagery. The above facial description was taken a few days ago from a boy, about 22 years old, of pure Indian parents, who was born in the Carmelo Mission, near Monterey. The figure of a California Indian as sketched by Capt. Smyth, of the British Navy, and published in Forbes' History of California; those in the Annals of San Francisco 1854, and in Dr. Pritchards' Races of Men, 1855, are excellent representations of the general features of the indigenous tribes of this State from the northern frontiers to San Diego and the Colorado. The Yumas of the latter country though are generally men of a gigantic stature, and fine appearance, as related by several travellers' accounts. The most of the Diggers have been domesticated by the Spaniards and Americans with great facility.

Some of the tribes within a hundred miles' range of the Santa Barbara coast, our old (ante 1835) pioneer friends inform us, were handsome made people, of a light yellow color and red cheeks, and were much more intelligent and sprightly than those of other parts of California.

[TO BE CONTINUED.]

Native Ornamental Trees.

On the subject of Ornamental Trees, the San Jose Reporter wisely says: The lonely fastnesses of the Sierra Nevada are as rich in botanical treasures as they are in the precious minerals. There is scarcely a canon, or ravine which does not present some new development of plant, tree, or shrub, and the time is not far distant when scientific men will begin to turn their attention in that direction.

In these lonely mountain gorges are to be found vast varieties of the rarest evergreens, and it is really surprising that some enterprising individual does not turn his attention to gathering and cultivating them. The mountain yew, the laurel, the abittim, the bay, the nutmeg, the fir, the arbutus, the manzanita, and many others, are the most beautiful evergreens in the world.

The idea that we Americans have, that all the most beautiful trees and plants must be brought from other countries, is extremely absurd. In England our common mullen plant is reared in hot-houses, and highly prized under the name of the American velvet plant.

Thus it is, people are always setting store by things of this kind simply because they are foreign. This is all nonsense. We have, right at hand, the most beautiful trees for ornament in the world, and it is to be hoped that ere long we shall find them blooming around every cottage door in the State.

A machine has been invented in Michigan to measure grain. It is called a grain meter, and is so constructed as to weigh and discharge every kind of grain with entire accuracy, without the attendance of any person, numbering, without the possibility of fault, every bushel or fraction of bushel measured by it; and this with more certainty, and with a nearer approach to precise results, than can be done by any other known method. A wheat dealer, in order to know the contents of a given bin of grain, has but to draw it off through this machine, which is self-operating night and day, and when the whole is discharged he finds the result as plainly marked on the register of the machine as the time of day on the dial of a clock.

HOP GROWING.—We are pleased to know that there will be many acres of hops planted the present year. We hear of two acres in San Jose, two or three small lots in Alameda, more in Napa and Sonoma, and also large lots in Sacramento. Thus we progress, and soon California will produce all the hops wanted for our own consumption and more to export.

SHEEP AND DOGS.—Ohio Hogs.—The statistics for 1859 for the State of Ohio, return 69,530 sheep as having been killed by dogs during the year, at a loss of \$109,861, and 36,441 as having been injured to the amount of \$37,001. Aggregate loss to the sheep-farmers from canine rapacity, \$146,743. The Buckeye Grangers count up, 2,174,298.

The Camelia Japonica a Hardy Plant.

THIS gorgeous blooming evergreen, that so many people nurse so very tenderly, and keep housed with so much care, fearing that "the winds of heaven may visit it too roughly," is a perfectly hardy plant in all this section of our State. We publish this fact after having seen the many successful experiments which have been tried with it. The Camelia at Smith's gardens, Sacramento, stand out in his garden openly and bloom well. Mr. Smith has quite a large collection in the open borders, and they bloom well. We have also seen them in various parts of this section of our State, and we urge those who love this very beautiful plant to try them. They should be planted, however, on the south-eastern exposure, to catch the morning sun; and they will do best if planted just under the edge of some fine large shrub, so that the foliage of the shrub or small tree may protect the flowers while in bloom, they being so perfect and so delicate that the sun and rains and dust would injure them; these do more injury than anything else. Care should be taken not to have them much exposed to the hot sun in our summers, as the sun burns the leaves of the Camelia; shield them from this exposure and all will be well, and these rare plants will be as bright gems in your garden parterre. The Camelia, the Magnolia, the Rhododendron, and the Azalea, will form a galaxy of rare beauties that will gladden the eye and taste of the best connoisseur of floral beauties; and each and all of these can be easily and successfully grown in all our gardens.

Guano and Bone-Dust.

THOSE of our vine-growers who have never tried Guano will do well to make trial of the same. It will be found a very good fertilizer, and a reviver of diseased or decayed vines, or those that have been checked in their growth. We are permitted to say that Messrs. Fay & Hill, on Front street, the agents of the Guano Company, will be happy to furnish parties who wish to make tests of Guano, with quantities sufficient to do so free of charge. Another excellent fertilizer can also be tried on the same terms. Bone-dust from the Sugar Refinery can be had as samples for trial from Messrs. Bond & Hale free of charge. We wish this notice could be widely extended. Great good would result from it.

Fawkes' Steam-Plow.

THIS great invention—this great mover of "terra firma"—this over-turner of the surface of the earth, is now creating considerable excitement in the Atlantic States, and the owners are very desirous that one of their plows should be exhibited in California, and put on trial at our next Annual Fair, and we sincerely trust this may be done. It would create a new era in plowing. With a Steam-plow upon our broad prairies we think our citizens who originally lived here and used the old-fashioned Mexican log plow, might be a little astonished to see a plow steaming it along at the rate of four or five miles an hour, and throwing the sod and earth up like a wave of the sea. We shall see what we shall see.

Keep on Planting Trees.

THE famous "Fernside," who so wonderfully discovered that it would "not pay" to grow apples in California, is invited to call at Hull, Knapp & Co's Oregon Warehouse and see the splendid "Yellow Newtown Pippins," just received. They are selling at only about twenty-five dollars a barrel. Wont it pay? We hope everybody all up in our mountain districts will be sure and plant apple-trees. We assert we can grow apples in such abundance here and of such a quality that we can sell them at about the same price as Eastern markets, and make money at it too, whatever Fernside may say to the contrary notwithstanding he thinks so himself, having been planting largely. So says report.

PEACH TREES.—In planting, set the young tree so, that when the earth settles, the collar or point of junction of the roots and stem shall be rather above than below the ground level. The peach cannot, like the pear, apple or quince, put out new roots above the old ones. That an excess of iron in the soil is favorable to the peach, is rendered probable by the fact that those particular localities called "peach regions" also happen to be iron regions—witness the iron upon the soil near Baltimore, Md.; that in New Jersey; that in St. Lawrence county, Ohio; that in Tennessee and Missouri. In those localities the peach rarely fails and the tree lives to a great age.

HERB TANNIN.—It is but recently, says the Maine Farmer, that we were made acquainted with the value of Sweet Fern for tanning purposes. It has proved to be better than oak or hemlock bark, and boots and shoes from leather tanned with fern, are rapidly coming into use in Maine, where the fern abounds. Another herb has been discovered in Iowa, known as the "dog fennel." It is described as a weed of disagreeable smell, which grows abundantly where farmers had rather see grass, and has been regarded as a nuisance. It is now found to abound in tannin, and sells for \$15 a ton. The leather tanned with it looks well, and is expected to wear well.

THREE towns in Massachusetts, raised the present year, 1,986 barrels of cranberries, valued at \$23,000.

Raise Carrots.

WE have so often urged upon farmers the value of root crops, that we hope they will awake to the real value of the same.

Among the many valuable and very profitable roots we may name the carrot. Every farmer that keeps milch cows and horses, should surely raise carrots. This fine root is so excellent for milch cows, it not only induces a greater quantity of milk, but much richer. And it is also very beneficial for the cow, giving her a fine glossy appearance and materially benefits her in flesh and in general health.

For horses, there can be nothing better; and all who want to see their horses improve and look well, as also to give them vigor of muscle and a lively and cheerful action, let them have carrots, at least a peck three times a week.

Carrots will pay the farmer well. Twenty to thirty tons can be raised to the acre. And the present market price is twenty-five dollars a ton and ready sale at that; this is a good income surely. The land for this crop should be well and thoroughly plowed and made fine, and planted in rows by a seed-sower. We earnestly call the attention of our farmers to this crop. We lately received some very fine samples grown on the farm of Wellard Boxzell, Esq., at Half-moon Bay, weighing eleven to ten pounds each, while many were heavier in the fields.

STING OF THE HONEY-BEE.—As there are many new dealers in the honey business, and as the sweets of the bee are not always obtained without danger of the sting—any more than roses can always be gathered without the risk of feeling the thorn—we offer an antidote for the sting of the bee. We do not say it is complete, yet it affords great relief and prevents the suffering usually attendant upon the sting. As at the present time so many new hands are at work among the bee, let all such have a raw onion handy (quite a different thing from honey), and when stung, immediately draw out the sting left in the flesh and rub the wound with a piece of the onion bruised. This will allay the smart and prevent suffering in most cases. Hard smokers and hard drinkers will suffer most, as the bee seems to owe a spite to such, by reason of the offence they receive from their breath.

FARMERS GRIEVANCES.—Many a poor and honest farmer who came to this country to better his condition, and after laboring in good faith day and night, to build up a home, finds himself "Homeless" by reason of the numerous false claims set up by pretenders who heartless and soulless stretch their claims over the fair and quiet "Homes," of those who have toiled to make them so. We are glad to see a brighter day coming and our courts taking measures to protect and confirm all just claims, whether Grant or Settler. As soon as this is done, we shall see a bright and glorious prosperity dawn over our land.

AN AGREEABLE CLIMATE.—The Northern Californian of the 8th instant says: "We lately saw some ordinary Castilian Rose-bushes that without extra care had bloomed uninterruptedly the year round. In this accommodating climate, with a little care, nearly all the summer vegetables may be produced out of season. In proof thereof we might cite our friend Leon Chervet, the 'Soyer' of Union, who from his own garden, makes such delicacies as radishes and lettuce a regular feature of his table d'hôte."

SCIENTIFIC AMERICAN AND PATENTS.—Hon. Judge Mason, of Iowa, who made himself so popular with the inventors of the country while he held the office of Commissioner of Patents, has, we learn, associated himself with Munn & Co., at the Scientific American office, New York.

We rejoice to see this distinguished gentleman in a position which he can so eminently fill and with honor to himself and others.

THE IRON INTEREST.—From recent estimates it is ascertained that there are nearly 1200 iron works in the Union, that these produce annually 850,000 tons of iron, the value of which, in an ordinary year, is fifty millions of dollars. The amount of rolled iron made in the United States is about 500,000 tons per annum. Of this about 300,000 tons is made east, and 200,000 west, of the Alleghany mountains.

MEDICAL TOPOGRAPHY AND EPIDEMICS OF CALIFORNIA.—The Report upon the Epidemics of our State, published by Thomas M. Logan, Esq., M.D., in a very neat Pamphlet of about 60 pages, with Maps and Statistical Tables, is a work which presents many very interesting and startling facts. We thank the Author for the copy sent us; we shall use it more particularly hereafter. It should be read.

LUMBER TRADE OF PORT SOUND.—During the year 1859, there was shipped from the mills of Messrs. Talbot & Co. at Teekaleet, over fifteen million feet of rough and dressed lumber, besides large quantities of laths, pickets, shingles, piles, large masts and spars; and from the Port Ludlow mills nearly seven million feet. Fifty-six vessels were employed in transporting the lumber.

Order upon the Farm.
It has been very correctly said that order or method is the secret of success in many of the mercantile class. The above being true, the rule is equally applicable to the farming classes. What we mean by order is "a place for everything and everything in its place." By everything, we mean all that a farmer uses in his business. A farmer should see that every rail and board about his premises is in its proper place; that his fences are in condition to prevent the entrance of his own or other people's cattle without his consent. Every one who neglects this neglects his own peace of mind, as well as subjects himself to losses that must be repaired by means that could have been otherwise profitably employed.

I have known the cultivators of the soil to succeed well in maturing crops, but by neglecting to keep their fences in order, lose the most valuable part of their labor. But I am glad to state that such cases are not frequent in these times. In the next place, the farmer should not allow his cattle that are used in the farm-work to be scattered indiscriminately over his fields, as much time is lost in getting them to their places, and as "time is money," it should be economized as much as possible. He should be careful to have his harness all in using trim, his working-cattle bear his harness-house, then but a few minutes are required to prepare for his day's plowing and hauling. His implements of every description should be kept near his dwelling, that no time be lost in repairing those things that are out of order. Many persons will say that they cannot find time to do all these things. I know you can, because whenever you see a rail missing from your fence, go and put it back immediately, for then is the right time. In case your rail should be destroyed, appropriate the first idle one you come to. If you have no idle ones, lose no time in procuring some, for if you do not, nine chances in ten you lose more by neglect than if you stop the plow long enough to make them. Whenever you are done using a plow, hoe, rake, hay-fork, thrasher, reaper, or anything else, take it immediately to the barn; make this an invariable rule, and let all your men know it. The result will be that when anything is wanted, the person sent for it will know where to find it. I would have every farmer have some of the most necessary tools used in making and repairing his implements of husbandry, for I know every one who is able to own a farm, is able to have such things. The rainy season, in which much could be done in the way of making and repairing, is always lost to most farmers because they have not the implements of manufacture. During such times he might put all his farming utensils in excellent working order; whereas, if it is neglected until fair weather, he has scarcely had it done before another rainy season overtakes him. Thus, all fair weather in which he might have plowed, passed in repairing. To conclude: farmers, preserve order in everything, and peace, prosperity, and health will accompany you through life.—[Tennessee Farmer.]

Best Time to Cut Timber for Fencing.
Late Autumn is the best time for felling timber for almost any purpose, and it is particularly so when the timber is to be worked up into rails, or stakes, or posts for fencing. At that season of the year the wood has arrived at its complete maturity and there is less sap and albumen in timber than there is at any other season of the year, which albumen, when exposed to the influence of the weather, hastens the decay of timber. If timber be cut and split out in the latter part of Autumn, the seasoning process is much more gradual and perfect because the grain of the timber contracts more equally and uniformly, rendering the timber firmer and less porous, and less cracked and checked, than when it is cut at any other season of the year. Besides this, timber that is cut in late Autumn, and split out, or sawed out before Spring, will not "powder-post," nor injure by the worms working in it, nor be injured by dry-rot, as is the case with timber, many times, which has been cut at some other season of the year. Fence-posts and stakes, particularly, no matter what the kind of timber may be, when felled and split out in late Autumn, will out-last other posts and stakes of the same kind of timber, which may be cut at a different season of the year, by several years, according to the time it may be cut. Reason teaches us that this is so, and the experiences of the most successful experimenters in timber, furnish the most indubitable testimony to substantiate the fact.

The treatment which timber receives, immediately after it is felled, affects its durability, and also its firmness and tenacity to a much greater degree than many are wont to suppose. For this reason, many farmers, in experimenting on the durability of timber, have failed almost entirely to allow this consideration to have any influence at all. If timber, which is intended for rails, stakes, and posts, be felled in late Autumn, and allowed to remain in the log for six or eight months, or half that length of time, with some kinds of timber, its durability will be more or less affected, according to the kind of timber, and no after-treatment will make it as durable as it would have been had it been split out immediately and placed in a favorable situation for seasoning. Timber for posts or stakes, ought always to be split out and seasoned nearly or quite one year before they are set in the ground. A post, or stake, which is set in the ground when it is green, will not last half as many years, as a general rule, as it would have lasted if it had been seasoned well before being placed in the ground.—[Todd's Report in N. Y. State Trans.]

PRESERVING GRAIN.—The following method of preserving grain for many years, completely sheltering it from weevil, mildew, wet, etc., is furnished in a letter from M. de Semchoff, a Russian landholder, who addressed it to the Academy of Sciences in Paris, and was there read at a late meeting of that body. This is the method adopted for preserving grain in Russia, which we earnestly recommend to our California agriculturists: The pits are dug in a dry soil, and instead of masonry, the sides are hardened by a long continued exposure to a woodfire. Before the corn is introduced, the air in the pits is purified by burning some straw in it, after which the grain is thrown in, packed close and the pits tightly inclosed. Corn has been preserved in such pits for forty years. Some of our California farmers who raise large crops of grain should try this method of preserving it during years when there is a great yield, in order to lay up a store for succeeding years, when there may be inferior yields.

Boiling Cattle.
At a recent meeting of the "Harvest Club," at Springfield, Mass., this subject was presented for discussion. From the report of the Springfield Republican, we extract the following: *Soiling*, or the summer feeding of cattle, was discussed. It was believed to be the most economical way, on costly level lands, to feed cattle with green food through the summer in stalls. In this way they can be fed more regularly, the manure is collected and saved, and they will give more milk, except for about two weeks after the twentieth of May, when feed is freshest. A cow can be kept on an acre of ground an entire year by this process. If this practice were generally adopted it would save much division fencing. Corn, clover, barley, millet, and rye, are the principal changes of food. Fall rye is the earliest greens procurable for this purpose. Barley stands frost better than some of the others. Millet and corn are better if wilted before feeding. Two cows have been kept well in this way, on one and a half rods of clover a day. Corn will not produce as much milk as clover, but it will be richer. Pasturing is, of course, the most natural way, and on this account soiling, except to a limited extent, is not recommended for young stock. Lands worth only ten dollars an acre had better be pastured.

We are surprised that stock-raisers who are now complaining in many parts of our State of their cattle dying for want of food should submit to such losses. Would it not be much better to soil their cattle in the dry season, and save hay for the winter season. This system has so often proved advantageous in other States, we wonder that stock-raisers should any longer delay it here.

Grasses to Cultivate.
A writer in the Oregon Farmer, in reply to an inquiry as to the best grass, and the best time to sow it, says: I have tried the "little bluegrass," and the "big bluegrass," and find each good for both winter and summer. But if you want good grass, put your land in good order, and then you will have grass. If you raise wheat and oats on your land till it will raise neither, and then put it in grass, you need not expect to obtain a crop. Plow your ground and put it in good order, and you cannot fail.

I will give you my experience, and if you profit by it you are welcome to the information. In the spring I plow my ground, and during the summer plow it again; and in the fall, when the first rain comes on, I sow my seed and have good grass the next year. Like every other crop, when I want a good one I give it a chance to grow by putting the ground in good order. If you want your pasture set in grass, and do not wish to plow it, you can do so by sowing the little bluegrass. It will set in two years if you will keep the stock off till the seeds get ripe. If your land has fern on it, plow it well in the summer and sow your seed in the fall. In two years you will have good pasture in the place of fern. I have found that for pasture alone, the little bluegrass is best; for both hay and pasture, the large bluegrass does best, while for hay only, timothy is far preferable.

If you think these hints worth heeding, give them a fair trial, and you will prove the matter.

To Make Good Cider.
A correspondent of the Kentucky Farmer, writing over the signature of "An Old Cider Maker," says: Select clean sound apples, so much as possible of one kind, and keep them until October or November. Have six hogheads made with one end open and longer than the other. Put them on a platform, so that the cider which will run from them will run into the barrel. Put in a hoghead one foot deep of clean straw well packed down, on which put 18 inches of clean coarse river sand, raised some around the sides of the hoghead. Fill the hoghead with new made cider, and allow it to filter slowly from a spigot hole one inch above the crows of the hogheads. Let it run slowly through a long pointed funnel bag, hung so as to drop the cider into the bung-hole of a clean barrel, which has been well fumigated with sulphur fumes. Bung the full barrels close, and put it in a cool place, and this cider will remain sweet and good. It will be pleasant, wholesome, and nutritious, and will not intoxicate.

CALIFORNIA HERRING.—The Humboldt Times, of the 4th, says: We noticed a small boat lying at the City wharf yesterday, with about ten barrels of fresh herring in it. They were caught in a weir, on the opposite side of the Bay, from Eureka, belonging to John Hall. It is strange to us that where such quantities of these fish can be taken, there are no persons prepared to smoke or pickle them. A gentleman of this place, by way of experiment, smoked some few barrels of herring about one month ago. We have tried some of them, and can recommend them as being second to none we have ever tried. If what he has put up should find a market in San Francisco, no doubt the business will be carried on extensively on this Bay, next season. In such quantities do they enter our Bay that several hundred barrels could be taken here in one season.

CHEESE.—The Oregon Farmer states that M. R. Hathaway has made since August 10th, 1859, on his farm near Lake River, W. T., 3500 pounds of cheese from the milk of fifteen cows. Taking into consideration that these cows had no other food than the wild grass range on his land, that paper thinks this gives a fair profit on the capital invested and labor employed in its production; and adds, that the farmers of the far greater portions of Oregon and Washington could realize a handsome income from their (in many instances) neglected cows, by the making of good cheese, which has ever borne a good price and met a ready sale.

IMPROVED PEACH TREES.—A correspondent of the Ohio Farmer gives the following as an improved plan for growing peach trees, from the reasons stated: "Procure your trees grafted upon the plum stock. The tree partakes of the plum, being hardy, and will never winter-kill, and putting out late in the spring, will never be injured by the frost, and is a certain preventive against the workings of the peach grub, while the natural lifetime of the tree is beyond that of our own; so you may depend upon peaches every year, and for a long period of time, without the destructive and discouraging influences attending the growth of the common peach."

OIL FOR MACHINES.—A careful experiment on one of the principal railroads, in regard to the comparative value of whale and metallic oils, resulted in showing a great difference in favor of whale oil. In running a single train one hundred and three days, one-half of the journals were lubricated with whale oil, consuming 284 gallons, costing 60 cents a gallon; the other half with metallic oil, consuming 27 gallons, costing \$1.34.

San Joaquin Agricultural Society.
At an adjourned meeting of the citizens of San Joaquin county held the 4th inst., at the City Hall, for the further consideration of organizing a District Agricultural Society, the report and recommendations of a Committee chosen at a former meeting to submit a plan for the future government of the Society, were heard. Col. H. T. Huggins occupied the chair, George H. Sanderson, Secretary. The Committee submitted the following report which, on motion, was laid on the table for consideration:

Mr. President: Your committee appointed to draft a plan by which the future movements of the contemplated District Agricultural Society may be conducted and governed, respectfully submit the following:

In consequence of the recent action taken by the State Agricultural Society at Sacramento, making that city the future location, thus placing this city out of the pale of its influence and patronage, we recommend that immediate and energetic action be taken to form a District Agricultural Society, to be located in Stockton. Your committee confidently believe that San Joaquin county, in all her various resources, and particularly in the agricultural productions from the 80,000 acres of land under cultivation, producing annually one million and a half of bushels of small grains, and 100,000 head of domestic animals, has sufficient material to make an exhibition equal to any former Agricultural Fair in this State. But, to make this contemplated Fair what it can and should be, far superior to any former exhibition on the Pacific coast, we earnestly solicit the co-operation of the following counties, viz:—Calaveras, Tuolumne, Stanislaus, Mariposa, Merced, Tulare and Contra Costa.

The following form of a charter is recommended: The people of the State of California, represented in Senate and Assembly, do enact as follows:

SECTION 1. There is hereby established an incorporated society, to be known and designated by the name of the San Joaquin Valley Agricultural Society, and by that name and style, shall have perpetual succession, and shall have power to contract and be contracted with, to sue and be sued, and shall have authority to have and use a common seal, to make, ordain and establish, and put in execution such by-laws and ordinances, rules and regulations as shall be necessary for the good government of said Society and the prudent and efficient management of its affairs. Provided, that said laws, ordinances, rules and regulations shall not be contrary to any provisions of this charter, nor the laws and Constitution of this State, or of the United States.

The following Constitution is recommended:

ARTICLE 1. This association shall be known, and designated by the name and style of—
ARTICLE 2. The objects of this Society are the fostering, encouraging and aiding in developing Agriculture, Horticulture, Domestic Manufactures, Mechanics, and Household Economy, and General Domestic Industry, Stock Raising, Improvement of Domestic Animals, Trial of Speed of Horses, and for the dissemination of useful information on these subjects.

ARTICLE 3. The officers of this Society shall be a President; two Vice-Presidents from each county represented in this Society; one Treasurer; one Recording Secretary; one Corresponding Secretary. The said officers shall constitute a Board of Managers, for the government of this Society, subject to such regulations and by-laws as may be hereafter formed.

Your Committee would recommend a Premium Fund to be collected; a Standing Committee to be appointed by the Chair, or otherwise, whose duty it shall be to solicit this city and county to appropriate \$500 or \$1000 each, to be paid over to the Board of Managers for Awards and Premiums; also to solicit donations from the respective counties that may co-operate in this District Agricultural Fair.

E. S. HOLDEN,
P. E. CONNOR,
E. B. BATEMAN,
T. J. KEYES,
A. G. STAKES.

The meeting adjourned until Saturday evening, 11th inst.

TEA AND COFFEE.—Taking into account the habits of our people, says a late article in Hall's "Journal of Health," tea and coffee, for supper and breakfast, add to human health and life. It should be added, however, that no more than a single cup should be taken at either meal, if unalloyed good is expected to result, and that it be never increased in strength, frequency or quantity. If these drinks were stimulants, and were taken thus in moderation and with uniformity, they would, in time, become inert, or the system would become so habituated to their employment, as to remain in the same relative position to them as if they never had been used; and consequently, as to themselves, they had better never had been used, as they are liable to abuse. But science and fact unite in declaring them nutritious, as well as stimulant; hence, they will do a new good to the system every day, to the end of life. Just as bread and fruits are daily abused by multitudes, and dyspepsia and cholera morbus result; yet we ought not to forego their employment on that account, nor should we forego the use of tea and coffee because their inordinate use gives neuralgia and other ailments.

PURIFICATION OF FOUL WATER.—Mr. Thomas Spencer, the discoverer of electricity has made another important discovery. He ascertained that the magnetic oxide of iron, which abounds in rocky strata, and in sands, attracts oxygen, whether it exists in water or in air, and polarizes it—that the polarized oxygen is the salubrious ozone—that the ozone so formed, destroys all discoloring and polluting organic solutions in water, and converts them into the sparkling carbonic acid of the healthful spring. Moreover, that the apparently mechanical process of filtration, is itself magnetic, and it is known that all substances are constitutionally more or less subject to magnetic influence; thus all extraneous matters are suspended in water may be rapidly attracted in filtration, and separated; and this may be done whether on a great scale or a small, either by the magnetic oxide or black sand of iron, by a mixture of this with ordinary sand; and Mr. Spencer has discovered a solid porous combination of carbon with magnetic oxide, prepared from Cumberland hematite, which is said to have very great filtering power.

CURING BEEF.—By most of the modes now in use, the beef becomes too much impregnated with salt, and is not, as a consequence, so fine for eating. By the following process this difficulty is prevented, and the beef will keep till the following summer: To eight gallons of water add two pounds of brown sugar, one quart of molasses, four ounces of saltpetre, and fine salt till it will float an egg. This is enough for two common quarters of beef. It has been repeatedly tried and found very fine. A famous beef-eater says it is the only good way. [Cultivator.]

CORN-CAKE.—The Maine Farmer says, a most delicious accompaniment to the cup of coffee for breakfast, is a corn-cake made of the following ingredients: One cup of meal, one egg, one cup of milk, half-a-cup of flour, two tablespoonfuls of sugar, one tea-spoonful of soda, two of cream-tartar.

The Two.
UNDER the above caption, the San Andres Independent of the 11th, gets off the following:

A few weeks since we had the temerity to suggest a name which, in our opinion had a fair chance for the nomination at Charleston. It was Joseph Lane; a man of military antecedents, who has wiped the blood of hecatombs of Greasers from his smoking sword, and hence is loved by the fire-eaters, who has a passion for blood as well as fire; who has a touch of "science," with a temper as quick as Cassius or gun-cotton, and can floor you with his man with the dexterity of a Heenan or a Hyer, hence he is a favorite with New York and its accomplished mayor; without much of that miserable stuff, education, hence strong with the common people; once a flat-boatman on the Ohio, a native of South Carolina, an adopted son of Indiana, hence strong in the South and West; a resident of Oregon, hence a favorite with the two Pacific States; a General, a Governor, a Senator, he is covered with honors already, and for all these reasons we thought old "Marion" might stand a first-rate chance to go through the great approaching conclave at Charleston "kyting." Our opinion was shortly afterward fortified by at least six Democratic journals, who meanly stole our thunder without credit, by publishing a biographical sketch, or two to three good puffs of our man. May the vultures tear their livers (gently and figuratively) for the Prometheus theft. Alas, for the uncertainty of all human calculation! Old "Marion" has been thrown off by the Hoosiers, and, we fear, out-played in California. That lets us out, and the six above named. The fact is, parties nowadays may be likened to "the Cretan labyrinth of old;" whoever would get through safely must keep his hand constantly on the wire. There must be no slumbering; no yielding to Siren voices. The house of Israel is in rebellion; Jonathan is meditating the sacrifice of old Saul for young David. Old "Marion," who ran up the ladder of glory as nimbly as a cat, in the strength of his manhood, now, in his old age has encountered a weasel on the slippery topmost rungs.

That's Latham; young David, who beat old father Saul and ruled Israel for a night and a day; (poor old Saul, he's fought his last battle with the Philistines—let's drop a tear for him); a man of rank education and Demosthenian eloquence; (so his friends say); charitable, flexible as crinoline,—"all things to all men;" (so says the National in one of its characteristic panegyrics); great in cunning; (so the world says); and invincible in luck; (that we know). There's a perfect character! men worship him, and the gods, eschewing jealousy, smile upon him; so young! yet Congressman, Collector at the California Pireus, Governor and U. S. Senator. Let the soft west-winds gently daily with his locks, and sweetest odor from rosebuds greet his olfactory; for he is a very Pericles of the hesperidian Democracy. Has he not procured a decree of banishment against his illustrious rival? Who then shall resist his striding ambition, when Thucydides pines in the arcanian groves of Alameda?

Well, this our young David-Pericles is said to have his eye upon the Presidency; and it has been surmised by a Democratic newspaper that he is going to Charleston to play an in-and-out, an off-and-on game, with Douglas for the nomination. It is true no biography has yet been written; but what of that? Horn-blowing is not the way to win; and besides, the story of all great men is nearly the same. They never stop at the half-way house; they all cross the Rubicon. They all have their enemies to beat and their allies to corner away on obscure shelves.—Read Plutarch. We are discouraged at the apparent destiny of our whilom Presidential hobby, brave, honest "Old Marion," and shall on that account, perhaps never more venture a political prophecy, or even a poor suggestion; but we cannot dismiss the subject without submitting it to the Democracy, whether a youth at the tender age of thirty-five, having cleaned out all the wire-pullers and Machiavelli's of California, may not become President soon, if not sooner?

Prof. Hardinge's Gold Quartz Process.

The Scientific Artisan says: We are in receipt of quite a lengthy article from Prof. Fleury, whose valuable communications will be remembered by the readers of our first volume, and who now resides in New York, concerning the complete success of quartz solution. We only give the chief points as reported by Prof. Fleury, and which have come under his immediate observation. "Being honored with an invitation to visit the chemical works of Prof. Benj. Hardinge, at the corner of Broadway and One Hundred and Fourth street, New York, near his residence, styled Wood-lawn, I, with many others, saw him dissolve one ton of quartz rocks in about one thousand gallons of water.

"This digester holds over three thousand gallons, and is capable of discharging six thousand gallons of liquid fluid every day. The liquid quartz which I saw dissolved, is chemically pure, and in perfect solution forming a thick pellicle when heated and exposed to the air, although it may be preserved any length of time in close reservoirs in the same liquid state. Professor Hardinge has been for many years laboring to perfect his vast purposes, and I hereby stake my reputation as a man claiming a sufficient share of scientific knowledge to judge of the fact, that he is now ready to build a city of the most durable as well as the most beautiful stone of which it is possible for the human mind to conceive. Walls of various conglomerates, and these walls lined with colored porcelain (painted in fresco), entablatures, etc. Roofs as white as snow, and fire-proof, molded statuary, and all kinds of molded marble of the richest and hardest kind, with their beautiful siliceous base. His great efforts in overcoming the great difficulties in separating gold and silver from quartzose pyrites, and his success in this department will soon be known to the commercial world.

"His method of treating coal, by first dissolving twenty tons at a time into petroleum, deodorizing and purifying the same, will also shortly be made known, and his long years of untiring industry will be appreciated. He has struggled through all sorts of difficulties, many of them of the most trying character. They will constitute, when laid before the public, interesting and startling records in the pages of the history of inventors."

MICE AS BEASTS OF BURDEN.—Very many of our readers have doubtless witnessed the truly wonderful performances of the trained canary birds, which have been exhibited about the country, but perhaps they are not aware, that the little mice which we have been accustomed to consider only as mischievous imps, are likely to come into active demand as a motive power for factories, and other similar purposes. Should such be the case, we shall feel it our duty to devote more space than we hitherto have done, to these neglected "animals of the farm." These grave reflections have been suggested by the statement in a foreign exchange, that "An ingenious Scotchman" has trained a couple of mice to turn a small reel for twisting twine. The laborers run about ten miles a day, and reel from 108 to 120 threads. A half-penny's worth of oat meal lasts a mouse five weeks, and the clear annual profit of each animal per year is computed at about six shillings."

Query, What would be the net profit per annum of a stable full of such stock?

Two fat Leicester sheep were recently exhibited at Faneuil Hall Market, Boston, weighing respectively 392 and 340 pounds.

NURSERY BUSINESS.

PREMIUM!! PREMIUM!! PREMIUM!!

French-Garden Vineyard!

SAN JOSE.

THE ATTENTION OF GRAPE CULTIVATORS AND AMATEURS is called to my fine collection of

GRAPE-VINES!!

which has been awarded the

FIRST PREMIUM AT THE STATE AGRICULTURAL FAIR AT SACRAMENTO; ALSO AT SAN FRANCISCO AND SAN JOSE.

Said collection comprises the

Best Varieties of Eating and Wine-Making Grapes;

and I have a large stock of

CUTTINGS AND ROOTED VINES,

Which I will sell at HALF OF THE PRICE at which I have sold them last year. Apply directly to me, or to my Agent in San Francisco, Mr. DELABIGNE, 29 Clay street.

I have also for sale a fine assortment of

FRUIT TREES!!

One, two, and three years old.

Lombardy and Silver Poplar, Elm, and other Ornamental Trees, all at greatly reduced prices.

I also offer for sale my

GARDEN,

And improvements thereon, at advantageous conditions for the purchaser. It contains eleven acres of land, covered with Trees, Grape-Vines of the best varieties, and in full bearing state.

Catalogues and descriptions will be sent on demand.

A. DELMAS.
14-3m

HALF MILE FROM CITY, TELEGRAPH MISSION ROAD.

Fruit and Ornamental Trees,

GRAPE-VINES,

Flowering Shrubs, Gooseberries, Currants,

RASPBERRIES, &c.

LAWTON AND DORCHESTER BLACKBERRIES.

Of Genuine and Superior Plants.

ROSES,

CLIMBING PLANTS, DAHLIAS, &c.

NURSERYMEN'S STOCKS, GRAFTS, &c.

We desire to offer to our friends and patrons a stock of

TREES, PLANTS,

VINES, SHRUBS,

AND

NURSERY STOCK,

THE PRESENT SEASON, UNRIVALED.

As Experienced Nurserymen our desire is to offer a stock that shall be reliable, producing fruits true to name and variety, and always embracing the newer and better sorts. It is not so much our aim to present numerous varieties as it is to offer valuable ones, and we shall always be prepared to serve our patrons with every new variety, either from Europe or our own country, as soon as fully proved to be a valuable kind. Our stock of nursery articles need only to be seen to be fully appreciated. We are confident we can

Equal Any Nursery in Stock or Growth,

Our efforts being to show our friends

Well-Grown Trees and Plants.

We invite all purchasers of Trees, Plants, &c., to call and see us, or our

AGENT, MR. JAMES L. BURTIS,

116 Washington street, San Francisco.

Where we have opened a Store, that our friends and patrons can

EXAMINE OUR STOCK,

As we purpose offering them at

ONE-HALF LAST YEAR'S PRICES.

Trees and Stock packed with great care, to insure safety.

DELIVERED AT ALVISO FREE OF CHARGE.

It would be advantageous to purchasers to call and make selections early, thus securing Choice Trees. Catalogues found at Farmer Office on application, gratis.

SAN JOSE NURSERY.

FRUIT TREES!

AND

Ornamental Trees and Shrubs,

15,000 ROSES.

ALSO,

A Fine Assortment of Greenhouse Plants.

GRAPE VINES!

Best foreign varieties, and also California, in cuttings or rooted plants, one or two years old, for sale to suit purchasers. Trade supplied at a liberal discount. Having the largest assortment of FRUIT and ORNAMENTAL TREES, SHRUBS, PLANTS, ROSES, &c., that can be found in any nursery in California, I offer them for sale at

EXTREMELY LOW PRICES.

For the season of 1859-60, being obliged to reduce my nursery to the half of its extent, having it planted in orchard.

MY COLLECTION OF ROSES TOOK THE FIRST PREMIUM AT THE STATE FAIR HELD AT SAN JOSE.

I offer an assortment of the best varieties of Apples, Apricots, Peaches, Plums, Almonds, Cherry, Mulberry, Gooseberry, and Currant in quantity. Flowering and Climbing Shrubs. The best assortment of Evergreens, cultivated in pots so they can be transplanted with safety.

All orders promptly attended to, the trees carefully packed up in bundles or boxes, according to the distance they have to go, and delivered free of charge on the steamer at Alviso. Apply to

Or to my Agents, Mr. Delabigne, 29 Clay street, San Francisco; Mr. J. Pinchard, Sonoma, California. 14-3m

HOW STRANGE.

BY FLORENCE PERRY.

How strange it will be, love—how strange, when we two
Shall be what all lovers become:
You, frigid and faithless—I cold and untrue—
You thoughtless of me, and I careless of you—
Our pet names grow rusty with nothing to do—
Love's bright web unraveled, and rent, and worn through,
And life's loom left empty—ah, hum!
Ah, me,
How strange it will be!

How strange it will be, when the witchery goes,
Which makes me seem lovely to-day;
When your thought of me loses its tender rose—
When every day serves some new fault to disclose—
When you find I've cold eyes, and an every-day nose,
And wonder you could for a moment suppose
I was out of the common-place way—
Ah, me,
How strange it will be!

How strange it will be, love—how strange, when we meet
With just a chill touch of the hand!
When my pulses no longer delightedly beat
At the thought of your coming, the sound of your feet—
When I watch not your going, far down the long street—
When your dear loving voice, now so thrillingly sweet,
Grows harsh, reproach or command—
Ah, me,
How strange it will be!

How strange it will be, when we willingly stay
Divided the weary day through!
On, getting remotely apart as we may,
Sit chilly and silent, with nothing to say,
Or coolly converse on the news of the day
In a wearisome, old-married-folk sort of way!
I shrink from the picture—don't you?
Ah, me,
How strange it will be!

Dear love, if our hearts do grow tepid and old,
As so many others have done—
If we let our love perish with hunger and cold—
If we dim all life's diamonds and tarnish its gold—
If we choose to live wretched and die unconsoling,
'Twill be strange of all things that ever were told
As happening under the sun!
Ah, me!
How strange it will be!

Affectation.

AFFECTATION always imparts an air of insincerity to the whole character; so that we have difficulty in forming any estimate of those by whom it is exhibited. We can scarcely believe one possessed of courage who is continually putting on the appearance of bravery, and recounting his exploits to all whom he meets. Hence, those who affect most are least understood; not because they are at all sparing in manifesting traits, but because the idea is conceived that they are not real—that their true characteristics are hidden.

There are some persons with whom affectation becomes a second nature. They display false colors until they forget that they have any of their own. The natural tones of the voice are lost; the natural movements of the body are seen no more. All about the person, the beaming of the eye, the curl of the lip, the soft repose or the lively animation of the features, are such as once required an effort to assume, but are assumed no longer. The feathers of the peacock in which the day has clothed herself have grown, and become, as it were, his native plumage.

Affectation, as the term is commonly employed, is very different from the hypocrisy in which the mean man disguises his villainy. The former is merely the result of vanity, and is often seen in persons who are not bad. The young lady affects an interest in the conversation of her guests, which she is far from feeling, and the deception which she practices is not only innocent, but commendable. In this way we are all obliged to affect more or less, for the sake of politeness. Were there no affectation, this world of ours would be a disagreeable place of abode. But there is a wide difference between the art of making our friends pleased with us and with themselves, and the art of appearing to others just what we are conscious of not being. The first is the use of affectation; the last its abuse.—[Temp. Crusader.]

MRS. ANNIE L. AVERY,
HOMEOPATHIC PHYSICIAN,
Residence, 249 Pacific Street (two doors from Stockton Street),
SAN FRANCISCO.

Special attention paid to diseases of women and children.

MRS. M. C. SIKES, M. D.
ELECTRICIAN AND HYDROPATHIST.
WOULD offer her services to the community in the practice of her profession.

To those suffering from nervous, inflammatory and chronic diseases, she can confidently commend our method of treatment, as being safe, natural and effective.
Discarding the use of drugs or poisons, she relies upon nature's remedies, and especially recommends her own manner of applying electricity to nervous and inflammatory diseases. As a therapeutic agent, it is invaluable, when rightly understood and applied. Electricians have succeeded in performing cures, by even a random and purely experimental use of it, because electricity being the most potent and all-pervading element, which we can bring into our service, any reasonable use of it cannot fail to prove beneficial to life and health. Therefore whenever a cure or improvement is possible, we offer our services, with a knowledge, based upon scientific principles.

Particular attention will be given to Obstetrics and the Diseases of Women and Children.
Residence—South-east corner of Mason and Pacific streets, San Francisco.

MRS. LIZZIE WILEY WARREN, M. D.,
Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of doctoring the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves, she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and known relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and wise, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.
In case of absence, calls will be attended by Mrs. M. C. SIKES, M. D., whose card appears in another column.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

HOW many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$2 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the NEW YEAR.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Hamilton, Ohio, do 4 and 6 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question,

The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—

EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;

WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES AND SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES AND RAKES.

SKELETON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horses.

EXTRA TRUCKS AND EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of us.

THOS. OGG SHAW,
33 SACRAMENTO STREET,
San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

NURSERY CIRCULAR.

FOREIGN AND NATIVE GRAPES,
AND GENERAL NURSERY STOCK,

OFFERED THE PRESENT SEASON OF 1859 AND 1860, BY

A. P. SMITH,

AT THE

POMOLOGICAL GARDEN AND NURSERIES,

SACRAMENTO, Two-and-a-half Miles from the City,

AND AT THE

**OFFICE AND DEPOT FOR TREES, 44 J street, between Second and Third streets,
SACRAMENTO CITY.**

THE CULTIVATION OF THE GRAPE, AND THE PLANTING OF VINEYARDS UPON AN extensive scale, is at the present time exciting a lively interest among the people of our State.

The congeniality of our soil and climate, and the success which has thus far attended the operations in the vineyard, are exciting the attention of hundreds to this subject, and destined to make vine-growing and wine-making one of the great interests of our State. With the world for a market, who can estimate the wealth that will hereafter accrue to our people in the manufacture and exportation of wine. This State and this interest yet in infancy, and this great interest is of such magnitude that it is of the first importance to begin aright. To do this, we should now ascertain what is to be the most desirable GRAPE TO CULTIVATE, especially for wine-making. The California or Los Angeles grape makes a good and pleasant wine, and while some claim it to be as good as any for making wine, the majority of experienced growers pronounce it inferior, and some assert that it will be superseded by some other and a much better grape. Among over ONE HUNDRED varieties of grape cultivated by us, the CALIFORNIA GRAPE has always proved to be the most tender, while the FRENCH and GERMAN grape invariably resist the frosts that have been so very destructive to our California grape. This is a very important point to establish, as the loss by frost in some wine-districts alone, would be very great, and therefore the attention of the cultivator should be directed to attaining a hardy class of grapes. Experiment alone must determine this, and whatever experience we have already attained should be carefully noted and improved upon.

For some years we have been most carefully experimenting upon and propagating from a very large stock of the finest kinds of foreign grapes, and while most of these have proved *respectively* HARDY, the CALIFORNIA grape has been entirely killed. At the same time no two opinions exactly agree as to their superiority in other respects over our native grape. Thus it will be seen that the wine-grapes of Europe have so far proved to possess a very decided advantage over the grape now being cultivated and known as the Los Angeles grape.

With these points established, and with the opinions of practical wine-growers of Europe to sustain us, there can be no reasonable doubt of the RE-PRODUCTION IN THIS STATE of the finest wine-grapes of Europe. The foreign grapes having a world-wide reputation as *wine, table, and raisin* grapes, and having been proved to be harder than our own grape, and better adapted to our soil and climate, they must and will become very extensively cultivated. We cannot sufficiently impress upon those about to plant vineyards, our own opinions and preferences for this class of grapes, believing as we do, that the varieties to be eventually selected from this class will be grown to the exclusion of all others. We would not by any means wish to discourage the planting of the CALIFORNIA GRAPE, which is indeed a useful and valuable grape, and of which we sell largely; but when it has to come in competition with varieties of superior merit, it must necessarily give place to them. From many of the foreign grapes we have experimented in WINE MAKING, and while all have proved to be good wine-grapes, some of the kinds have produced wine of such decided superiority as to leave no doubt in the minds of competent judges of this class of grapes being the grape from which we may hope to manufacture an article of wine that will improve by age and be fit for exportation. The present season we have made wine from TWENTY DIFFERENT kinds of this class of grapes, as well as a large quantity from the California grape, and another season we hope to be able to report more fully. We have also made some very interesting experiments in the grapes for RAISING, and notwithstanding our process has been crude and imperfect, our success was very flattering, and we have no doubt but that the very finest quality of raisins can be profitably prepared in this country. We wish to draw the attention of parties to our extensive stock of this class of grapes which are very select, and which we have been propagating for several years at large expense, having heretofore limited our sales till the stock now in hand is the largest in this State. Such varieties as we have specified we can furnish by the hundred or thousand, and when taken in large lots we will put them at much lower rates than heretofore offered.

We wish it to be distinctly understood that our stock has been all grown by ourselves from bearing vines in our own vineyard, and we enumerate only such as we can furnish in large quantities.

When a thousand or more vines are ordered, the selection of kinds will partly rest with us, but will be comprised within the following assortment:

✂ We would suggest to our customers that they should name to us the proportions they desire for TABLE and for WINE grapes. The following is the list for the present season:

Black Hamburgh—An immense bearer, a large and purple berry, one of the finest and most luscious of black grapes known.

Willmott's Black Hamburgh—Extraordinary bearer, and fruit with immense sized berries, differing in shape from other berries.

Black Prince—Large, very productive, rich and very delicious.

Black Morocco—Very prolific, large clusters, and gives promise of being a very fine wine grape.

Black St. Peters—Long and large clusters, a late fruit, sweet and very delicious.

Black Frontignan—A good grape with a sweet and musky flavor.

Cannon Hall Muscat—One of the largest white grapes known. From our experience this year we think it a fine wine grape.

Chasselas of Fontainebleau—A white, very productive grape, medium size.

Early White Sweet-water—A well known early sweet grape, being more than three weeks earlier than the California grape, and a great bearer.

Early White Malvoisier—Early, and sweet, and good.

Frontignan Muscat—Very fine.

Syrian—An immense bearer, very large, a late sort.

Grizzly Frontignan—A good bearer, fine flavor, good table grape.

Lashmier's Seedling—White, good size, medium bearer, high flavor, believed to be good for wine.

Large Rose of Peru—A large and superior grape, and very prolific.

McReady's Early White—Very prolific, and a fine white grape.

Muscat of Alexandria—Large and fine, the very finest of table grapes, and of exquisite flavor.

Royal Muscadine—A delicious grape, great bearer, incomparable as a table grape, and promises to be first rate as a wine grape.

Red Frontignan—A very fine grape.

White Frontignan—A very delicious grape.

Our native grapes consist of the California grape from one to three years, Isabella, Catawba, Clinton, Concord, and Rebecca. Some of the latter are new sorts, and of these we are not largely stocked this season. We particularly ask planters of vineyards to review our remarks in this card.

FRUIT AND ORNAMENTAL TREES.

The Trees offered from the above establishment this season are more than usually fine, and in the NUMBER OF VARIETIES, of each kind of fruit, we possess the largest collection in the State, our catalogue embracing OVER NINE HUNDRED VARIETIES, among which are

APPLES, about 250 varieties;
PEARS, 400 varieties;
PLUMS, 50 varieties;
CHERRIES, 50 varieties;
PEACHES, 75 varieties;
NECTARINES, 20 varieties;
APRICOTS, 12 varieties;
GRAPES, 100 varieties.

We hesitate not in saying that our Pear and Cherry trees are the finest ever offered for sale in this State, of all sizes, being from 5 feet to 12 and 14 feet high. The greater portion being not only of very large size, but also handsomely shaped, are elegantly adapted to planting near residences, affording the double advantage of shade and fruit. Of the above two fine Fruits we offer 25,000 Trees for sale, of different sizes and prices, and as low as good Trees can be bought at any first-class Nursery in the State. Many persons have had but poor success with Cherry Trees in this State. We state their information that

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common Native or Oregon stock of this Coast.

Apple, Plum, Peach, Nectarine, Apricot, Fig, and Almond.

Besides a miscellaneous collection of other small fruits. Particular regard has been paid to the growing of the trees in good shape, and purchasers of our two-years-old trees will find that they have been well "cut back," and are now firm, symmetrically shaped trees. We guarantee no finer healthier trees, will be found in the market this season. We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and Greenhouse Plants,

Embracing all the old and well known varieties, as well as a great many others both good and new. Also, a very fine lot of different sizes, of that very popular shade tree, so full of reminiscences of home, the good old-fashioned Elm Tree of many varieties, but most of the American and Scotch Elms, which are of good size and when well established in the soil, they are of very rapid growth. Also,

LOCUST; LABURNUM, or GOLDEN CHAIN; MAPLE, in variety; LINDEN, European and American; CATALPA; CHINA, and other Trees.

✂ We call particular attention to our collection of **THE CAMELLIA**, now so well acclimated as to be growing finely in our open grounds, and blooming as elegantly out of doors here, as possible with the tenderest care in a conservatory. It is no longer a house-plant, but one of the gems of the pleasure grounds.

✂ WE GUARANTEE ALL TREES FROM OUR NURSERY TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c., see CATALOGUES, which are sent by mail to all applicants.

* **VEGETABLE SEED**—We invite attention to our very large and general assortment, the crop of THIS YEAR, which is very fine. We are now prepared to supply THE TRADE in quantities to suit, and at lower prices than can be found at any other establishment in the State. We have now been growing SEED of GOOD FRESH SEED at very low rates. These seeds will be done up handsomely in packages, for Wholesale or Retail Trade and will always be in readiness at our Garden, and at City Office, 44 J street Sacramento.

Our Trees and Shrubs will be sold for CASH ONLY, and Orders must be accompanied with the Cash to insure attention.

The California Farmer.

SAN FRANCISCO:
FRIDAY.....FEBRUARY 24, 1880.

Direct our Letters and Exchanges.
Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct letters to "Col. WARRER, California Farmer Office," as there are frequent miscarriages for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

State Agricultural Society.

THE Bee of Sacramento, in reply to our article upon the action of the press of this State, asks us to name those journals that condemn the action of the State Agricultural Society. This is wholly unnecessary, for all we need to do is simply to say the only journals that have (vainly) attempted to uphold or defend the wrong course of the State Society are the Sacramento Bee, Sacramento Union, and the Alta of this city, (which has, however, subsequently condemned the action) and the Cultivator. These two last have published the letters of "Anthrax," which form a very lame apology indeed. But who is Anthrax, and how much has he at stake in California? Not a resident of our State. Knows only what a brief visit of about a year could inform him, and then his labors with the State Society have been those of a guest and a recipient of its courtesies. Well may he defend such an institution! He knows the advantage: "Speak well of a bridge that has carried you safe over." Anthrax is soon to take his leave of this State, and report says he is so unfavorably impressed, that he will warn all persons from coming to our State. We wonder if he would speak well of anything in California unless it should be "Silver Terrace," to make lots sell well; and then the old road must be fenced up lest old Californians should have the beaten paths to travel in. In further reply to the Bee we need only ask who will or who can defend the State Agricultural Society except those who have "axes to grind."

The Standard, of Sacramento, during the Convention, manfully condemned their course, and so has nearly every journal that has spoken. Let the names of some of the prominent members, and even the leading members of the Board of the Society, the past and former years, be presented, and they will be found now in active operation against the State Agricultural Society. This is all the proof needed; such as we trust will convince all that the decided course we felt called upon to take in condemning such action, was in accordance with the true sense of the Public Mind. The following gentlemen have publicly denounced the wrong, or are now forming new organizations over the State, as will be seen by their names, appended to public documents:

Gen. A. Reddington, Treasurer State Ag'l Society.
E. B. Crocker, Esq., Sac. City, V. P. "
D. J. Staples, San Joaquin, " "
J. W. Osborn, Napa, " "
Cary Peebles, Santa Clara, " "
A. H. Meyers, Alameda, " "
John Center, San Francisco, " "
A. P. Smith, Sacramento, Manager, " "

These were all in the Board last year. There are others undoubtedly, but the above with a host of members of the Society scattered over the State, as will be seen by the meetings held in different places, which we are publishing in our columns, must convince all candid minds that we are right; and although we are pained to be compelled thus to speak of a society that had the power to accomplish so much good, they have now forever lost it, for it will be seen that the great and strong sections of the State have taken decided action against the old organization, and they will never recant from it. Now is the time to make such a reform as shall be lasting and beneficial, and we trust it may result in great good to the whole State.

THE HONEY-BEE IN SAN FRANCISCO.—Our citizens should be aware that they can raise their own honey very easy in this city, as the bees will visit the Mission and all the hills surrounding our city, as well as the numerous gardens, and find plenty of food. We have had many years experience with bees, in the Atlantic States, and have had bees in our own garden in this city, the present winter, and we have never seen bees do so well in the months of January and February before. They are making honey very fast, and we are thankful that the greatest success will attend them. Any person desirous of witnessing a proof of this can see the bees now at work, corner of Mason and Pacific streets, where we shall be pleased to show them in all their labors.

BEE-HIVES.—A great contest is now going on respecting the famous Bee-Hives of two distinguished apianians, both of whose hives are advertised in our columns. We allude to the "Harbison Hive" and the "Langstroth Hive," both very much approved and both selling rapidly. We refer our readers to the cards of the several owners and their agents, in our present number. Mr. Harbison, the patentee of the first, will soon issue a new work on "The Bee," which will be much sought for, and will be of great service to our State. We have used the Harbison Hive ourselves, with complete ease and success, in removing swarms, and most earnestly commend it. We shall also try the Langstroth, and give our experience of that.

OUR ADVERTISEMENTS.—We think we can speak of our advertising columns with some degree of pride. We feel sure that our present number will show the two largest and best advertisements ever placed in the columns of a newspaper on the Pacific Coast. New York may boast of large advertisements, but none can excel those in our columns; and while we present a goodly number of permanent advertisers we know we can always give back to our patrons a goodly share of customers from all parts of our State and elsewhere.

Pacific Railroad.

THIS great work can now be said to have awakened a universal interest over our whole country, and it must be a source of sincere gratification to every well-wisher of the Union to see and hear that our Senators and Representatives are talking, writing, and acting about it, and to know that the President of the Nation will make a "great strike" for the Pacific Railroad. We feel confident, now that the wheels of Congress have been put in motion, that the Pacific Railroad will arouse so much feeling that even "Harper's Ferry" will be forgotten and the Speakership be merged in a united effort to benefit the whole country.

UNJUST TO CALIFORNIA.—In looking over the files of all the newspapers published in the Atlantic States how little is seen respecting the rich and boundless resources of our State, and how seldom do we see our climate extolled or the real progress and present prosperous condition of California set forth. But we do see much, very much published and highly colored too, respecting those dark shades that are found in this State (but no more than in others), and these are published far and wide, seemingly to hinder those who desire to come to us, from doing so. Such a course is wholly wrong, and we hope it will be discontinued, and a better one pursued. Our neighbors in the Atlantic States had better be liberal to Californians and give them a just tribute for what they have done. The rapid strides that California is making cannot always be hidden from the world. If the press in the old States will not be just or generous, we shall in self-defense be called upon to flood them with such documents as will convince them that here in our glorious State we have room enough and gold enough to make a million new comers rich and happy this year and next. Yes, let a million come to us and we can provide for them good homes, good health, a glorious climate, and enough of the good things of life to satisfy any reasonable creature.

"I WISH YOU WOULD PURCHASE?"—Many persons write to us to make purchases for them: directing us to buy this or that article, and send by Express, with bill, and it will be paid. We have always done this cheerfully, and often at great inconvenience, by purchasing bills of \$20 to \$150 and forwarding bills, relying upon immediate remittances, when we often have to wait two, four, six, or eight weeks, and often without one cent gain, and portage and drayage to pay, besides the loss of time in attending to it. Hereafter we desire it understood that unless the cash or its equivalent comes, we must decline, as our time demands that we should not lose a moment. We are willing to oblige to the utmost of our power, but cannot do ourselves a great injury and sustain great losses beside; and when we send bills, we trust they will be promptly attended to. We can then labor for friends cheerfully. Careful as we may be, we sustain many losses by doing what is called a kindness for somebody.

HOL FOR WASHOE!—The season is approaching when we are to have another stampede from the busy haunts of our cities and towns, and hundreds and thousands will "be off for Washoe." Sick is life in California! and we suppose it will always be so while gold and silver remain the standard of man's respectability in the world. Strip a man of his wealth, and he becomes almost worthless to society, although his life may have been bright with good deeds before. And so let Fortune smile upon a thing in human shape, so coarse and sensual and so ignorant that he cannot even write his name; let a lucky strike give him a pile, let him be among the rich, and he will be courted and flattered, and all his coarse sayings will be esteemed shining wit, his dinners sumptuous, and his carriages splendid; and undoubtedly Washoe will make many great men and many miserable ones too. Let all who are now in a good business and happy be content. Riches to such will not add to their happiness.

RARE NEWS.—In a number of the Country Gentleman, published at Albany, N. Y., lately received, we find among its "California news," the following paragraph:

"There was danger that San Francisco would be inundated by an overflow of the levee."
This is certainly "important, if true!" But perhaps the top of Telegraph Hill might escape the "overflow of the levee," and thus afford a place of refuge. However, it might be after all that the above paragraph intends to imply that San Francisco really is in danger of being swamped by a "bulldozer."

THE INDIANS OF CALIFORNIA.—We commence with this number of the FARMER a History of the Indians of California, by A. S. Taylor, Esq., whose contributions to this journal and to many other papers have done much to make the history of our State known and honored abroad. California is certainly very much indebted to Mr. Taylor for valuable scientific as well as historical sketches and essays. Few men have done so much in this way, and we are highly gratified to be able to lay before our readers the valuable history which is now communicated. It will be continued through many numbers of the FARMER.

FINE ORNAMENTAL TREES.—Those who are planting small ornamental grounds, should not forget to plant double flowering Peach and Cherry. These two trees are very beautiful indeed. We think B. S. Fox, & Co. and several other nurserymen have them. For fine evergreen trees purchasers should not forget the Golden Gate Nursery, of W. C. Walker, Esq., on the New Mission road. He has the very finest lot of rare and beautiful evergreens in the State, including the Magnolia grandiflora, and many other rare kinds.

STILL MORE FLOWERS.—The Editress returns thanks to B. S. Fox, Esq., of San Jose, for a very handsome parcel of choice plants from his most excellent nursery. These plants shall be placed in her garden with her own hands and his gift will be appreciated. She trusts his generosity will flow back upon him in a thousand ways by a very prosperous business which he so truly deserves.

Agricultural Convention.

In compliance with the call which had been circulated, the Agricultural Convention, composed of Delegates from counties around the Bay of San Francisco, met to day, 24th Feb., at ten o'clock, at the City Hall.

A. H. Myers, President of the Alameda County Agricultural Society, called the meeting to order, and on his motion, Judge Daniels (President of the Santa Clara Society), was appointed temporary Chairman. F. F. Fargo was chosen Secretary. Mr. Myers being called upon by the Chairman to state the objects of the meeting, read the circular call, and letters from G. N. Swasey (President of the Northern District Society), and others, expressing their readiness to co-operate in the movement undertaken.

A Committee on Credentials was appointed which, after a recess of fifteen minutes, reported the following named persons as duly accredited members of the Convention:

Alameda—A. H. Myers, D. E. Hough, William P. Toler, Dr. H. Gibbons, A. Lucelling.
Contra Costa—George P. Loucks, H. H. Fassett, C. T. Cutler, N. Jones, W. Bradford.
Sonoma Horticultural Society—George H. Butler, M. G. Vallejo, John Sweet, William Boggs, Mr. Swift.

Sonoma Agricultural and Mechanical Society—R. Mathewson, William Hall, William Ordway, J. Q. Shirley, H. L. Weston, N. P. Stafford.
Santa Clara—William Daniels, Cary Peebles, J. F. Kennedy, Thomas Campbell, Charles G. Thomas, L. Archer, Wm. Reynolds.
San Mateo—John Cumming.
Monterey—Mr. Terrill.

Santa Cruz—William N. Sloon.
San Francisco—William Greene, Michael Hays, John J. Haley, J. L. Burtiss, John Center, R. B. Woodward, F. W. Macdonald, J. L. Sanford, Edward Raymond, W. C. Walker, William O'Donnell, Samuel Brannan.

On motion of Mr. Myers, a committee of five was appointed to nominate permanent officers.

The Committee reported nominations and the following officers were elected.

President—William Daniels, of Santa Clara.
Vice-President—R. Mathewson, of Sonoma; G. P. Loucks, of Contra Costa; and J. L. Burtiss, of San Francisco.
Secretary—Frank F. Fargo, of Alameda.

On the motion of Mr. Myers, all officers of Horticultural and Agricultural Societies and of the Mechanics' Institute of San Francisco, present, were invited to a seat in the Convention and to have a voice in the proceedings.

The reading of communications, etc., being in order, the following letters were read:

From J. W. Osborn of Napa:

To the Chairman of the Agricultural Convention, San Francisco:

Sir: It being inconvenient to attend the Convention personally, in response to an invitation received, I would say, that under the circumstance in which many of the members of the former State Agricultural Society find themselves placed, I consider it very desirable a new Association should be formed, by which a more equal justice will be done all parts of the State, local interest in Agricultural Fairs encouraged, and the State Society itself placed on a basis which will render it independent of sectional interests in its management, and while affording a greater freedom to the exhibitor, be less cumbersome and uncertain in its action.

The old organization called for two great a tax of time and labor from its officers, whose only reward was the consciousness of advancing the agricultural interests of the State, while those who reaped the entire pecuniary interests of the exhibition were not called upon either for labor or for its support.

The absolute necessity which existed of exacting the fee of membership from all exhibitors, acted as a bar against those of limited means, and prejudicial to the very interest which the Society was instituted to advance. A society fostered by the State's bounty, should in my view be free to all exhibitors of the State's products. On the other hand, the ease with which membership could be procured, rendered the society at all times liable to be controlled by interested parties, whose views might be those of immediate pecuniary interest, instead of the development of the State's agricultural resources.

Again, the exhibitions were altogether too frequent, and extended over so much of time, as to leave little encouragement to the County Fairs, the labor and effort of those most interested in such associations being too severely taxed to be able to devote the necessary attention to secure the success of both local and State exhibitions in the same season.

Few but the initiated, know or appreciate the valuable time and labor which have been bestowed, or the genuine public spirit displayed by many of the officers of the old institution, and where time is so valuable, care should be taken in a new organization to make that tax as light as possible.

My idea is, District Societies should be formed, holding exhibitions and sale fairs wherever the counties are not strong enough to organize their own societies, which, when it can be done, I believe to be the most valuable effort in this direction. I think once in three years sufficient for a State exhibition, which should be held in that city offering the best facilities, in all cases free of expense to the society; the labor of preparation to be borne by that community receiving the immediate pecuniary benefit. In the constitution of the State Society, whatever limit there may be to membership, I think the entire control and management should be left to a board selected by the delegates from the County Societies, the presiding officers of which to be ex officio members of the State Society.

I think the agricultural interest thus organized and represented, with an able Secretary, earnest, zealous and permanent in his office, fully conversant with the agricultural business of the State, would be at all times in harmony with local interests, be in working condition, without too great tax of time and labor from its active members, and be successful in commanding the entire confidence and support of the productive interests of the State. Yours, respectfully, J. W. Osborn.

From G. N. Swasey, President of the Agricultural Society of the Northern District of the State:

MARYSVILLE, Feb. 12, 1880.
A. H. Myers, President of the Alameda Agricultural Society:

DEAR Sir: Your circular, addressed to me individually in reference to the subject matter had under consideration by your Society, at a meeting thereof held on the 4th of February, was duly received.

In reply to the preamble and resolutions adopted at the mass-meeting of the members of your Society and the citizens of Alameda County, I can assure you that the action of the State Agricultural Society, had at their annual meeting, held at Sacramento, is much regretted and fully disapproved of by the people of the northern counties of the State. They feel that the spirit and letter of the Constitution has been violated, by locating the State Fair for the year 1880, at Sacramento. The new Constitution declares that the same shall go into effect on and after the first day of January, 1880. It went into effect on that day, and the off-

icers of the Society have acted under the same ever since. It further declares, that the annual exhibitions of the Society shall not be held for two successive years at any one place. If it had declared that there should not be made under that Constitution, two locations successively at one place, then there might be some plausibility in the argument that the location for last year was made in 1858, under the old Constitution; but the prohibition is against the holding of two Fairs successively at the same place, however located; whether under the old or the new Constitution. The Fair of 1859 was held under the new Constitution, and all its proceedings were conducted thereunder, and now it is proposed to hold that for the year 1880, at the same place, under the same Constitution. This we deem a direct violation of that instrument, and as such I cannot sanction it.

In reference to the object of your meeting in forming District Societies, I can but refer you to our own action in that direction as expressive of my opinion of the same. In April of last year, the people of the Northern Counties of this State deemed it advantageous to their interests to organize a District Society, and did so, embracing in its organization all the counties north of Sacramento. The Society is called "The Agricultural, Horticultural and Mechanical Society of the Northern District of California." This Society held its first annual exhibition, commencing on the 30th day of August last, which, as a whole, was a success, and far more creditable than that of the State Society, held in Marysville, in the year 1858. We design to keep up our organization, and are now preparing to hold an exhibition for this year, which shall eclipse that of the State Society, or those of any other Society in the State.

It is evident from the great variety of climate and soil, and the great want of uniformity in the seasons, of the different portions of the State, that either the State Fair must migrate from one portion of the State to another, or we must have District Fairs, to accommodate our citizens. Impressed with the belief that District Fairs were better calculated to promote the interests of Agriculture, Horticulture, and the other branches of industry, we undertook the organization of our Society.

It may be well to consider whether it is not advisable, in case the District System is adopted, that we have a State Fair located at some central point. At such a Fair the premium stock and articles of the various District Societies could be brought in competition, and thus a spirit of rivalry and emulation be stimulated between the several Districts, and thereby the people from remote portions of the State would be saved the expense and trouble of taking to such Fair other than stock and articles such as had been declared meritorious, by having received the premium of their own District Society.

It is the intention of our Society to ask an appropriation by the State.

With the views thus entertained by our Society, I trust it will hardly be necessary for us to send a delegation to the contemplated Convention.

I subscribe myself, yours, truly,
G. N. SWASEY,

President of the A. H. and M. S., of the N. District of Cal.
On motion of H. Linden, a Committee of one from each county and society represented, was appointed to report business and plan of action for the Convention.

The different delegations named the following Committee: J. F. Kennedy, Santa Clara; H. H. Fassett, Contra Costa; John Center, San Francisco; H. L. Weston, Sonoma; A. H. Myers, Alameda; John Cumming, San Mateo; George Coffran, Mechanics' Institute; George H. Butler, Sonoma Horticultural Society; W. Wadsworth, State Horticultural Society; Mr. Terrill, of Monterey.

The Committee then took a recess until two o'clock, at which time they were instructed to report.

AFTERNOON SESSION.

The Convention reassembled at two o'clock P. M., pursuant to adjournment.

The Committee on Business, through its Chairman, John Cumming, submitted the following report:

To the Agricultural Convention:
Your Committee, consisting of one member from each County Agricultural Society, and one from the Mechanics' Institute of San Francisco, and the Sonoma County Agricultural Society, organized by the election of John Cumming, Chairman, and H. H. Fassett, Secretary, and would respectfully submit the following report:

Whereas, in consequence of the management of the State Agricultural Society, said organization has failed to meet the wants and wishes of the Agriculturists of the State:

Therefore, we recommend a division of the State into Districts, to which the County Societies therein may become auxiliary Societies, with a view to the organization of a State Society on the part of the Districts to which they may become auxiliaries.

The following, in the opinion of this Convention (subject, of course, to such modification as the Legislature in their wisdom shall see fit to make), would be a proper division of the State:

The Northern District, as already organized, embracing all the counties north of Sacramento.

Sacramento District embracing Sacramento, Yolo, Placer, Amador, and El Dorado.

San Joaquin District embracing San Joaquin, Calaveras, Tuolumne, Stanislaus, Mariposa, Merced, Tulare, Fresno, and Buena Vista.

San Francisco Bay District, embracing San Francisco, San Mateo, Alameda, Santa Clara, Santa Cruz, Monterey, and Contra Costa.

Sonoma and Napa District, embracing Sonoma and Napa.

Humboldt District, embracing Humboldt, Trinity, Siskiyou, Del Norte and Klamath.

Los Angeles District, composed of Los Angeles, San Bernardino, San Diego, and San Luis Obispo.

Your Committee would therefore request the Legislature of the State to repeal the law appropriating \$5,000 annually to the present State Society; and that a just and liberal appropriation be made to such District Societies as are now, or may be organized, and may hold District Fairs during the year 1880; and would respectfully submit the above for your consideration.

The report, after considerable discussion, was adopted with unanimity. Contra Costa county was at first reported as belonging to the San Joaquin District; but at the request of Contra Costa delegates present it was changed to the San Francisco District.

Some members questioned the policy of dividing the counties into districts, or saying anything about any district, save those about the bay. In reply, it was said that it would be well to suggest a division to the Legislature, but the Convention offered their system of districts as only a suggestion, except in relation to the counties bordering on the bays of San Francisco and San Pablo.

Sonoma, Napa and Marin were represented, and they wanted a district of their own. Alameda, Santa Clara, Santa Cruz, Monterey, San Mateo and San Francisco were represented, and they wanted a district of their own. All the Sacramento valley from Yuba county northwards had a district of their own; and so of the San Joaquin valley; and these divisions already made would compel the vicinities of Sacramento, Humboldt and Los Angeles to have districts, or to be beyond the limits of Agricultural Association. There was no intention to give offense to the Sacramentans, or to meddle in their business, when this Convention attempted to set limits to the Sacramento district; that had really been done before by the adjoining counties, and by the public opinions among the farmers, with which the members of this county were pre-

ty well acquainted. Perhaps Solano would prefer to belong to the Sacramento district, but, if so, she would only have to express her desire in the matter and that desire would determine the matter.

On further motion, a committee of five was appointed to aid in carrying forward the objects of the Convention, by securing the passage of such laws as will assist in furthering the organization of District Societies, and by collecting information upon the subject.

The committee was constituted as follows: Wm. Daniels, Santa Clara county; A. H. Myers, Alameda; John Center, San Francisco; J. W. Osborn, Napa; and William McPherson Hill, Sonoma.

On motion, it was resolved to publish the proceedings of the Convention in pamphlet form, and the Secretary was instructed to send a copy so published to each member of the Senate and Assembly, and to such agriculturists generally as may be interested in the same.

A collection was taken up to defray the expenses of the publication, and the Secretary instructed to attend to the matter.

The Convention then adjourned, subject to the call of the Business Committee.

SAN FRANCISCO DISTRICT AGRICULTURAL SOCIETY.

After the adjournment of the Convention as above, the officers of the latter body remaining in their seats, on motion of Mr. Myers of Alameda it was resolved that those present proceed to organize a District Society.

On motion it was further resolved that a committee of one from each county in the proposed district should be appointed to draft an act as the basis of legislative action in the premises and a constitution for the proposed Society, to report at 7 P. M. (The further proceedings will be given in our next.)

San Joaquin Valley District Agricultural Society.

An adjourned meeting of the District Agricultural Society was held at the City Hall, in Stockton, on the evening of 17th February. D. J. Staples was chosen President, and George H. Sanderson, Secretary.

The committee appointed at a previous meeting to draft plans for the future government of the Society, made their report, which was accepted and the Committee was discharged.

On motion a Committee of five was appointed to report a list of officers for the ensuing year. The meeting was addressed by Messrs. McLean, Owens, Hogan, Lyons and other gentlemen.

The following officers were unanimously elected:

President—Capt. John McMullin.

Vice Presidents—San Joaquin—D. J. Staples, Saml. Mason, and W. H. Lyons. Contra Costa—Capt. David Small and J. H. Hunsacker. Calaveras—Dr. W. Jones and E. L. Stevenson. Tuolumne—W. T. Cooper and Mr. Jarvis. Stanislaus—Calvin W. Cook and I. D. Morley. Merced—Wm. J. Barfield and Samuel R. Gwin. Mariposa—J. D. Crippen and Edward Bell. Fresno—Wm. Campbell and Mr. Jordan. Tulare—O. K. Smith and J. C. Pemberton.

Recording Secretary—P. E. Connor.

Corresponding Secretary—E. B. Bateman.

Treasurer—Andrew Wolf.

On motion, the Executive Committee were empowered to fill any vacancies that might occur.

Section 1 of the Charter was then adopted.

The blank in article 1st of the Constitution was filled by adopting the name of the SAN JOAQUIN VALLEY DISTRICT AGRICULTURAL SOCIETY.

Article 3d of the Constitution was amended by allowing the county where the Fair might be held to have three Vice Presidents for that year.

The balance of the preamble, Constitution, etc., was then adopted as a whole.

Stockton was chosen as the place for the Fair to be held in 1880.

The Executive Committee were chosen as the Judiciary Committee to revise the Constitution, frame By-Laws, Rules, Regulations, etc., and report at some future meeting.

A committee of three, consisting of Messrs. Lyons, Junkin and Athorn, were appointed to draw up an Act for the Legislature to pass, authorizing the Supervisors to levy a special tax of \$1,000, to be used for the assistance of the Society.

A Committee to solicit funds was chosen consisting of Messrs. Holden, Sperry, Oullahan, Owens and Hook.

MAP OF WASHOE MINES.—We have received from Messrs. Hutchings & Rosenfield a copy of "De Groof's Map of the Washoe Mines." It is of convenient size, and will no doubt be of great benefit to those journeying thither.

POST OFFICE AT MISSION DOLORES.—The large number of residents that now make it their home at the Mission Dolores, and the amount of real business done there, require that a Post Office should be established at that point. By the San José lines of stages that pass through the Mission the mails could be carried at a very little cost, and we hope that the residents of the Mission and vicinity may have this privilege granted to them.

PUBLIC LANDS.—At the Visalia Land Office since its location in Visalia, says the Delta of the 18th inst., the amount of land sold from September 1st, 1853, to December 31st, 1859, was 26,096 acres; located under State Act donating 500,000 acres to the State, 5,400 acres; total, 32,496 acres. Declaratory statements of settlement have been filed since March 1st, 1859, on 30,080 acres. Since the 18th day of April, 1859, there has been 5,562 acres of swamp and overflowed land entered in this county. Previous to April we have certain estimate of the amount of swamp and overflowed land entered, but the County Surveyor informs us that he thinks it not less than 35,000 acres, making a total of 103,128 acres. Add to this the supposed amount of land entered in the Land Office in San Francisco, previous to the location of the Land Office here (10,000 acres), and we have 113,128 acres of land already entered or occupied, the greater portion of which lies in this county. Receipts by the County Treasurer of Tulare County for State lands sold since December 31st, 1854, to January 1st, 1860, amount to \$12,683 50; the greater portion of which is interest, the purchase money not having as yet been paid only in a few instances.

NON-TRUTHS.—The following truthful sentiments which have been widely published and attributed to the Hon. Mr. Hilliard, a member of Congress, should have been credited to George S. Hilliard, Esq., one of New England's ablest writers and brightest scholars.

These truths should have a firmer hold of men, when they form their judgment of character by outward circumstances and appearances.

"I confess that increasing years bring with them an increasing respect for those who do not succeed in life, as those words are commonly used. Heaven is said to be a place for those who have not succeeded upon earth; and it is surely true that celestial graces do not best thrive and bloom in the hot blaze of worldly prosperity. Ill success sometimes rises from superabundance of qualities in themselves good—from a conscience too sensitive, a taste too fastidious, a self-forgetfulness too romantic, a modesty too retiring. I will not go so far as to say, with a living poet, that 'the world knows nothing of its great men'; but there are forms of greatness, or at least excellence, that 'die and make no sign'; there are heroes without laurel, and conquerors without the triumph."

will the size of the entrance for bees, substantially in the manner and for the purposes set forth.

22 N. B. Repairing promptly attended to.

BY THE OVERLAND MAIL.

Election of Speaker.

By the Overland Mail and telegraph to the Alta from Fresno, the important news was received that the long contest in the United States House of Representatives had been terminated by the election of a Speaker.

The course of the vote for a day or two previously had pointed to the election of Governor Pennington, of New Jersey, as an event which could not long be delayed, and the whole country had been led to anticipate that it would occur on 1st February.

The vote was: Whole number, 233; necessary to a choice, 117; Pennington, 117; McMillan, 85; Gilmer, 117. The announcement of the result was followed by applause. The Clerk declared Mr. Pennington elected Speaker of the House.

Mr. Hindman rose to call the attention of the country to some facts connected with the election, but there were loud and prolonged cries of "Order."

Mr. Grow, elevating his voice to the highest pitch, said: "A Speaker has been elected, and nothing is in order till he has been conducted to the chair." Cries of "That's so, let him take his place."

The Clerk sustained Mr. Grow's suggestion, and appointed Messrs. Beacock and Sherman to conduct Mr. Pennington to the chair. These gentlemen at once entered upon the performance of their duties, and escorted him to the chair.

Mr. Phelps being the oldest representative member, administered the oath to the Speaker, by request of the Clerk. The members were sworn in by delegations.

The Postmaster General has decided to discontinue the coach service between Fort Yuma and San Diego, and substitute horse service as more economical.

The Harper's Ferry Investigating Committee have been discharged. Senator Wilson, before the Committee, denied any knowledge of Brown's intentions; told Dr. Howe to get Kansas arms out of Brown's hands for fear of mischief. The Committee deny furnishing reports for publication.

SUPERB CAMELLIAS.—A sale of very superb Camellias from Smith's Garden Sacramento, took place early this week, at H. A. Cobb's auction rooms. The bidding was spirited. Prices ranged from \$3 to \$4, \$5, or \$10 each. Another sale takes place tomorrow. Everybody should buy. They are rich and gorgeous plants.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we have models to show their value) are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1883.
This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.
With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly lifts up and burrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1880.
This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machine; neat when used and ornamental when out of use.

No. 4. The Mechanical Spirit Level.

Patented September 13, 1879.
This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Munka Bar.

This will be much wanted in California. It is simple in its construction, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Drawer,
A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns. Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to
COL. WARREN, Editor Farmer.

Extra Size Lawton Blackberry Plants.

By the late steamer we have received 1500 True Lawton Blackberry Vines, of very extra size, such as will show fruit the present year. We shall sell by the hundred or dozen, as are wanted, or the entire lot. Inquire at FARMER'S OFFICE.

Dr. Wistar's Balsam of Wild Cherry.
—here the preparation is known, it is so well established as an infallible remedy for the cure of Coughs, Cold, Sore Throat, Hoarseness, Bronchitis, Spitting of Blood, Pain in the Breast, Gravel, Whooping Cough, and every form of Pulmonary Complaint, that it was a work of supererogation to speak of its merits.

Discovered by a well known physician more than twenty years since, it has, by the wonderful cures it has effected, been constantly appearing in public favor, until its use and its reputation are alike universal; and it is now known and cherished by all (and their "name is legion") who have been restored to health by its use as the GREAT REMEDY for all the diseases which it professes to cure.

Sir James Clark, physician to Queen Victoria, has given it as his opinion that

CONSUMPTION CAN BE CURED!
The whole history of this medicine fully confirms the opinion of that eminent man. Thousands can testify, and have testified, that when all other remedies had failed, this has completely cured; that when the sufferer had well-nigh despaired, this has afforded immediate relief; that when the physician had pronounced the disease incurable, this has removed it entirely.

The virtues of this Balsam are alike applicable to cure a slight Cough or a Consumptive, and its power as a safe, certain, speedy, pleasant and efficient remedy cannot be equalled.
(CAUTION! Purchase name unless it has the written signature of "L. Wistar" on the wrapper, as well as the printed name of the proprietor.)

BETH W. FOWLE & Co., Proprietors, 18 Tremont street (Museum building), Boston, Mass.
For sale by—WALTER MORRILL, HENRY JOHNSON & Co., and HARRINGTON & Co., San Francisco; CHAS. MORRILL and R. H. McDONALD & Co., Sacramento; Smith & Davis, Portland Oregon; and by all good dealers in medicine every where. 23

CHOICE GROCERIES.

New Raisins, Citron, Currants, Figs, Prunes, &c.
For sale at
A. L. EDWARDS & Co.'s,
81 Clay street.

MACKEREL, Tongues and Sounds,

CHOICE BUTTER, &c. in Kits,
For sale at
A. L. Edwards & Co.'s,
81 Clay street.

Jellies, Jams, PRESERVES, FRESH FRUITS, ENGLISH SAUCES, &c.
For sale at
A. L. Edwards & Co.'s,
81 Clay street.

Comet Teas, Old Gov't Java, Costa Rica, and Rio Coffee,
For sale at
A. L. EDWARDS & CO'S,
81 Clay street.

TO SHEEP FARMERS.

THE undersigned, having had many years' experience as a PRACTICAL SHEEP FARMER (dealing in Australia and California), offers his services either to DRESS, Dress Sheep affected with Scab, Foot-rot, &c.; or would take a situation to Superintend a Sheep Ranch. Having cured some badly diseased sheep in California, he can give satisfactory references. Address, by express, W. M. H. T. KIRBY, Taylor and Greenwell streets, San Francisco.

Refer to—L. Haskell, Jr., California and Front streets; Co. Warren, Ed. Cal. Farmer; Edw. Bosqui, No. 93 Merchant street.

WANTED,
BY AN AMERICAN FARMER, WHO UNDERSTANDS Stock-raising and dairy business, a SITUATION to take charge of a large Ranch; or would be willing to take a better salary on shares, in a locality suitable for honey-bees. Please address "M. D." California Farmer Office, San Francisco. References given and required. 24

NURSERY BUSINESS, &c.

J. R. RAY,
SEED AND NURSERY DEPOT,
No. 106 J STREET,
SACRAMENTO.

HAS IN HIS NURSERY, SUBJECT TO THE
order of good cash customers, the most extensive assortment of

TREES, SHRUBBERRY, AND VINES.

To be found in the State, consisting of every variety of

Almond,
Apple,
Apricot,
Blackberry,
Cherry,
Fig,
Gooseberry,
Grape,
Mulberry,
Nectarine,
Peach,
Pear,
Plum,
Strawberry,
Quince,
Raspberry,

Beside a good stock of SHRUBBERRY and SHADE TREES, for beautifying homes.

Samples, comprising a few thousand trees, may be found at my Seed and Nursery Depot.

SHADE TREES,

For sale this season, consisting of—

10,000 Locust Trees,
1,000 China Trees,
Lombardy Poplar,
Mountain Ash,
Magnolia Acuminata,

Together with
Elm,
Ash,
Maple,
And other Evergreens—all warranted.

The Locusts are certainly not equalled, by any lot in the State, for beauty and size; they are from two to three years old, straight and well grown, varying from ten to twenty feet in height.

SEEDS! SEEDS!

The extensive SEED DEPARTMENT contains a complete stock—

FOR THE GARDEN, FIELD, FOREST & NURSERY.

Either from the best seed-growers in the country, or raised under my own supervision. Much care is taken to have Seeds free from mixture, and every package of seeds sold is, with proper care, warranted to grow and produce what is marked on the label.

And everything appertaining to the Seed and Nursery business, for sale at greatly reduced prices from last year.

ARTICHOKE, CHUFAS—articles deserving special notice—are for sale in quantities.

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MARCH 2, 1860.

NUMBER 4.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 131 Washington street (up stairs), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$6 a year in advance.
Advertisements and Subscriptions must be paid for in advance.

Norcross' Fringe and Button Factory.

The public mind, the great mass of the people, are so absorbed in the great maelstrom of wealth-getting; they are so much on the rack seeking out ways and means by which they can discover the "Open Sesame," by which a fortune is made without Labor, that they lose sight of the Real Wealth that is fast accumulating in our country, by means of Labor—the only true source of wealth, permanence and enduring happiness.

Every journal in our land has now more or less to say about Washoe. Would that the cry were "Work!" and then there would be more health, more wealth and more happiness among the whole people; and instead of the anxious, care-worn and wo-begone look, there would be cheerfulness and contentment with the glow of health upon the brow.

While we see the same spirit of adventure in the mass of the people, and the same desire to get rich without Labor, we are rejoicing in the fact that there is a great main artery, the best bower-anchor, that will feed the body politic with arterial blood, and hold the ship of State safe amid all those storms and whirlpools that threaten to engulf and wreck us. And this hope is founded upon the knowledge that we have in California the "Genius of Labor," and she is coursing over our State in her Triumphant Car, too.

In every portion of our State there has sprung up Manufactories of every kind, giving steady employment to our people by the scores and hundreds; and by these associations the masses will be governed, for ties will be formed, homes built up, and the desire for wandering abroad, that "spirit of unrest," will be rooted out, and a real, permanent, healthy prosperity take the place of that feverish excitement which has uprooted so many of the best laid plans ever constructed by men.

We were led to these thoughts and remarks, by a recent visit paid to the Manufactory mentioned above.

Here in our very midst, in the very heart of the City, we have a Manufactory that gives employment to about a score of busy artisans, mostly young women. (This, too, is highly important, for it teaches women to become truly independent.) They are engaged in helping to build up our State, and save the gold from going abroad, to the value of some one or two hundred thousand dollars a year.

Norcross' Silk-Fringe and Button Factory is a very important establishment for California. It is a warehouse for a vast amount of the "useful" as well as the "ornamental" articles so much wanted in the household economy; and as these must be had, how much better to have them of "Home Manufacture."

This Manufactory is indeed a most interesting place to visit, and we hope our Legislators and all persons who desire to witness the real progress California is making, will be sure to call and see for themselves. Here all kinds of Silk and Worsted Fringes, Silk Buttons, Cords and Tassels, Coach Trimmings, Gimps, etc., are made to any pattern, and in as superb a style, and as cheap, or cheaper, than they can be imported.

We witnessed the operations of work going on, and saw the delicate floss-silk transferred to the wooden mould, making the finished Silk Button. We saw, too, the "reeling, winding, doubling and twisting," and the "laying up" of the fine silk into "cords"; then the making of the beautiful Tassels. Each and every species of this work is full of ingenuity and skill, all resulting in creating "Gold," and in finding food for those who "Labor," in a way far superior to going to Washoe.

Then, in addition to all these, the department for manufacturing the rich Regalias, in all their varieties, for the Orders of Masonry and Odd Fellowship; this work is full of the most satisfactory and pleasing interests. Here are seen all the Royal and Loyal Heraldry of "Duty, Truth, and Love," with all those noble sentiments embroidered in pure gold and silver, by the hands of fair ones, who have always and ever woven for man the richest, noblest and brightest ornaments he ever wore.

We noticed several rich sets of Regalias in progress of making for different parts of our State. We saw one, superbly rich, of the "Knight Templar," worth \$400, and several for other Orders all made in this establishment.

It will be recollected that Mr. Norcross recently visited the Atlantic States, and returning, brought with him the best machinery and materials of all kinds, by which every desirable article can now be manufactured with dispatch.

It is such Manufactories as these that our State

STANFORD BROTHERS' OIL AND CAMPHENE MANUFACTORY, SAN FRANCISCO.

should foster and encourage, and nurse with maternal and paternal fondness; these will "build up" our State more rapidly and more securely than anything else. It is such works as these our State Agricultural and Mechanical Institutes should encourage. And it was to this establishment we referred at the time of the State Fair, at Marysville and at Sacramento, at neither of which any just or fair mention was ever made, or encouragement given, although a large expense was incurred by Mr. N., to show what California could do. We are grateful to know that the Public appreciate it; and we hope that good and true men and women will visit this Manufactory, and see what is now done to give employment to labor, and to save the Gold from going abroad that can be better employed at home.

Imported Butter and Eggs.

What we have so often said about the products of the Dairy and the Farm in every article of produce, has proved true, and more especially in regard to Butter, and we might add Eggs and all other articles.

Eighteen months since the Dairyman crowded Butter up to 75 cents, 87½ cents, and one dollar a pound. The consequence was California was flooded with Eastern Butter, and down it came to 50, 40, 30, and even 25 cents, so that the average was not equal, for the year, to more than 40 cents to the producers. We then urged that the producers should examine carefully the cause of these fluctuations and remedy them. This could be done by a wise economy with their stock, keeping only the best and providing good pastures. This would reduce the cost of keeping stock, and enable them to produce more and cheaper; and, by this means, place the price of their products so low as to completely shut out all competitors from abroad. Had this been done, the Dairyman would have had the control of the California markets always; but now—how is it! A neglect of these important matters left our Butter market "bare" of fresh and sweet Butter, and by means of the Opposition steamers to New York, the article of Butter can now be brought here in half barrels, at the small sum of three cents a pound, and thus the Dairy is touched in its tenderest point. Already more than 1000 half barrels of the very best Butter have come to us by steamers, and the price realized is gauged by that which is demanded by our own producers—at first 50 cents, and California Butter 75 cents. Now the home-made comes down to 50 cents, and Eastern 40 and 35 cents; soon California Butter 40 and 30 cents, and the Eastern will stop coming. But had our Dairyman been wise, and preferred to make Butter at 40 cents last year, or even 50 cents this winter, all this 1000 half barrels would stay off; but in addition to this amount many thousands come by clippers also, and thus our market is flooded with foreign produce to the injury of the Home-producers, who alone have the power to check it, and who could, by well-concerted action, wholly guard themselves, and secure to our Home Dairies a real permanent and

prosperous business. We hope wise counsels and guarded actions will prevail hereafter.

We are glad to know that a large amount of Clover and other Grasses have been sowed the present year, and that a very much larger amount of Butter will be produced—probably more than double that of last year.

Stanford Brothers.

We call attention to the new Card of the Stanford Brothers, of this city, which appears in our columns this week.

We have often spoken of this House, for we always believed that where large capital is employed in manufacturing, and thus giving permanent employment to the laborer, it is a great public benefit, and should receive a corresponding public patronage.

Messrs. Stanford Brothers have always been largely engaged in trade, usefully and successfully, and have ever been liberal to the working classes. Their large Oil and Camphene Factory, the largest in the State, keeps a number of men in steady employ, and the large Warehouse to which they have recently removed on the corner of California and Front streets, is now the storehouse of their many Manufactories—a very central and appropriate place for a House of this standing. Messrs. Stanford have long been known in our State, having been engaged largely in mercantile business since '49, and always cheerfully and with a ready hand aiding in works of public utility and private beneficence, well knowing that the best way to build up a State and make it prosperous is to rear up good Institutions.

The Advertisement of this House will fully explain their extended business, and the articles manufactured by them—each and all stand for quality, unrivaled on our Coast.

The New Branch of their business—the Coal Oil for Lamps and their Stock of new patterns of Lamps—exceed in variety and richness any importation yet made to this State, and to their whole business we can take pleasure in directing public attention.

Turner Brothers—California Sugar.

This firm of many Brothers, with their large Warehouse on Front street, is doing a very large business in Wines, Syrups, Cordials, etc. The House has a wide circuit of business connection and custom, having a large House in Rochester, N. Y., and another in the city of New York, and offering employment to a large number of workmen. In the labor department we see good to our State. Messrs. T. consume a very large amount of sugar in their Factory; this is mostly from France and Germany. The Beet-root sugar, or China sugar from the sugar-cane, both products of the soil, could be easily raised here, if our Legislature would only give a stimulus by encouraging these products. A quarter of a million pounds of sugar from abroad is annually used by this House in California. And why would it not be worthy our Legislature to devise ways and means to introduce

the growth and manufacture of sugar, by a splendid State Bounty? Let them give \$10,000 Bounty to the man or company that shall successfully introduce its manufacture and present the State with the first two hogheads of California sugar. This would bring it out. The paltry premiums of a local society cannot do it. The State must do it. Other States and Nations do it; and France, by her national bounties, has created the manufacture of Beet-root sugar, until the present value of the Beet-root sugar manufacture reaches the enormous sum of 900,000,000 francs. Let California Legislators look to these facts.

Messrs. Turner Brothers import glass bottles to an enormous amount; and although there is a small manufactory commenced, we want the Legislature to recognize and encourage all such manufacturers by the most liberal bounties.

Turner Brothers give steady employment to many workmen; keep a large capital in constant activity, and they help on the great work of building up our State. Their Warehouse and Factory are worthy a visit, and they are always glad to show their friends and patrons and the public, what they have done by their spirit of enterprise—by Work.

Pet Flowers.

A large proportion of those "Pet Flowers" around the dwellings of our citizens—those cultivated in pots—are lost by bad management. By this, we do not mean neglect; but they are killed off by over-care, too much nursing, too much feeding, in the same way as thousands of children are killed off—by thoughtless kindness.

Plants are often over-watered, that is, watered too often; the roots are water-rotted. And again, they are dried off, the surface earth is watered only, while the roots are left to perish. Plants in pots need care regularly; they should be watered according to their wants; they need more water in a hot and dry day than in a moist and humid one; more on a clear than on a cloudy day; more when in bloom than at any other time. Plants in pots should be watered at night fall; and those that stand on windows should be turned round every few days, so as to give the light to all sides of the plant. Never use painted or glazed pots; they prevent the evaporation of the moisture and circulation of the atmosphere.

Parlor-plants should have free access to air. A room wherein the air is so confined as to change the leaves of plants to a yellow cast is not fit to live in. There is no better "Health Thermometer" than a collection of Plants. If the Plants are healthy, the foliage of a bright green, then the air is pure; if of a yellow or fading hue, then the air is diseased and should be changed.

Never let Plants in pots grow too tall; grow them bushy in form, branching out with broad forms equal on all sides. This can be done by stopping the leaders and causing the Plants to branch. Few Plants only should be grown otherwise. Climbing or trailing Plants are the exceptions.

Bay District Agricultural Society.

Last week, in connection with the proceedings of the Agricultural Convention, we gave the preliminary proceedings to organize the San Francisco District Agricultural Society. A Committee was appointed to report a memorial and an act to present to the Legislature, and also a Constitution for the Society. The meeting then adjourned till evening.

EVENING SESSION.

The meeting assembled pursuant to agreement, at 7 o'clock, President Daniels in the chair.

The Committee on Constitution, etc., reported that they had not performed all the duties entrusted to them, and asked further time to complete their labors.

They reported, however, a Constitution, which was taken up by sections and acted upon. The section providing for the manner of locating the Annual Fairs elicited a spirited discussion and called out several propositions for the disposition of the vexed question. Mr. Pesbels, of Santa Clara, proposed that the seven counties should cast lots for the choice of years in which each county should have the Fairs, and the county drawing No. 1 be entitled to it for the first year; and so on in rotation until all are served. And in case the county entitled to it did not wish it, then the next in numerical order might have it. This plan met with opposition.

The following is a copy of the proposed Constitution, which was agreed upon by the meeting, and afterwards referred to a Special Committee, consisting of Messrs. A. H. Meyers, William Daniels, John Center, G. P. Loucks, John Cumming, D. R. Ashley and Judge Blackburn, who were requested to revise and report at a subsequent meeting:

Article 1. The name of the Society shall be "The San Francisco Bay District Agricultural Society," and it shall comprise the counties of San Francisco, San Mateo, Santa Clara, Santa Cruz, Monterey, Alameda and Contra Costa.

Art. 2. The objects of this Association shall be to promote the interests of the Agricultural, Horticultural and Mechanical Arts.

Art. 3. The Society shall consist of such persons as shall pay to its treasurer the sum of five dollars annually and agree to support its Constitution. Any person who shall pay the sum of twenty-five dollars, at any one time, shall be a member for life.

Art. 4. The Annual Meeting shall be held on the day of— for the election of officers and other business. Special meetings may be called by the Board of Managers, notice of which shall be given by the publication in at least three newspapers of the district.

Art. 5. The officers of the Society shall be a President, seven Vice-Presidents (one in each county), a Secretary, a Treasurer, and two Directors, who shall be elected at the Annual Meeting and hold office for one year, and until their successors assume their duties. They shall constitute a Board of Managers for the transaction of the general, prudential and financial concerns of the Society.

Art. 6. The place for holding the Annual Fairs of this district shall be determined by a Board of Delegates, composed of one from each county embraced in its organization; and said Fairs shall not be held in any county more than once, until each county shall have had the advantages of a Fair if desired; said Delegates shall be chosen by the County Society where organized, and where no County Society exists, by the Agriculturists thereof.

Art. 7. This Constitution may be altered or amended at an annual meeting, but not without the vote of four counties, each county having one vote.

The following resolutions were adopted:
Resolved, That when this Meeting adjourns, it do so to meet at San Jose, on Wednesday, 21st of March next, at 10 o'clock, A. M.

Resolved, That the various counties in the district are requested to send each ten Delegates to said Meeting.

Resolved, That the thanks of the Meeting be tendered to John Center and others who interested themselves in providing a Hall for the Convention and other facilities for the occasion.

After a vote of thanks to the officers of the Meeting, the Convention adjourned.

Planting Apples in the Mountains.

We have for many years been urging the planting of Orchards and Vineyards upon our hill-sides, and even high up in the mountains; and it is a source of great pleasure to know our suggestions have proved so true, and that so many persons have done well in their efforts in thus following out our advice.

We are glad, too, to find all up in the mining districts, that Gardens of Vegetables and Fruit Orchards are being established and with profit. A friend calling on us from Bostwick's Bar, a mining region, informs us of complete success in planting an Apple Orchard, and the prospect of making it very profitable.

We wish that those miners, who have been formerly among gardens and orchards in the old States, and who have a taste for cultivation, would just try a few trees and vines; they would find it would pay well; and, besides, it would afford them a recreation, being a change of labor to work at gardening an hour or two each day. A trial of this kind, in every mining region, would be a "lucky lead."

A New Bee-Hive.

We have received another New Bee-Hive. It is called "Dugdale's Patent Bee-Hive." It is about double the size of Langstroth's, having four apartments below and two above, with apertures for the Bees, to be driven into each or all. A large front of wire, or frame, to be closed at night, to protect the Bees, or to close in stormy weather. It is a peculiar Hive, needing however some improvements to meet the wants of the Bee for our climate. The Hive can be seen at our garden, at the corner of Mason and Pacific streets.

CALIFORNIA NOTES.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
(CONTINUED.)

SYPHILITIC diseases have prevailed so completely among the California tribes, for the last twenty-five years—tainting their system to that extent—that the women bear very few children. The form of syphilis prevailing among them is very severe and difficult of cure. They are also stated to be peculiarly affected by pulmonary attacks, and seldom recover from them. They are often found tattooed with a kind of blue pigment, on the face and breast, which gives those practicing it a very unpleasant appearance.

One of their great articles of exchange throughout the length of the State, was aulone and other shells, which they broke and rubbed down to a circular shape, to the size of a dime, and strung them on a thread of sinews, and which they used as ornaments and money, and set the greatest value upon. This aulone shell exchange seems to have extended from the Colorado to the Russian Possessions.

The Indians on the Colorado and Gila were seen using these shell-fish for food and ornaments, by Padre Kino and other Jesuits, in their travels of 1680 to 1744, from Sonora, in their attempts to get round the head of the Gulf, and was the first proof of Kino's vicinity to the Pacific, and which made him indulge the notion he could travel up soon by land to Monterey.

The females are almost invariably fat, gross and squabby, after eighteen, and with dull, apathetic, inexpressive countenances, similar to the men. Both men and women are very dirty and filthy in their habits, but under rigid subjection are easily brought under the control of white people, for domestic housework. They continue to the last, however, loose, lazy, careless, capricious, childish and fickle.

In the early settlement of Alta California there were many Spanish soldiers in service, called the "Volunteers of Catalonia," commanded by Captain Don Pedro Fages. A company of Sonora soldiers, in deerskin jackets, was called the "Compania de Cuera." Many of these soldiers married with the female neophytes, and most of them left families of mixed Spanish and California Indian, all of which are noted in the Mission marriage books. These mixed races have intermarried with each other since that time, and continue so to do. The mothers are generally prolific, and the progeny of robust health. How long this may continue is difficult to tell. The bulk of the *Gente de Razon* of Alta California were of this mixed breed, or, rather, they were re-mixed with Mexicans of Spanish blood; though there were many pure-blood Spanish people in the country, also, before 1846. Since 1848 a strange breed of American and Indian have sprung up along the Pacific Coast, from Washington Territory to Arizona, which, with the mixed Spanish-Indian breed, may in time have some political consequence in our affairs.

Very few we have heard of have ever learned to read, though every mission in the olden time had its church-choir of Indian singers, who were instructed by the Fathers in the music and service of the Mass of the Roman Catholic Church. Near every mission and settlement of the coast-counties of California, south of San Francisco, are still to be found numbers of the old neophytes of the Catholic religious establishments, and every Spanish family thereabouts has one or more in their service. The propensity to drunkenness, gambling and indolence, in the men, and dissoluteness, laziness and childishness, in the women, renders them, however, of very little use.

Out of many male Indians examined in a nine-years' observation, we have not seen more than a dozen with mustache or whiskers. Sufficient accurate observation has never been made on this point, however. We never saw one bald, or with bad teeth, except—in the matter of teeth—some of the very oldest. Some of them near the Carmelo Mission have reached to one hundred years of age. Their general expression of features is somber and melancholy, as seems to be that of all the Indian tribes of this hemisphere. Their heads are not so angular and long as the Indians of the Atlantic, nor can they be lit up with any such animation; their color of skin is, however, (with exceptions named) remarkably similar, as is their hair. Their gait in walking is very slow and awkward; we have never seen any of them, either in the San Joaquin country or on the Coast, cut any figures of dignity and majesty. They appear to be devoid of permanent, strong affection, either in their social or religious feelings—in fine, extremely apathetic. After the breaking up of the missionary establishments, they either returned to their former wild life in the Tulares, or living in brush and straw huts, hard by the missions, or hung around the pueblos, drinking and gambling, and wasting their time and strength in all manner of debauched habits. They have very seldom exhibited any extreme habits of vindictiveness or revenge, during their sixty years control by the whites, prior to 1833. Since then, and even before, the Klamaths, the Shastas, the Yumas, and the Mohaves, were the only tribes which exhibited any degree of pertinacious bellicosity or cunning treachery. There are probably at this time, not less than four thousand of the old Mission Indians living near the scenes of the Catholic Fathers' labors in the Southern Coast counties—in the county of Monterey about three hundred. They are to be found more numerous in Los Angeles, San Bernardino and San Diego counties.

The Indians living in the valleys immediately on the north shore of the Bay, were the Tamales and Canimares, in Marin and Sonoma counties. The Canimares had large rancherias in Santa Rosa plains, at Bodega, on Russian River, and in Petaluma and San Rafael valleys. This tribe, as we are informed by Capt. John B. R. Cooper, a pioneer of 1824, were considered to have numbered, prior to 1820, in their different rancherias, not less than 10,000 souls. When Capt. Cooper settled the Molino Rancho, in Santa Rosa Valley, in 1834, there were living in his neighborhood as many as 2000 Canimares. The Tamales, their friends and

neighbors, were commanded by an old chief, named Marin, who was a man of great bravery, and several times defeated the Spaniards in prairie skirmishes. He was at last pacified, and allowed himself to be baptized into the Roman Catholic Church; he afterwards acted as *mayordomo* of the Indians of Dolores and San Rafael Missions, at one of which he died, a few years before the American flag was raised. He is said to have had his tribe under complete subjection. The smallpox, the measles, and the terrible fever-and-ague which attacked the Indians of the Columbia River, about 1830, carried off thousands of his people, and committed immense havoc also in the rancherias and tribes of Sonoma, Napa, Sausal and Suisun valleys. This fever-and-ague likewise destroyed immense numbers of the Sacramento and San Joaquin Indians. The old mountain trader, Jedediah Smith, who was a very observing and truthful man (and withal a devoutly religious Methodist), stated to Captain Cooper, between 1827 and 1830, that this distemper must have exterminated 50,000 of the Sacramento and San Joaquin Indians. They made the disease worse by jumping into cold water while in the paroxysms of the fever.

Prior to 1820, the measles and smallpox had committed great ravages in the missions of Upper and Lower California; it carried off nearly all the Indians of the latter country, to the South, below the Mission of San Ignacio, anterior to 1810. The Indian tribes of the Colorado also suffered greatly from the smallpox. This pestilence prevailed extensively again in the missions of Alta California, in 1828-29, and carried off many of the neophytes.

The Indians living near Santa Ynez and La Purisima Missions, in Santa Barbara county, exhibited, on several occasions, great spirit in fighting with the Spaniards. These, the Yumas, the Klamaths, the Tamales, the Shastas and the Mohaves, appear to have been the most warlike tribes of the Indians. The Islands of the Santa Barbara channel were thickly populated with Indians when the Spanish colonization commenced, in 1769. The Tamales, or Tamalesnos, are very likely the same tribe who received Sir Francis Drake, in 1579, as a remnant of them still live around Punta de los Reyes. The Indians who inhabited the Santa Barbara Islands were the neophytes who were afterwards domesticated at the missions of San Buenaventura, Santa Barbara, and San Juan Capistrano. They held communication with the main land by means of canoes made of wood and tule, and lived principally on fish, muscles and aulones (the Monterey halibut or ear-shell), which are extraordinarily abundant in those parts and vicinity. The sites of old rancherias thereaway, as well as over the entire shores of California, may be designated to this day, by immense quantities of aulone and muscle shells, which the traveler or hunter stumbles on at every step.

From inquiries we have made among the old foreign settlers, and from the various accounts of the Catholic Missionaries and travelers, the Indian population of California in 1826 may be estimated as follows:

The Indians of Sonoma and other valley ranges on the north shores of the Bay of San Francisco, from Punta los Reyes to Clear Lake, numbered not far from 40,000 souls (probably 70,000), and existing in many clans and bands of different dialects, were domesticated in the Missions of Dolores, Sonoma and San Rafael.

The Indians of the Sacramento, according to estimate of Capt. Jedediah Smith, to our aforementioned friend, numbered not far short of 80,000 souls, from Red Bluffs to the American Fork. They existed in innumerable bands, who generally could make out to converse with each other, as one mother tongue, having divergent dialects, seemed to prevail among the clans of the entire valley; though, as we are informed, Major John Bidwell, of Butte county, an old pioneer, says four different languages were spoken in the same country.

Those of the San Joaquin Valley, from the Cosumnes to the Tejon, Capt. Smith numbered at about 70,000, and who were also cut up into very numerous tribes and bands. They differed in language from the Coast Indians, and many of them were domesticated in the Missions, from San Gabriel up to San José and Santa Clara, to which establishments they were brought by the Spanish military expeditions equipped annually from the Presidios or the Missions.

The Christianized Indians of the Missions numbered, in 1826, according to the Fathers, about 25,000 souls—some years more, some years less. They used often to run away by bands to the mountains.

Those on the Colorado, the Mohave, and the western Coast Range edge of the Desert country to the Gulf, may be roughly estimated at 20,000 souls.

According to Adam Johnston, Esq., Indian Agent for California in 1850 (as stated in Schoolcraft), the tribes who lived around the Mission of Dolores and Yerba Buena, were the "Ahwahshies, Ohlones, Altabmos, Romannans and Tulomos." The Ohlones were likely the same called by the old priests, "Salones," "Solomonies," the Sonomies were another. No doubt the names of all the Indian rancherias were entered with the neophytes' names in the Baptism Book of Dolores Mission, commencing about the year 1773, and coming down to 1830. From the observations of Captain Smith, above named, in 1820; from those of Col. R. McKee, and Mr. George Gibbs, in 1851 (vide Schoolcraft), and the newspaper accounts of the Northern Coast counties, we may approximately assume an Indian population of 30,000 in 1826, and within the present boundaries of the mountain counties of Mendocino, Trinity, Klamath, Humboldt, and Siskiyou. In all this region of country, elk, deer, and feathered game were extremely numerous, and there is no exaggeration in saying that it is impossible that fish could be more abundant in the lakes and rivers of this extent of country than they were, and sometimes are still. The Indians of these rugged Sierras are cut up into innumerable bands of bold and treacherous savages, holding, as it would seem, very little communication with each other in the way of peace and friendship, and always at war with the whites, and among themselves.

According to the foregoing figures, which we believe are not above the real numbers, the Indian population within our present State limits, in the year 1826, summed up a population of two hundred and sixty-five thousand souls.

Within the boundaries of the present Utah, Oregon, and Western New Mexico, we are led to believe from the various works of authors and travelers, that the Indian population of those regions, in the year 1820 (including Moquis and half-civilized tribes), numbered little short of 300,000 souls. The most of them (excluding Moquis, Pimas and Maricopas) were affiliated tribes of Diggers. Or, taking in the State of California, probably half a million would not exceed the numbers of this dismembered race, who inhabited an immense extent of territory, subject continually to the most extraordinary, awful and convulsive changes of nature, the volcanic records of which are plainly visible and noteworthy to the present civilized people who are their immediate successors.

To show the status of Indian affairs in California during the most flourishing times of the Catholic Missions, it appears from a manuscript official report of the President, Friar José Senan, of 31 December, 1822, that there were in the twenty establishments (Sonoma had not been organized) the number of 20,958 souls of all ages. From the foundation of the Missions, in 1769, to that time (fifty-two years), 74,621 had been baptized, 20,412 married, and 19,725 died. The Missions then possessed 152,179 head of horn-stock, 200,646 head of sheep, 1,724 goats, 1,496 hogs, 14,375 tame horses, 6,133 wild horses, and 2,116 mules. They had sowed, in 1822, of wheat 3,118 fanegas, and gathered 31,771 fanegas; of barley, 393 fanegas sowed and 5,244 gathered; of maize or Indian corn, from 113 fanegas sowed they reaped 12,423 fanegas; frijoles, 80 fanegas produced 1,952 fanegas; of peas, 8 fanegas produced 102 fanegas; of garbanzas, 80 fanegas produced 1,952 fanegas; and of abas or horse-beans, 29 fanegas produced 679 fanegas.

In 1822, San Diego had 1,697 Indians, San Luis Rey 2,663, San Juan Capistrano 1,052, San Gabriel 1,593, San Fernando 1,001, San Buenaventura 973, Santa Barbara 1,010, Santa Ynez 592, La Purisima 764, San Luis Obispo 467, San Miguel 926, San Antonio 834, Soledad 532, San Carlos Carmelo 341, San Juan Bautista 1,222, Santa Cruz 499, Santa Clara 1,394, San José 1,620, San Francisco Dolores 958, and San Rafael 830; in all 20,958 Indians of all ages. In Lower California, in the same year, there were about 6,000 Christian Indians, from Cape St. Lucas to San Diego, as we are led to assume from Humboldt, Forbes, etc.

In his essay on New Spain, of 1822, Humboldt states from official sources that in the Alta California Missions in 1802 (there were then only 18 establishments) the number of Christian Indians amounted to 15,562 souls (7,945 males and 7,617 females); the Spanish population was then said to be 1,300 souls.

In an official account of December, 1809, by the President, Padre Tapis, the following facts are given of the status of the nineteen existing Missions: Males, 9,726; females, 8,809; total, 18,535 souls in all told. The number in the year 1808 was 18,598 souls. Up to 1809 the priests had baptized 42,653 persons of all colors and kinds, had married 13,176, and buried 29,308—all but about five per cent Indians.

Forbes, in his History of California, states, from official sources, that the twenty-one Missions had, in 1831, the number of 18,683 Indians, and of Spaniards of all kinds 4,342 souls. This is the last enumeration which seems to have been carefully made of the Mission Indians.

In the four enumerations we shall then have the following numbers of Indians—the sexes about equally divided:

For 1802, in 18 missions.....	15,562 souls.
For 1809, in 19 missions.....	18,535 souls.
For 1822, in 20 missions.....	20,958 souls.
In 21 missions, for 1831 and 1833 (the year of Secularization).....	18,683 souls.

[TO BE CONTINUED.]

The Gulf Stream as a Fertilizing Agent.

If we follow the Gulf Stream across the Ocean, we perceive how fully it fulfills the purposes for which it was designed. Sir Walter Scott tells us that the pools in the Orkneys are never frozen, the effect of the grand hot-water-warming apparatus of a far distant shore being sensibly felt even in these islands, which are situated in a latitude nearly ten degrees further north than the ice-bound coast of Labrador. We all know that in Great Britain there is an extraordinary difference between the eastern and the western coasts; so great indeed as to induce completely different degrees of agriculture. The Emerald Isle owes her splendid grazing land to the soft breezes born of the Gulf Stream which strikes full upon her shores. The western shores of England are robed in bright green pasture, nourished with the warmth and moisture issuing from the same tropical sun. The dairy produce of Great Britain has its roots and issues in this steadfast hot water river in the Ocean, the limit of which modern science has so accurately mapped: nay, the florid lamb looks of our people and the large size of our domestic animals, are but the effects of that moist and genial atmosphere which finds its birthplace in the beneficent Gulf Stream.

And in order to bring the effects of this extraordinary marine phenomena closer home to the stomach of our reader, we may perhaps be permitted to ask him, how it is that of late years he has purchased peas, potatoes and brocoli so many weeks before their season in Covent Garden market? Peas in May were once thought to be an extravagance only allowable to a duke. Now any moderate man may indulge in them to his heart's content. Well, these vegetables are forced, but in a hot-house atmosphere of nature's own contriving. Where the tail of the British dolphin dips into the Atlantic, there the effects of the Gulf Stream are most felt; it is bathed with the warm moist air, heated by the far-off Gulf cauldron, and we may say, with exactness, that the majority of our early vegetables sold in the open market are forced in hot-houses in Cornwall and Portugal, by means of a boiler situated beyond the West Indian Archipelago, the conducting hot-water pipe of which runs for nearly four thousand miles between the cold walls of the surrounding ocean. Had the ancients been aware of this property of the ocean, it would have modified the representations of the Pagan Olympus, and we should have been familiar with the spectacle of—Neptune turned gasp-wear.

Nature can't be Cheated.

Man have grown so into the habit of cheating each other, that sometimes they seem to forget the shrewdness of Dame Nature, and attempt to play off their cheats upon her. But invariably they learn their mistake before done with the trial, and are glad to escape her public anathemas at no small sacrifice of comfort and credit.

There is a farmer who gets it into his head that the stomach (his horse—not his own!) is a most unreasonable organ—laying down numerous useless and arbitrary laws, and requiring too much attention by far. But worse than all, it requires food too and food costs labor and money, and so he assumes to decide as to quantity, and begins to "curtail." Nature appears to submit, and he begins to congratulate himself on the success of his experiment, when the projecting bones and baggy look of the poor victim stare him in the face. Still, he says, flesh and fat are not absolutely essential, and continues the diminished ration, until at last he learns by the diminished strength and spirit of the animal, that flesh and fat have some other end in view than simple plumpness—that both are essential to vigor and strength, that the motive power of the horse is the product of the liberated force, which in the processes of digestion and nutrition was imprisoned for the time in the organic tissues, ready to do its office at the bidding of the will! Now he knows that the horse needs food just as much as the locomotive needs fuel, and for the same reason; and that he can get no more force out of either than he puts in; that neither is a primitive source, simply a medium of motive power. Well, we are glad that he has learned so much; by and by, he will come to see, for like reasons, the importance of so husbanding the strength thus acquired, that one-fourth of it shall not be expended in the tedious and unprofitable process of grinding coarse wry hay and hard grain, and so by chopping one and grinding perhaps cooking the other by less expensive machinery, leave the poor laden animals five hours of the twenty-four for needed rest and sleep.

Here is another, who has been so long lovingly dandled on the lap of mother earth, that he almost believes she loves him well enough to supply his numerous wants without so much help from him; and so he scratches her on the bosom just enough to remind her of his needs, carelessly sprinkles deficient seed and lies down to await for an abundant harvest. But the abundant harvest comes not, and after numerous failures, his industrious scientific neighbors proving all the time, by luxuriant growths of grass and grain, the bounty of nature towards such as neglect not her inexorable laws—he will study to know the nature and necessities of soil, and the importance of abundant and perfect seed.—[Wis. Farmer.]

Amalgamation of Potatoes.

A pamphlet has been published in Scotland by a farmer named Craig, on the potato disease and its cure. By planting three different kinds together, last year, very favorable results were achieved. Two out of the three varieties planted had been, on previous occasions, affected by the disease; all were found to be perfectly healthy and sound when dug, and experience has shown that they kept well during the winter. He believes that the potato disease may be safely attributed to the violation of one of the laws of nature, and that the generation of the malady is occasioned by the plants being too closely bred, or, in other words, by "sub breeding," that is, "breeding in and in."

The lesson we derive from this, is that two or more varieties of seed potatoes should be planted in each hill.

What say our potato philosophers to this? If the argument or objection applies to potatoes, why not to turnips and all other plants? and why not to grain, grass, fruit, etc.? What say our farmers? Shall the seed be mixed? Here is an important principle mooted—who shall solve it?

It is probable that some plants may dwindle away, degenerate, and finally "run out," and that they require "crossing;" but why not "cross" them on fresh seed of their own sort or variety as among pure blood-horses or cattle? In this way the same quality may be kept up forever. Plant potatoes on rich, new, dry ground, upon drained land, where they shall not suffer from wet or drought, and we believe they will be free from disease. Plant them in old, low, wet, clayey soil, with no matter how much manure, and you may count on poor, diseased, and watery tubers.—[Tenn. Farmer and Mechanic.]

ROUND VALLEY RESERVATION.—Orders from Washington have been received instructing the Surveyor General to have Round Valley, in Mendocino county, surveyed for an Indian Reservation. Round Valley, says the *Petaluma Journal*, is the richest tract in the basin of Eel River. It contains 18,000 acres of good soil, and the climate is mild, regular, and moist; plenty of timber and water, and the land is covered with rich grass. The valley is about ten miles long by six miles wide, and it is almost inclosed by the north fork of the Eel River, which makes the bend that incloses the valley, along the banks of which there is a great growth of black oak timber, valuable for fence rail and building purposes. The center of the valley is prairie land. The Valley for the most part has been taken up and improved by settlers, who will be obliged to leave. Government will, of course, remunerate them for all improvements made previous to the proclamation declaring it to be its intent to reserve these lands for a reservation.

A NEW WINE.—Messrs. Woodruff & Wright, of Ripon, Wisconsin, are engaged in the manufacture of what they call Western Champagne, from the juice of the Pie-plant stalk. One acre of thrifty plants it is said will yield from 2 to 3000 gallons of wine, which may be flavored by the addition of small quantities of the juice of currants, raspberries, strawberries, or anything else one's taste may prefer. Mr. Wright thinks it is in many respects preferable to other wines, urging as a reason that it is cheaper, less intoxicating, and even beneficial in its effect on the system. [Californians, try it.]

WHAT is true of dogs, in Ohio, is equally true of them in Wisconsin, says the Farmer of that State. They are a perfect nuisance on general principles, and especially to those who keep sheep. Is there no way this can be abated? Strychaine is a good article when judiciously used. [We think a little of that drug would not be bad in our city.]

A good woman who is very fond of using large words, sent for us to prescribe for a headache, the result of a violent fall. She assured us that she "fell down" and struck her head "with such exceeding violence on the steps that she wasn't conscientious for some hours." It occurred to us that if falls were productive of that condition, a large portion of the human family must be in the daily habit of knocking their heads on the steps.—[Scalpel.]

WHAT is the difference between a confirmed sinner and a beggar? One is a mendicant and the other is a mend-i-won't.

NURSERY BUSINESS.

First Premium
NURSERIES,
SAN JOSE.
B. S. FOX & CO.

HALF MILE FROM CITY, TELEGRAPH MISSION ROAD.

Fruit and Ornamental Trees,
GRAPE-VINES,

Flowering Shrubs, Gooseberries, Currants,

RASPBERRIES, &c.

LAWTON AND DORCHESTER BLACKBERRIES,

Of Genuine and Superior Plants.

ROSES,
CLIMBING PLANTS, DAHLIAS, &c.

NURSERYMEN'S STOCKS, GRAFTS, &c.

We desire to offer to our friends and patrons a stock of

TREES, PLANTS,

VINES, SHRUBS,

AND

NURSERY STOCK,

THE PRESENT SEASON, UNRIVALED.

As Experienced Nurserymen our desire is to offer a stock that shall be reliable, producing fruits true to name and variety, and always embracing the newer and better sorts. It is not so much our aim to present numerous varieties as it is to offer valuable ones, and we shall always be prepared to serve our patrons with every new variety, either from Europe or our own country, as soon as fully proved to be a valuable kind. Our stock of nursery articles need only to be seen to be fully appreciated. We are confident we can

Equal Any Nursery in Stock or Growth,

Our efforts being to show our friends

Well-Grown Trees and Plants.

We invite all purchasers of Trees, Plants, &c., to call and see us, or our

AGENT, MR. JAMES L. BURTIS,
118 Washington street, San Francisco,

Where we have opened a Store, that our friends and patrons can

EXAMINE OUR STOCK,

As we purpose offering them at

ONE-HALF LAST YEAR'S PRICES.

Trees and Stock packed with great care, to insure safety.

DELIVERED AT ALVISO FREE OF CHARGE.

It would be advantageous to purchasers to call and make selections early, thus securing Choice Trees. Catalogues found at Farmer Office on application, gratis.
B. S. FOX & CO.
September 9, 1859. B-5m

SAN JOSE NURSERY.

FRUIT TREES!

AND

Ornamental Trees and Shrubs

15,000 ROSES.

ALSO,

A Fine Assortment of Greenhouse Plants

GRAPE VINES!

Best foreign varieties, and also California, in cuttings or rooted plants, one or two years old, for sale to suit purchasers. Trade supplied at a liberal discount. Having the largest assortment of FRUIT and ORNAMENTAL TREES, SHRUBS, PLANTS, ROSES, &c., that can be found in any one nursery in California, I offer them for sale at

EXTREMELY LOW PRICES.

For the season of 1859-60, being obliged to reduce my nursery to the half of its extent, having it planted in orchard.

MY COLLECTION OF ROSES TOOK THE FIRST

PREMIUM AT THE STATE FAIR HELD AT SAN JOSE.

I offer an assortment of the best varieties of Apples, Apricots, Peaches, Plums; Almonds, Cherry, Mulberry, Gooseberry, and Currant in quantity. Flowering and Climbing Shrubs. The best assortment of Evergreens, cultivated in pots so they can be transplanted with safety.

All orders promptly attended to, the trees carefully packed up in bundles or boxes, according to the distance they have to go, and delivered free of charge on the steamer at Alviso. Apply to
L. PREVOST, San Jose.
Or to my Agents, Mr. Delabigne, El Cley street, San Francisco; Mr. J. Pinchard, Sonoma, California. 14-1m

PREMIUM!! PREMIUM!! PREMIUM!!

French-Garden Vineyard!

SAN JOSE.

THE ATTENTION OF GRAPE

cultivators and amateurs is called to my fine collection of

GRAPE VINES!!

which has been awarded the

FIRST PREMIUM AT THE STATE AGRICULTURAL

FAIR AT SACRAMENTO; ALSO AT SAN

FRANCISCO AND SAN JOSE.

Said collection comprises the

Best Varieties of Eating and Wine-Making Grapes, and I have a large stock of

CUTTINGS AND ROOTED VINES.

Which I will sell at HALF OF THE PRICE at which I have sold them last year. Apply directly to me, or to my Agent at San Francisco, Mr. DELABIGNE, 59 Clay street.

I have also for sale a fine assortment of

FRUIT TREES!!

One, two, and three years old.

Lombardy and Silver Poplar, Elms, and other Ornamental Trees, all at greatly reduced prices.

I also offer for sale my

GARDEN.

And improvements thereon, at advantageous conditions for the purchaser. It contains eleven acres of land, covered with Trees, Grape-Vines of the best varieties of, and in full bearing state.

Catalogues and descriptions will be sent on demand.

San Jose, November, 1st 1859. A. DELMAR 14-3m

WORK WHILE 'TIS DAY.

The following beautiful lines and the noble sentiment they advance, will strike every reader that has a soul in him, as worthy of a great spirit; they are the production of Blanche D'Artois, an American lady, who certainly possesses a very high degree of genius; they would do honor to any poet in our country:

Work!
While bright daylight on thy path is beaming—
Work while 'tis day:
Despair not thou, although thy task is seeming
To last away.
Trust! when the dusky shadows o'er thee fly,
Obscure the sun.
Though Duty's task is ended but by dying,
Let it be done!

Work!
While bright daylight on thy path is beaming,
Though not for gold—
Fame proves a phantom, and our idle dreaming
Is a tale that's told;
But cherish ever with a grand emotion,
A zest for strife!
Our earthly birth-right in this wild commotion,
This threefold life.

Work!
While bright daylight on thy path is beaming,
For night falls down.
Work! while the furor in thine eye is gleaming,
To win the crown.
Work with thy hand, and with thy many talents,
Ay, with thy soul;
Thy threefold life weighed in the eternal balance,
Demands the whole. [Seal]

Something for those who Wish to be Beautiful.
A truth which we have often appreciated, is beautifully expressed in the following by Professor Upham:

"As we were about to start, I saw the captain move to an elevated position above the wheel; and it was interesting to see how quickly and completely the inward thought or purpose alters the outward man. He gave a quick glance to every part of the ship. He cast his eye over the multitude coming on board the ship, among whom was the American ambassador to England, who, if the captain may be said to embody the ship, may be said with equal truth to embody in his official person a nation's right and honor. He saw the husbands and wives, the mothers and children, entrusted to his care; and his slender form, as he gave the orders for our departure, seemed at once to grow more erect and firm; the muscles of his face swelled; his dark eye glowed with a new fire; and his whole person expanded and beautified itself by the power of inward emotion. I have often noticed this interesting phenomenon; and have come to the conclusion, if man, or woman either, wishes to realize the full power of personal beauty, it must be by cherishing noble hopes and purposes—by having something to do, and something to live for, which is worthy of humanity, and which, by expanding the capacities of the soul, gives expansion and symmetry to the body which contains it."

A Good-Humored Rebuke.

A certain good old farmer kept his constant good nature, let what would turn up. One day while the black tongue prevailed, he was told that one of his red oxen was dead.

"Is he?" said the old man; "well, he was always a breechy old cuss. Take off his hide and take it down to Fletcher's; it will bring the cash."

In an hour or two, a man came back with the news that "line-back" and his mate were both dead. "Are they?" said the old man; "well, I took them from B— to save a bad debt I never expected to get. It is lucky that it aint the brindles. Take the hides down to Fletcher's; they will be as good as cash."

In about an hour the man came back to inform him that the night brindles was dead.

"Is he?" said the old man; "well, he was a very old ox. Take off his hide, and carry it down to Fletcher's; it is worth more than either of the others."

Hereupon his wife, taking upon herself the office of Eliphaz, reprimanded her husband severely, and asked him if he was not aware that his loss was a judgment from heaven for his wickedness.

"Is it?" said he; "well, if they take judgment in cattle, it is the easiest way I can pay them!"

ABOUT the coolest thing we ever heard occurred in Williamsburg, Oregon. The keeper of a boarding house called on one of his delinquent boarders for money to purchase supplies for the table. The fellow received the dun with as little emotion as if he had been a statue, and coolly retorted, "Well, if you have got no money, sell your watch—that will buy grub; as boarders must be fed, you know!"

MRS. LIZZIE WILEY WARREN, M. D.,
ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of doctoring the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the disease themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes inherent unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and wise, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. ANNIE L. AVERY,
HOMEOPATHIC PHYSICIAN,

Residence, 249 Pacific Street (two doors from Stockton Street),
SAN FRANCISCO.

Special attention paid to diseases of women and children.

The Bascom Institute, San Jose.—The Summer session of the Bascom Female Institute, will commence on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

WILL YOU NOT SEND THE
CALIFORNIA FARMER
ABROAD?

How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$5 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the New Volume.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1880:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Hamilton, Ohio, do 4 and 6 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question, The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANNY'S (with Wood's Improvement) REAPERS. Also—

EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;

WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELETON CLOD CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,

38 SACRAMENTO STREET,

San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1880.

NURSERY CIRCULAR.

FOREIGN AND NATIVE GRAPES,
AND GENERAL NURSERY STOCK,

OFFERED THE PRESENT SEASON OF 1859 AND 1860, BY

A. P. SMITH,

AT THE

POMOLOGICAL GARDEN AND NURSERIES,

SACRAMENTO, Two-and-a-half Miles from the City,

AND AT THE

OFFICE AND DEPOT FOR TREES, 44 J street, between Second and Third streets,

SACRAMENTO CITY.

THE CULTIVATION OF THE GRAPE, AND THE PLANTING OF VINEYARDS UPON AN extensive scale, is at the present time exciting a lively interest among the people of our State.

The congeniality of our soil and climate, and the success which has thus far attended the operations in the vineyard, are exciting the attention of hundreds to this subject, and destined to make vine-growing and wine-making one of the great interests of our State. With the world for a market, who can estimate the wealth that will hereafter accrue to our people in the manufacture and exportation of wine. This State and this interest yet in infancy, and this great interest is of such magnitude that it is of the first importance to begin right. To do this, we should now ascertain what is to be the most desirable grape to cultivate, especially for wine-making. The California or Los Angeles grape makes a good and pleasant wine, and while some claim it to be as good as any for making wine, the majority of experienced growers pronounce it inferior, and some assert that it will be superseded by some other and a much better grape. Among over one hundred varieties of grape cultivated by us, the CALIFORNIA GRAPE has always proved to be the most tender, while the French and German grapes invariably resist the frosts that have been so very destructive to our California grapes. This is a very important point to establish, as the loss by frost in some wine-districts alone, would be very great, and therefore the attention of the cultivator should be directed to attaining a hardy class of grapes. Experiment alone must determine this, and whatever experience we have already attained should be carefully noted and improved upon.

For some years we have been most carefully experimenting upon and propagating from a very large stock of the finest kinds of foreign grapes, and while most of these have proved perfectly hardy, the CALIFORNIA grape has been entirely killed. At the same time no two opinions exactly agree as to their superiority in other respects over our native grape. Thus it will be seen that the wine-grapes of Europe have so far proved to possess a very decided advantage over the grape now being cultivated and known as the Los Angeles grape.

With these points established, and with the opinions of practical wine-growers of Europe to sustain us, there can be no reasonable doubt of the re-production in this State of the finest wine-grapes of Europe.

The foreign grapes having a world-wide reputation as wine, table, and raisin grapes, and having been proved to be hardier than our own grape, and better adapted to our soil and climate, they must and will become very extensively cultivated. We cannot sufficiently impress upon those about to plant vineyards, our own opinions and preferences for this class of grapes, believing as we do, that the varieties to be eventually selected from this class will be grown to the exclusion of all others. We would not by any means wish to discourage the planting of the CALIFORNIA GRAPE, which is indeed a useful and valuable grape, and of which we sell largely; but when it has to come in competition with varieties of superior merit, it must necessarily give place to them. From many of the foreign grapes we have experimented in wine making, and while all have proved to be good wine-grapes, some of the kinds have produced wine of such decided superiority as to leave no doubt in the minds of competent judges of this class of grapes being the grape from which we may hope to manufacture an article of wine that will improve by age and be fit for exportation. The present season we have made wine from twenty different kinds of this class of grapes, as well as a large quantity from the California grape, and another season we hope to be able to report more fully. We have also made some very interesting experiments in the grapes for raising, and notwithstanding our process has been crude and imperfect, our success was very flattering, and we have no doubt but that the very finest quality of raisins can be profitably prepared in this country. We wish to draw the attention of parties to our extensive stock of this class of grapes which are very select, and which we have been propagating for several years at large expense, having heretofore limited our sales till the stock now in hand is the largest in this State. Such varieties as we have specified we can furnish by the hundred or thousand, and when taken in large lots we will put them at much lower rates than heretofore offered.

We wish it to be distinctly understood that our stock has been all grown by ourselves from bearing vines in our own vineyard, and we enumerate only such as we can furnish in large quantities.

When a thousand or more vines are ordered, the selection of kinds will partly rest with us, but will be comprised within the following assortment:

We would suggest to our customers that they should name to us the proportions they desire for TABLE and for WINE grapes. The following is the list for the present season:

Black Hamburgh—An immense bearer, a large and purple berry, one of the finest and most luscious of black grapes known.

Willmott's Black Hamburgh—Extraordinary bearer, and fruit with immense sized berries, differing in shape from other berries.

Black Prince—Large, very productive, rich and very delicious.

Black Morocco—Very prolific, large clusters, and gives promise of being a very fine wine grape.

Black St. Peters—Long and large clusters, a late fruit, sweet and very delicious.

Black Frontignan—A good grape with a sweet and musky flavor.

Cannon Hall Muscat—One of the largest white grapes known. From our experience this year we think it a fine wine grape.

Chasselas de Fontainebleau—A white, very productive grape, medium size.

Early White Sweet-water—A well known early sweet grape, being more than three weeks earlier than the California grape, and a great bearer.

Early White Malvoison—Early, and sweet, and good.

Frontignan Muscat—Very fine. Syrian—An immense bearer, very large, a late sort.

Grizzly Frontignan—A good bearer, fine flavor, good table grape.

Lashmier's Seedling—White, good size, medium bearer, high flavor, believed to be good for wine.

Large Rose of Peru—A large and superior grape, and very prolific.

McReady's Early White—Very prolific, and a fine white grape.

Muscat of Alexandria—Large and fine, the very finest of table grapes, and of exquisite flavor.

Royal Muscadine—A delicious grape, great bearer, incomparable as a table grape, and promises to be first rate as a wine grape.

Red Frontignan—A very fine grape.

White Frontignan—A very delicious grape.

Our native grapes consist of the California grape from one to three years, Isabella, Catawba, Clinton, Concord, and Rebecca. Some of the latter are new sorts, and of these we are not largely stocked this season. We particularly ask planters of vineyards to review our remarks in this card.

FRUIT AND ORNAMENTAL TREES.

The Trees offered from the above establishment this season are more than usually fine, and in the NUMBER OF VARIETIES, of each kind of fruit, we possess the largest collection in the State, our catalogue embracing OVER NINE HUNDRED VARIETIES, among which are

APPLES, about 250 varieties; PEACHES, 75 varieties;
PEARS, 400 varieties; PLUMS, 50 varieties; NECTARINES, 20 varieties;
CHERRIES, 50 varieties; APRICOTS, 12 varieties;
GRAPE, 100 varieties.

We hesitate not in saying that our Pear and Cherry trees are the finest ever offered for sale in this State, of all sizes, being from 6 feet to 12 and 14 feet high. The greater portion being not only of very large size, but also handsomely shaped, are elegantly adapted to planting near residences, affording the double advantage of shade and fruit. Of the above two fine Fruits we offer 25,000 Trees for sale, of different sizes and prices, and as low as good Trees can be bought at any first-class Nursery in the State. Many persons have had but poor success with Cherry Trees in this State. We state for their information that

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common Native or Oregon stock of this Coast,

the former being the only stock fit to grow them on. We have also a very fine stock of the following, viz

Apple, Plum, Peach, Nectarine, Apricot, Fig, and Almond,

Besides a miscellaneous collection of other small fruits. Particular regard has been paid to the growing of the trees in good shape, and purchasers of our two-years-old trees will find that they have been well "cut back," and are now firm, symmetrically shaped trees. We guarantee no finer healthier trees, will be found in the market this season. We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and Greenhouse Plants,

Embracing all the old and well known varieties, as well as a great many others both good and new. Also, a very fine lot of different sizes, of that very popular shade tree, so full of reminiscences of home, the good old-fashioned Elm Tree of many varieties, but most of the American and Scotch Elms, which are of good size and when well established in the soil, they are of very rapid growth. Also,

LOCUST; LAURUM, or GOLDEN CHAIN; MAPLE, in variety; LINDEN, European and American; CATALPA; CHINA, and other Trees.

We call particular attention to our collection of THE CAMELLIA, now so well acclimated as to be growing finely in our open grounds, and blooming as elegantly out of doors here, as possible with the tenderest care in a conservatory. It is no longer a house-plant, but one of the gems of the pleasure grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c., see CATALOGUES, which are sent by mail to all applicants. * * * VEGETABLE SEED—We invite attention to our very large and general assortment, the crop of this year, which is very fine. We are now prepared to supply THE TRADE in quantities to suit, and at lower prices than can be found at any other establishment in the State. We have now been growing SEED of GOOD PRESIDENT SEED at a very low rate. These seeds will be done up handsomely in packages, for Wholesale or Retail Trade, and will always be in readiness at our GARDEN, and at City Office, 44 J street Sacramento. Our Trees and Shrubs will be sold for CASH ONLY, and Orders must be accompanied with the Cash to insure attention.

STATE SUMMARY.

The Mariposa Gazette estimates that 20,000 or 30,000 people will go from California to Washoe, Mono Lake and Walker's River, this spring and summer.

Millions of wild geese, the Mariposa Gazette says, are upon the plains, between the San Joaquin and the Tuolumne. They have a good idea of how far a gun is effective, and few are killed.

According to the official report, the net earnings of the Sacramento Valley Railroad for fifteen months past have been \$119,270.58; the gross receipts \$270,202.52. Business steadily increasing.

Born, at Stone Point House, Sunday morning, Feb. 19, to A. J. Markwell, twin boys, weighing respectively 8½ and 9 pounds. All doing well. So says the Petaluma Journal.

Winter fruit from the Suscol Nurseries comprising several varieties of late-keeping apples and pears, we see lately noticed, all large sized, of good flavor, and without doubt excellent keepers.

The Placer Herald thinks that if our legislators were allowed a salary of \$900 (though \$800 would be ample), payable any time after organization, the sessions would be much shortened, and the State saved at least \$20,000 per annum.

The Visalia Delta says that arrangements are making to erect saw-mills in the pines, to furnish a plentiful supply of lumber at reasonable rates. At present lumber is selling there at \$80 per thousand feet, and at no time has it been less than \$75.

In Humboldt county, says the Times, the remarkably fine weather this winter has enabled the farmers to put in their grain in good season, and they have improved the opportunity. A much larger number of acres will be sown than at any former period, a great deal of new ground having been inclosed and broken.

Of sixty-one Acts passed by the present Legislature, and which have become laws by the approval of the Governor, nearly all are of a special and local character, and many of them relate to subjects which, under a more simple and rational system than ours, would not require legislative action at all.

A project is on the tapis in Petaluma, says the Journal, for the formation of a jockey club, and the procuring in the immediate vicinity of a tract of land sufficiently large and well adapted for a first class race track. The track will probably be gotten up on the joint stock principle, and is expected to prove a good investment.

The Alameda County Agricultural Society have been granted by the Board of Supervisors the appropriation of \$300 authorized by the Legislature. The Board at first rejected the proposition, but reversed their action on the presentation by the President of the Society of a petition numerously signed by the citizens of the county.

Capt. Thomas, of Mariposa, the Gazette says, has procured a lot of wood from one of the fallen Big Trees, which lies near the South Fork Meadows. The wood in appearance much resembles cedar, but some of it has a beautiful grain, and being dressed and varnished, looks wavy and shadowy, not unlike splendid mahogany. Fancy boxes are being made of it.

The whole farming community at Red Bluffs, says the Beacon, are sadly out of humor on account of the continued drought. If rain does not visit the earth in a very short time, in Tehama county, the farmer will have a hard road to travel for one or two years. Indeed, if this dry weather continues much longer, quite a number of our citizens will become bankrupt.

A new machine for the reclamation of swamp-land has just been made in Stockton, says the Republican, for Kinney Lania. It is intended to cut a ditch four feet wide and four feet deep. Its capacity to perform the work properly will be tested at an early day. If the plan should be entirely successful—of which its constructor is pretty sanguine—the lands can be reclaimed cheaper than uplands can be inclosed with a substantial fence.

Contra Costa has now an institution of learning worthy the liberal patronage of its citizens, says the Gazette. We allude to the Union Academy, located near the village of Alamo, in San Ramon Valley. A more lovely or more healthy location than this could not have been found—outside of our own "loveliest village of the plain"—in the county. The institution will be opened for the reception of scholars on Monday, 12th instant, under the superintendence of Rev. David McClure, a gentleman eminently qualified for the position to which he has been appointed. The Trustees of the Academy have issued a Circular to the public.

New gold diggings are reported in Contra Costa by the Alameda Herald, which learns that some prospectors had discovered gold in considerable quantities in the mountains near the telegraph road, and about ten miles from Oakland. Two men were at work in a ravine there, and when our informant left they had panned out about \$20. They felt confident of finding, in paying quantities. The diggings are near the line dividing Alameda and Contra Costa counties, and not far from Conklin's Hotel, the place where the late homicide by W. C. Pease occurred. We presume before this time the whole neighborhood is claimed and staked off. Persons intending to locate there will do well to be on hand at an early day.

In noticing the proposed law for expelling the Chinese from the mines, that ably conducted journal the San Andreas Independent presents the Chinese question in a nutshell, and its statements are indisputable. It says: "The object of the bill is evidently to drive this class of people from the mines; and it has our hearty approbation. They have become an intolerable nuisance. All the gold they dig, except the small pitance required for a wretched subsistence, is sent to China, and there it stays. All their influences are vicious, hateful and corrupting; all their habits of life disgusting. They can not become citizens; should not ever be allowed any of the white man's rights—either oath or franchise, as against a white man, cannot be slaves here, and therefore should be at once expelled from the State by all such legislation as may constitutionally be enacted against them. We hope this substitute may pass."

By the steamer Columbia, which arrived on Tuesday, from up the coast, accounts of a most inhuman butchery of Indians around Humboldt Bay were received. It seems that the farmers and stock-owners who reside in the vicinity of Bel River, who charge the Indians with killing their cattle, organized a secret Vigilance Committee, and divided their forces into several gangs, who at a given hour were to attack the various Indian villages, and spare neither age, sex or condition. The result of their diabolical plans is thus given by Mr. Lord, the messenger of Wells, Fargo & Co.'s Express, who arrived on the Columbia: "Between three and four o'clock on Sunday morning last (26 Feb.) an attack was made by a party of white men, from the Indians at several villages around Humboldt Bay. At Indian Island, opposite the town of Eureka, and distant but a few hundred yards, more than forty Indians were killed, three-fourths of the number being women and children. On the beach, south of the entrance to the Bay, forty or fifty Indians were also killed. Report says all that were there—every one—was killed. It is also reported, and is no doubt true, that a simultaneous attack was made upon the villages of Bel River. From what was known in Eureka, not less than two hundred Indians—men, women and children—were killed on this Sabbath morning." May this horrid story prove to be an exaggeration.

MARRIED.

We copy from our Sacramento papers the following, with much pleasure and gratification: for it is an evidence of the wisdom of man and the Divine tendency of woman:

MARRIED.—In Sacramento, at the residence of J. A. Duffy, by the Rev. Father Cassin, P. J. DEVINE to ELLEN V. LYONS, all of that city.

Most truly do we wish our friend many years of connubial bliss; and as we have always had a high opinion of the artistic skill of our friend as a Delineator and Sculptor; we trust that by the aid of a good helpmate we shall, in the "good time coming," behold new beauties in the specimens of his skill as an artist of nature, and that all the models of his handiwork shall indeed bear evidence of Divine skill and workmanship.

At the late annual meeting of the Stockholders of the California Steam Navigation Company, the following was adopted:

"Resolved, That it is inexpedient to pay any more money as black mail, or to make any compromise with outside boats, other than those with whom an arrangement at present exists, and that the general sense of this meeting be to 'no compromise.'"

In view of this continued pressure upon the operations of the Company, and which has ever shown itself to be not a fair and legitimate competition, but solely a blackmailing system, the Trustees were authorized at an early day to take the necessary steps for the dissolution of the Company, whenever in their judgment they may deem it expedient.

A GENTLEMAN from Western Utah reports that he saw a mass of rich lead ore, of about one hundred pounds weight, which was taken from the Galena Vein, lately found, in the hills east of Smith's Valley.

The quartz leads near Jacksonville, Oregon, are reported to be of the richest kind, and they are taking it out big.

BEE-HIVES!

The following is an extract taken from the advertisement of the Agent for the Langstroth Bee-Hives, in the CALIFORNIA FARMER of February 23d:

"See Huber on Bees, published in London, 1841. The page and section not given. This is a very convenient and lawyer-like way of setting forth by inference what is not the fact. The extent of Huber's invention was a section hive, in which the sections were attached by hinges. This was used and used only for an observatory hive. It cannot be made practicable for anything else."

The assertion sought to be cast on the veracity of the eminent Patent Attorney, whose opinion on the validity of certain patents, published in the same number of the FARMER as above alluded to, calls for the following vindication:

Extract from Bees' work on Bees, published in 1843, page 39, chapter 9. "Huber carried the principle of these experimental hives still further; he joined several of them together with hinges which were so contrived as to admit of easy removal, and as the frames, or leaves as Huber called them, were not glued, they afforded a free communication with each other."

"Huber EXTENDED and rendered the system more complete, probably approximated it more nearly to that of his ancient GREEK INVENTORS."

"The experiments, however, of Mr. Golding, myself and others, already detailed, have shown that this hive admitted of still further improvements: the leaves were too narrow to be applicable to all purposes, and the hive altogether has been so much simplified by Mr. G., that I shall confine myself to a description of the particular form and dimensions which he has adopted."

"The general width of the leaves should be an inch and five-eighths, but slightly varying in the same proportion recommended for the HARB in page 32."

"The exterior dimensions of this hive are one foot two and a half inches high, by one foot one inch deep; the width will depend on the number of leaves; the number usually employed is eight."

"The perpendicular bars at the front and back converge at the bottom towards each other, so that at the top the interior of the hive from front to back measures eleven inches, at the bottom only ten inches."

"The upright pieces are of course kept in their position by having the top pieces tenoned into them, and are further held together by a small cross-bar, also tenoned into them, about half an inch or an inch from their lower ends, so as to allow a free passage for the bees beneath."

"A series of these leaves being placed in juxtaposition, secured at the front by shutting but-hinges, and at the back by books and eyes, and having a glazed door, covered by a shutter at each end, constitute what I think will be found to be an improved modification of the hive of Huber."

J. S. HARRISON.

STATE OF CALIFORNIA, } ss.
CITY AND COUNTY OF SACRAMENTO. }
I, John C. Barr, a Notary Public, in and for the county of Sacramento, do hereby certify that I have carefully read over and compared the above extracts with the original publication, viz., "Bees' work on Bees," and find the same to be a true copy.

Witness my hand and official seal this 2d day of March, A. D. 1880.

JNO. C. BARR, Notary Public.

The California BEE-HIVE!

The BEST, and hence the CHEAPEST Hive ever offered to Bee-keepers.

The above hive was awarded the FIRST PRIZE at the State Fair held at Marysville in 1878, and also by the Mechanics' Institute of San Francisco, held the same year. And again at the State Fair, 1879, the FIRST PRIZE; also a SPECIAL PRIZE was awarded by a Committee named by the parties, and the Langstroth Bee-Hive was awarded the Langstroth Bee-Hive.

There were SIX DIFFERENT HIVES in competition at the latter Fair.

Bee-keepers wishing to purchase HIVES, or RIGHTS to make and use, will please address the undersigned or either of the following Agents:

L. WARNER, Sacramento (General Agent).
THOMAS OGG SHAW, San Francisco.
SAMUEL MORRISON, Santa Clara.
CHAS. C. WARNER, Stockton.
E. A. SHERMAN, Los Angeles.
JACOB V. HOAG, Washington, Yolo county.
B. H. HOAG, Napa.
E. C. WINCHESTER, Millerton, Fresno county.
G. W. HARRISON, Marysville.

The Price of INDIVIDUAL RIGHTS is \$15, which may be forwarded through Wells, Fargo & Co., at my expense.

County or State Rights will be sold on terms advantageous to the purchaser.

The Specifications and Claims of my Patent will be given to the public to do time.

N. B. Notice is hereby given, that I WILL DEFEND any legitimate suit commenced by L. L. Langstroth or his Assignee, against persons using my HIVE under authority from me, against persons using my HIVE under authority from me, against persons using my HIVE under authority from me.

EPITAPH ON A CANDLE.

A wicked one lies buried here,
Who died in a decline;
He never rose in rank, I fear,
Though he was born to shine.

He once was fat, but then, indeed,
Grew thin as any grieter;
He died, the doctors all agreed,
Of a most burning fever.

If e'er you said, "Go out, I pray,"
He much ill-nature showed;
On such occasions he would say,
"V'y, if I do, I'm blessed!"

In this his friends do all agree—
Though you may think I'm joking—
When going out, 'tis said that he
Was very fond of smoking.

Since all religion he despised,
Let these few words suffice:
Before he ever was baptized,
They dipped him once or twice.

Anecdote of Mrs. Burns.

It is generally known that Mrs. Burns, after her husband's death, occupied exactly the same house in Dumfries which she inhabited before that event; and it was customary for strangers, who happened to pass through or visit that town, to pay their respects to her, with or without letters of introduction, precisely as they do to the churchyard, the bridge, the harbor, or any other public object of curiosity about the place.

A gay young Englishman one day visited Mrs. Burns, and after he had seen all she had to show, the bed-room in which the poet died, his original portrait by Nasmyth, his family Bible, with the names and birthdays of himself, his wife, and children, written on a black leaf by his own hand, and some other little trifles of the same nature, he proceeded to entreat that she would have the kindness to present him with some relic of the poet, which he might carry away with him as a wonder, to show in his own country. "Indeed, sir," said Mrs. Burns, "I have given away so many relics of Mr. Burns, that to tell the truth, I have not one left." "O, you surely must have something," said the persevering Saxon; anything will do—any little scrap of his handwriting, the least thing you please. All I want is just a relic of the poet; and anything, you know, will do for a relic." Some further altercation took place—the lady reasserting that she had no relic to give, and he as repeatedly renewing his request. At length, fairly tired out with the man's importunities, Mrs. Burns said to him, with a smile, "Deed, sir, unless you take myself, then, I dinna see how you are to get what you want; for, really, I'm the only relic of him that I ken o'." The petitioner at once withdrew his request.

It has been suggested that the inventor of crinoline did more to enlarge the sphere of women than any reformer of this or earlier ages.

War are kisses like the creation? Because they are made out of nothing, and are pronounced good.

Dr. Wistar's Balsam of Wild Cherry may well be called a "wonder of medical science." It cures coughs, and colds instantly; it soothes the irritated parts; it heals the inflammation; and even consumption itself yields to its magic influence.

Buy none unless it has the written signature of "J. B. Wistar" on the wrapper.

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with
SPRING AND CURLED-HAIR MATTRESSES and LINENS
than any other House in the State. It is one of the largest
Hotels in California; a fire-proof building, and provided with
Bosley Water throughout the House. It has a frontage on
Jackson street of 87 1/2 feet, by 175 feet deep. There are no
dark rooms in this house, all having free and open frontage,
with pure air, which is of great advantage in a California
climate, there being no large buildings adjacent thereto.

The undersigned invites the attention of the Traveling
Public, and Strangers in particular, to the merits of this
House. It was established under its present Management, on
the 1st of January, 1857, as a

First-Class Hotel,

IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to
encroach upon the merits of other Houses, cannot but recall
the marked favor with which his enterprise has been received
by a discriminating public, in a constantly increasing patronage
of his HOUSE, and the same matches the same, and the same
SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most Popular

Places of Amusement, the Principal

Thoroughfares, the Fashionable

Promenades and Steam-

boat Landings;

Thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR

FAMILIES AND SINGLE GENTLEMEN,

During their sojourn in this city.

For a year past we have studied how we can maintain a
FIRST-CLASS HOTEL, and at the same time effect some re-
duction of price below three dollars per day to our friends.
We are happy to announce to you that we have succeeded in
our efforts.

We have obtained a reduction of our heavy rental; and we
have now under cultivation, in the heart of a Rancho, which
produces our Vegetables fresh from the ground; with a dairy
that secures us the purest Milk and Cream, and a stock of
Poultry that supplies Eggs and Poultry always fresh; with many
other economical advantages. By this means we can promise
our friends that we shall even improve upon the proverbial
excellence of our Table; and the same matches the same, and
solicitation to the comfort of our Guests, will continue to
be the pride of the Hotel International.

We have Elegant Suites of Family Rooms, together with
highly furnished single apartments for Families or Single
Gentlemen, which, together with the smiling energy of the
Proprietor, makes this House one of the most Popular Hotels
in the United States. For comfort and luxury this house is
not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the
landing of the steamers, to carry passengers to the Hotel. [15

GUANO! GUANO! GUANO!!!

CIRCULAR FOR CALIFORNIA FARMERS.

SAN FRANCISCO, Nov. 15th, 1859.

DEAR SIR:

The undersigned, AGENT FOR THE SALE OF

JOHNSTON'S ISLANDS GUANO, wishes to call your

attention to this invaluable fertilizer—a limited quantity

of which will be received in a few days. It is desired

you will make a trial of its effect upon your lands. The

price will be Thirty Dollars per Ton, of 2240 pounds. A

low rate is named for the purpose of inducing California

Farmers and Gardeners to try it, and report upon its re-

sults. The limited amount of fifty tons is all that can be

now offered in the market. It is desirable that this

quantity be divided as much as possible among prominent

agriculturists, and their reports obtained the coming har-

vest. Your order for from one to three tons, will be

received with pleasure.

In the use of the article, the following suggestions

should be observed:

FIRST.—The Guano should be finely pulverized upon a

light floor, which can be done with a garden roller, or by

blows and pressure with a common shovel.

SECOND.—It should be mixed with twice its bulk of

fine black loam soil, as follows: a layer of the loam

should be spread upon the floor, then the Guano spread

upon the loam, followed by a top dressing of loam; the

whole should then be repeatedly turned with a spade

until thoroughly mixed. It may then be used immedi-

ately.

THIRD.—The best time to apply Guano is in damp or

rainy weather; or, if in fair weather, certainly upon a

calm, still day.

FOURTH.—It is better applied in the early part of the

season, soon after the first rains. When applied to lands

tilled or plowed, it should be immediately mixed with

soil by harrowing, or otherwise. When applied to hay or

grass lands, it may be sown broadcast with or without

harrowing.

FIFTH.—For Vegetable Drills, it should be mixed with

twice its weight of wood or coal ashes; the mixture

should be placed below the seed, and some fine soil—say

half an inch in thickness—intervene between them. If

Self-adjusting Post-Driver.

A valuable Implement for Farmers.

HYDE'S PATENT SELF-ADJUSTING POST-
DRIVER is now offered to Farmers, as a valuable
assistant in FENCE-BUILDING. The hammer works
in a swinging frame, rendering it self-adjusting on an
even or hilly land. It has been used on hills where it
had to be hauled up with a tackle; any common carpen-
ter can construct one. The two pulleys, one on the drum,
and the other on the crank, are to be covered with
leather or rubber belting, and when pressed together by
the foot lever, the friction of one on the other is sufficient
to raise the hammer, and on lifting the foot from the
lever the drum is free and the weight drops; and so on,
setting posts far better and much more expeditiously than
can be done by digging and nailing.

A number of this Machine can be seen at the FARMER office,
where EIGHTS are for sale. Price of Right for single
machine, \$10; and County Rights according to population,
etc. 20

J. St.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since

the ever glorious FORTY-NINE, have suffered with

you in three fires and three floods, and intend to live

among you with my family during the term of my natural

life, not longer. I return to my most sincere thanks

for your unflinching patronage and support, which has

enabled me to pay One Hundred Dollars on the Dollar

through all my adverse fortune. I would also give you

a few reasons for your continued patronage, and induce-

ments to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate

Druggist in this City.

Persons in this connection will please observe that there

is as much difference between a DOCTOR and a DRUG-
GIST as there is between a Druggist and a Doctor, and

rather more so between those who have picked up the

Drug Business and those who have devoted their whole

lives to it. To this latter class I have the honor to belong,

having learned my business in the Atlantic States, and

been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people

wish to know where they can get their prescriptions filled

with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of

The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE

BEST place in California to obtain everything NEW,

ODD and STRANGE in the Drug line, and especially to

make it the most extensive depot for every valuable

Patent Medicine, Drug and Chemical. We invite pro-

prietors of valuable and reliable Patent Medicines to send

them along. We have a large and thoroughly fire-proof

Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open All Night!

And charge no more for medicines than in the day time

FIFTHLY.

We will furnish those in indigent circumstances with

MEDICINES AT COST! the same being attested by two

or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS

ONLY. The amounts we have lost heretofore by cred-
iting we intend to distribute equally among our patrons, in
the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valu-
able articles:

Dr. Carr's Warburg's Tincture. This article is par-
ticularly recommended for Ague and Fever, when every other
article fails to cure. Guedes' Nerve and Bone Liniment,
warranted the best in California.
Flower of the West, for Fever and Ague.
Delicate Spanish Tincture, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numer-
ous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know
how to import them, and how to sell them to satisfy the
public as to price and quality. At all events, give us a
call, and WE WILL TRY.

J. L. POLHEMUS

EDUCATIONAL.

ACADEMY OF NOTRE DAME,
SAN JOSE.

THE NINTH ANNUAL SESSION of this Institution will
commence on THURSDAY, August 13th.
The course of instruction embraces all the branches of a
polite and useful education. Its aim is to form young ladies to
virtue, accustom them to early habits of order and economy,
and to cultivate in them those qualities which render virtue
both amiable and attractive.

TERMS:
Entrance, to be paid but once.....\$ 15
Board and Tuition, per session.....275
Washing.....60
Physician's fees per session (unless it be preferred to pay
the bill in case of sickness).....10
Piano, Vocal Music, Drawing and Painting form extra
charges, but there is none for the French, Spanish or German
Languages, nor for Plain Sewing and Fancy Needlework.
Payments are to be made half a session in advance, and no
deduction will be made for half a session commenced, except
in case of sickness.
Pupils will find it much to their advantage to be present
at the opening of the session.

DAY SCHOOL.
There is a Day School attached to the Academy for the con-
venience of those parents in the neighborhood who may prefer
that their children should return home every day.

Tuition, including the branches specified.
Senior Class, per month.....\$5
Junior Class, per month.....4
Primary Class, per month.....3
Letters may be addressed to the

SUPERIORESS,
Academy of Notre Dame, San Jose.

SANTA CLARA COLLEGE.

THE NINTH ANNUAL SESSION of this In-
stitution will commence on MONDAY, August 22d.
The plan of instruction embraces two regular Courses—the
Classical and the Commercial, besides a Preparatory
Department.

TERMS.
Entrance, to be paid but once.....\$ 15
Board and Tuition per session.....335
Washing and mending of articles washed, per ses-
sion.....45
Stationery, per session.....10
Medical attendance and medicines (unless it be
preferred to pay the bill in case of sickness,) per
session.....10
Vacations, if spent at the College.....35

HUCKS & LAMBERT

Patent Anti Friction

Washington's Birthday.
AT THE UNIVERSITY OF THE PACIFIC AT SANTA CLARA.
DEAR FARMER: Knowing the interest you take in all matters pertaining to Education, we have thought of furnishing for your columns a brief account of the celebration, on the 22d, by the students of the University of the Pacific.

The day was as unclouded as the character of Washington was pure. All nature wore an aspect of cheerfulness and seemed to join in thanksgivings to the great Jehovah for the gift of a Washington.

The church was tastefully decorated for the occasion. We noticed in the rear of the speakers a life-like portrait of "the Father of his Country," by one of our best American artists; also, the "First Prayer in Congress." These were beautifully wreathed with garlands woven by the hands of the fair ones.

A platform extended the entire width of the church, and was occupied by the members of the several Literary Societies, and the Alumni of the University, the Professors, Clergymen, and distinguished visitors. The church edifice was quite too small for the multitude which came together on the occasion.

At 10 a. m. the young gentlemen left the University building and marched in procession to the church, accompanied by the Santa Clara Brass Band, which discoursed soul-thrilling music. When in front of the Female College, the procession was joined by the young ladies, who acted a noble part on the occasion.

The exercises were opened with prayer by the Rev. E. Banister, A. M. Then followed the addresses and essays, interspersed by vocal and instrumental music. "Hail Columbia" and the "Star Spangled Banner," sung by the students of both the male and female colleges, under the direction of Prof. Olinger, produced a fine effect. The music on the piano by Prof. Schuch of the Female College was equal to anything we have ever heard. The Anniversary Address, by Mr. A. E. Pomroy, a member of the junior class, was a masterly production, worthy of an older head. We should like to see this classic, classical and able production published in some neat form for general circulation. The "American Union," by J. Munsell, was worthy of the occasion. It completely electrified the immense audience. Mr. S. is one of the finest speakers we have heard among students. He dealt some severe strokes upon disunionists. The "Perfect Statesman," by Mr. Brady, set forth in a clear and able manner the character of the true statesman. "California," by John Zuck, was a true picture of California, drawn by a master-hand. We venture the assertion that if this address were once to find its way into the public prints, it would be copied by every newspaper in the land.

"The Ties that Bind our Nation in Gentleness together," by Miss Lizzie Stephens, of the senior class of the Female College, was a fine essay. There was a beauty and finish about her style, that evinced a rare knowledge of the rules of good writing. This essay was finely read. "Tis Strange," "Tis Passing Strange," by Miss Duncan, of the same class, was a highly creditable production, and showed ability on the part of the writer.

Thus passed one of the most interesting celebration of the kind we have ever had the pleasure to attend. Long may the students of these Colleges and the good people of this delightful Valley live to celebrate in so highly an intellectual manner the Natal Day of "the Father of his Country."

Visitor.

NURSERY BUSINESS, &c.

J. R. RAY, SEED AND NURSERY DEPOT, No. 106 J STREET, SACRAMENTO.

HAS IN HIS NURSERY, SUBJECT TO THE order of good cash customers, the most extensive assortment of

TREES, SHRUBBERY, AND VINES.

To be found in the State, consisting of every variety of

Almond, Mulberry,

Apple, Nectarine,

Apricot, Peach,

Blackberry, Pear,

Cherry, Plum,

Fig, Strawberry,

Gooseberry, Quince,

Grape, Raspberry,

Beaside a good stock of SHRUBBERY and SHA

TREES, for beautifying homes.

Samples, comprising a few thousand trees, may be found at my Seed and Nursery Depot.

SHADE TREES,

For sale this season, consisting of—

10,000 Locust Trees,

1,000 China Trees,

Lombardy Poplar,

Mountain Ash,

Magnolia Acuminata,

Together with

Elm, Linden,

Ash, Weeping Willow,

Maple, Arbor Vitae,

And other Evergreens—all warranted.

The Locusts are certainly not equalled, by any lot in the State, for beauty and size; they are from two to three years old, straight and well grown, varying from ten to twenty feet in height.

SEEDS! SEEDS!

The extensive SEED DEPARTMENT contains a complete stock—

FOR THE GARDEN, FIELD, FOREST & NURSERY.

Either from the best seed-growers in the country, or raised under my own supervision. Much care is taken to have seeds free from mixture, and every package of seeds sold, with proper care, warranted to grow and produce what is marked on the label.

Hop Vines, Rhubarb Roots, Asparagus Plants, Grape Cuttings, Dahlia Roots,

And everything appertaining to the Seed and Nursery business, for sale at greatly reduced prices from last year.

ARTICHOSES, CHUFAS—articles deserving special notice—are for sale in quantities.

Dealers will be supplied on the most liberal terms.

Small seeds can be sent per Mail to any part of the country.

HOP ROOTS.

THOSE DESIRING TO ENGAGE in that lucrative business—HOP CULTURE, now calling so much interest—can be furnished with good, vigorous roots of the best variety, from the oldest Hop Yard in the State. The crop from this yard has just been sold for \$1.00 per lb. My Hop Yard is twenty-five miles below this city, on the Sacramento river. The vines, covering one acre, were planted about four years ago. Parties wishing to engage largely in the business will be supplied on liberal terms.

Address Seed and Nursery Warehouse, 106 J Street, Sacramento.

SACRAMENTO ADVERTISEMENTS.

ST. GEORGE

HOTEL!

Corner of Fourth and J Streets,

SACRAMENTO.

THIS HOTEL, HAVING BEEN THOROUGHLY

RENOVATED,

RE-FITTED AND RE-FURNISHED,

IS NOW OPEN

FOR THE RECEPTION OF THE PUBLIC.

C. I. HUTCHINSON,

Proprietor.

Premium Marble Works!

P. J. DEVINE & BROTHER,

K Street, corner Sixth,

SACRAMENTO, CAL.

Marble Mantels and Grates, Monuments, Tomb and Grave Stones, Tables and Counter Tops, Marble and Precious Stone, Granite and Freestone Sills and Lintels, &c., &c., constantly on hand and made to order, on reasonable terms.

All kinds of Ornamental Work done with dispatch.

Also, Calced Plaster for sale.

WM. B. HUNT,

DEALER IN

HIDES, SKINS,

WOOL AND TALLOW.

Office on Second street, near M.

SACRAMENTO.

SAMUEL JELLY,

IMPORTER OF

FINE WATCHES, JEWELRY,

Silver-ware, Cutlery, &c.,

124 J STREET ONE DOOR BELOW FIFTH,

SACRAMENTO.

Watches Repaired and Jewelry Manufactured.

Agents for Grover & Baker's Sewing Machines.

Large Potatoes and Onions.—We are very desirous of procuring some very large Onions and Potatoes, for a special purpose; we only want a few, but will cheerfully pay a liberal price for fine samples, and be very grateful besides.

We also want a variety of curious or rare vegetables of any kind—Beet, Parsnip, or Carrot. Those who have such and will send them to our office, we will reward them for so doing.

FARM STOCK, &c.

FINE STOCK! FOR SALE.

BY THE STEAMERS WHICH SAILED FROM NEW YORK on the 5th of January, 1890, I have made another shipment of

THOROUGH-BRED STOCK

to the Pacific Coast, consisting of

SHORT-HORN DURHAM CATTLE.

Pure FRENCH MERINO, SOUTHDOWN and GOTSWOLD

SHEEP.

Including the celebrated Southdown Buck "JONAS WEBB," believed to be the best of his kind in America.

ESSEX, DERBESHIRE, LIOESTER and SUFFOLK

SWINE.

All of these animals are of Pure Breed, and of the BEST QUALITY, having been imported from the most celebrated herds and flocks in England and France, or bred directly from such imported stock.

The Bull "PRINCE GEORGE OF CAMBRIDGE," No. 8634 in the American Herd Book, was got by "Third Duke of Cambridge," bred by the late Thomas Bates, of Kirklington, England, and his dam was got by "Yorkshireman," also bred by Mr. Bates.

The Bull "HAROLD 4th," No. 2954 American Herd Book, was got by "Harold 3d," bred by Robert Gidding, Hinton, Kent, England, and his dam was by "Metoon," got by "Duke of Wellington," also bred by Mr. Bates.

The FRENCH SWINE were either bred in France, or have been raised by myself from stock imported from there, and they have been served by the best Ram I have ever imported from France.

The SOUTHDOWN EWES have been bred from stock imported from the flocks of Jonas Webb, Lord Walsingham, Mr. Elman, and the Duke of Richmond, who are known to have the best flocks of Southdowns in England. The most of them have been served by a Ram bred by Jonas Webb, of Hahrahm, England, and the others by Mr. Samuel Thorpe's celebrated Prize Ram, bred by him from his Webb stock.

My brother, JAMES M. PATTERSON, goes out with the stock, and is authorized to make sales, and any information can be obtained by addressing him at SAN FRANCISCO, California. He will also send to all applicants Catalogues and Circulars describing the animals.

JOHN D. PATTERSON.

WESTFIELD, Chautauque Co., N. Y., January, 1890.

The Stock referred to above have arrived, in fine health and condition.

The BULLS and SWINE can be seen at the BLACKBARK STABLE on Pine street, or by calling on me at the TREMONT HOUSE.

I have imported, and have for sale,

50 HIVES OF BEES,

which I will sell on favorable terms.

J. M. PATTERSON.

French-Merino

BUCKS.

THE undersigned begs to inform SHEEP RAISERS, that he is now permanently located on the

SALINAS PLAINS, AT LEESE'S RANCHO,

and is now prepared to supply them with MERINO BUCKS from the celebrated Bucks "Samson," "Louis Napoleon," and "Brigham Young," imported into this country by Messrs. SEARLE & WYNN, and purchased by them of J. D. PATTERSON, Esq., of Westfield, Chautauque county, N. Y.

The RAMS can be contracted for either delivered here or on the Rancho.

J. B. WYNN,

At Meats, FALKNER, BELL & CO'S,

San Francisco, July 8, 1890.

N. B.—COL. WARREN, Editor of Farmer, is authorized to contract for the sale of these Bucks.

FRENCH MERINO SHEEP.

FOR SALE.—The undersigned has One Hundred Bucks and Ewes, to arrive, via Panama, of the very finest quality. Those wishing to purchase can leave their address, and they will be notified when they arrive.

S. BRANNAN, San Francisco.

BUCKS FOR SALE.

YEARLING BUCKS, the produce of the splendid FRENCH MERINO BUCKS "SAMSON" and "NAPOLEON," out of first-class American Ewes. The Sires were bred by J. D. PATTERSON, and imported into this State by Seale & Wynn.

For sale by

JOHN SEARLE, Rancho Armas, six miles from San Juan, Monterey county.

N. B.—The 324-lb. Fleeces of "Samson" may be seen at the Farmer's office.

SHEEP WANTED ON SHARES.

Having a splendid range for Sheep, well watered, etc., the subscriber would take 300 or 500 Ewes to keep on share of increase. Address

C. HAYEN,

Milpitas, Santa Clara County,

or J. K. WHITE, 102 Front street (up-stairs), San Francisco.

BERKSHIRE AND ESSEX SWINE.

We have a lot of very extra Berkshire and Essex Swine, of the purest sort, which can be imported in sixty days. The origin of this stock is very celebrated—none superior. Inquire at this office.

AMERICAN EWES WANTED.

SHEEP-RAISERS who have a fine lot of AMERICAN EWES for sale, can hear of a purchaser by calling at the CALIFORNIA FARMER'S Office, or addressing a letter to the Editor, stating the number of sheep, age, condition and price.

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MARCH 9, 1860.

NUMBER 5.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.
TERMS—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

Dr. Stebbins' Address.

Before the Middlesex County Agricultural Society, at Concord, Mass., Sept. 24, 1859.

We take pleasure in laying before our readers one of the most sterling, earnest and truthful addresses we have read for a long time. We ask our farmers and mechanics to read and re-read, and commit to memory these sound and wholesome truths; and we do hope they will fall like good seed into good ground, and spring up and bring forth sixty and an hundred fold. We can only give extracts from this address.

How can farmers and mechanics evince and vindicate their right to be classed among the honored and honorable of earth? How can young men and young women be convinced that it is as respectable and far more profitable and prosperous and delightful, to till the soil and manage the dairy and furnish the wardrobe and the table, than it is to sell merchandise and ply the needle, play the exquisite and the bell? The answer is swift and conclusive. These occupations must be raised to the rank of arts by their intelligent, scientific pursuit. The reason of things must be known, and then farming will be a delight, not a drudgery, an honor, not a disgrace, both in its pursuit and result. How then can this knowledge, essential to the highest success, to any success, in your calling be obtained? In our public schools. I know as the public schools of the country are usually conducted, little or no attention is paid to practical science. Children are taught to spell Ompomposus, and name the rivers in Ethiopia and Siberia, but they are not taught why a silver spoon is tarnished by boiled eggs, or a knife by cutting an apple. They are not taught why deep plowing prevents the severities of drought, or why guano is a good fertilizer on some soils, or whence come the carbon of the forest trees. They are not taught the difference between boiled and roasted meat, and why bread is heavy. Silver dollars are put into the churn to bring butter, and pork is killed at high tide or full of the moon to prevent shrinkage, because our schools spend more time in teaching the extraction of cube root, than the extraction of butter from cream. The science of cooking, on which health and life depend, is not taught, but algebra is. So our wives prefer boarding to house-keeping, since they can work quadratics but not the kneading trough; they can explain the binomial theorem, but not the nature and action of yeast. It is no fault of theirs. It is the fault of the system. Our modes of education are defective, and need renovation. Boys and girls should be taught in school the science of agriculture and cooking, as they are now taught arithmetic and grammar. They should understand from germination to maturity, the process of growth and the food of every crop, every vegetable raised. Its parts and the uses of each part in its growth should be known to them as well as the uses of the parts of their own bodies—their hands, their feet, their eyes, their ears. They should know, moreover, all the weeds on the farm, their character and relative damage to crops, and how to exterminate them. These subjects should be thoroughly taught and illustrated in their schools. The young mind thus becomes interested in future pursuits, and enters upon them not as a task but as a pleasure. Labor thus becomes a profession not a servitude, it becomes attractive as any other art, more than many now sought for. Botany, or the study of plants, grains, vegetables, should be a prominent study in our common schools; commenced with the alphabet, and continued to graduation, so that every boy and girl fourteen years of age can not only tell the growth and food of every grain and grass and vegetable, but also just what soil and season and fertilizers are best for it. Chemistry, also, should be studied from the earliest period till the latest, as we now study arithmetic and geography. It is vastly more important to a person to know the prime gases, than the prime numbers; the circulation of oxygen is sometimes much more necessary to be understood than the calculation of decimals; and unlike fractions, many persons reduce their farms to the lowest terms because they haven't learned how to do it. Chemistry should be studied till the composition of every soil and its adaptation to grains and grasses and vegetables is understood, just as well as the adaptation of the stomach of the horse, the ox, the camel, the fow, to their different kinds of food and methods of digestion, is understood.

The scholar should know what wheat eats, and how to supply it with food, just as well as he knows what an ox eats and how to feed it. He should know the different diet of the potato, and how to feed it, as he knows the different diet of the cat, and how to feed it. The cat does not live on grass nor the ox on mice. Wheat and potatoes do not eat precisely the same food, yet who thinks of preparing the field for the wheat, differently from that of the potato, as he would prepare differently the stall for the ox and the dish for the cat. Taste of the guinea and the pear, have they not food on different food? Do not asparagus and squashes demand different diet? All this, and much more, children should be taught in our schools. Then, when they go upon the farm, it will be with the curiosity with which the chemist enters his laboratory; not simply to see how much money they can get, but how much they can enjoy and discover.

I press this point. Our system of common school education is seriously, not to say radically defective in this respect. Arithmetic, geography, and grammar are studied to the neglect of other more important and more attractive

branches of knowledge. Teachers should be trained in our Normal Schools, not in algebra and geometry, only or chiefly, but in botany and chemistry and meteorology. Three hundred and forty-five students were at the State Normal Schools in 1857. Of these, one-half are the sons and daughters of farmers and mechanics, and are all to be teachers in our public schools, the only school which a great portion of the children will ever attend to fit them for the duties of life. The expense of these schools, exclusive of the real estate, is about fourteen thousand annually, and worthily is it applied, in spite of the deficiency which I shall name. I find no special statement in the reports of the amount of time given to the different studies pursued; but in the Westfield School I find botany optional, one of the most important studies to farmers, and also book-keeping. At Bridgewater, the proportion of time given to literature as distinguished from scientific studies, is as three hundred to five hundred; only three-fifths as much time is given to the sciences on which all agriculture and mechanical labor and success are based, as to other studies. Whether botany can be studied, even if desired, is not stated. The reports of the schools at Framingham and Salem, give no information respecting their attention to these subjects. This is a serious matter, and deserves of farmers and mechanics close scrutiny. These Normal Schools should be so conducted that teachers will come from them qualified to teach those branches which will make labor a luxury, and the laborer skillful and intelligent.

There is much said now-a-days of a farm for the State. I have but little faith in the result of such great and expensive establishments. They make mostly fancy farmers, and do not help farmers' wives at all in their chemical laboratory—the kitchen. The principles of farming should be taught in every district school, and fully illustrated in the high school. The management and studies of these schools demand attention of the thoughtful of all classes. They absorb nearly or fully one-third of all the moneys raised for school purposes, in many of our towns (and wisely, if it is rightly expended), while the scholars in attendance are less than one-tenth of the school population. And more important still is the fact that sometimes nine-tenths or more of the scholars in attendance are spending two-thirds of their time on studies which are of no value in practical life.

Our high schools are now often conducted as if the scholars of New England were residents of ancient Italy, and cattle were to be reared and crops raised with Virgil's Georgics and Bucolica as a hand-book. The housewifery of our daughters is taught from the domestic economy of Dido, and their delicacy beautified and their modesty perfected by mining, syllable by syllable into the story of her shame! Boys who are fitting to be builders, are required to study word for word, the syntax and etymology, and line for line, the construction of Caesar's bridge, who never received a word of information respecting the strength of timber or the names of the parts of an ordinary dwelling! Young aspirants for political honor, ardent to become statesmen, assessors, school committee, possibly representatives to the great and the General Court, are thoroughly drilled in the municipal regulations of Rome, and thumb out of their dictionaries with perspiring agony and muttered expletives, the majestic utterances of Cicero against Cataline, when they know nothing of the duties and responsibilities of a field driver, or that such a piece as that of Webster in reply to Hayne, is in existence. It is true that the law requires schools to be kept in towns containing five hundred families, in which Greek and Latin can be taught. But by no means requires that all the scholars who attend these schools shall study them. And it is hardly just to ruin the practical education of nine-tenths of the scholars, for the sake of fitting one boy or ten for college. The education of the scholars in our public schools should be such as make intelligent men and women in the great industrial departments of life. Farmers and mechanics, look to it that your schools do this work for which they were established; then agriculture and mechanics will be arts, not drudgeries.

The reason why labor is repulsive and considered a curse, is because it is blindly directed, unintelligent. The attainment of food or money is the only motive to work. Appetite or avarice goad men to the field or the shop; the palate is the lash and the purse the garner. They do not go because they delight in the art of tilling the soil and construction of the machine, as the artist goes to his studio and makes the landscape glow on his canvas or the bosom warm in his statue. But the farmer and mechanic should so work and would so work, if they understood the philosophy of their profession, the chemistry of art. They would go to their fields and shops as boys go to a holiday.

I am not saying that work is not work. Play is work and the hardest of work. And all work should be saturated with intelligence and interest as well as with sweat, as to make it a luxury.

Origin of the Berkshire Hog.

BENJAMIN F. JOHNSON, of West Urbana, Illinois, in the Illinois Farmer, gives the following sketch of the origin of the Berkshire swine:

"The Berkshire is a native of the South Sea Islands, where the population instead of pressing on the means of subsistence, the means of subsistence presses on the population. Vegetation is so luxuriantly vigorous, and fruits and vegetables so extraordinarily abundant, says an authority: 'The South Sea Islands on their discovery, by Europeans, were found to be well stocked with a small, short-legged, black hog, and the traditional belief of the human natives bore, that they were as anciently descended as themselves. The hog, in fact, in these islands, is the principal quadruped, and is, of all others, the most carefully cultivated. The fruit of the breadfruit-tree, either in the form of a sour paste, or in its natural condition, constitutes its favorite food, and its additional choice of yams, eddoes, and other nutritive vegetables, renders its flesh most juicy and delicious; its fat though rich, being at the same time not less delicate and agreeable than the finest butter.' In these islands, besides the hog, the only indigen-

THE AMERICAN PUMP—"WITHOUT SUCTION, WITHOUT PACKING."

PATENTED APRIL 5TH, 1859.

ous quadrupeds were the rat and a small dog. Therefore being the largest and strongest animal, and having no occasion for defensive operation, the hog of the Islands of the South Seas, has lost his tusk to a great extent, and under the most favorable circumstances for the development of his nature, he has become the small-boned, short-legged, round-bodied, thrifty, hardy, prolific creature we find him. No other breed seems to have the vital force of this, and no animal more uniformly, certainly and distinctly, marks his offspring than the Berkshire. He is among hogs, what the Devon is among breeds of cattle. He has the strongest original constitution.

Ligurian Bees—Apis Ligustica.

The general diffusion of this species of bee, says Dzierson, will form a marked era in the bee-culture of Germany. The profit derived by the farmer from feeding stock depends not alone on due attention to the habits and wants of the animals, but mainly on the character of the breed itself. So, also, with the bee. We find marked difference in point of industry even among our common bees; but the Italian bee surpasses these in every respect. A chief difficulty in the way of a more general attention to bee-culture arises from the almost universal dread of the sting of the insect. Many fear even the momentary pain which it inflicts, though no other unpleasant consequence follows; but in some persons it causes severe and long-protracted swelling and inflammation. This especially deters ladies from engaging in this pursuit. All this can be avoided by the introduction of the Italian bee, which is by no means an irascible insect. It will sting only when it happens to be injured, when it is intentionally annoyed, or when it is attacked by robbing-bees; then it will defend itself, and such are its extraordinary vigor and agility that it is never overpowered, so long as the colony is in a normal condition. Colonies of common bees may speedily be converted into Italian stock by simply removing the queen from each, and, after the lapse of two or three days, or as soon as the workers decidedly manifest consciousness of the deprivation, supplying them with an Italian queen. We are thereby also enabled to note the gradual disappearance of the old race, as it becomes supplanted by the new. Besides the increased profits thus derivable from bee-culture, this species also furnishes us with no small gratification in studying the nature, habits, and economy of the insect to greater advantage because, by means of it, the most interesting experiments, investigations, and observations may be instituted, and thus the remaining doubts and difficulties cleared up. He further says, it has been questioned, even by experienced and expert apiarists, whether the Italian race can be preserved in the purity in countries where the common kind prevails. There need be no uneasiness on this score. Their preservation could be accomplished, even if natural swarming had to be relied on, because they swarm earlier in the season than the common kind, and also more frequently.

The main thing to be attended to in any localities where common bees are found or kept is to secure the production of drones in numbers overwhelmingly large; though Dzierson is under the impression that where both kinds of drones exist in about equal numbers, the Italian queens will usually encounter Italian drones, both queens and drones being more active and agile

than the common kind. Besides, the wings of both queens and drones are finer and more delicate than those of the common kind, and the sounds produced in flying are clearer and higher toned. Hence, probably, they are readily able to distinguish each other when on the wing. The Baron of Berlepsch, one of the most enthusiastic and skillful apiarists, on a large scale, in Germany, says he can from his own experience confirm the statements of Dzierson, in relation to the Italian bee, having found: 1. That the Italian bees are less sensitive to cold than the common kind. 2. That their queens are more prolific. 3. That the colonies swarm earlier and more frequently, though of this he has less experience than Dzierson. 4. That they are less apt to sting. Not only are they less apt, but scarcely are they inclined to sting, though they will do so intentionally annoyed or irritated. 5. That they are more industrious. Of this fact he had but one summer's experience; but all the results and indications go to confirm Dzierson's statements, and satisfy him of the superiority of this kind in every point of view. 6. That they are more disposed to rob than common bees, and more courageous and active in self-defence. They strive on all hands to force their way into colonies of common bees; but when strange bees attack their hives, they fight with great fierceness, and with an incredible adroitness.

Bush (*Die Honigbiene*, Gotha, 1855), describes the Italian bee as follows: The workers are smooth and glossy, and the color of their abdominal rings is a medium between the pale yellow of straw, and the deeper yellow of ochre. These rings have a narrow black edge or border, so that the yellow (which might be called leather-colored), constitutes the ground, and is seemingly barred over by these slight black edges or borders. This is most distinctly perceptible when a brood-comb, on which the bees are densely crowded, is taken out of a hive. The drones differ from the workers in having the upper half of their abdominal rings black, and the lower half an ochry-yellow, thus causing the abdomen, when viewed from above to appear annulated. The queen differs from the common kind chiefly in the greater brightness and brilliancy of her colors. Otto Radtkofer, Jr., Munich, in a communication to the *Bienenzeitung*, says that a colony of Italian bees, which he transferred in February, began to build new combs before the middle of March, while his common bees had not, at the close of his communication (the last of April), begun to build any new comb. Not only, says Mr. Radtkofer, are the Italian bees distinguished by an earlier awakened impulse to activity and labor, but they are remarkable also for the sedulous use they make of every opening flower, visiting some on which common bees are seldom or never seen. They have also demonstrated their superior agility in self-defence; nay, they would not tolerate the presence of other bees on comb that had been strewed with flour for their common use. In all these respects, the palm of superiority must be awarded to the Italian bee.—[*Mich. Farmer*.]

PRESERVING POTATOES.—The preservation of potatoes by dipping them in boiling water is a valuable and useful discovery. Large quantities may be cured at once, by putting them into a basket as large as the vessel containing the boiling water will admit, and then just dipping them a minute or two at the utmost. The germ, which is so near the skin, is thus destroyed without injury to the potato. In this way several tons might be cured in a few hours. They should be then dried in a warm oven and laid up in sacks, secure from frost, in a dry place.

State Agricultural College.

The Trustees of the New York State Agricultural College have issued a pamphlet containing the charter, ordinances, regulations, and course of studies which it is proposed to pursue. It is embellished with a neatly printed view of the College buildings, as they will appear when fully completed. The Board of Management have been fortunate in securing as President so energetic and capable a man as Major M. R. Patrick, and we have great hopes that he, with the cooperation of such men as Henry Wager, John A. King, B. P. Johnson, James O. Sheldon, and their associates, will accomplish much good.

As yet none of the Professors have been appointed, except William H. Brewer, who has accepted the chair of Agricultural Chemistry and Botany.

The course of instruction is to extend over three years, on the completion of which a special degree and diploma will be conferred. The year is divided into Summer and Winter terms—the former commencing in April, the latter in December. No student under sixteen years of age will be received. The annual charge for tuition, with board, lights, and fuel, is \$200.

During the first, or Freshman year, the student will be drilled in grammar, arithmetic, algebra, geometry, the rudiments of chemistry, mineralogy, geology, and botany; while in the field, he will learn to plow, spade, plant and manage crops, and the dairy. During the winter months, he will be instructed in making and preserving manures, feeding animals, grafting, etc.

The second year sees him fully launched into the higher branches of mathematics, chemistry, and the cognate sciences; and he commences to make surveys, plan and build roads, and gets a peep into comparative anatomy, vegetable physiology, and drawing. His field studies are amplified too. He now drains land, builds fences, plants trees, manages teams and wagons, and makes excursions to collect specimens of minerals and plants. In winter, he breaks and trains horses, gets out timber, fattens and breeds stocks, and, in-doors, continues and extends his range of study. Practically in the shop and field, and theoretically, by means of models and drawings in the school-room, he learns the mechanical principles involved in the construction of every variety of farm implement and machine; his hand being hardened and strengthened by the labor of constructing and repairing the implements, and trained to skillful manipulation in the delicate tracing of their proportions in his sketch-book.

The third year of the student very properly is well posted in the laws of our State relating to contracts, highways, and fences, in farm-book-keeping, and in the polite branches of learning. In the laboratory, he not only analyzes earths and metals, but his experiments lead into the realm of electricity and magnetism. He draws landscapes, animals, and architectural plans, and puts the finishing touches to his study.

In a word, it is expected to take our farmer-boy through every branch of learning that bears directly upon his occupation, and to turn him out at the end of the three years a good farmer and a well-educated man. All this for a paltry six hundred dollars, or what John Johnston would get in a single year from fifteen acres of his wheat. And let us here suggest that if "the great tide-drainer" could be induced to take a part in the instruction of the boys, it would be well for the College.

THE FARM.

It is intended to divide the farm into two divisions; one, to be the special sphere of the Juniors, the other, of the Freshman class.

It is intended that reduced maps shall be struck off from the topographical map of the farm, of which each student shall have one, and be required to keep a record of his labors on his own half—cost, productions, value, and all the data for making a complete report at the close of the year. In this way each student becomes thoroughly acquainted with the character of every portion of the farm before entering the Senior class.

During the last term of the graduating class, they will be required to prepare from their maps and field notes, above mentioned, plans for laying out the grounds, having reference to aspect, soil, location, etc., with accompanying essays upon the cultivation and management of the whole farm, not only with an eye to pecuniary profit, but to rural beauty and effect of landscape.

It will, of course, be some years before the benefits of such an institution as this will be fully apparent, for the almost entire lack of precedents makes it necessary for the Board of Management to develop a plan for themselves. Before the right one is discovered, there must be failures, and disappointment, and unwelcome delays; but we feel assured that if the public do not expect too much, and the farmers give the support they should, the College will live and do much for the State.

Students contemplating joining the institution, will be furnished with every necessary information by applying personally or by letter, to Mr. R. Patrick, President of the College, Ovid, Seneca County, N. Y.—[N. Y. Tribune.]

Treatment of Bees.

Plenty of air is as necessary for bees in winter as in summer. Without care the passages may be closed by rain freezing on the outside, or moisture condensing from the outside, and the bees be smothered. Dead bees and the filth falling from the comb sometimes obstruct the entrance. Turn back the hive occasionally, and clear away all filth and frost. It is not necessary to dig out hives that may be covered by drifting snow. During mild weather, unless there be new-fallen snow on the ground, it is well to allow the bees to fly; but on days only warm enough to tempt a few to issue, shade the hive to discourage them. In very cold weather the sun is needed upon them. Continue to guard against depredations from rats and mice, especially with those stored in the house. These latter should be kept dark and as quiet as possible. The offensive effluvia from dead bees may be removed by sprinkling air-slacked lime upon the floor of the room.—[*Belfast Journal*.]

CALIFORNIA NOTES.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
(CONTINUED.)

The poem of Hiawatha, lately written by Henry W. Longfellow, descriptive of the Indian life, traditions, and country, has been abundantly criticized by the literary quidnuncs of the Atlantic States and England; by many who consider themselves highly capable of judging, it is ignorantly disparaged, or damned with faint praise; by others, extolled to the glowing heights of Parnassus. Having paid considerable attention to the Indianology of our country, in our humble judgment this poem of Longfellow's is an honor to the learning, judgment, and genius of a number-one poet of the English language. His knowledge of the Indianology of the Apalachean tribes is deep and sober, and his portraits are evidently from nature and the best of observing travelers.

MONTREY, 18 January, 1856.

[Note.—Since writing the above, we have perused Schoolcraft's fifth volume of Indian History, etc., 1855, a copy of which has just come to hand. We see nothing in the articles on Oregon and California to shake our belief in the correctness of our estimates of the Indian populations treated of in the foregoing notes.]

There appears to be a prominent idea running through Schoolcraft and all the writers on North American Indianology, that the ancient inhabitants of the Western Hemisphere, progenitors of our Indians, came formerly from the Eastern Continent. The grounds of this speculation or conjecture, appear, to our humble judgment, as far fetched as Aristotle's notion of the man in the moon, because we see something like his face when that satellite is full, the night is clear, and the dogs barking at the physog of his queer features. It may be likened to those philosophers who are always contriving systems of how salt, coal, clay, lime, and the ocean, were made; from what elements or forces first deposited or eliminated. Why could not these materials have been formed *per se*, and just as the earth and the moon were? And why could not the Universal Parent have peopled this hemisphere with a distinct race of men, like he has with that of distinct animals? Why should they have come from Europe and Asia, any more than Europe and Asia being originally populated from America? What if a few canoes of Kanakas, Chinese, and Japanese, have been drifted from island to island, and even across by Behring's Straits to the North Pacific shores of the Western Continent? Could not canoes of American Indians, of the old civilized races, in the same way, in the profound ages of California antiquity, have been drifted in certain ocean currents, from America North-West to Asia North-East? May not Asia have been first populated and civilized from Alta California? And why could not an indigenous race of men progress in the United States land, in Mexico, in Central America, and in Peru, from barbarian to semi-civilization, by long and intermittent fits and starts, with climate, soil, and disposition assisting, as they have done from remote ages in Asia, Europe, and North Africa? From savages to herdsmen, herdsmen to agriculturists, warriors, and priests, and from these to written languages and to builders of stone cities and great pyramids and temples? There can be shown, we respectfully suggest, no good reason why. The subject of Indian chronology and archæology is unnecessarily, to our minds, entangled with these far-fetched questions. But we do not presume to dogmatize against the idea that our Continent may have been visited formerly by stray castaways from the shores of Europe or Pacific Asia, and who may have lit up a new light among the American ancients, any more than the reverse of the proposition.

20 March, 1856.

[Note.—The foregoing notes and memoranda were written from fragments taken down in 1854-55-56, and before the writer had seen the report of Mr. T. J. Henley, Superintendent of Indian Affairs in California, to the Indian Bureau, published in the President's Message, etc., for 1856, and which did not reach California until the spring of 1857.]

The information given by Superintendent Henley is very valuable, as far as it relates to the condition of the Indian Reservations of California in 1856. We see nothing in it, however, to alter the estimates and opinions we had previously formed. It would make a great addition to the value of Reports from the Indian Agents on the Pacific Coast, and in Utah, New Mexico, and Arizona, if information as to the Indian languages, clans, habits, and traditional history, could be carefully gathered. To do this, all that is necessary is a general idea of the subject, and plain common-sense observation. The officers ought also to be furnished with approved books on the subject. Such work is considered a great honor among intelligent and educated men at the East, and would greatly benefit the Government in coming to a sound understanding on Indian subjects, on which they spend millions of dollars and many lives annually. The knowledge of the different languages, habits, prejudices, and history, of the Indians, would often save warring wars, and prevent exchequers from drying up. There is no other study superior to that of man—of the Indianology of North America; and to the statesmen of the United States, the problem fraught with the highest interest to our future political power and progress, is about resolving to a solution. For does not the land of Anahuac and anarchy lie at our doors, with a very unpleasant odor from its fever-stricken body.

20 August, 1857.

MONTREY, 16 July, 1859.

The memoranda contained in these notes on the Indians of California, were mostly collected from 1833 to 1856, and a few additional speculations and facts added since, and to the set of vocabularies, etc., following. They have been withheld from publication from want of leisure and opportunity to reduce them to form for publication. At best they are but the gatherings of common observation and personal labor; we make no assumption of learning in Ethnology or Philology. They are, however, we think, worthy of preservation, to give Californians an idea of the primary history of

their country, and may be suggestive to observers on the Pacific and elsewhere. These observers and note-makers are very much wanted, of the Indian clans in the country between the Bay of San Francisco and the northern boundary of the State, between the ocean and the Sacramento river, the Indians of the Sacramento and the Sierra Nevada, from Yreka to the Tejon pass, and also those of the Colorado river near the Gulf. The Washoes and Putes of the eastern base of the Sierra Nevada, in the vicinity of Carson Valley, are said to be very numerous and of a much better character than formerly supposed; but we have as yet no information of their language and traditions. The Indians of the southern Sierra Nevada counties and those of Mono Lake and Walker and Owen rivers, and the clans in their vicinity, offer to those having opportunities and a taste for such interesting inquiries, an unexplored field, which it is highly desirable some one should traverse with a liberal eye. It seems that none of the scribes of San Francisco have ever thought of making diligent examination of the old baptism and marriage books of the Mission of Dolores, which would give much valuable information on the Autochthons of that arenaceous and windy peninsula.

The following note reprinted from a late number of the San Francisco Herald, may be found of interest in connection with the foregoing matters: "In a series of twenty-four letters, on the Indians of Los Angeles county, written by the late Hugo Reid (who died in January, 1853), for the Los Angeles Star, in 1852, and which have now become extremely scarce, and considered by American and European ethnologists of great value, the highly curious fact is stated that about from the year 1818 to the year 1834, Santa Catalina, San Clemente, and the other islands of the Santa Barbara Channel, were often invaded by the Indians of the northwest coast (Kodiaks, etc.), who came down and killed great numbers of those of the islands.

"The remains of those of San Clemente, which were collected in caves on the island about 1833, showed in their heads, 'the whole of them to have been possessed of double teeth all round, both in the upper and lower jaw!'

"As Reid was an educated man, who had resided in California over twenty years prior to his death, and moreover was a person of great honesty and worth, such a statement would not have been made without his having good foundation for the story. What a scientific treat to some of our San Francisco medicos would be the possession of half a dozen of these Indian skulls of San Clemente.

"Reid also mentions that Padre José Maria Zalvadeas (about 1824), 'reduced the Indian language of San Gabriel Mission to grammatical rules, translated the prayers of the Church, and preached a sermon in their language every Sunday.' What has become of this Indian vocabulary of Zalvadeas? It would be of the greatest value to American philologists. Can any of our friends at Los Angeles inform us?

"In connection with California Indian vocabularies, we are informed that the Smithsonian Institute will, as soon as circumstances permit, publish a curious vocabulary and grammar of the Matsigen Indian language, of San Juan Bautista, in Monterey county, which was prepared by the Missionary Father Felipe Arroya, as long ago as 1815, and containing not less than ninety-four folio pages. This old friar had resided in California from about 1810 to 1842, in which latter year he died at the Mission of Santa Ynez, in Santa Barbara county. The study of the Indian languages had been his mania, and after his vocabulary was finished, it was the constant plague of his life and his friends how he could get it printed. In the changes and revolutions of the Missions and the country, from 1822 to 1842, the old priest got considerably changed about from Santa Clara to Santa Barbara, and the matter finally lost sight of until the MSS. book was fortunately turned up by the Rev. John Cumelias in 1856, at the Mission of Santa Cruz, while acting as Catholic priest of the parish. There is little doubt that in all of the twenty-one Missions of Alta California, fragments of church catechisms, and likely in some of them entire vocabularies, are still left, which ought to be preserved and taken care of as matters of literary curiosity in the ancient California history, and which would throw great light on the homology of our State.

"A curious account in manuscript was found about 1831, among the papers of Father Gerónimo Bozcano, giving a history of the Indians of the Mission of San Juan Capistrano, in Los Angeles county, among whom he had labored for twenty-five years prior to his death in 1831. A translation of this account was published in New York in 1848, in Alfred Robinson's 'Life in California.'

Let no American, much less a Californian, think this Indian subject is a trifling one. It is one of the most stupendous and momentous we as a Nation and a Sovereign State have to deal with. From the frontiers of the United States to the Isthmus of Panama there is the richest and most excellent country on the face of the earth. It is inhabited by not less than twelve millions of Indians of different races, habits, and languages.

The white blood is nearly dried up there, and the Indian is assuming his own mastery; retreating the steps of his ancestors and swallowing the race of the conquerors. Our relations with these people, by the year 1900, will assume the form of the secondary question in the theater of American politics: the first, our own continued only as a race and nation; the second, on what basis shall exist our status of amalgamation and government with these nations of the healthy invigorating altitudes of Mexico and Central America. For who can divine but that the Indian may learn the art of self government the same as other races. They were capable of a social and governmental policy four hundred years ago. How will it be with those who have increased in numbers for the last two hundred years, after having stood the shock of European civilization so long? There are, it is supposed, as many if not more Indians in the Spanish North American countries as there

were in the year 1520. The more we know of the Indian, then, the better are we able to encounter difficulties and to provide for contingencies, which promise soon to be of the highest moment to us, of California particularly, and the United States generally, as affecting our social, political, geographical and commercial progress, particularly on the Pacific. The question to be settled, then, by 1900 is, if the Indian and white man can learn to live in peace and prosperity under a democratic form of government? Will the Indian continue swallowing the white man in the Mexicans, or will the white man open his mouth wider and try to gulp down twelve millions of people of a different complexion? Shall we be enticed in their nets, and lose our own affiliations and identity, or will it be that they will gain the forces we lose, and we debilitate our blood and the political virility of our race? *Quien sabe* is all we can arrive at for this present.

The vocabularies and the accompanying memorials following these notes, numbered from one to eleven, from Klamath river to the San Diego frontiers, will add some new facts on the California Indianology to those collected in the Congress publications on the Pacific Railroad Surveys, the Mexican Boundary Surveys, the six volumes of the splendid government work on the Indians of the United States, by Schoolcraft, and of other late acquisitions to the California Bibliography. If there is any man of leisure in the world, in these volcanic and earthquake times, there is abundant material to write the history of the Monarquia Indiana Californica; and a grand, curious, and famous work will it make, if the author has truth, liberality, and moderation for his guide, and uses the faculties of competency, patience, diligence, and the accumulated facts of history from 1540 to 1860; and his task will be no light one either.

[TO BE CONTINUED.]

(From Wilkes' Spirit of the Times.)

The Horse.

Is breeding the horse—soil, climate, and some other causes operate to increase or retard the animal growth. The rich, dry soil is best adapted to secure the full and perfect development of all the animal organs. Sandy soils make dry, sinewy limbs, but these barrens stint the growth of the body to the mere shadow of a horse. Sandy barrens are not equal to gravel hills, mixed in with alluvial bottoms, to furnish an abundance of food. Mountainous regions beget power, by clambering their rugged precipices. Nature adapts the power to the service. It requires more power to climb rugged ascents than to perform in a level country. This surplus power acquired in the mountain surpasses as much in the valley as it excels in the mountain. It is well to encourage colts to run over the hills and pastures, when growing, to invigorate and strengthen their locomotive powers, so that they will stand service in after years. This country is unsurpassed for breeding purposes, having the advantages of good soil and climate, with the best of grazing lands. It holds out the choice of situation—the mountain upland, or prairie; gravel, sand, or clay soils; warm, temperate, or cold climate. All that is required is a superior breed, and good husbandry, to produce the highest formed cattle.

The first step to decide is what kind of cattle a man requires to supply his own wants, or to meet the public demand. If you want, or the public interest requires, a horse of great courage and endurance, united with good speed and action, then the breeder must couple together these very essentials to insure a fearless, swift-footed progeny. If superior properties do not exist they cannot be transmitted, and the converse of the proposition is equally true. From the two stoutest horses, other things being equal, we may expect to produce the strongest progeny. Parents with pure blood, of unequivocal soundness of constitution, in good form, conditioned by the laws of breeding, have never failed to produce their equals. In superior condition we have a right to expect their superiors. In procreation, artificial strength produces natural strength. Cultivated instincts, or artificial propensities, have a tendency to produce like qualities. The strong nose, the very breath of the dog, created to scent game at a distance, is transferred through the principles of hereditary law.

With a knowledge of the physical form in relation to force, combining theory and practice or the laws of hereditary descent, they should be able to produce three out of four winners, one of which should be of the first class. The science should be so well understood that no compromise, barring accidents, would accept of a second-class animal. Unfortunately the system is not yet reduced to this mathematical certainty.

The breeder can transfix any prominent existing quality of other animals upon his own breed. Uniting the fleetest horse with the longest liver will perpetuate speed and staying qualities. The desirable qualities must exist in the breed, and have been handed down through successive generations. Temper is an essential qualification to insure distinguished offspring—that is, the will to put in motion all their physical energies. Breeders who disregard this principle will fail to secure the prize. Though they may perform well in private, when in good humor, without the excitement of the race to work over themselves, they will not respond in the hour of need when called upon to their highest excitement they will bolt, run wild, or shut up. A good amiable temper is the safest in every emergency.

Condition is another essential of breeding. A diseased horse, with a broken-down constitution, never yet produced a sound, healthy colt. It is the antecedent of all improvement. The health and strength of a horse is increased by good food, artificial stimulants, warmth, and cleanliness. The superfluous flesh can be reduced by exercise and grooming to firm, hard, contracted muscle, the lungs cleared by drawing, and the sinews strengthened by gentle friction, and their expanding power increased by cooling food and action, which lays the foundation of a vigorous constitution in the offspring. We can acquire by skill the firm flesh, the dry, solid bone, the clear wind, elastic sinews, and strong muscles; and, as "like produces like," we have a sure thing so far as we take pains to condition the animals. The highest degree of muscular strength, clear wind, and lasting speed is as necessary to the breeder as to the racer, and far more useful to the public. Because, if the former be an entire horse, he may be the progenitor of a large number of valuable racers or roadsters. His influence is not confined to winning or losing a few purses, but is extended far and wide to the future improvement of his race. The entire horse, a few years ago was looked upon as a phenomenon, that could make his mile in 3 minutes. Now we have

those upon the course that have made the astonishing time of 2:24—2:25, and it is confidently predicted that lower figures will mark the trotting era of 1880. From the wonderful speed of the entire horse kept in the stud, we may indulge the hope that some descendant of an Allen, a Patchen, or a Drew, will accomplish the mile in two minutes twenty seconds. Many other stallions have been singularly successful, and become famous as the progenitors of trotting stock. Mares of acknowledged excellence, bred to these slashing sultans of the stables, would perpetuate offspring that would enroll their names high on the trotting calendar.

In order to improve the speed of the horse we must avoid the form of the ox, the slow, dull, monotonous action of the animal of slow work, and unite the form of the fox, deer, and greyhound, those fast-footed knights of the forest. Their form is that of speed and endurance, the *fac-simile* of the form of the high-mettled racer. It is in-bred, created by constant unremitting exertions in the chase.

The form of the horse is significant of substance and action. The head should be lean, the neck fine at the setting on of the head, growing large at the body. The expanded nostril prevents distress at a rapid pace. The withers, high, give graceful action; the oblique shoulders give ease of motion and extended stride; the chest with deep girth and capacity to give free action to the lungs, gives endurance, and is the most essential organ to insure continued exertion. The short back is decidedly stronger than the long back, though not as easy in the pace under saddle. The arm large, and elbow forming the lever of motion to the forehand, deep, attached to the shoulders by strong cords and muscles, gives force and quickness of speed. The knee, the fulcrum that holds the balance of power, should be well let down, giving the arm greater lever power. The leg, or lever of motion, should be enveloped with distinctly-defined muscles and prominent sinews. The well-bent hind leg gives motive power that presses the horse into the collar. It is the principal point of progression. The long, rounded hip is the balance-wheel that keeps the whole machinery in motion. The black feet have been bred tougher than white hoofs. The feet and limbs should be guarded with the utmost scrutiny. A good body will wear out two sets of poor limbs. The wind and limbs are the steam and wheels of locomotion. Without these this car of flesh and bones must stop.

The horse is a complicated pile of bones, strung together by a set of muscles and ligaments, acting upon each other like machinery, doing their work with the additional force of lever power. To understand the strength and power of these animals we must be able to understand the anatomy of the machine, or structure of the frame, so as to calculate the power gained upon the force of resistance. If we study cause and effect, and apply the first great cause, hereditary descent, we shall be able to mould the offspring by degrees into superior form and substance, and ultimately secure a thoroughbred American race of horses.

It has been said, with an air of triumph, that the slashing fine stallions that go with such lightning speed have no colts that promise to equal their sires. The reason is obvious. They have not been coupled with mares that were anywhere near their equal. And it would be a very great wonder if their colts should come out and fill their places. It would be contrary to the well-established principles of physiology. It is like alloying gold and silver; it reduces their weight, and depreciates their standard of value. Mares that have become unfit for work have been put to breeding. This is beginning wrong end foremost. There are a few honorable exceptions. And it is to be hoped that there is some hidden speed back in the woods, breeding to these sovereigns of the trotting turf, where the colts will come out clippers from the start. If the pace is established in the breed; if mother, grandmother, and great grandmother were trotters, still running back in the family for eight or ten generations, there is no more doubt that their colts will be fast trotters than there is in the canine species that the pointer will breed a pointer, or the greyhound will breed his kind—the swift-footed runner. The latter are always great runners. It is bred in the bone, and comes out in the flesh. The form has been preserved from time immemorial. The type or form of speed must be established in the family, and preserved. It would be impossible to produce speed for the turf by breeding to a dray horse. It would be a violation of the conditions, defrauding speed of its inheritance. We must follow down the beaten track, avoiding the high-ways and byways of degeneracy. The straight road, without deviation to the right hand or left, is the shortest distance. The horse that runs wild of the mark will fail at the come out. Breed from unalloyed trotters, without a stain upon their escutcheon, and they will inevitably bring forth trotters of the first class, unless some strong negative power is permitted to counteract the law of nature.

Give to science an open field and fair test, and it will triumph over ignorance or imbecility. Let the horse be clothed in the type of universal excellence, and he will come out in a new edition, full of original matter, ready to respond to the good faith of his backers upon the race-course; to publish his pedigree by the prowess of unconquerable speed; to prove himself the architect of his own fortune—the proud emperor of his race.

What the public demand is great speed united to good style. The homely horse, though he has great speed, is only half made—nothing else having been cultivated but speed. Some of the fastest horses in the country, with a form that would dazzle the brain of a California editor, have been beautiful beyond description when in their sublime torrents of speed.

The amateur would ask no prouder monument dedicated to his fancy than a beautiful family horse, that could go in 2:20 on the road. It would be cherished with filial affection, and when its time was served out, its obituary would be preserved as a family relic. Such is the veneration of the human mind for the brute creation.

JENIUS.

Essential for Fruit Trees.

Fruits may be successfully cultivated in almost all localities, by observing the following requisites: 1st. Wood-ashes, containing as they do, all the elements necessary to their growth, except carbon, which is derived from the air, afford congenial elements for all trees and woody growth.

2d. That lime, whether in the form of marl shell, plaster, or stone-lime, is a specific for apple trees, and that apples are largest and fairest grown in a calcareous soil.

3d. That phosphates, in the form of bones (which are principally composed of phosphate of lime), or superphosphates, are specific for pears and grapes.

4th. That ammoniacal manures, as guano, horse-dung and urine, are specifics for the peach, and give spirit and flavor to all other fruits.—[Summer's Prize Essay.]

How to Protect Furs from Moths.—The largest emporium for furs is doubtless Moscow; and apropos of that city, we see it stated by one who was present at the first World's Fair in London, in 1851, when the furs from Moscow for the exhibition were being unrolled, he observed that each contained a swan's quill, one end of which was lightly corked. On inquiring of the Russian gentleman who had the furs in charge, he was informed that the quills contained liquid quicksilver, and were a certain preventive of the attacks of moths.

NURSERY BUSINESS.

First Premium
NURSERIES,
SAN JOSE.
B. S. FOX & CO.

HALF MILE FROM CITY, TELEGRAPH MISSION ROAD.

Fruit and Ornamental Trees,

GRAPE-VINES,

Flowering Shrubs, Gooseberries, Currants,

RASPBERRIES, &c.

LAWTON AND DORCHESTER BLACKBERRIES,

Of Genuine and Superior Plants.

ROSES,

CLIMBING PLANTS, DAHLIAS, &c.

NURSERYMEN'S STOCKS, GRAFTS, &c.

We desire to offer to our friends and patrons a stock of

TREES, PLANTS,

VINES, SHRUBS,

AND

NURSERY STOCK,

THE PRESENT SEASON, UNRIVALED.

As Experienced Nurserymen our desire is to offer a stock that shall be reliable, producing fruits true to name and variety, and always embracing the newer and better sorts. It is not so much our aim to present numerous varieties as it is to offer valuable ones, and we shall always be prepared to serve our patrons with every new variety, either from Europe or our own country, as soon as fully proved to be a valuable kind. Our stock of nursery articles need only to be seen to be fully appreciated. We are confident we can

Equal Any Nursery in Stock or Growth,

Our efforts being to show our friends

Well-Grown Trees and Plants.

We invite all purchasers of Trees, Plants, &c., to call and see us, or our

AGENT, MR. JAMES I. BURTIS
116 Washington street, San Francisco,

Where we have opened a Store, that our friends and patrons can

EXAMINE OUR STOCK,

As we purpose offering them at

ONE-HALF LAST YEAR'S PRICES.

Trees and Stock packed with great care, to insure safety.

DELIVERED AT ALVISO FREE OF CHARGE.

It would be advantageous to purchasers to call and make selections early, thus securing Choice Trees. Catalogues found at Farmer Office on application, gratis.

The Scavengers.

ANATOMY, physiology, geology and history teach us that, in order to preserve the proper balance between the animal and vegetable kingdoms, as well as to secure the necessary transformations of the elements which alternately and interchangeably become constituents of living and dead matters, certain kinds and classes of animals are made to subsist on the dead and decaying organic matters and excretions of other animals. They are scavengers.

Were it not for the scavengers of the ocean, of which the oyster and other shell-fish are prominent examples, the great deep would soon become a putrid pool, whose pestilential effluvia would infect the whole atmosphere, and spread desolation over all the earth.

And so on the dry land. In every place where rotting and decaying animal matters are found, the scavengers appear. The field, the garden, the barn-yard, the sinks, and cess-pools, all have their scavengers precisely according to the necessity for their existence. And man wars upon them as though they were his foes. Had he the power, he would exterminate them from the earth. But nature has wisely ruled it otherwise. Were it not for their friendly offices, he would soon cease to exist. The way to rid the earth of the scavengers, is, to remove the causes of their presence. The hog, the rat, the toad, the venomous serpents, the flies and the spiders, and a host of troublesome insects and vermin, are not only blessings in disguise, but actually indispensable to our health and happiness.

Our great mistake consists in eating the scavengers. We go even so far as to breed them, as in the cases of oysters and hogs, for human food, and so make ourselves the scavengers of scavengers. Animals of a higher organization are not intended by nature to be the scavengers for the lower animals. Nature has, throughout all the domain of animated existence, established the contrary rule. If we reverse or pervert it, we must take the consequences. We must suffer now, if we do not perish in the end.

All animals destined to purify the earth, by converting putrescent and effete organic matters into their own bodies, or through their bodies into the primary elements, have a gross organization and brief existence. To devour is their ruling instinct; and, like the vulture and carrion-crow, they relish, with the keenest zest, the putrefying carcasses which are most abhorrent to poor human instinct. They are destined to pass away just as fast as the earth is properly developed and cultivated. All of the tribes and nations of the human family who have, like the carnivorous and the omnivorous animals, made themselves to any extent scavengers, have ultimately degenerated in organization, and become corrupt in body and depraved in mind. Many of them have fulfilled their mission and passed away. There will never be a permanently progressive and ever-improving race on the earth, until man ceases to use as food the foul carcasses of these filthy animals.

There are animals below man in the scale of being—the herbivora—which do not eat other animals. And so far as man subsists on flesh-food at all, he should eat of these animals, and these only. It is as clear as any scientific demonstration can be, that if man devours the carcasses of carnivorous and omnivorous animals, his earthly tendency and destiny will be more or less conformed to theirs.

The general practice of the world is, unfortunately, the very opposite of the doctrine which nature, science, and revelation, so plainly teach. Indeed, our standard authors on chemistry, physiology and medicine, are directly in conflict with nature on this subject. Even good Christians find the staple articles of food as well as the daintiest luxuries of their tables, in the flesh, blood, viscera, grease, adipose and excrementitious matters of that concentration of scrofula, measles, and vermin, the hog, whose foul secretions and morbid humors are made doubly filthy by domestication, and, in fact, rendered a mere mass of disease and corruption by the ordinary processes of fattening. Physicians need not go so far from home to discover the causes of erysipelas eruptions, bilious blotches, festering sores, bad blood, glandular swellings, carbuncles and caries, apoplexies and palsies, gouty and rheumatic affections, tubercular consumption and the numerous cachexies; nor need the people wonder at the long list of incurable distempers, contagious and infectious maladies, and epidemics and pestilential disorders, so long as the pernicious doctrine is taught in high places, and commended by the example of the learned, that man may partake of the scavenger-animal, and not share its destiny. While human beings delight in those "creature comforts" which are condemned by science and Scripture, and in their feasting violate every law of physiology, as well as outrage nature and decency, moralists need not wonder at selfishness, sensuality, and depravity among men. The basis of all that is reformatory and progressive in human nature, is dietetic reform.—[Life Illustrated.]

THE AMERICAN SMOKER.—Says the Scalpel, the fashionable young gentlemen who wear large seal-rings, and gold chains, and carry big sticks to keep their delicate legs steady when obliged to walk, and to suck on when they go down in the stages of mornings, and are out of tooth-picks—may be seen with a cigar, sticking out of a piece of baked earth, which some cunning German-Yankee has got up, and called it Meerschaum. The poor creatures, we are told, are obliged to suck the filthy cigar through this a great many thousand times before it gets sufficiently stunk and discolored to be classic in its pretensions; by the way, if ever the "Meerschaum American Smoker" should go out of fashion, we would suggest to the apothecaries to purchase them. Any old salt who sails a packet-ship, and is obliged to prescribe for jack, would find them a capital—no, a—another use for them, even without a cigar.

THE Mobile Register gives some account of the fitness and usefulness of camels as beasts of burden. Mr. M. B. Woolsey, of Dallas county, Alabama, writes to that paper that his camels, with no more attention than the calves and dry cattle get, are fat and growing. With the woods for a pasture, and water twice a week in summer, and once in ten days in winter, this wonderful animal would thrive. He says his experience goes to prove them eminently useful for beasts of burden and for draught. They are hardy, require but little care, eat almost anything, and are, in traveling, swifter than the mule, carrying double the weight usually placed upon that animal. The camel lives to the age of fifty years, is subject to few diseases, and is so tractable that no trouble whatever is found in teaching him what is required of him.

"Never put off till to-morrow what you can do to-day," said a mother to a child. "Well, then, mamma, let us eat the cranberry pie that is in the safe."

A word of kindness is seldom spoken in vain. It is a seed which, even when dropped by chance, springs up a new flower.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.
C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.
Ball's Celebrated Canton, Ohio, do 8 and 10 do
The Hamilton, Ohio, do 4 and 6 do
The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question, The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;
WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELETON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE-PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of us.

THOS. OGG SHAW,
38 SACRAMENTO STREET,
San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 15th, 1860.

NURSERY CIRCULAR.

FOREIGN AND NATIVE GRAPES,
AND GENERAL NURSERY STOCK,

OFFERED THE PRESENT SEASON OF 1859 AND 1860, BY

A. P. SMITH,

AT THE

POMOLOGICAL GARDEN AND NURSERIES,

SACRAMENTO, Two-and-a-half Miles from the City,

AND AT THE

OFFICE AND DEPOT FOR TREES, 44 J street, between Second and Third streets,

SACRAMENTO CITY.

THE CULTIVATION OF THE GRAPE, AND THE PLANTING OF VINEYARDS UPON AN extensive scale, is at the present time exciting a lively interest among the people of our State.

The congeniality of our soil and climate, and the success which has thus far attended the operations in the vineyard, are exciting the attention of hundreds to this subject, and destined to make vine-growing and wine-making one of the great interests of our State. With the world for a market, who can estimate the wealth that will hereafter accrue to our people in the manufacture and exportation of wine. This State and this interest yet in infancy, and this great interest is of such magnitude that it is of the first importance to begin aright. To do this, we should now ascertain what is to be the most desirable grape to cultivate, especially for wine-making. The California or Los Angeles grape makes a good and pleasant wine, and some assert to be as good as any for making wine, the majority of experienced growers pronounce it inferior, and some assert that it will be superseded by some other and a much better grape. Among over one hundred varieties of grape cultivated by us, the CALIFORNIA GRAPE has always proved to be the most tender, while the FRENCH and GERMAN grape invariably resist the frosts that have been so very destructive to our California grape. This is a very important point to establish, as the loss by frost in some wine-districts alone, would be very great, and therefore the attention of the cultivator should be directed to attaining a hardy class of grapes. Experiment alone must determine this, and whatever experience we have already attained should be carefully noted and improved upon.

For some years we have been most carefully experimenting upon and propagating from a very large stock of the finest kinds of foreign grapes, and while most of these have proved perfectly hardy, the CALIFORNIA grape has been entirely killed. At the same time no two opinions exactly agree as to their superiority in other respects over our native grape. Thus it will be seen that the wine-grapes of Europe have so far proved to possess a very decided advantage over the grape now being cultivated and known as the Los Angeles grape.

With these points established, and with the opinions of practical wine-growers of Europe to sustain us, there can be no reasonable doubt of the re-production in this State of the finest wine-grapes of Europe.

The foreign grapes having a world-wide reputation as wine, table, and raisin grapes, and having been proved to be harder than our own grape, and better adapted to our soil and climate, they must and will become very extensively cultivated. We cannot sufficiently impress upon those about to plant vineyards, our own opinions and preferences for this class of grapes, believing as we do, that the varieties to be eventually selected from this class will be grown to the exclusion of all others. We would not by any means wish to discourage the planting of the CALIFORNIA GRAPE, which is indeed a useful and valuable grape, and of which we sell largely; but when it has to come in competition with varieties of superior merit, it must necessarily give place to them.

From many of the foreign grapes we have experimented in WINE MAKING, and while all have proved to be good wine-grapes, some of the kinds have produced wine of such decided superiority as to leave no doubt in the minds of competent judges of this class of grapes being the grape from which we may hope to manufacture an article of wine that will improve by age and be fit for exportation. The present season we have made wine from twenty different kinds of this class of grapes, as well as a large quantity from the California grape, and the grapes for raisins, and notwithstanding our process has been crude and imperfect, our success was very flattering, and we have no doubt but that the very finest quality of raisins can be profitably prepared in this country. We wish to draw the attention of parties to our extensive stock of this class of grapes which are very select, and which we have been propagating for several years at large expense, having heretofore limited our sales till the stock now in hand is the largest in this State. Such varieties as we have specified we can furnish by the hundred or thousand, and when taken in large lots we will put them at much lower rates than heretofore offered.

We wish it to be distinctly understood that our stock has been all grown by ourselves from bearing vines in our own vineyard, and we enumerate only such as we can furnish in large quantities.

When a thousand or more vines are ordered, the selection of kinds will partly rest with us, but will be comprised within the following assortment:

We would suggest to our customers that they should name to us the proportions they desire for TABLE and for WINE grapes. The following is the list for the present season:

Black Hamburg—An immense bearer, a large and purple berry, one of the finest and most luscious of black grapes known.

Willmott's Black Hamburg—Extraordinary bearer, and fruit with immense sized berries, differing in shape from other berries.

Black Prince—Large, very productive, rich and very delicious.

Black Morocco—Very prolific, large clusters, and gives promise of being a very fine wine grape.

Black St. Peter—Long and large clusters, a late fruit, sweet and very delicious.

Black Frontignan—A good grape with a sweet and musky flavor.

Cannon Hall Muscat—One of the largest white grapes known. From our experience this year we think it a fine wine grape.

Chasselas of Fontainebleau—A white, very productive grape, medium size.

Early White Sweet-water—A well known early sweet grape, being more than three weeks earlier than the California grape, and a great bearer.

Early White Malvoison—Early, and sweet, and good.

Frontignan Muscat—Very fine.

Syrian—An immense bearer, very large, a late sort.

Grizzly Frontignan—A good bearer, fine flavor, good table grape.

Lashmier's Seedling—White, good size, medium bearer, high flavor, believed to be good for wine.

Large Rose of Peru—A large and superior grape, and very prolific.

McReady's Early White—Very prolific, and a fine white grape.

Muscat of Alexandria—Large and fine, the very finest of table grapes, and of exquisite flavor.

Royal Muscadine—A delicious grape, great bearer, incomparable as a table grape, and promises to be first rate as a wine grape.

Red Frontignan—A very fine grape.

White Frontignan—A very delicious grape.

Our native grapes consist of the California grape from one to three years, Isabella, Catawba, Clinton, Concord, and Rebecca. Some of the latter are new sorts, and of these we are not largely stocked this season. We particularly ask planters of vineyards to review our remarks in this card.

FRUIT AND ORNAMENTAL TREES.

The Trees offered from the above establishment this season are more than usually fine, and in the NUMBER OF VARIETIES, of each kind of fruit, we possess the largest collection in the State, our catalogue embracing OVER NINE HUNDRED VARIETIES, among which are

APPLES, about 250 varieties;

PEACHES, 75 varieties;

PEARS, 400 varieties;

NECTARINES, 20 varieties;

PLUMS, 50 varieties;

APRICOTS, 12 varieties;

CHERRIES, 50 varieties;

GRAPES, 100 varieties.

We hesitate not in saying that our Pear and Cherry trees are the finest ever offered for sale in this State, of all sizes, being from 6 feet to 12 and 14 feet high. The greater portion being not only of very large size, but also handsomely shaped, are elegantly adapted to planting near residences, affording the double advantage of shade and fruit. Of the above two fine fruits we offer 25,000 Trees for sale, of different sizes and prices, and as low as good Trees can be bought at any first-class Nursery in the State. Many persons have had but poor success with Cherry Trees in this State. We state for their information that

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common

Native or Oregon stock of this Coast,

the former being the only stock fit to grow them on. We have also a very fine stock of the following, viz:

Apple, Plum, Peach, Nectarine, Apricot, Fig, and Almond,

Besides a miscellaneous collection of other small fruits. Particular regard has been paid to the growing of the trees in good shape, and purchasers of our two-year-old trees will find that they have been well "cut back," and are now firm, symmetrically shaped trees. We guarantee no finer healthier trees, will be found in the market this season. We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and Greenhouse Plants,

Embracing all the old and well known varieties, as well as a great many others both good and new. Also, a very fine lot, of different sizes, of that very popular shade tree, so full of reminiscences of home, the good old-fashioned Elm Tree of many varieties, but most of the American and Scotch Elms, which are of good size and when well established in the soil, they are of very rapid growth. Also,

LOCUST; LABURNUM, or GOLDEN CHAIN; MAPLE, in variety; LINDEN, European and American;

CATALPA; CHINA, and other Trees.

We call particular attention to our collection of THE CAMELLIA, now so well acclimated as to be growing finely in our open grounds, and blooming as elegantly out of doors here, as possible with the tenderest care in a conservatory. It is no longer a house-plant, but one of the gems of the pleasure grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c., see CATALOGUES, which are sent by mail to all applicants.

VEGETABLE SEED—We invite attention to our very large and general assortment, the crop of THIS YEAR, which is very fine. We are now prepared to supply THE TRADE in quantities to suit, and at lower prices than can be found at any other establishment in the State. We have now been growing SEED for a number of years, and have given universal satisfaction. We are now prepared to supply large quantities of GOOD FRESH SEED at very low rates. These seeds will be done up handsomely in packages, for Wholesale or Retail Trade, and will always be in readiness at our Office, and at City Office, 44 J street Sacramento.

Our Trees and Shrubs will be sold for CASH ONLY, and Orders must be accompanied with the Cash to insure attention.

The California Farmer.

SAN FRANCISCO: FRIDAY, MARCH 9, 1880.

Direct our Letters and Exchanges.
Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct letters to "GEO. WARREN, California Farmer Office," as there are frequent miscarriages for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as Colonel Warren, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscriber has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

A Self-Sustaining Post Office for the U. S. Government.

The enormous expense of the United States Post Office Department—the large and increasing annual deficit—is leading our prominent statesmen to a serious reflection upon the causes of all this vast outlay of expenditure, and to devise means whereby a better system could be adopted, and a self-sustaining institution could be built up, that would reflect credit and honor upon our government, while at the same time that a very low rate of postage would secure to the people a means of safe and rapid communication from one part of our country to the other.

In a great government like ours, where so mighty an institution as our Post Office Department, costing millions annually, with its innumerable divisions and subdivisions, all emanating from one direction, each and all appointments of trust and power waiting the action of one head, there must necessarily be such delays and hindrances as must result in great and irretrievable losses pecuniarily, besides large and serious losses to vast numbers of people who are dependent upon the regularity of the motion at the fountain-head.

As all appointments and all removals require action from the chief bureau—this involving months of delay—the evil suffered by the people is incalculable; and it is these delays and hindrances that have caused so many *expresses* to be started, all over the country—the aggregate annual business of which now amounts to as great, if not a greater, sum than that of the Post Office department itself.

If the carriage of these mail bags can be let out by contract, on all the various routes of the United States, why not let out the routes themselves? Why not let the mail routes, with the privilege of carrying the letters and parcels exclusively, to good and responsible parties—giving the "patent right" for so long a time to those parties that will carry it in the quickest time, doing the work in a manner most acceptable to the public? We believe if the U. S. government should make proposals to give rights for routes, in this way, large premiums would now be realized upon routes that have long been a heavy bill of expense to the government. The thing is plain: the work would be quickly simplified, the routes would be improved, better conveniences for the public, many new and increased facilities, and a greater number of sub-offices established; for, whenever private enterprise can be permitted to step in, competition will be so lively that the mails will be carried in about half the time, and at about half the cost, and the whole people will have their letters and parcels carried at a less rate than at present. As proof of this, the present great inconvenience and delay induce all the expresses and parcel-deliveries of private enterprise, that could and would be greatly improved by the additional right to carry the mails. Upon the safety of so carrying them we shall speak in future papers. We only make these hurried suggestions to call attention to the subject.

The Right Style of Pruning Trees.

We do love to see a tree scientifically pruned. A tree well pruned looks as if it would almost say to the pruner, "Thank you—well done!" A visit to the orchard of John Center, Esq., at the Mission, this week, gave us great pleasure. We saw a very fine collection of fruit trees, of all choice varieties, all of the dwarf species, very handsomely arranged in squares, together with many trained on the trellises as espaliers—the entire system being the best and most perfect, and the entire lot of trees being the finest collection of well-pruned trees we have seen in the State. We advise all fruit-growers who would see well trained fruit trees to go to Mr. Center's garden and examine them.

A collection of new varieties of imported gooseberry trees (from Scotland) were very finely formed into open heads. The entire garden is in the most perfect order and in a high state of cultivation, and reflects great credit upon the proprietor for his taste in the design, and upon the gardeners for their workmanship.

The Oakland Fair.

The plan of the Oakland Fair has indeed succeeded, and all that is now needed is a union of strength of all the citizens of the several sections composing the proposed district, and the exhibition will be a grand one. The time fixed, as will be seen, is June, a pleasant period of the year, when early fruits are in all their perfection, and flowers are in their glory; a season too, when all the various classes of stock will show to perfection. We sincerely hope there will be a generous feeling everywhere in regard to it, so that California shall make her mark for a grand Spring Fair.

Left-Handness.

The fine Bridgewater treatise thus explains:

"The question has been much discussed among anatomists, whether the properties of the right hand, in comparison with those of the left, depend on the course of the arteries to it. It is affirmed that the trunk of the artery going to the right arm passes off from the heart, so as to admit the blood directly and more forcibly into the small vessels of the arm. This is assigning a cause which is unequal to the effect, and presenting altogether too confined a view of the subject; it is a participation in the common error of seeking in the mechanism the causes of phenomena which have a deeper source."

"For the conveniences of life, and to make us prompt and dexterous, it is pretty evident that there ought to be no hesitation which hand is to be used, or which foot is to be put forward; nor is there, in fact, any such indecision. Is this taught, or have we this readiness given to us by nature? It must be observed, at the same time, that there is a distinction in the whole right side of the body, and that the left side is not only the weaker, in regard to muscular strength, but also in its vital or constitutional properties."

"The development of the organs of action and motion is greatest upon the right side, as may at any time be ascertained by measurement; or the testimony of the tailor or shoemaker; certainly, this superiority may be said to result from the more frequent exertion of the right hand; but the peculiarity extends to the constitution also, and disease attacks the left extremities more frequently than the right. In opera dancers, we may see that the most difficult feats are performed by the right foot. But their preparatory exercises better evince the natural weakness of the left limb, since these performers are made to give double practice to this limb, in order to avoid awkwardness in the public exhibition; for, if these exercises be neglected, an ungraceful performance will be given to the right side. In walking behind a person, it is very seldom that we see an equalized motion of the body; and if we look at the left foot, we shall find that the tread is not so firm upon it, that the toe is not so much turned out in the right, and that a greater push is made with it."

"From the peculiar form of woman, and the elasticity of her step resulting more from the motion of the ankle than of the haunches, the defect of the left foot, when it exists, is more apparent in her gait. No boy hops upon his left foot, unless he be left-handed. The horseman puts his left foot in the stirrup, and springs from the right."

"We think we may conclude that everything being adapted in the conveniences of life, to the right hand—as, for example, the direction of the worm of the screw, or of the cutting end of the auger—is not arbitrary, but is related to a natural endowment of the body. He who is left-handed is most sensible to the advantages of this adaptation, from the opening of a parlor door to the opening of a penknife. On the whole, the preference of the right hand is not the effect of habit, but is a natural provision, and is bestowed for a very obvious purpose; and the property does not depend on the peculiar distribution of the arteries of the arm, but the preference is given to the right foot, as well as to the right hand."

We are glad to see this question agitated, and we trust it will be kept before scientific minds until truth is established.

We differ materially in the premises set forth—that "the development of the organs of action and motion is greatest upon the right side,"—unless the writer means to convey the idea that it is so now among the generations of men hereditarily, not naturally.

We have never been a student of anatomy or of physiological science, but we have been of nature, and we don't believe the God of Nature ever made the right arm, hand, leg or foot stronger than the left, in a healthy being; neither do we believe the right eye can see better, or the right ear hear better. We believe He gave us our limbs, eyes and ears to train alike, and we only wish that mothers would train their sons and daughters, from early infancy, to use both hands alike and both feet alike, giving exercise to each and use to each, and they would very soon see a stronger physique in their children. We know children can be taught to use both hands with equal success; daughters can be taught to sew and write as well with the left hand as the right, and boys to use their playthings, their tools and to write also, with one hand as well as the other. The great cause of the universal use of the right hand arises from training. The mother seeing her child using the spoon or knife with its left hand, at table, becomes alarmed lest the dear child should be deformed by being left-handed, and thus the habit is formed of using only the right hand, when in its infancy and innocence it would have used the left hand one day and the right hand the next. Let mothers try it, and they will find how easy it will be to teach a child to use both hands alike; then if misfortune deprives them of one hand, the other is ready. God gave us two arms and two hands, two legs and feet, two eyes and ears, and they are equal in the sound and healthy being, and were intended to be trained to be used alike. We earnestly hope our learned physiologists will take up this subject and handle it thoroughly, until the truth is established; for we believe a new era will dawn upon mankind.

Products Worth Raising.

HEMP.

Why do not some of our land owners who come from those States that are familiar with hemp-growing, enter into the cultivation of it here? We believe a very good thing can be made of it. Those who understand it would do well to make inquiries about it speedily.

NORS.

Here is an article we know will pay well to cultivate in large quantities. California hops will always command from twenty-five to fifty per cent more than imported ones, for the reason that we can grow them better, in larger quantities per acre, and harvest them safer, by reason of our dry climate.

CHANGE BY CULTIVATION.—At the late meeting of the British Association, Dr. Lankester laid before the society a report by Prof. Buckman, "On the Growth of Plants," in which it was stated that the author was continuing his experiments on the influence of cultivation in altering the specific character of plants. Several instances were given in which the character of a plant was so much changed by culture as to lead to the supposition that certain forms which had hitherto been regarded as distinct species were only varieties.

HITCHINGS & ROBERTSFIELD, having exhausted the first edition—700 copies—of Degroot's Map of Washoe Mines, have issued a second edition, enlarged and corrected. Of course every one leaving for the new diggings will require a copy.

Alameda Agricultural Society.

The Alameda County Agricultural Society met pursuant to adjournment at San Leandro, on Saturday, March 3, 1880.

Mr. Myers, from the Committee appointed to wait upon the Board of Supervisors and ask for the appropriation of \$500 for the Society, as authorized by an Act of the Legislature, reported that the appropriation had been made, and was in the possession of the Society.

The President stated the first business in order was the election of ten delegates to the adjourned District Convention, to be held at San José on the 21st inst., whereupon the following named persons were chosen: Dr. H. Halle, A. H. Myers, R. Blacow, A. W. Harris, Jas. Shinn, H. C. Smith, John Luelling, E. L. Beard, F. F. Fargo, and H. Linden; and the following alternates: L. A. Amerman, E. T. Crane, W. H. Souther, Jas. Lentell, W. A. Bray, George Fleming, Joe. Scott, D. E. Hough, W. P. Toler, and A. Luelling.

PETITION FOR A NEW LAW.

On motion, a Committee of one from each election precinct was appointed to circulate petitions asking for a repeal of the law creating the State Society, and the passage of one authorizing the formation of District Societies.

The members of this Committee were requested to report the names to the petition to the Secretary of the Society, on or before the 17th inst.

ANNUAL FAIR.

Mr. Myers offered the following, which was adopted:

Resolved, That the Annual Fair and Cattle-Show of the year 1880 be held in the city of Oakland, commencing on the 5th day of June, and continuing four days.

Resolved, That the Pomologists, Florists and Artisans of the counties in this District and the San Joaquin Valley and Sonoma and Napa Districts be invited to cooperate with this Society in this Fair.

PREMIUM FUND.

It being deemed advisable to offer liberal cash premiums upon the most meritorious stock exhibited, and the present finances not justifying the Society to do so at this time, on motion, a Committee of ten was appointed to solicit contributions to a "Premium Fund," for the purposes indicated above. The Committee was constituted as follows: A. B. Forbes, C. M. Hathaway, S. Card, John Center, R. B. Woodward, J. A. Mayhew, J. A. Hobart, S. M. Davis, F. K. Shattuck, S. B. Martin. The President, Secretary and Treasurer were added to the Committee.

PREMIUM LIST.

A Committee of five was named to cooperate with the Board of Managers in the preparation of a premium list for the Annual Fair, and Messrs. W. H. Souther, James Hutchinson, A. Davison, R. A. McGloire and D. E. Hough were appointed.

On motion, the Society adjourned to meet on Saturday, the 31st inst., at 1 o'clock p. m., at San Leandro.

In reference to the above, the Alameda Herald, from which we copy, says:

At the meeting of the County Agricultural Society, held on Saturday last, it was determined to hold the Annual Fair and Cattle-Show for the present year in the month of June, instead of later in the season. The object of this we understand to be to avoid collision with similar institutions in neighboring counties, which are usually held at about the same time in the autumn months; so that our people may be at liberty to attend such Fairs, and also that others may not be debarred from attending ours by their own exhibitions. It is also believed that the month of June is quite as propitious for a successful Fair in this locality as any season of the year. It is then that the most attractive floral display can be made; the early fruits are in prime; the fields do not become too hard to prevent a plowing match; the early crops will admit of mowing and reaping contests; stock is then usually in good condition, and farmers are then enjoying a leisure, preparatory to commencing harvest. These points were all duly canvassed, and it was deemed expedient to fix the time as given above. The success of the Floral Fair of last June, which was but an experiment, demonstrated the feasibility of early exhibitions; and with the addition of the Cattle-Show, and the experience of last year's Fair, we presume the ensuing Annual Exhibition will prove all its friends could desire.

The recent appropriation by the Board of Supervisors will enable the Society to liquidate the little outstanding liabilities, complete the diplomas, and make all the necessary preparations for the next Fair. The Board of Managers need the cooperation of the members and our citizens generally, in the approaching Exhibition; and, with the aid we shall probably receive from adjoining counties, we hope to make one of the best Fairs ever held in the State.

How Little They Know of California!

Every mail that comes to us brings evidence of the importance of our making known the resources of our State. Every journal should try to fill those numbers that go to the Atlantic States with useful information, so that we may enlighten the dark mind of the benighted ones in respect to California; for the fact is, the press in the old States are unwilling to publish those items which show the rapid strides our State is making, lest it should induce a greater rush for California. We say boldly, the press abroad are either afraid or unwilling to publish the true condition of California, lest such truths should take away thousands of good citizens from their midst and send them to us.

As an evidence of how little they really know of California, we will give a paragraph from a private letter from New York, received last steamer by a resident here, touching scientific matters. The writer in New York, a very intelligent gentleman, in making a shipment of scientific apparatus which would require the use of quicksilver, wrote as follows:

"Thinking it would be difficult to obtain pure quicksilver in California, I send you two pounds!" The quicksilver cost, landed here, one dollar a pound. It can be purchased here for about one-half that. The person to whom the letter was addressed wrote back:

"Thanks for your kind intentions respecting the quicksilver; but let me inform you that here, in our wonderful country, we have only to smite the mountains, as Moses smote the rock, and pure quicksilver gushes forth in molten streams!"

(Literally true, as reported in Napa county). Yet it seems, with all the information touching the New Almaden Quicksilver Mines of California, it is supposed we cannot get pure quicksilver! This is something like the item we published of the Atlantic paper that supposed San Francisco Levee would be overtopped, and perhaps Telegraph Hill might be inundated!

Circulate the documents! circulate the documents! We shall make all "Down-Easters" believe Californians are somebody yet.

The Ohio State Board of Agriculture have located their Annual Fair at one point for two years, and rejected a proposition to locate permanently at one place.

Prices of wool.

Messrs. Goodale & Co., of Cleveland, O., in their circular of Jan. 1, state that the prices of wool at their depot during the past year, have ranged from 33 to 60 cents; with the exception of some fancy clips which have ranged as high as 70 cents. The same firm says further:

"The average price at the present time is 49½. The wools remaining unsold are fine and will increase the average price to about 50 cents."

The average price of 1858 was 37½ cents.

" " 1857 " 45½ "

" " 1856 " 47½ "

" " 1855 " 38½ "

" " 1854 " 35½ "

"We think the present prices will be fully sustained and may advance somewhat until near clipping time, or in the month of April, at which time the prices will fall off as is usual at the season of the year."

The Indianology, by A. S. Taylor, Esq.

We are constantly receiving complimentary notices of the valuable articles published in our journal, and also a kind notice of our journal included, of which the following is a sample. We know the compliment paid to the able author of the "Indianology" we are publishing is deserved, and we will try to merit what is intended complimentary to ourselves.

EDITOR CALIFORNIA FARMER: Will you oblige me by sending to this office the numbers of your valuable paper containing "The Indianology of California," by Alex. S. Taylor.

From a personal acquaintance with Mr. Taylor, I am convinced of his peculiar ability to do justice to the theme he has chosen, hence I am very anxious to peruse the series complete.

* * * You see, apart from the agricultural information it imparts so abundantly, it attracts great attention from the fact of its containing such articles as the one in question; so we can't afford to let it pass, without saying something about it.

STEADY ADVANCE OF THE GRAIN MARKET.—Keep on shipping grain, that is the word; and although the price of wheat has gone down from 14 shillings, to 7 and 8 and 10 shillings for extra, in Australia, and 2½ cents in New York; yet these markets leave a margin preferable to our own, and as a remuneration, they promise a profit—it seems to prove this—for those who *know* continue to ship; and every thousand bags sent out of the State, helps the producers here.

JONAS G. CLARK & Co.—This immense furniture warehouse, on Washington Street, in this city, is now a greater curiosity than all the museums, theaters, circuses, or rope tyings; for if visitors should go and visit their immense warehouse, they would be puzzled to know where all this furniture goes to; and yet the halls are almost emptied every week, and filled again by the busy workmen, and by the arrival of new goods. Messrs. Clark & Co. do more business, probably, than all the other dealers on the Pacific Coast, their sales in all the principal cities being immense.

CLOUDS AND RAIN.—The clouds which have increased in density since morning, with increasing winds from the west quarter, are now this afternoon sending down a very generous shower of rain to bless the farmer, and help him in his weakness of belief—he too often forgets in his murmuring of the dry season, that there is a promise: "There shall be the early and the latter rain;" and it is now falling copiously, and the earth is receiving it graciously and gratefully into its bosom.

THE MECHANICS' INSTITUTE.—Mr. George Coffran, late President of the Mechanics' Institute, has delivered his retiring report, from which we take the following statistics:

Amount received during last fiscal year.....	\$3,382 99
Amount on hand at beginning of year.....	1,969 00
Total amount for fiscal year.....	\$5,351 99
Amount expended for salaries, etc.....	4,777 24
Balance on hand.....	\$ 574 75
Number of members at date of last report.....	586
Increase during the year.....	52
Total.....	638
Number of shares taken.....	852
Installments paid thereon.....	\$2,812 50
Addition to number of Books in Library.....	1,312
Total number now in Library.....	3,112

MERCANTILE LIBRARY ASSOCIATION.—The election on Tuesday was an occasion of much excitement, and 1,335 votes were polled. This vote embraces nearly the entire membership, including nearly five hundred members recently received. The following gentlemen were elected: President, William H. Stevens; Vice President, William R. Garrison; Treasurer, J. G. Kellogg; Corresponding Secretary, R. B. Swain; Recording Secretary, Edward Hunt; Directors, Charles W. Brooks, Frank Baker, S. P. Belknap, William Norris, J. W. J. Pierson, John Shaw, H. C. Macy, Charles K. Bond, Thomas Bennett.

The shipment of treasure by the steamers of Monday was unusually light. This is partly attributed to the Washoe excitement, which is inducing so many persons to prepare for spring operations in that region. The amount sent by the Golden Gate was \$924,938 64, and by the Cortes \$159,500.

OFFICERS OF THE MECHANICS' INSTITUTE.—The annual election of officers of the Mechanics' Institute was held on the evening of the 2d instant, at their rooms. There was much interest taken in the result, and several tickets were in the field. The whole number of votes thrown was 202. The following ticket was elected by a large majority: President, Thos. Tennent; Vice President, J. W. Cherry; Corresponding Secretary, William F. Herrick; Recording Secretary, P. B. Dexter; Treasurer, John E. Kincaid; Directors, Gardner Elliot, Benjamin Dove, Paul Torquet, Henry L. King, J. P. Buckley, James A. Sperry, A. H. Houston.

GREAT DECREASE IN SHIPMENTS OF GOLD.—By the face of the figures, it appears that there has been a large decrease in the amount of gold sent abroad by the last steamer. Although the shipment of gold may be less, yet we expect if the case were examined we should find there was an equivalent sent for it, in the shape of Government Drafts, to the tune of some half a million, and, added to this, one large banking house, whose shipments are usually \$100,000, made none, that amount being retained here to be invested in scientific and manufacturing material, which will result in good to our State. So that in fact the real amount was about \$1,800,000, instead of \$1,134,000, as appears by record.

Petition of Agriculturists.

We find the following published in the Morning Reporter, of San José:

To the Honorable Senate and Assembly of the State of California:

The undersigned, citizens and residents of the county of Santa Clara, would respectfully represent that, WHEREAS a law was passed and approved May 13th, A. D., 1854, and amended and approved March 20th, A. D., 1858, incorporating a State Agricultural Society, has entirely failed to meet the necessities of the great Agricultural and general Industrial interests of the State of California; therefore, your petitioners would respectfully ask that said law of 1854, as amended in 1858, be repealed, and the appropriations therein contained be applied to all District Agricultural Societies (dividing such appropriation in a just and liberal manner) as may organize under the general law concerning Agricultural Societies.

The above petition has been signed by a large number of our most influential citizens. We do hope that our present Legislature, will repeal the Act, that our citizens are praying for. Those desirous of signing the above petition, will find it at the office of Justice Shearer.

FROM WASHOE.—A gentleman from Washoe direct informs the S. A. Independent that a large number of working men in the Washoe diggings have been employed all winter (at drifting and other kindred labor) at two dollars per day. This does not present a very good case for miners in search of sudden fortunes. He fully confirms the most favorable accounts of the richness of the "Comstock Lead"—nine feet of which sold for \$75,000—but is of opinion that the hopes now entertained of the mines generally will prove fallacious. The people in Carson Valley, he says, are in no way excited about the silver mines. The excitement is all on this side of the mountains.

TUCKER'S ACADEMY OF MUSIC.—This beautiful hall, says the Morning Call, is now nearly completed, and supplies a desideratum in San Francisco particularly apparent since the destruction by fire of Musical Hall. Every modern improvement has been introduced, and the comfort and convenience of the audience has been consulted in all the arrangements, which is particularly manifest in the wide seats, luxurious cushions, and ample space allotted to spectators. Certainly, no room in the State can compete with the "Academy" in its just proportions and elegance of adornment. Good taste has governed the enterprising proprietor in the finishing and furnishing of this beautiful assembly room, and in every detail it is shown that careful attention has controlled the action of the master spirit in his determination to meet the public requisition. The retiring rooms for ladies and for gentlemen, the hat rooms, the refreshment saloons, supper rooms, in short, they are a perfect adaptation of all that makes up the "quarters" for a public hall room, or concert hall. There are nearly one hundred gas burners in the hall, and the elegance of the fixtures are justly noted as indicating the liberality of Mr. Tucker and artistic skill of Mr. Prior. In order to guard against fire, a water tank of 1,200 gallons capacity, is kept constantly filled, and two watchmen have the guard and care of the building, one of whom is constantly on the alert. Mr. Barber has charge of the ticket department, and his amenity and gentlemanly deportment always insure to the visitors of the establishment a just consideration. Mr. B. has also fitted up a suit of rooms which are furnished with creature comforts of the very best quality, and supplied by accomplished aids. Tucker's New Hall is an ornament to the city, and, as already remarked, supplies a great public want.

MAGNIFICENT RHODODENDRONS IN BLOOM.—Two large plants of the Rhododendrons are now in full bloom at the Conservatory of the Golden Gate Nursery (Walker's Gardens). They are truly beautiful. Having enjoyed this rare sight—they being the first handsome specimens ever bloomed in California—we would recommend our citizens to go to the Conservatory and enjoy the sight; and, in addition to these, they will find much to admire and many things worthy of purchase.

GRAPE CULTURE IN THE MOUNTAINS.—While at Murphy's, a few days since, says the S. A. Independent, we noticed many grape-vines in all the gardens, and were informed that the finest qualities of grapes were produced there last year. On the road between Murphy and Douglass', Dr. Jones has fenced in a large field on the hill-side, which he designs to turn into a vineyard. An experienced horticulturist informed us that the ground was well adapted to the culture of the grape. Mr. Batten, of Vallejo, has an excellent orchard, and about 10,000 grape-cuttings for planting next spring.

DON'T FORGET TO PLANT EVERGREENS.—The beautiful evergreens of the very choicest varieties, can be had of large size, at WALKER'S GARDEN, GOLDEN GATE NURSERY, New Mission Road—Magnolias, Acacias, Junipers, Laurels, Pittosporums, Auracarias, Rhododendrons, Laurestinus, and many others. Every garden should have them.

EDNEY'S PUMP.—We call the attention of our readers to the illustration of the "Double Action Pump," advertised in our journal this week and which is figured upon our first page. Its intrinsic value as a pump is beyond price—a labor-saving, a time-saving, and a money-saving implement in a treble capacity, and well worthy the attention of all who use pumps.

OFF FOR WASHOE.—There has been quite an exodus for this new land of promise, during the week, and the wharves from which the up-river boats depart present a lively scene in the afternoon. The adventurers comprise men of means, as well as those who have only muscle to depend on, and we hope they may all make their fortunes.

The mail steamer (semi-monthly) of Monday carried off 17,218 letters, and the mail stage (semi-weekly) had 4,848.

THIRTEEN YEARS AGO, on Tuesday, March 6th, the first detachment of the New York Volunteers landed at San Francisco, from the ship Thomas H. Perkins. The detachment was commanded by Col. Stevenson.

FIRMNESS.—Decision is one quality which should be inseparable from family government, of which, indeed, it is the very soul and essence. Children are the keenest observers in the world, and if they detect indecision of character in a parent's judgment, all influence over their minds is lost. They have often no faith in the sentences pronounced, and become equally indifferent to punishment or kindness. Firmness, then, is essential. If an infant understands that you will at all risks keep your word with it, a respect is implanted in the child's mind, not to be eradicated, unless by your own deterioration.

At the recent annual distribution of the "Cosmopolitan Art Association," the famous painting of "The Village Blacksmith," by Herring, valued at \$5,000, was drawn by Governor Wise.

STATE SUMMARY.

The Legislature has passed a bill allowing the Board of Supervisors of Stockton to raise \$1,000 for the proposed District Fair to be held there next Fall.

Twenty journals in all have opposed the passage of a Sunday law, while only half a dozen, beside the religious press, have spoken in favor of one.

The average number of clear days per annum in California is about 200; of rainy days about sixty; remainder cloudy and foggy.

It is reported around the mountains that somebody's dog crawled into a hollow log after a rabbit, and hauled out a purse containing \$2300 in gold dust. Do not know whether the report is true or not.

A gentleman residing in Sonoma Valley, it is said, has discovered an extensive deposit of plumbago, or, as it is generally termed, black lead. The sample exhibited was of great purity.

The skeleton of a full-grown whale was struck upon near Santa Cruz, says the Sentinel, in excavating the base of the hill to the north-west of the town, for the foundation of a house.

It is the opinion of most farmers in Tulare county, says the Delta, that the ground will retain sufficient moisture from the rains already fallen, to mature the crops without irrigation.

For some days this week, says the Tulare County Courier of the 3d inst, it has been cool and cloudy. On Wednesday it rained, and on Thursday came quite a snow storm, with a frost which we fear has injured the fruit blossoms.

The stock for the "San Juan and Santa Cruz Telegraph Company" has all been taken, and it will not be long before the lightning flash of intelligence will pass along the line. The Company held their first meeting in Santa Cruz, says the Sentinel, on the 22d inst, for the election of officers.

The Nevada Library Association was organized about two years ago, and without any aid except that paid as admission fees and the monthly dues, they have accumulated one of the best libraries to be found in the interior of the State, containing over one thousand volumes, among which are many rare and costly works.

The most astonishing reports come from the new quartz mines of Southern Oregon. Rude arastras are said to be crushing rock that yields from ten dollars to two and a-half ounces to the pound! One lot of 400 pounds yielded 44 ounces of gold. The surface of the hill where the ledge crops out, is said to be strewn for a considerable distance with auriferous boulders. If these reports prove truthful, Washoe will have a formidable rival.

"The Bloody Law" is the appellation given to the proposition to punish highway robbery by hanging, by the San Andreas Independent. "A cruel and bloody code," it says, "begs a savage nature. Once let the public become habituated to the sanguinary punishments proposed for this offence, and it will not be long until they petition for the same severity for many other offences. It proposes a retrograde step in legislation which carries us back two hundred years, to the cruel codes of a semi-barbarous age."

We learn, says the Stockton Argus, that the grain-growers in the southern part of the country are suffering serious loss from the effect of the wire worm. The grain sown of summer-fallow land seems to be that which suffers most. In a field of fifty acres of wheat near French Camp, the owner has been compelled to remove where the worm had made its appearance, for the first time this year. The same loss, although not so great an extent, was experienced in the crops of rye sown last year near the same place. We have heard of no similar complaint from any other section of the country.

Wild cattle, numbering thirty or forty thousand, are ranging in the vicinity of Brannan's tule farm, on the west side of the San Joaquin river, five or six miles below the mouth of Disappointment Slough, says the Republican. They have no doubt found their way thither from the main land, on high ridges that traverse the banks of the slough in every direction. So wild have these cattle become by years spent in this wide waste, that it is difficult to get sight of them. The land is represented as being in fine condition, and quite fit for the butchers' stalls.

Yuba county, says the Marysville Appeal, has subscribed \$200,000 towards the San Francisco and Marysville Railroad, and has paid \$50,000, or forty per cent of her subscription; so has Solano county. If individual subscribers have paid a proportionate amount upon their subscriptions, there must have been something like a million dollars paid into the company's treasury. In the name of the tax-payers of Yuba, we would ask if those stockholders have advanced such a proportion of their subscriptions? And if they have not, why are they permitted to be preferred debtors to the company? Will those who have the affairs of the company in charge be so obliging as to make public answer to these queries? The levying by the Board of Supervisors of a railroad tax of fifteen per cent makes these questions pertinent at this juncture.

CONTAMINATION IN THE TOUCH.—A distinguished traveler says that the policy of China which has hitherto excluded foreign nations from that country, has been of real benefit to the white race, for the Chinese have shades of social vices darker than anything ever dreamed of by the most debased of white men. The same writer says that even the touch of these human brutes is contamination. This is the kind of abomination which our law-makers are permitting to fester the country. These are the pagan brutes which are to be forced into the presence of our families. We are not to have them in small detachments either, but by whole colonies. There are many millions of them yet to come, and come they will, unless we do something to prevent them. (San Jose Reporter.)

IMPROVEMENT.—Our enterprising townsman, Andrew P. Jackson, says the Saison Herald, has recently completed the inclosure of two thousand acres of land, situated some five miles north-east of this place; twelve hundred acres for hay, and eight hundred for pasture, on which he has more than one hundred fine dairy cows. Last year he made over 10,000 pounds of excellent cheese, and expects to make 20,000, at least, the present year. We also learn that at his homestead, one mile from here, Mr. Jackson has 640 acres under cultivation; 370 of which is sown to wheat and barley. He has enlarged his orchard this season, by the addition of over one thousand choice fruit trees, making in all over 6000 now standing in his orchard, and about 7000 grape-vines to his vineyard, from which he made last year several hundred gallons of wine, which we know to be an excellent article. From the foregoing it will be seen that Mr. Jackson has not been entirely engaged in building wharves, warehouses, roads, etc., in this place, which alone entitles him to much credit.

At Mariposa, says the Gazette, March rode in on a raw wind, and her reputation for being a windy female has been fully sustained since her advent. Storm-squalls occur nearly every day, during which, snow, hail, and rain fall in quantities at the same time. Nevertheless, vegetation comes forward with considerable rapidity and grasses upon southern slopes now afford good pasturage. Barley and wheat are looking well.

Mr. Pettit of this place, has a field of the former that will average five inches high. Peach trees in favored situations are beginning to bloom. Owners of stock rather hard up for cash, are driving considerable quantities of beef and pork into the mines, and butchering on their own account. Pork has been sold here by the whole hog, dressed, at 12½ cents a pound. The quail law went into effect on the 1st inst. On that very morning an old fellow swinging two plumes on the top of his head, got up on the top of the school-house and began to holler, as we interpreted, "shoot me if you dare—if you dare—if you dare."

THE AMERICAN PUMP!

Patented April 5, 1859.

Without Suction, Without Packing!

This is a DOUBLE ACTING FORCE PUMP, with but one bore and one piston, worked by a tree piece, having as much leverage and less friction in its working than any other pump heretofore invented. The object of the whole invention was strength, simplicity, economy, durability, and to lessen the power to raise water from great depths, all of which have been attained to a perfection heretofore unknown in force pumps.

The working parts all stand under the water, as does the air chamber, beyond the reach of careless or malicious interference or frost; there is no loss of water and no loss of labor in any depth; a constant flow of water is kept up. The different sizes (five in all) work in diameters of from fourteen to twenty-four inches, and cost \$15, \$20, \$25, \$40, and \$60 each, and are worked by hand, horse, water, wind, or steam; adapted to ditches, wells, tanks, machinery, engines, mines, railroads, docks, forcing water under or above ground to great heights and distances; discharges at various points; throws by hose and pipe, thirty to forty feet; is extremely useful and convenient in watering gardens, flowers, vineyards, washing windows, and, in sudden emergencies, for checking fires in their earlier stages, and no pump equals it in economy or success for purposes of irrigation. The fixtures for power cost \$12, \$15, and \$18 each, according to size. It has now been in successful operation for eight months, in every depth from 8 to 100 feet, and for nearly every conceivable purpose, in twenty-four States of the Union, commencing at Maine and extending to the Rio Grande, and in New Brunswick and Cuba. The pumps have been sent everywhere on trial, and the failures to give entire satisfaction have averaged two to the hundred! I append a few notices, certificates and extracts of letters to justify my opinion.

"The pump needs no priming to obtain water. The arrangement and operation are very simple, and easily understood."—[Littell's Illustrated, N. Y.]
 "This is a new pump which is offered for public favor. Construction is greatly simplified, and appears to be designed for durability and efficiency. Those who have used it speak highly of it."—[N. Y. Observer.]
 "The piston discharges at both ends into the air-chamber, causing a regular flow of water at the discharge pipe at top. It prevented every part can be galvanized, except the piston, which keeps itself clean, and is proof against rust."—[N. Y. Evangelist.]
 "This is a new invention, a working model of which has been shown at which presents several novelties for a double acting pump, being exceedingly simple in construction, apparently very strong and durable, rendering the labor of working it, on account of the very small amount of friction in its working parts, very trifling in comparison to other pumps of a similar nature."—[N. Y. Christian Advocate and Journal.]
 "As a specimen of the ease and efficiency with which this pump works, we can state that one man, working regularly, forced water from this pump, a distance of 340 feet, being 97 feet perpendicular height, which is good work, as every one who is in the habit of raising water knows."—[Scientific American, N. Y.]
 "There are no suction valves nor complicated fittings; neither chains, pulleys, nor guide rods. It is easily arranged for any motive power, and runs water to any desirable height without any waste of force. A woman or boy can work it with ease to raise water fifty feet, and a man can raise it 100 feet all day. The simplicity of it is the absence of all contrivances which waste power by increasing friction, the motion being directly from the handle to the valve by simple leverage."—[The Independent, N. Y.]
 "The construction is simple; and it works with an ease that will surprise those acquainted only with the old fashioned order of raising water. One of these pumps now in use near vicinity, enables us to state that full confidence can be placed in the statement contained in the advertisement."—[Presbyterian Banner and Advocate, Pittsburgh, Pa.]
 "It is calculated to work at any depth desired, and the great ease with which the highest columns of water are raised is far beyond anything we have yet seen or could have imagined. The pump we personally tested, was connected with a pipe sixty-five feet high, and it required but a very slight exertion with one hand to deliver a stream of water at this height at the rate of eight or ten gallons per minute. A small boy could have done it with ease."—[The American Mining Chronicle, N. Y.]
 "We got one of them which we have put into operation on our farm, and like it so far very much. It brings up a considerable stream of water, with little or no labor to the person working it. It must meet with a ready sale, and speedily grow very popular."—[The Southern Planter, Richmond, Va.]
 "Having had considerable practical experience in the use of machinery of this character, after testing this with our own hands, we have no hesitation in according to it our unqualified favor. In truth, it surpasses everything for the purpose we have before examined."—[U. S. Journal.]
 "One of our newest and most useful inventions of the day is a Double Acting Force Pump, used by James M. Edney. It is without packing and without suction, is exceedingly simple in its construction, and, at the same time, possesses all the requirements of a good pump, and can be used either as a well, a cistern, or a ship's pump."—[N. Y. Express.]
 "A boy of ten years of age can work it at fifty feet, and a man at a hundred feet. We have seen one in operation, and consequently speak from personal knowledge. They are adapted to almost every purpose where a pump is required."—[N. Y. Day Book.]
 "Having seen one of your pumps in operation, we consider it the best we have ever seen for general use; it is simple, and can be operated with less power than any pump we have ever known of the same capacity."—[Galveston News, Texas.]
 "As the late State Fair in this city, The American Pump took the premium, and met the approbation of all who examined it."—[Herald (N. C.) Register.]
 "We speak from personal knowledge, and say, that of all pumps we ever saw, we never saw one at all comparable to this. A man can raise water at any depth, and pump with them. If you want a good pump get one of these."—[St. Louis (Mo.) Ch. Advocate.]

A Working Model and Pumps always to be seen on application at the office. Complete drawings, price, and particulars in detail, sent free of postage. Address, JAMES M. EDNEY, 147 Chambers street, N. Y. ROSS, DEMETER & Co., Agents, SAN FRANCISCO. Where Models may be seen and Pumps had, with Circulars and drawings.

Ladies' Dress Trimmings, HOSIERY, UNDER-LINEN, HOOP SKIRTS, And every article for Ladies' and Children's use. MRS. D. NORCROSS, 144 Sacramento street, above Montgomery.

Pacific Fringe Manufactory!!! DRESS TRIMMINGS CORDS, GIRDLES, TASSELS, &c. Constantly on hand and made to order. D. NORCROSS, 144 Sacramento street, above Montgomery.

W. K. VANDERSLICE, MANUFACTURER OF Silver-Ware. 184 WASHINGTON ST. OPPOSITE THE MARKET, SAN FRANCISCO. Tea Sets, Pitchers, Wafers, Cups, etc., made to order. N. B. Repairing promptly attended to. 12 15

Ferrets. VERMIN DESTROYERS. A PAIR OF SUPERIOR FERRETS (Male and Female) for sale. The attention of Farmers troubled by Rats, Gophers, or Skunks, is invited. They instinctively follow into the holes, attack and exterminate all burrowing animals. Apply at the Office of the California Farmer, 21 m 130 Washington street.

Green-House Plants. THE LARGEST AND BEST ASSORTMENT OF FIRST PREMIUM ROSES and DAHLIAS. Evergreen and Ornamental Shrubbery. A Choice collection of FRUIT TREES, constantly on hand and for sale. Gardens Laid Out and Decorated in the newest style, at short notice. Bouquets and Flower Baskets Made to Order. REIMER & O'HARE, Proprietors. 5

COAL-OIL LAMPS! 1,200 DOZEN COAL-OIL LAMPS! Deitz's Unrivaled Burner; THE Most simple, Convenient, and Economical Lamp in use, JUST RECEIVED, EX EMILY FARNUM, SUMATRA, NOON-DAY, PANTHER, NAPIER, AND BY EXPRESS.

CHANDELIERS. For CHURCHES and PUBLIC HALLS. Two, Three, Four, and Six Lights Each. LANTERNS, FOR QUARTZ-MILLS, SAW-MILLS, WHARVES, STABLES, HOTELS, &c., &c. HAND LAMPS, PARLOR LAMPS, SUSPENSION LAMPS, SIDE LAMPS, KITCHEN LAMPS, BILLIARD LAMPS. PRICES LOWER Than Ever Before. FOR SUIT IN LOTS TO SUIT THE TRADE. Corner Front and California streets.

CALIFORNIA NURSERY. Corner of Folsom and Spark streets, MISSION DOLORES.....SAN FRANCISCO.

A CHOICE COLLECTION OF Green-House Plants.

THE LARGEST AND BEST ASSORTMENT OF FIRST PREMIUM ROSES and DAHLIAS.

Evergreen and Ornamental Shrubbery.

A Choice collection of FRUIT TREES, constantly on hand and for sale. Gardens Laid Out and Decorated in the newest style, at short notice. Bouquets and Flower Baskets Made to Order. REIMER & O'HARE, Proprietors. 5

DISSOLUTION—NOTICE IS HEREBY GIVEN that the firm of HULL, KNAPP & CO. is this day dissolved by mutual consent. The books and papers of said firm are in the hands of M. S. BURRELL, for settlement. All persons indebted to said firm are requested to come forward immediately and settle the same; and all persons having claims against said firm, will please present them immediately for adjustment.

All business of the said firm requiring settlement at San Francisco will be adjusted by J. B. KNAPP, 30 Washington street. W. C. HULL, J. B. KNAPP.

Portland, March 1, 1860. NEW FIRM—SUCCESSORS TO HULL, KNAPP & CO. The business heretofore conducted by HULL, KNAPP & CO., will be continued by J. B. KNAPP, of San Francisco, and M. S. BURRELL, of Portland, under the name and style of KNAPP, BURRELL & CO. J. B. KNAPP, M. S. BURRELL. 30 Washington street, San Francisco, March 5, 1860.

BEE-HIVES!

The following is an extract taken from the advertisement of the Agent for the Langstroth Bee-Hives, in the CALIFORNIA FARMER of February 23d:

"See Huber on Bees, published in London, 1841." The page and section not given. This is a very convenient and lawyer-like way of setting forth by inference what is not used. The extent of Huber's invention was a section hive, in which the sections were attached by hinges. This was not used only for an observatory hive. It cannot be made practicable for anything else."

The asperion sought: to be cast on the veracity of the eminent Patent Attorneys, whose opinion on the validity of certain patents, published in the same number of the FARMER as above alluded to, calls for the following vindication: Extract from Bevan's work on Bees, published in 1843, page 39, chapter 9.

"Huber carried the principle of these experimental hives still further; he joined several of them together with hinges which were so contrived as to admit of easy removal, and as the frames or leaves as Huber called them, were not glazed, they afforded a free communication with each other."

"Huber EXTENDED and rendered the system more complete, probably in a more judicious manner than that of his ancient GREEK INVENTORS."

"The experiments, however, of Mr. Golding, myself and others, already detailed, have shown that this hive admitted of still further improvements: the leaves were too narrow to be applicable to all purposes, and the hive altogether has been so much simplified by Mr. G., that I shall confine myself to a description of the particular form and dimensions which he has adopted."

"The general width of the leaves should be an inch and five-eighths, but slightly varying in the same proportion recommended for the BARS in page 32."

"The exterior dimensions of this hive are one foot two and a-half inches high, by one foot one inch deep; the width will depend on the number of leaves; the number usually employed is eight."

"The perpendicular bars at the front and back converge at the bottom towards each other, so that at the top the interior of the hive from front to back measures eleven inches, at the bottom only ten inches."

"The upright pieces are of course kept in their position by having the top pieces tenoned into them, and are further held together by a small cross-bar, also tenoned into them, about half an inch or an inch from their lower ends, so as to allow a free passage for the bees beneath."

"A series of these leaves being joined in juxtaposition, secured at the front by shifting butthinges, and at the back by books and eyes, and having a glazed door, covered by a shutter at each end, constitute what I think will be found to be an improved modification of the hive of Huber."

J. S. HARRISON.

STATE OF CALIFORNIA, CITY AND COUNTY OF SACRAMENTO, ss. I, John C. Barr, a Notary Public, in and for the county of Sacramento, do hereby certify that I have carefully read over and compared the above extracts with the original publication, viz., "Bevan's work on Bees," and find the same to be a true copy.

Witness my hand and official seal this 23d day of March, A. D. 1860. JNO. C. BARR, Notary Public.

The California BEE-HIVE!

The BEST, and hence the CHEAPEST Hive ever offered to Bee-keepers.

The above hive was awarded the FIRST PREMIUM at the State Fair held at Marysville in 1858, and also by the Mechanics' Institute of San Francisco, held the same year. And again at the State Fair held at San Francisco, 1859, the FIRST PREMIUM; also a SPECIAL PREMIUM was awarded by a Committee named by the parties exhibiting the Langstroth hive, to the above hive, for its superiority in competition at the latter Fair.

Bee-keepers wishing to purchase HIVES, or RIGHTS to MAKE and USE, will please address the undersigned or either of the following Agents: THOMAS OGG BRAW, (General Agent), SAMUEL MORRISON, Santa Clara. CHAS. C. WARNER, Stockton. E. A. SHERMAN, Los Angeles. JACOB V. HOAG, Washington, Yolo county. R. H. HOAG, Napa. E. C. WINGFIELD, Millerton, Fresno county. G. W. HARRISON, Marysville.

The Price of INDIVIDUAL RIGHTS is \$15, which may be forwarded through Wells, Fargo & Co., at my expense. County or State Rights will be sold on terms advantageous to the purchaser.

The Specifications and Claims of my Patent will be given to the public in due time. N. B. Notice is hereby given, that I will DEFEND any legitimate suit commenced by L. L. Langstroth or his Assignee, against persons using my Hives under authority from me. J. S. HARRISON, Patentee. SACRAMENTO, March 1, 1860. 4-1m

Literary Shrubbery.

A Practical Joke.

In a western State, one of the political parties had for twenty years been in the habit of holding their nominating conventions at the house of Mr. G.

He happened on a recent occasion, for the first time, to be in when they had finished their business, and heard a little delegate more that "this convention adjourns *one die*."

"*One die!*" said Mr. G., to a person standing near, "where's that?"

"Why, that's away in the northern part of the county," said his neighbor.

"Hold on, if you please, Mr. Chairman," said the landlord, with great emphasis and earnestness, "hold on, sir; I'd like to be heard on that question. I have kept a public house now for more than twenty years. I am a poor man. I have always belonged to the party, and never split in my life. This is the most central location in the county, and it's where we've always met. I've never had nor asked for an office, and have worked day and night for the party, and now, I think, sir, it is contemptible to go to adjourn this convention *way up to Sine Die*."

NATURAL CURIOSITY.—We were shown last week, says Wilke's Spirit of the Times, by Mr. Thiese, of this city, a singular product of Long Island—a hen of the common New England species, with four legs and two tails; the two extra legs occupy a prominent place behind the natural ones, but do not touch the ground, unless the hen is frightened, or being chased, when she uses all four to hasten her speed. The two tails go off in different directions like the forks of the letter Y, but, unfortunately, she has lost part of one of them, owing to a dog having worried her; she is quite tame, and from her strut appears to be proud of her extra appendages. In her determination to prove her claim to headship, she has laid during the week two eggs of the usual dimensions. This is certainly a great feathered curiosity, and worthy of the attention of naturalists.

EFFECT OF OCCUPATION UPON LONGEVITY.—Dr. Edward Jarvis, of Boston, President of the Statistical Association, has prepared a table from the mortality reports of Massachusetts, from May 1, 1843, to December 31, 1856, showing the average ages of men of different occupations. He divides the community into classes, and finds that in time the average age of the cultivators of the earth who died was about 64, of professional men 63, merchants and capitalists 48, mechanics active abroad 48, active mechanics in shops 47, sailors 46, laborers 45, common carriers 44, inactive mechanics in shops 42. Of the particular occupations, the average age of clergetymen was 55, lawyers 55, physicians 54, cooper 57, blacksmiths 52, carpenters 50, masons 48, tanners 48, merchants and clerks 47, shoemakers 43, painters 42, tailors 41.

A COBRA.—An instance of intemperity is related by the Bombay Times. It appears that while a party of fifty persons, of the Jewish community, were engaged in conversation, previous to prayer, Mr. Reuben unwittingly roused from his repose a large cobra di capello, which at once pounced upon his disturber. Blinding its grasp, the young man caught the cobra in the middle of its body, but it darted off with a violent jerk, and again turned upon its assailant. Mr. Reuben, however, held the cobra a second time in his hand, and giving it a swing in the air, struck its head against the ground several times, and killed the dangerous reptile, much to the admiration of the Jewish gentlemen present on the spot.

EIGHT OF THEM.—The editor of the Indiana Farmer lays down the law of agricultural newspapers in this wise:

"You should subscribe for the Farmer for many reasons. 1st, because you cannot afford to do without some agricultural paper; 2d, this is your own State paper, and adapted to your own locality; 3d, it is now the best practical agricultural paper in the Union; 4th, it keeps the dollar at home; 5th, it advertises home enterprises; 6th, foreign papers advertise foreign commodities into use to the injury of home industry; 7th, a man that has no State pride about him is an alien to his friends; 8th, the best men of the State do subscribe for home papers."

LIFE WITHOUT TRIALS.—Would you wish to live without a trial? Then you would wish to die but half a man. Without trial you cannot guess at your own strength. Men do not learn to swim on a table; they must go into deep water, and buffet the surges. If you wish to understand their true character—if you would know their whole strength—of what they are capable—throw them overboard. Over with them; and if they are worth saving, they will swim ashore of themselves.

When a young man steals a kiss from a Lowell girl, she blushes like a "new-blown rose," and says smartly, "you darnd't do that twice more." The Boston girls hold still until they are well kissed, when they flare up at once and say, "I should think you would be ashamed."

A negro being questioned, was asked if his master was a Christian. "No, sir, he's a member of Congress," was the reply.

He who follows his recreation instead of his business, will in a little time have no business to follow.

Sorrow comes soon enough without despondency; it does man no good to carry round a lightning rod to attract trouble.

Why should a hen enjoy perpetual daylight? Because her son never sets.

If every mind were delicate and refined, could the passion of love know any satiety?

Out of good men choose acquaintance; of acquaintances, friends.

A man never suspects, who has confidence in himself.

THAT DISTRESSING MALADY, the Dyspepsia, is not a periodical but a permanent complaint, producing suffering at all times and under all circumstances. The only real cure for this disease and its concomitant evils is the world-renowned Oxygenated Bitters.

Also, the following quadrilles: Viennese Empire, Prince Imperial and La Perouse.
Terms reasonable.

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with SPRING AND CURLED-HAIR MATTRESSES AND LINENS than any other House in the State. It is one of the largest Hotels in California, a fire-proof building, and provided with Benley Water throughout the House. It has a frontage on Jackson street of 37½ feet, by 173 feet deep. There are no dark rooms in this house, all having free and open frontage, with pure air, which is of great advantage to a California climate; there being no large buildings adjacent thereto.

The undersigned invites the attention of the Traveling Public, and Strangers in particular, to the merits of this House. It was established under its present Management, on the 1st of January, 1857, as a

First-Class Hotel,

IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to encroach upon the merits of other Houses, can but recall the marked favor with which his enterprise has been received by a discriminating public, in a constantly increasing patronage of the FIRST RESPECTABILITY, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most Popular Places of Amusement, the Principal Thoroughfares, the Fashionable Promenades and Steamboat Landings; thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR FAMILIES AND SINGLE GENTLEMEN,
During their sojourn in this city.

For a year past we have studied how we can maintain a FIRST-CLASS HOTEL, and at the same time effect some reduction of price below three dollars per day to our friends. We are happy to announce to you that we have succeeded in our efforts.

We have obtained a reduction of our heavy rental; and we have now under cultivation, in the suburbs, a Rancho, which produces our Vegetables fresh from the ground; with a Dairy that secures us the purest Milk and Cream, and a stock of Fowls that supplies Eggs and Poultry always fresh, with many other economical advantages. By these means we can promise our friends that we shall even improve upon the proverbial excellence of our Table; and the same matches Beds, and solicitous attention to the comforts of our Guests, will continue to be the pride of the Hotel International.

We have Elegant Suites of Family Rooms, together with highly furnished single apartments for Families or Single Gentlemen, which, together with the entire energy of the Proprietor, makes this House one of the most Popular Hotels in the United States. For comfort and luxury this house is not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the landing of the steamers, to carry passengers to the Hotel. [15

Self-adjusting Post-Driver.
A valuable Implement for Farmers.

HYDE'S PATENT SELF-ADJUSTING POST-DRIVER is now offered to Farmers, as a valuable assistant in FENCE-BUILDING. The hammer works in a swinging frame, rendering it self-adjusting on uneven or hilly land. It has been used on hills where it had to be hauled up with a tackle; any common carpenter can construct one. The two pulleys, one on the drum, and the other on the crank, are to be covered with leather or rubber belting, and when pressed together by the foot lever, the friction of one on the other is sufficient to raise the hammer, and on lifting the foot from the lever the drum is free and the weight drops; and so on, setting posts far better and much more expeditiously than can be done by digging and ramming.

A model of this Machine can be seen at the FARMER'S office, where RIGHTS are for sale. Price of right for single machine, \$10; and County Rights according to population, etc.

OLIVER HYDE, Patentee.
Berkeley.

J. L. POLKEMUS DRUGGIST
190

J. St.

OFFICIAL NOTICE!
POLKEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.

FELLOW CITIZENS: I have lived among you since the ever glorious FORTY-NINE, have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return to my most sincere thanks for your unflinching patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY,
I claim to be the Oldest Established Legitimate

Persons in this connection will please observe that there is as much difference between a DOCTOR and a DRUGGIST as there is between a Druggist and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last eighteen years.

SECONDLY,
Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged
By other Druggists, legitimate or illegitimate, and of the Purest Drugs and Chemicals.

THIRDLY,
I intend my store shall be ONE of the best, if not THE BEST place in California, to obtain everything NEW, ODD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY,
We Keep Open All Night!
And charge no more for medicines than in the day time

FIFTHLY,
We will furnish those in indigent circumstances with MEDICINES AT COST! the same being attested by two or three good citizens.

SIXTHLY,
Hereafter we do a business on a CASH BASIS ONLY. The amounts we have lost, heretofore by credit, we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY,
We have received the agencies for the following valuable articles:
Dr. Carl Warburg's Tincture. This article is particularly recommended for Aged and Fever, when every other article fails to cure. Bland's Nerve and Bone Liment, warranted the best in California.

Flower of the West, for Fever and Ague.
DeWitt's Spanish Liniment, for the Hair.
Hudson's CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY,
We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

Mr. BROADWAY PINNED TO THE WALL.

READER, DON'T STOP TILL YOU GET TO THE END, or you'll lose the fun. The following Circular has been scattered about our hotels and other public places:

INSTANTANEOUS VIEWS.
"From certain advertisements and circulars which have been recently issued, it appears that a New York house, whose efforts at Stereoscopic Photography have but very lately commenced, lay claim to the earliest publications of Instantaneous Views."

"Doubtless they have inadvertently fallen into this error. At the same time, justice to the London Stereoscopic Company demands that the mistake be promptly corrected. More than twelve months since the London Company's eminent artist, Mr. Williams, succeeded in taking Instantaneous Views for the Stereoscope, of New York City, Harbor, River, &c. Justly therefore it is claimed for the London Stereoscopic Co., and universally it is admitted by all impartial testimony, that their productions, instantaneous and otherwise, were the FIRST and the Finest that have ever been offered to the public."

"To condemn this statement, nothing is requisite but an actual inspection of the views in question."

"504 BROADWAY, N. Y."

Now who this Mr. Broadway is who has taken up the cudgel so valiantly we do not know, but it is evident by the title of N. Y. to his name that he means to let it be understood he is "No Yankee."

In reply to his card, however, we would offer friend Broadway two little pills to swallow, which will no doubt "permanently correct" the difficulty he finds in digesting our Instantaneous Views.

The first pill is compounded by "The Autocrat of the Breakfast Table," a right royal medicine which goes direct to the spot. Read:

Boston, August 31st, 1859.

MY DEAR SIR: I have received and examined the beautiful specimens of your art, you have had the kindness to send me. They are very fine, and realize the possibility of which I spoke in a marvelous way.

These Crowds caught in the very attitudes which lasted but for the space of a heart beat are really wonderful. They show us how impossible it is to reproduce nature except by making nature reproduce herself.

Since I wrote my article I have obtained a few specimens by a London Company, but no Instantaneous Views that I have seen appear to me at all equal to some of yours.

Thanking you very sincerely for this generous token of your regard, I am Very truly yours, O. W. HOLMES.

To Mr. E. ANTHONY, 308 Broadway, New York.

There now, dear Broadway, take my medicine like a good boy. It had sent some of its best specimens to the "Autocrat," but he did not find them "at all equal to some of ours." A nice pill—do you good—let better in the morning.

What was that you said? The "Autocrat" is only an AMERICAN opinion! American pills perhaps don't agree with your constitution, and we will give you a nice English medicine. Open mouth wide now and swallow a little from the "Autocrat of the Breakfast Table" Stereoscopic Society.

"We have received a letter from Mr. Anthony of New York, containing three Stereoscopic Views of Broadway, taken instantaneously. The noble street is represented thronged with carriages and foot passengers. All is life and motion. The trotting crowd, the carriages with two feet off the ground, boys are running—men walking, riding, driving, carrying weights—ladies sweeping the dirty pavement with their long dresses, or trailing up their crinolines and displaying their pretty ankles as they trip over the crossings, exactly as they do in Europe. We leave all our best views to the London Stereoscopic Society, and we will give you a little from the Autocrat of the Breakfast Table. It is only an AMERICAN opinion! American pills perhaps don't agree with your constitution, and we will give you a nice English medicine. Open mouth wide now and swallow a little from the "Autocrat of the Breakfast Table" Stereoscopic Society.

"In reply to Mr. Anthony's query about our European photographs, we can only say we know of no pictures, save two or three of Wilson's best, which could be put in comparison with those which he has sent; and we old-world stick-in-the-mud fellows must take care on the Yankee will go ahead of us."

And now, dear Broadway, we are sure all that naughty conceit will be carried out of you, and as soon as you feel well enough to walk out, call in at 308, and we will show you what an Instantaneous Stereoscopic View is, for we don't think you have ever seen one.

Your friend,
E. ANTHONY.

That the Public may judge, each man for himself, of the merits of the respective INSTANTANEOUS VIEWS, we have samples of both, side by side, at our store.

You will find that our INSTANTANEOUS VIEWS taken in the city are better than "so called" of the London Co. taken in the bright sunshine.

We do not speak without the evidence to show. Call and see.

American & Foreign Stereoscopic Emporium.
An extensive and varied assortment of American and Foreign Views and Groups always on hand at the lowest prices, and of the best quality.

New invoices received per every arrival from Europe. Having agents in England and France, we are certain to receive the latest views published in either country, and our stock will be found both extensive and well selected. A liberal discount to the trade.

Parties at a distance sending us \$3, \$5, \$10, \$15, \$20 or \$25, can have a good instrument and such pictures as they may request sent by Express. All orders will be executed with care, and our friends may depend upon receiving a good and satisfactory selection.

Merchants from every section of the country are respectfully invited to make an examination of our stock before purchasing elsewhere.

A circular will be forwarded to any address on application.
E. ANTHONY, 308 Broadway, New York.

Photographic Materials for Amateurs and the Trade.
Our long experience in the business and our extended connections make our rooms the Central Emporium for Photographic Materials and Stereoscopes. This is our only large house in the United States whose attention is exclusively devoted to these branches.

All of our own importation, from the best growers in the United States and Europe, which we can warrant to give full satisfaction to our patrons.

Our stock consists, in part of:
ALF

BY THE OVERLAND MAIL.

The Overland Mail arrived yesterday morning, at Fresno City, with St. Louis dates to the 16th February. We copy the following from the dispatch, published in the Bulletin:

In the Senate, on Monday, 13th February, after preliminary business, of no moment, Mr. Hann, of California, rose, and announced the death of D. C. Broderick, late Senator from California, who fell in a conflict engendered by a political contest. After sketching in review the life of the deceased Senator, who had with laudable energy carried out his own fortune, Mr. Hann paid an eloquent tribute to his memory. Other Senators also spoke on the subject. The usual resolutions were then adopted, and the Senate adjourned.

The regular proceedings in the House were interrupted on the 13th, by a message from the Senate, announcing the death of Mr. Broderick. Mr. Burch, of California, delivered an eulogy, saying that Mr. Broderick's memory would long be cherished by the people of California. Mr. Haskin and others followed. The resolutions were adopted, and the House adjourned.

On the 15th February the Senate receded from its amendment to the Post Office Deficiency Bill, and it has been signed by the President.

The census of Kansas, taken in 1889, has just been published. All the counties, except six, show 21,628 voters, 46 colored persons, and a total population of 69,940.

On February 13th, the Joint Committee of the Virginia Legislature reported a series of resolutions, declaring it inexpedient to appoint deputies to the Conference proposed by South Carolina.

Among the *en duo* is one that a company of gentlemen are ready to carry all the mails of the United States from the revenue arising therefrom, should the franking privilege be abolished.

Another rumor is, that in case of its abolition, a number of members have bills ready for introduction abolishing the whole Post Office system, and allowing the mails to be carried by private enterprise, as express matter is now carried.

A correspondent of the N. O. Delta of yesterday (the 15th) says that the Texas Commissioners are fully convinced that the authorities and the principal citizens of Matamoros are in league with Cortinas. The Commissioners have reported to the Governor that war exists.

Senator Hann, of California, introduced a bill for the construction of a Railroad from the Missouri river to the Eastern boundary of California.

Arrives from Washington state that the Senate Committee on the Mexican Treaty are ready to report favorably. The friends of the Jarez Government assert that his side will certainly conquer. Arrives from England state that the English Minister, Wyke, has instructions to recognize the Liberal Government.

The War Department has decided to withdraw the troops from Utah, excepting one regiment. The troops will be scattered hereafter between El Paso and Fort Yuma.

MRS. LIZZIE WILEY WARREN, M. D.

ELECTROICIAN AND HYDOPATHIST.
Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*, believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the supplying such conditions as the natural remedies agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent, the most potent and all-pervading element which can be used, as it is approximately to the principle of life, apparently identical with vitality. Its therapeutic uses are *innumerable* and *etc.*, and may be relied upon wherever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. ANNIE L. AVERY,

HOMOEOPATHIC PHYSICIAN,

Residence, 249 Pacific Street (two doors from Stockton Street).

Special attention paid to diseases of women and children.

The Bascom Institute, San Jose—The Summer session of the Bascom Female Institute, will commence on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

WILL YOU NOT SEND THE

CALIFORNIA FARMER

ABROAD!

How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the **CALIFORNIA FARMER**. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$1 to us, and we will mail a copy of the **FARMER**, as you shall direct, for one year, and we will pay the postage. Begin now, with the New Volume.

TO GRAPE PLANTERS.

As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planting will be so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them all with much increased value. May we not expect this from all planters of the vine everywhere?

Large Potatoes and Onions—We are very desirous of procuring some very large Onions and Potatoes, for a special purpose; we only want a few, but will cheerfully pay a liberal price for the same, and be very grateful besides. We also wish a variety of curious or rare vegetables of any kind—*Beet, Parsnip, or Carrot*. Those who have such and will send them to our office, we will reward them for so doing.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale.

Apply at her residence, corner of Mason and Pacific streets.

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MARCH 23, 1860.

NUMBER 6.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 134 Washington street (op stairs), San Francisco.

TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

Horse-chestnut and Buckeye.

(*Æsculus Hippocastanum* and *Pavia Luta* and *Pavia Ohionensis*.)

Three varieties of the *Æsculus* are among the most beautiful of all the ornamental trees of our land, and were they of a costly class, would be procured at any price; but because they can be obtained at a very trifling sum, or can be had for the digging; oh, they are common, and woe do. But where can there be found a more beautiful tree than a well-formed Buckeye? when in bloom; and when the yellow and scarlet varieties are mingled, there are no trees to excel them; besides, there are valuable properties found in them: they can be made profitable for starch and for the food of swine; and, as a medicinal plant, they deserve more attention than they have ever received.

CHESNUT, HORSE (*Æsculus hippocastanum*). This ornamental tree, now so common throughout Europe, is a native of Asia. The first plant is said to have been brought into Europe by the celebrated botanist Clusius in a portmanteau. It is too well known to require description. The wood is soft and of little value. The food contains much nutritive matter, but it is combined with a nauseous bitter extractive, which renders it unfit for the food of man; but horses, kine, goats, and sheep, are fond of it. The bark of the tree contains an astringent, bitter principle, which operates as a tonic. It has cured agues, and some authors affirm that it might be a substitute for the Peruvian bark; but trials and experience have not justified their opinion. Given in a decoction made with an ounce of the bark to a pint of water, it may be advantageously taken, to strengthen the habit weakened by previous disease.

BUCKEYE.—Under this name, Michaux describes two species of trees in the United States, viz: the large buckeye or yellow pavia, (*Pavia lutea*); and the Ohio buckeye or Ohio horse-chestnut (*Pavia Ohionensis*).

The yellow pavia, or large American buckeye, is first observed on the Alleghany Mountains in Virginia, near the 39th degree of latitude. It becomes more frequent in following the chain towards the southwest, and is most profusely multiplied in the mountainous districts of the Carolinas and Georgia. It abounds, also, upon the rivers that rise beyond the mountains and flow through the western part of Virginia, and the States of Kentucky and Tennessee, to meet the Ohio. It is much less common along the streams which have their sources east of the Alleghanies, and may therefore be considered as a stranger to the Atlantic States, with the exception of a tract thirty or forty miles wide in the Southern States, as it were beneath the shadow of the mountains. It is here called big buckeye, to distinguish it from the *Pavia rubra*, which does not exceed eight or ten feet in height, and which is called small buckeye.

Michaux states, that he had seen no situation which appeared more favorable to the development of the big buckeye, than the declivities of the lofty mountains in North Carolina, and particularly of the Great Father Mountain, the Iron Mountain, and the Black Mountain, where the soil is generally loose, deep and fertile. The coolness and humidity which reign in these elevated regions, appear likewise to be necessary to its utmost expansion; there towers to the height of sixty or seventy feet, with a diameter of three or four feet, and is considered a certain proof of the richness of the land.

The flowers of this tree are of a light, agreeable yellow, and the numerous bunches, contrasted with the fine dense foliage, lend it a highly ornamental appearance. The fruit is contained in a fleshy, oval capsule, the surface of which, unlike that of the horse-chestnut of Asia and Ohio, is smooth. Each capsule contains two seeds or chestnuts, of unequal size, flat upon one side and convex on the other. They are larger and lighter-colored than those of the common horse-chestnut, and, like them, are not eatable.

Of American trees, the large buckeye is one of the earliest to cast its leaves, which begin to fall near Philadelphia about the 15th of August, and while the other horse-chestnuts are still clothed with their finest verdure. Its foliage and flowering are also tardy, which is deemed an essential defect in a tree, the greatest merit of which is its beauty. The wood, from its softness and want of durability, cannot be made to subserve any useful purpose. In beauty, this species is reckoned inferior to that magnificent tree, the

Ohio buckeye, or common American horse-chestnut, which is not a native of any of the Atlantic States, where, however, it is a favorite ornamental tree. The ordinary stature of the American

horse-chestnut is ten or twelve feet, but it sometimes equals thirty or thirty-five feet in height, and twelve or fifteen inches in diameter.

The foliage of this tree appears very early in spring, being very thickly followed by its flowers, which almost cover the tree in white bunches, making a very brilliant appearance. The fruit is of the same color with that of the foreign horse-chestnut and of the large buckeye, and of about half the size; it is contained in fleshy, prickly capsules, and is ripe the beginning of autumn. Horse-chestnuts are said to injure swine and other stock which eat them.

The bark of the larger trees is blackish, and endowed with a disagreeable odor and highly acrimonious properties. The wood is white, soft, and wholly useless. The value of the Ohio buckeye or American horse-chestnut consists mainly in the beauty of its abundant, precocious, and beautiful foliage and flowers, qualities which bring it into great request as an ornamental tree. (North Am. Sylva).

A Migratory Rose.

STRANGE as this heading may appear to the reader, the flower is nevertheless an entity—a thing that exists and may be handled; a plant almost as regular as the swallow in its flights to and fro; one that travels many miles annually; and, what is more, a fashionable one—resorting to the seaside during the hottest season, to indulge in a swim among the cool billows of the Mediterranean. The name of this remarkable vegetable phenomenon is *Anastasia hierochuntina* among the botanists; the *Rose of Jericho* with the unlearned.

Very many superstitions are connected with this extraordinary plant in the minds of Bedouins and other Arab tribes. The ancients attributed miraculous virtues to the Rose of Jericho. Dispensing with the notions of both, however, there remains to us quite a sufficient charm about this apparently insignificant shrub, which seldom attains six inches in height, to apologize for introducing the subject to our readers.

To behold this little rose, it is not necessary to tell you to "go to Jericho;" no such uncomplimentary journey is required. In the arid wastes of Egypt, by the borders of the Gaza desert, in Arabia's wilderness of sands, on the roofs of houses and among rubbish in Syria, abundant specimens are to be met with. But, like many other things of insignificant exterior, few pause to look upon or handle this wayside shrub, which nevertheless carries with it a lesson and a moral.

By the laws of germination, there are, we are told, three things necessary for a plant—humidity, heat, and oxygenized air. The first of them is indispensable, inasmuch as without it the grain or seed would not swell, and without swelling, could not burst its shell or skin; and heat, in union with water, brings various gases to young plants—especially oxygen—which are necessary for its existence.

With these facts before us, and a knowledge that rain seldom falls in most places where the Rose of Jericho thrives, how are we to account for the extraordinary circumstance of this plant being periodically abundant and flowering at precisely the same season year after year, when, by the acknowledged laws of germination, there has been that succor wanting which is indispensable to propagate vegetation? Now appears the most remarkable and most direct interposition of nature for her offspring—an interposition little short of miraculous, and, indeed, apparently so fabulous as to be unworthy of record. But the fact has been established beyond doubt that, for its own purposes, this little plant performs annual journeys over a large extent of country, and in the ocean, whence, at a stated period, it, or rather its offspring, returns to the original haunts, takes root, thrives and blossoms.

In the height of spring, when nature casts her vesture, set with flowers and flowerets of a hundred varied hues, over the fertile valleys and hills of Syria and part of Palestine; when every breeze is laden with rich incense from orange groves or honeysuckle dells, then, unheeded, amid the rich profusion of vegetation, or isolated amid the desert sands, blossoms the tiny Rose of Jericho. On house-tops, where the sun's fierce rays rend crevices—on dust-heaps, where half-starved wretched curs prowl and dig for food or a resting-place—where multitudes through the streets, and where neither foot of man nor beast has ever left imprint on the burning sand, there sprouts the wonderful *Anastasia hierochuntina*. When summer has fairly set in, and flowering shrubs have ceased to blossom—about the same season of the year that Mr. Brown and his family are meditating a month's trip to the seaside for fresh breezes and sea-bathing, when the whole house is turned topsy-turvy in the pleasurable excitement of packing for the month's holiday—the Rose of Jericho begins to show symptoms of a migratory disposition also. How astonished Mr. Brown would be if his gardener rushed in with the startling intelligence that some favorite rose-bush or other plant in the garden had evinced signs of restlessness, and after a few preliminary efforts, had quietly taken itself off for the season!

Hadji Ismail, the Bedouin camel-driver, who witnesses this phenomenon usually, encountering scores of migratory *Anastasia hierochuntina*, simply pauses to stroke his prolific beard and fresh charge his pipe, while he pours into the eager ears of some untraveled novice legends about this wonderful rose—legends replete with fairy romance, in which almost invariably a certain unmentionable gentleman comes in for a volley of invectives, as being the instigator of this mysterious freak of nature.

The first symptom the Rose of Jericho gives of an approaching tour is the shedding of all her leaves; the branches then collapse, apparently wither, and roll themselves firmly into the shape of a ball. Like the fairies that traveled in nut-shells, this plant ensconces itself in its own framework of a convenient shape, size, and weight for under-

A DEVON BULL.

A DEVON COW.

taking the necessary journey. Not long has the flower assumed this shape when strong land-breezes sweep over the land, blowing hot and fiercely towards the ocean. In their onward course, these land-winds uproot and carry with them the bulbs or frame-work of our rose; and, once uprooted, these are tossed and blown over many and many a dreary mile of desert sand, till they are finally whirled up into the air, and swept over the coast into the ocean.

Soon after the little plant comes into contact with the water, it unpacks again, unfolds itself, expands its branches, and expels its seeds from the seed-vessels. Then the mother-plant finishes her career, or is stranded a wreck upon the sea-beach. However this may be, it seems evident that the seeds, after having been thoroughly saturated with water, are brought back by the waves and cast high and dry upon the beach. When the westerly winds set in with violence from the sea, they carry these seeds back with them, scattering them far and wide over the desert, and among inhabited lands; and so surely as the spring-time comes round will the desolate borders of the desert be enlivened by the tiny blossoms of the Rose of Jericho. [Chambers' Journal.]

Artificial Honey-Bee Comb.

J. V. Hoag, apiarist, of Washington, Yolo County, and manufacturer of the Harbison hive, is now manufacturing with all the nicety of art, comb for honey bees, says the Sacramento Bee. It is made of pure beeswax, melted down, run into molds to make it thin and even, like window glass, cooled, and then pressed, stamped, or embossed into the exact shape of the partition, which separates the double row of cells in the comb. He does not make the entire comb, but merely this ground work; and it is done with such perfectness that when placed in the hive the bees accept it as their own work, and erect their hexagonal cells upon it with the utmost alacrity.

It is a new thing, as we are told, in these United States—Mr. Hoag being the only person in the Union who, so far as is known, manufactures this artificial comb. It is a German invention, and said to be very profitable to bee men, as the artificial comb can be had cheap, and saves much time to the bees. We know this: that the bees work upon it just as if it were their own manufacture, and what better evidence of its perfectness and adaptation can be had? When the Queen of Sheba presented a vase of exquisite flowers to Solomon, and asked him to say whether they were real or artificial, he answered: "Let in the bees!" They would soon have told the story that the lilies of the valley and the rose of Sharon, manufactured by Sheba's Queen, were bogus; but they don't seem to know that this artificial comb is not the real thing. And how could they tell the difference, for is it not made of the wax gathered by themselves and gauged by all the nicety of the most finished art?

HOW TO WATER PLANTS.—As a rule, waters should never be given, until the further withholding of it would be detrimental to the plants. Habitual watering does, in the majority of cases, more harm than good. Plants left to battle with drought, send their roots down deep in search of moisture, and when rain does come, they benefit more by it than those that have regular waterings all along. If the ground is dug deeply, and kept in good heart,

plants that have once got established will bear drouth for any length of time, but things lately planted, and that have not had time to "get hold," must be kept supplied or their beauty may vanish for half the season. Succulent vegetables, too, which ought to be kept growing quick, must have abundance, and of course, plants in pots must, of necessity, have sufficient. There are two important points to be attended to in giving water, one is to expose the water to the sun before using it, to render it soft and warm, and the other is to give a thorough soaking at once, sufficient to keep the ground moist a week. Supposing the supply to be limited, but regular, the best way of economizing both water and time is to take the garden, piece by piece, watering each piece thoroughly every evening, and then beginning again as at first. [Floral World and Garden Guide.]

A Good Ranch.

We found a fine ranch at Alvarado, now owned and occupied by an old friend, formerly a merchant of this city, but now better employed. We found him, like Cincinnati, holding the plow. Mr. Eigenbrodt, at Alvarado, has a fine farm of 250 acres of very deep rich black loam, always yielding heavy crops. The last year Mr. E. had a very fine crop of corn, yielding him 100 bushels to the acre. His crop of potatoes were enormous in quantity, and in size, often twenty potatoes weighing eighty pounds. The present year Mr. E. will have in as a crop, forty acres potatoes, forty acres beans, forty acres grain, a large field of corn, and other articles raised for the San Francisco market. The yield of the last year of thirty acres of potatoes was 4,000 sacks, about 117 pounds each, and a better quality were never sent to market.

Vineyard Planting.

We are glad to receive from those who plant vines, a schedule of what is planted by them. We have been favored by a letter from a Correspondent, owning a fine young Vineyard and Orchard, who gives us the following as his planting, this year: 1200 Los Angeles Grape, 100 Isabella Grape; these make, in addition to former planting, 5000 Vines. 800 will be in bearing this year, being two to four years old; also, 2500 were trenched for rooting. This is on the fine Ranch, called the "Golden Gate Ranch," near Mokelumne Hill, of which a Card appears this week. So much for Mountain Planting. We hope all will send us their planting.

Wash your Fruit-Trees.

The present is the time to cleanse all fruit-trees that are troubled with the moss or with insects. Make a good strong wash of soap-suds, and with a swab of woolen rags give the body and large limbs of the trees a good washing. After this has been done, the bark of the trees will put on a bright yellow-green look, changed entirely in appearance to the eye, the general health of the tree being greatly improved. Potash, three pounds to a barrel of water will also make a good wash.

Removal of Stumps.

A VALUABLE correspondent in the mountains desires us to give him information relative to the best way to remove stumps from new land, and we should be glad if our friends who have cleared land would give their plans. We know there are several kinds of stump-pullers, but some of them are too expensive for a person to use when only a small farm is to be cleared, for some cost \$200 or \$300. There is a common stump-puller, costing about \$12 or \$15, to be used with oxen, but this is for small stumps and roots. The inquiry of our friend relates to large stumps six or seven feet in diameter. Our recommendation would be to dig around them and put in a good blast of powder, and split them out. This can be done if the charge is put in with a large auger at the sides, and we think it would be effectual in dividing so they could be cut, dug, and drawn out with chains.

When cleared land is scarce in the mountains it is desirable to know the easiest and best way to remove stumps, and we shall be glad of all the information we can get, for the general good. Some use saltpetre to put into holes in the stump to rot them, and then burn them out; but this is a tedious way. The one way wanted is to remove them, stump, roots, and all, and do it at once. Please give us your plans, farmers?

Devon Cattle.

We ask public attention to the great sale of Devon Cattle, which appears in our columns, this week. This is the first lot of Pure Devons ever offered on this Coast. This herd of Devons has come to us with a high and well-earned reputation; they received the highest premiums of the country, having taken the highest prizes at the National Exhibition, at Boston.

This herd of Devons comes to us with full pedigrees, as will be seen in the Card announcing the Sale, which is to take place on the 12th of April next. Every stock-owner in our State should attend this Sale, in order they might see, examine, and know, what pure Devon Cattle are.

It is to be hoped that Mr. Ely, the Importer of this Herd, will realize a handsome sum, in reward for the great expense and risk he has run in bringing these Cattle to the Golden State.

The sale will take place on the 12th of April, under the direction of Mr. Ely. Catalogues and particulars, with terms, will be duly announced. James E. Wainwright, Esq., auctioneer.

Glorious Potato Ground.

DURING a little trip in Alameda county we went over the ground that was so famous, in 1853, for "big taters" and plenty of them, and we found the land not run out yet. Such crops and such potatoes would make "Down-Easters" stare. We made a call on Mr. John Hankin, near Alvarado, who occupies land where Messrs. Beard and Horner raised their millions of pounds, and we saw enough to convince us that Alvarado can raise "taters" still. Mr. Hankin very kindly selected us some very pretty samples of small ones, which we find upon weighing are three pounds and upwards.

The crops are enormous upon all this section of country, and there is no crop more certain than potatoes; they are in perfect order, and are now being shipped to this city. Mr. Hathaway, Clay street wharf, receives them.

The Gopher.

We have continued inquiries, all tending to this theme: What shall I do to get rid of the gopher? There are many ways now daily practiced. Shoot them; poison them with strychnine or phosphorus. This is done by placing grain soaked in phosphorus in their holes, taking care not to leave it within the reach of domestic fowls or swine. Potatoes, turnips, or sugar-beets sprinkled with strychnine and placed in their holes, will do the work, or what is better, dig down to their main trunk or under-ground channel where they all pass, and then leave a quantity of poisoned feed, and you kill off hundreds in a day. There are also gopher-traps that are useful. One more and perhaps the best method is to drown them out if possible, by flooding the entire land that is troubled with them.

Land Drainage.

We have inquiries relative to the drainage and use of land where water settles and leaves a white crust, "being so situated it becomes a reservoir for all surrounding land that is irrigated, and the water settles and leaves a scum or crust, a kind of alkali," and "the ground becomes cold and sour, and produces nothing. In its present shape it is nearly worthless." For all such land there is but one remedy: a deep and thorough cultivation; subsoil all such land twenty-four inches deep, and if possible run a ditch through it to carry off waste-water. Such a piece of ground, if sown to meadow-grass would be a fine place for a cranberry patch and would pay well.

HIGH WIND, STORMS, AND COLD.—We have had a series of very severe weather the past week, heavy gales of wind with rain, and also very cold weather for the season, the thermometer running down as low as 53° in the morning and only 62° at mid-day.

CALIFORNIA NOTES.

BY ALEX. S. TAYLOR.

THE INDIANOLGY OF CALIFORNIA.

(CONTINUED.)

Number 1. Calaveras County and Tehama Indians.

Vocabulary of the Indians living near Deer's Ferry and vicinity, on the Stanislaus river, in the Sierra Nevada of Calaveras county.

flesh, meat	sok-ut	cellipse	suk-n-ey

[Note.—This vocabulary was taken from an Indian about twenty-five years old, who said that his tribe spoke about the same language as those of Camp Seco, on the Mokelumne river. This Indian had the same brown eyes as the Coast Indians; his rancheria was Tu-kin. He had a broad face and forehead; coarse black straight hair, as thick as that of a horse; the hair came very low down over the forehead, and his lips were as thick as an African's.]

In the month of May, 1859, the people of Monterey were surprised one day to see a large cavalcade coming into the town, who, to their surprise, turned out to be a company of Indians, from the Merced river and vicinity, all mounted on fine horses, and generally pretty well dressed and equipped in the Spanish fashion of California. They numbered about fifty, many of whom were armed with rifles. The most of them spoke Spanish and broken English. Their expedition was after muskies and avonles. Several of them were as shiny black as an ebony African Moor, while others were of the usual Indian mixed colors.

An Indian of the Cosumnes river, who had lived in Monterey some years, with a friend of mine, told me that his tribe had words in their language which enabled them to communicate with those of Monterey.]

A friend, living near Tehama, gave me the following vocabulary of the Indians near that town, on the Upper Sacramento. For one hundred miles up and down the river and the neighboring

mountains, the same language is spoken or understood.

ENGLISH.	INDIAN.	ENGLISH.	INDIAN.
stood	Ind-it	newey	memlook

grasshopper	memlook	memlook	memlook
weevil	memlook	memlook	memlook
elk	memlook	memlook	memlook
deer	memlook	memlook	memlook
shummit	memlook	memlook	memlook

There were in the Sacramento Valley, or near that river, in 1843, as far up as Red Bluffs, when he first established his Rancho, near Tehama, as many as 50,000 Indians.

The Colusi Indians, of the Sacramento river, bury their dead, but do not burn them. They make a round hole in the ground, and put them in after tying them up like a bundle. Into the grave they put all the dead man's arms, baskets, ornaments, eatables, etc., and then covered him over. On one occasion, in 1856, a friend of mine saw two hundred strings of beads buried with a woman near Colusi.

Number 2. Klamath River Indians.

Indian Vocabulary of the Klamath River, in the Vicinity of the Mines.

[The following interesting letter will explain itself, and for which I have to return my thanks to Messrs. Van Dyke and Taggart for their kindness.]

ORLEANS BAR, Klamath Co., Dec. 3, 1855.

Sir: Your note of the 9th ultimo, with the Vocabulary from Mr. Taylor of Monterey, was duly received; but I have not had time until the present to attend to your request.

I have filled up the list of words from memory, or nearly so; but I have no hesitation in assuring you that they are as nearly correct as it is possible for me to represent Indian sounds by combination of English letters.

I have been in the habit of speaking all these words: for the list required, constitutes of course but a small part of this language. For the last six years, and even now, there are certain gutturals and aspirates, which I find a difficulty in producing, and which can only be achieved by No. 1. organs of speech, assisted by fine ears and long practice. You will see, I have been under the necessity of making a new list of words, in order to get room to spell plainly.

When I came on the River, the number of inhabited rancheries was thirty-six. The accompanying list comprises all that are now inhabited, within the bounds of this tribe, from Bluff Creek to Indian Creek—a distance of perhaps eighty miles on the Klamath River. I have not thought it worth while to mention the names of the "deserted villages": let them pass away with their inhabitants. There are many "suggestions, and explanations, with regard to the structure of the language," that I could make, that I have no doubt would at least be interesting to your friend, Mr. Taylor.

Hoping that you will consider this as complying with your request, I subscribe myself, yours, respectfully,

G. W. TAGGART.

MR. WALTER VAN DYKE, Uniontown, Humboldt Co.,

[TO BE CONTINUED.]

Ventilation of the Bee-Hive.

We give a chapter from "Langstroth" on the Ventilation of Bee-Hives. Parents may take a hint from these useful creatures, and learn the importance of ventilating their dwellings:

If a populous stock is examined on a warm day, a number of bees may be seen standing upon the alighting-board, with their heads turned towards the entrance of the hive, their abdomens slightly elevated, and their wings in such rapid motion, that they are almost as indistinct as the spokes of a wheel, in swift rotation on its axis. A brisk current of air may be felt proceeding from the hive; and if a small piece of down be suspended at its entrance by a thread, it will be blown out from one part and drawn in at another. Why are these bees so deeply absorbed in their fanning occupation, that they pay no attention to the busy numbers constantly crowding in and out of the hive? and what is the meaning of this double current of air? To Huber, we owe the satisfactory explanation of these curious phenomena. The bees thus singularly applying their rapid wings, are ventilating the hive; and this double current is caused by pure air rushing in, to supply the place of the foul air forced out. By a series of beautiful experiments, Huber ascertained that the air of a crowded hive is almost as pure as that of the surrounding atmosphere. Now, as the entrance to such a hive is often very small, the air within cannot be renewed without resort to artificial means. If a lamp is put into a close vessel, with only one small orifice, it will soon exhaust the oxygen, and cease to burn. If another small orifice is made, the same result will follow; but if a current of air is by some device drawn out from one opening, an equal current will force its way into the other, and the lamp will burn until the oil is exhausted.

It is on this principle of maintaining a double current by artificial means, that bees ventilate their crowded habitations. A file of ventilating bees stand inside and outside of the hive, each with head turned to its entrance, and while, by the rapid fanning of their "many twinkling" wings, a brisk current of air is blown out of the hive, an equal current is drawn in. As this important office demands unusual physical exertion, the exhausted laborers are, from time to time, relieved by fresh detachments. If the interior of the hive permits inspection, many ventilators will be found scattered through it, in very hot weather, all busily engaged in their laborious employment. If its entrance is contracted, speedy accessions will be made to their numbers, both inside and outside of the hive; and if it is closed entirely, the heat and impurity quickly increasing, the whole colony will attempt to renew the air by rapidly vibrating their wings, and in a short time, if unrelieved, will die of suffocation.

Careful experiments show that pure air is necessary not only for the respiration of the mature bees, but for hatching the eggs, and developing the larvae; a fine netting of air-vessels enveloping the eggs, and the cells of the larva being closed with a covering filled with air-holes.

In winter, if bees are kept in a dark place, which is neither too warm nor too cold, they are almost dormant, and require very little air; but even under such circumstances they cannot live

entirely without it; and if they are excited by atmospheric changes, or in any way disturbed, a loud humming may be heard in the interior of their hives, and they need almost as much air as in warm weather.

If bees are greatly disturbed, it will be unsafe, especially in warm weather, to confine them, unless they have a very free admission of air; and even then, unless it is admitted above, as well as below the mass of bees, the ventilators may become clogged with dead bees, and the colony perish. Bees under close confinement become excessively heated, and their combs are often melted; if dampness is added to the injurious influence of bad air, they become diseased; and large numbers, if not the whole colony, may perish from dysentery. Is it not under precisely such circumstances that cholera and dysentery prove most fatal to human beings? the filthy, damp, and unventilated abodes of the abject poor, becoming perfect lazarettoes to their wretched inmates.

I have several times examined the bees of new swarms which were brought to my apiary, so closely confined, that they had died of suffocation. In each instance their bodies were distended with a yellow and noxious substance, as though they had perished from dysentery. A few were still alive, and although the colony had been shut up only a few hours, the bodies of both the living and the dead were filled with this same disgusting fluid, instead of the honey they had when they swarmed.

In a medical point of view these facts are highly interesting, showing as they do, under what circumstances, and how speedily, diseases may be produced resembling dysentery or cholera.

In very hot weather, if thin hives are exposed to the sun's direct rays, the bees are excessively annoyed by the intense heat, and have recourse to the most powerful ventilation, not merely to keep the air pure, but to lower its temperature.

Bees, in such weather, often leave almost in a body, the interior of the hive, and cluster on the outside, not merely to escape the close heat within, but to guard their combs against the danger of being dissolved. At such times, they are particularly careful not to cluster on new combs containing sealed honey, which, from not being lined with cocoons, and from the extra amount of wax used for their covers, melt more readily than the breeding-cells.

The Pea Bug (Bauchus Prist).

PROFESSOR J. P. KIRKLAND gives, in the Ohio Farmer, the results of some experiments made with chloroform, with a view of destroying the larva of the pea bug. He says:

The eggs of that insect are deposited in the pea while it is yet young and tender. About the period when the pods become dry, the young larvae are hatched, and commence devastating on the cotyledon of that vegetable. That is the moment to be improved for arresting the progress of the evil.

The seeds should be shelled from the pods, and placed in a suitable bottle, closed vessel, or box. On them should be sprinkled a few drops of chloroform, which should be extensively shaken. This should then be corked, and every specimen of insect within it will probably be destroyed in twenty minutes time; but, to render the process perfectly successful, it is well to continue the peas in their inclosure for twenty-four hours, or longer. Seed peas thus treated, will show, on examination, a mere speck at the point, occupied by the young worm. But the advantages of this process will be most observable when the plants from these seed peas make their growth next season. They will be far more vigorous and healthy than those starting from seeds which have been extensively attacked by that pestiferous insect. By this method we can annually preserve the seeds, and perpetuate the cultivation of the fine varieties of this vegetable, in this vicinity, without resorting to foreign importations.

OLD VERMONT FOREVER!—The Green Mountain State has always been prolific in brave men, handsome women, fast horses, and mammoth beef; but she has outdone herself in an ox, now in Boston, which is by far the largest specimen of his race ever in this country. If our recollection of Hebrew measurement be correct, he is even twice the size of the brute which the children of Israel bowed to when they proved recreant to the faith of their fathers. He stands 6 feet 5 inches in height (or 19 hands 1 inch), measures 13 feet 4 inches from head to rump, 9 feet 3 inches in girth, and when last brought to the scales showed 4,206 pounds weight. He is not yet 5 years old (and will not have his growth for three years to come), is gentle as a lamb, lively as a kitten, and has frame for 1,500 or 2,000 pounds more weight, as he is, to use a farmer's phrase, "only in good working condition." His owner intends taking him to England for exhibition.

UNRULY ANIMALS.—As a general rule, our domestic animals are never unruly, except when taught to be so. For instance, some persons, in turning stock from one field to another, only let down a few of the top rails or bars, and force their animals to jump over. Too lazy to put up as well as to let down, they leave the gap half closed, as a temptation to the stock to jump back again. A few practical lessons of this kind make animals unruly. Carelessness in regard to putting up fences when thrown down, or in repairing weak spots, confirms the habit. A writer says his practice has always been to teach his cows, calves, sheep and hogs to go through or under, rather than over the bars and fences, always leaving a rail or bar up at the top. Taught in this way, they never think of jumping, and he has never been troubled with unruly animals, even when his fences were low.

HOW TO TEST SILVER ORE.—In these times, the following test of silver ore may be found useful: Pound a small piece of the rock supposed to contain the metal as fine as possible, then place it on a shovel, or anything handy, and hold it over a slow fire, to burn away sulphur or arsenic, which are generally mixed with the ore of silver. Then take a cup, or any glass or earthenware vessel, into which pour a small quantity of nitric acid (aqua fortis), in which put about a teaspoonful of the powdered ore, which boil in the acid for a minute or two. Then take some common salt dissolved in water, in another vessel, pour a small quantity of the salt and water into the acid; if it turns white and looks milky, there is silver in the ore. The above is a cheap, convenient and certain test for silver.

RAILROAD MIRROR SIGNALS.—A locomotive has been placed on a railroad between the Bickering Collieries and Leigh, England, which has its weatherboard made of plate-glass, forming a screen, while projecting over the frame of the engine are arranged large adjustable mirrors set at a proper angle. By means of these reflectors, the engineer has a view of the whole train behind him, so that in case of a casualty to any one of the cars, he can see it reflected in the mirror on his engine. Some trial trips have been made with this apparatus, and they are stated to have been very satisfactory. As such mirrors may be applied at no great expense to every locomotive (if found to increase the safety of traveling in the least), they should certainly be adopted on all railroads.—[Scientific American.]

To extract the bitter quality from yeast, bake a small piece of bread quite black and drop into the yeast; or, if it be very bitter, put a small quantity of bran into a small sieve and strain the yeast through. These remedies have been tried and never known to fail. Or, pour cold water over the yeast some time before you require it, the yeast will sink, and the bitter quality remain in the water, which pour off.

STOVE POLISH.—Make a weak alum-water, and mix your British luster with it; let the stove be cold, and brush it with the mixture; then take a dry brush and luster, and rub the stove till it is dry. Should any part become so dry as to look gray, moisten it with a wet brush and proceed as before. By two applications a year, it can be kept as bright as a coach body.

COURTESY.—Much of the rude manners observable in our working men and women may be traced to the roughness of speech customary in the domestic lives of the people. Mother and father speak rudely to each other; they mean no harm, no unkindness even; it is just their way; they would tell you, if expostulated with, but it is a way the children catch up, as surely as a clever parrot imitates all it hears around. Listen to the workmen's children at play, you will hear all that "father and mother" are in the habit of saying; repeated, too, with the very mannerism of the speakers.

Just before the steamer Europa sailed from Boston, three men named John B. Ross, David Leech and Adolph Bishop, were arrested on charges of forging the name of Mr. Bonner of the New York Ledger on a check on the Nassau Bank.

It is said that a dog of African breed, which belonged to Gen. Espinasse, who fell at Magenta, still larks about the spot where his master fell, and though often taken away, even to some distance, constantly returns.

A traveler being informed by the landlord of a certain inn that he must not sleep with his boots on, very considerably replied, "Oh, the bugs won't hurt 'em; they are an old pair."

Men long inured to vice, and habituated to folly, afford rare instances of reformation; youth is the proper season.

**TO THE AGRICULTURAL PUBLIC:**

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.
C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.
Ball's Celebrated Canton, Ohio, do 8 and 10 do
The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question,

The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANNY'S (with Wood's Improvement) REAPERS. Also—EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;
WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.
INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES AND SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES AND RAKES.

SKELETON CLOD CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS AND EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and also, persons wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,

**38 SACRAMENTO STREET,
 San Francisco.**

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOS. OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind, and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

**NURSERY CIRCULAR.****FOREIGN AND NATIVE GRAPES,
 AND GENERAL NURSERY STOCK,**

OFFERED THE PRESENT SEASON OF 1859 AND 1860, BY

A. P. SMITH,

AT THE

POMOLOGICAL GARDEN AND NURSERIES,

SACRAMENTO, Two-and-a-half Miles from the City,

AND AT THE

OFFICE AND DEPOT FOR TREES, 44 J street, between Second and Third streets,

SACRAMENTO CITY.

THE CULTIVATION OF THE GRAPE, AND THE PLANTING OF VINEYARDS UPON AN extensive scale, is at the present time exciting a lively interest among the people of our State.

The congeniality of our soil and climate, and the success which has thus far attended the operations in the vineyard, are exciting the attention of hundreds to this subject, and destined to make vine-growing and wine-making one of the great interests of our State. With the world for a market, who can estimate the wealth that will hereafter accrue to our people in the manufacture and exportation of wine. This State and this interest yet in infancy, and this great interest is of such magnitude that it is of the first importance to begin aright. To do this, we should now ascertain what is to be the most desirable GRAPE TO CULTIVATE, especially for wine-making. The California or Los Angeles grape makes a good and pleasant wine, and while some claim it to be as good as any for making wine, the majority of experienced growers pronounce it inferior, and some assert that it will be superseded by some other and a much better grape. Among over ONE HUNDRED varieties of grape cultivated by us, the CALIFORNIA GRAPE has always proved to be the most tender, while the FRENCH and GERMAN grape invariably resists the frosts that have been so very destructive to our California grape. This is a very important point to establish, as the loss by frost in some wine-districts alone, would be very great, and therefore the attention of the cultivator should be directed to attaining a hardy class of grapes. Experiment alone must determine this, and whatever experience we have already attained should be carefully noted and improved upon.

For some years we have been most carefully experimenting upon and propagating from a very large stock of the finest kinds of foreign grapes, and while most of these have proved PERFECTLY HARDY, the CALIFORNIA grape has been entirely killed. At the same time no two opinions exactly agree as to their superiority in other respects over our native grape. Thus it will be seen that the wine-grapes of Europe have so far proved to possess a very decided advantage over the grape now being cultivated and known as the Los Angeles grape.

With these points established, and with the opinions of practical wine-growers of Europe to sustain us, there can be no reasonable doubt of the RE-PRODUCTION IN THIS STATE of the finest wine-grapes of Europe. The foreign grapes having a world-wide reputation as wine, table, and raisin grapes, and having been proved to be harder than our own grape, and better adapted to our soil and climate, they must and will become very extensively cultivated. We cannot sufficiently impress upon those about to plant vineyards, our own opinions and preferences for this class of grapes, believing as we do, that the varieties to be eventually selected from this class will be grown to the exclusion of all others. We would not by any means wish to discourage the planting of the CALIFORNIA GRAPE, which is indeed a useful and valuable grape, and of which we sell largely; but when it has to come in competition with varieties of SUPERIOR GRAPE, it must necessarily give place to them.

From many of the foreign grapes we have experimented in WINE MAKING, and while all have proved to be good wine-grapes, some of the kinds have produced wine of such decided superiority as to leave no doubt in the minds of competent judges of this class of grapes being the grape from which we may hope to manufacture an article of wine that will improve by age and be fit for exportation. The present season we have made wine from TWENTY DIFFERENT KINDS of this class of grapes, as well as a large quantity from the California grape, and another season we hope to be able to report more fully. We have also made some very interesting experiments in the grape for RAISING, and notwithstanding our process has been crude and imperfect, our success was very flattering, and we have no doubt but that the very finest quality of raisins can be profitably prepared in this country. We wish to draw the attention of parties to our extensive stock of this class of grapes which are very select, and which we have been propagating for several years at large expense, having heretofore limited our sales till the stock now in hand is the largest in this State. Such varieties as we have specified we can furnish by the hundred or thousand, and when taken in large lots we will put them at much lower rates than heretofore offered.

We wish it to be distinctly understood that our stock has been all grown by ourselves from bearing vines in our own vineyard, and we enumerate only such as we can furnish in large quantities.

When a thousand or more vines are ordered, the selection of kinds will partly rest with us, but will be comprised within the following assortment:

We would suggest to our customers that they should name to us the proportions they desire for TABLE and for WINE grapes. The following is the list for the present season:

Black Hamburg—An immense bearer, a large and purple berry, one of the finest and most luscious of black grapes known.

Willmott's Black Hamburg—Extraordinary bearer, and fruit with immense sized berries, differing in shape from other berries.

Black Prince—Large, very productive, rich and very delicious.

Black Morocco—Very prolific, large clusters, and gives promise of being a very fine wine grape.

Black St. Peters—Long and large clusters, a late fruit, sweet and very delicious.

Black Frontignan—A good grape with a sweet and musky flavor.

Cannon Hall Muscat—One of the largest white grapes known. From our experience this year we think it a fine wine grape.

Chasselas of Fontainebleau—A white, very productive grape, medium size.

Early White Sweet-water—A well known early sweet grape, being more than three weeks earlier than the California grape, and a great bearer.

Early White Malvoison—Early, and sweet, and good.

Frontignan Muscat—Very fine.

Syrian—An immense bearer, very large, a late sort.

Grizzly Frontignan—A good bearer, fine flavor, good table grape.

Lashmier's Seedling—White, good size, medium bearer, high flavor, believed to be good for wine.

Large Rose of Peru—A large and superior grape, and very prolific.

McReady's Early White—Very prolific, and a fine white grape.

Muscat of Alexandria—Large and fine, the very finest of table grapes, and of exquisite flavor.

Royal Muscadine—A delicious grape, great bearer, incomparable as a table grape, and promises to be first rate as a wine grape.

Red Frontignan—A very fine grape.

White Frontignan—A very delicious grape.

Our native grapes consist of the California grape from one to three years, Isabella, Catawba, Clinton, Concord, and Rebecca. Some of the latter are new sorts, and of these we are not largely stocked this season. We particularly ask planters of vineyards to review our remarks in this card.

**FRUIT AND ORNAMENTAL TREES.**

The Trees offered from the above establishment this season are more than usually fine, and in the NUMBER OF VARIETIES, of each kind of fruit, we possess the largest collection in the State, our catalogue embracing OVER NINE HUNDRED VARIETIES, among which are

APPLES, about 250 varieties;

PEARS, 400 varieties;

PLUMS, 50 varieties;

CHERRIES, 50 varieties;

PEACHES, 75 varieties;

NECTARINES, 20 varieties;

APRICOTS, 12 varieties;

GRAPES, 100 varieties.

We hesitate not in saying that our Pear and Cherry trees are the finest ever offered for sale in this State, of all sizes, being from 6 feet to 12 and 14 feet high. The greater portion being not only of very large size, but also handsomely shaped, are elegantly adapted to planting near residences, affording the double advantage of shade and fruit. Of the above two fine fruits we offer 25,000 Trees for sale, of different sizes and prices, and as low as good Trees can be bought at any first-class Nursery in the State. Many persons have had but poor success with Cherry Trees in this State. We state for their information that

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common Native or Oregon stock of this Coast.

Apple, Plum, Peach, Nectarine, Apricot, Fig, and Almond,

Besides a miscellaneous collection of other small fruits. Particular regard has been paid to the growing of the trees in good shape, and purchasers of our two-year-old trees will find that they have been well "cut back," and are now firm, symmetrically shaped trees. We guarantee no finer healthier trees, will be found in the market this season. We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and Greenhouse Plants,

Embracing all the old and well known varieties, as well as a great many others both good and new. Also, a very fine lot of different sizes, of that very popular shade tree, so full of reminiscences of home, the good old-fashioned Elm Tree of many varieties, but most of the American and Scotch Elms, which are of good size and when well established in the soil, they are of very rapid growth. Also,

LOCUST; LABURNUM, or GOLDEN CHAIN; MAPLE, in variety; LINDEN, European and American; CATALPA; CHINA, and other Trees.

We call particular attention to our collection of **THE CAMELLIA**, now so well acclimated as to be growing finely in our open grounds, and blooming as elegantly out of doors here, as possible with the tenderest care in a conservatory. It is no longer a house-plant, but one of the gems of the pleasure grounds.

WE GUARANTEE ALL TREES FROM OUR NURSERY TRUE TO THE NAME.

For more minute particulars of Shrubs, Roses, &c., see CATALOGUES, which are sent by mail to all applicants.

VEGETABLE SEED.—We invite attention to our very large and general assortment, the crop of THIS YEAR, which is very fine. We are now prepared to supply THE TRADE in quantities to suit, and at lower prices than can be found at any other establishment in the State. We have now been growing SEED of GOOD FRESH SEED at very low rates. These seeds will be done up handsomely in packages, for Wholesale sale or Retail Trade and will always be in readiness at our Gardens, and at City Office, 44 J street Sacramento. Our Trees and Shrubs will be sold for CASH ONLY, and Orders must be accompanied with the Cash to insure attention.

The California Farmer.

SAN FRANCISCO:
FRIDAY, MARCH 23, 1900.

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct letters to "Col. Warren, California Farmer Office," as there are frequent misarrangements for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as Colonel Warren, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscribers have learned with deep regret that his initial letters have been mistaken for another party, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

Diseases among Sheep.

Is traveling among the various sheep-ranches, and examining the flocks, we think we can point out the cause of a considerable portion of the disease that among sheep-raisers is called *scab*, but in reality is the "mange," or what is less dangerous, a *manure scurry*. It is the same kind of disease that afflicts a great portion of mankind, and is known by the more familiar term of "dirt," and the sovereign remedy is *water and cleanliness*.

We find among nearly all our sheep-raisers the practice prevails of "corrals" for 500, 1000, and sometimes a greater number. Here for an entire season the sheep are nightly kept, and in a brief time the manure in the yard becomes finely pulverized so that any move of the sheep causes a cloud of dust to rise and settle on the fleece. This dust of the manure works into the wool and lies upon the skin, and being in its nature very strong, as the weather grows warm and the sheep become heated, it causes an irritation which induces the sheep to rub themselves, and in a little time the result is they bruise and break the skin, and cause inflammation. This fine dust working into the flesh increases the itching until large sores are thickly produced, and by many supposed to be the *scab*, when in reality it has been produced by a dirty corral.

To be successful in sheep-raising great care is needed, and one important item is *cleanliness* and warmth in bad weather, and free air and shelter in the dry and burning weather of our summers. "Sheep-corrals" can easily be kept clean, and with profit. They should be often covered with straw. A layer of straw once a week or oftener, according to the number kept together, will repay the cost and trouble many times over. The vast amount of straw annually burned and wasted should be preserved. Sheep-raisers who do not raise grain can get it for hauling; if not, better buy it. When the yard or corral is well-covered the sheep are kept clean and look much better; their constant moving in the corral carries their manure down through the straw and when the straw becomes saturated and dirty, a new covering, and so on until the quantity needs removing or the corral is removed. This manure so made, is always valuable, and will repay the cost many times. By this course sheep will be preserved clean, be kept in good health, their lambs come stronger, the fleece when taken off be worth more, and the stock-owner have a better name. Let any one look at the flocks of sheep that have been kept in those dirty corrals after the rains we have recently had, and it would be difficult to say whether they were the black Mexican sheep or good American sheep. We assert that the dust of sheep-manure, when brought in contact with the skin, irritates and poisons it, and produces a disease that is often taken for the *scab* or *mange*. It is a species of mange. We hope for the credit and profit of our sheep-raisers, this plan will be tried, as well as for the humanity that is needed for this class of our stock.

Dairy Stock.

We are very much surprised to see a want of care among the many dairymen who have fine stock, those too who house their cows at night. They permit their flock to lie down on the dirty floors, cold, wet, and very uncomfortable, when, perhaps, there are many tons of straw lying in the fields rotting, or perhaps it may have been burned to get rid of it. When will dairymen learn that the better they care for their stock, the warmer and more comfortable they rest and sleep, the more milk and better milk they will give. Dairymen, and all working-cattle too, should be cared for, and if time was taken to card them and rub them down every day, it would pay well. Let any dairymen try it with a part of their stock, and they will see that it is so.

RANCH TO LEASE.—We call attention to an advertisement offering to lease a Vineyard and Orchard. We give the following description, which will show what they are, to any one desiring such a place: The Ranch is situated on the Stockton and Mokelumne Mill road; besides the 5000 vines, there are 300 apple-trees of 15 varieties, a few of which were in bearing last year; 100 peach-trees of several varieties in bearing; pear, cherry, plum, apricot, nectarine, fig, pomegranate, currant, strawberry. It is desired to lease this Ranch for a term of years, upon shares, with a view to having all the ground suitable filled with vines, in the shortest possible time. The party leasing, can have immediate possession—thereby enjoying the present crop, which promises to be large. We can information favorable to this Ranch.

The Great Valley of Amador.

Men have been said of this large and fertile plain or valley—one of the largest sections for cattle, sheep and horses which we have in our State. Our citizens in other portions of the State can form but a poor estimate of this fertile valley, unless they should visit it. Having crossed it several times, we have recently visited the several ranches, seen the stock, and gathered the particulars of its prosperity.

The valley extends from the Monte Diablo foothills, on to the Livermore Pass and other great passes which open the way to Stockton. Some portions of this valley are twenty, thirty, and even forty miles long, and four, six and ten miles wide. After leaving Hayward's Hotel, San Lorenzo (one of the best country hotels in our State), a fine road leads through the lofty hills (the best sheep-grounds in the State), to Dougherty's Ranch. Mr. D. has one of the largest stock ranches in this section, and is connected with Mr. Martin, also a large stock-owner. The entire valley is filled with stock-growers—many very largely engaged—mostly those who have long been residents. Cattle, sheep and horses cover this valley and the hill-sides by thousands and tens of thousands, so that from every point, whether you are in the valley or on the mountain tops, the vision takes in literally, the "cattle upon a thousand hills." In our recent trip, during the late rains, the rich verdure, the opening flowers, the wide spread scenery, all combined to form a picture of more than ordinary beauty. It is one of the fairest pictures in our whole State.

The following is, we believe, a near approximate to the amount of stock in the immediate center of this great valley:

	Cattle.	Horses.	Sheep.
Dougherty's Ranch.....	4,000	250
Martin's ".....	5,000	400
Livermore's ".....	4,000	250	1,500
John Bernal's ".....	2,500	250	1,500
Aug. Bernal's ".....	5,000	200	2,000
Johnson's ".....	600	300
Sewal's ".....	1,000	300	4,000
Patterson's ".....	3,000
Murray's ".....	3,000
Allen's ".....	500
Ryder's ".....	500
Miller's ".....	2,500
"Mission and McBure's Ranch.....	4,000
Field's Ranch.....	600
Total.....	22,000	2,250	23,400

Here we have an aggregate of nearly fifty thousand head of stock that we know exists, and in many cases we are under the mark, and there were other small ranches in the small valleys breaking out into this valley and in the hills that border it, to the amount, we really believe, of TEN THOUSAND MORE. Pacheco, and other large tracts immediately contiguous to it, would swell the amount to ONE HUNDRED THOUSAND HEAD OF STOCK.

The valley through which we traveled—say about eight miles from Dougherty's, commencing at Hart's Store, and thence to Patterson's and Livermore's—bears the most unmistakable evidence of being once a vast lake. The soil, in many places, is entirely composed of *sea pebbles*, and for miles appears like the wash of the shore. That it was a great lake there can be no doubt. Yet the largest portion of this great valley, and all the hill-sides and mountains, is as rich land as can be found, covered with native clovers of various kinds, and all the sweet indigenous grasses of our State, that make stock thrive so well. We had the pleasure of meeting most of the owners we have named, from whom we gathered important facts, which will be the subject for future notices.

Alameda County—The Crops, Etc.

What a cheering light greets the vision, even from this city, as we look across the Bay upon the green hills of our neighboring but very rich Agricultural county. We may call it one of the most fertile and richest county in the State.

We have recently passed over a good portion of it from the landing of the steamers on the Oakland side, through San Antonio, San Leandro, San Lorenzo, Alvarado, Mission San José, and over the mountains and the great Amador Valley, and have visited many of the grain-farms, stock-ranches and orchards, and we find everywhere a cheerful smile upon the face of cultivators of the soil and those who have flocks and herds.

Never have we seen the grain-fields, the grass crops, orchards and vineyards look so well before. The rich green of the rapidly growing grain bespeaks a bounteous harvest; the trees are bursting into bloom, promising the most abundant crop; the sheep are increasing by thousands and tens of thousands, and the young lambs gambol upon a thousand hills.

The Grape-vine shows the leaf, and upon many a hillside, the flowers have decked the earth with more beauty and glory than the art of man could conceive. The vision everywhere is truly one that should make every heart glad, for never has the husbandman had such cause for rejoicing as at the present time. Every species of labor promises a goodly reward, and Hope sits triumphant in every breast.

GLORIOUS RAINS!—What farmer, grain-grower, vine-grower, orchardist, or gardener, will complain now? Could they arrange anything better themselves, if they had their own way? Never, since we have been resident in California—and that is since '49—have we seen a finer prospect for every species of crop; never have the grain and grass looked so finely, or the early vegetables given a better promise. Now let gratitude fill the hearts of all and still every murmuring tongue.

THE INDIANOLOGY OF CALIFORNIA.—The very deeply interesting history of the Indians of California which we have been publishing, should receive more than ordinary attention. The history is the most complete, in fact the only one ever yet published, and reflects the highest honor upon the compiler, A. S. Taylor Esq., of Monterey. This history is alone worth the cost of the FARMER for the entire year.

CALIFORNIA AND THE HOLY LAND.—Whoever will examine the map of California and the map of the Holy Land, will be struck with the resemblance they bear to each other. We make mention of this to call attention to it. It is worthy some thought.

Dairy Stock—Fine Stock.

It will be remembered that at the Santa Clara County Agricultural Fair, last Fall, and also at the Oakland Fair, in the Autumn, also, the Messrs. Blacow Brothers exhibited large herds of very fine dairy stock that attracted great attention and won not only the first premiums on several classes, but universal admiration also. It has been our pleasure to see this stock lately and to examine it, and see the rapid advance we are making in this State.

The herd of Robert Blacow, Esq., of Centerville, consists of about forty head, all fine, and most of them very superior. Among the herd Mr. B. can name a good list of *Presidents*. We think Mr. Blacow has made more *Presidents* than any man in the Union. We saw Washington, Jefferson, Madison, Monroe, Jackson, and Franklin, besides a goodly number of dames that were *mothers* of *Presidents*. Mr. Blacow deserves great credit for his perseverance in bringing his herd to such perfection. In this herd there are probably as fine milkers as there are in the State. One cow "Lillie," with a calf by her side, will give *three pails* full a day, and another cow even more than that. Mr. Blacow has some of the finest stock for sale there is in our State. He recently sold some young heifers for \$400 and \$500 each. The young bulls Madison and Monroe are engaged at \$400 and \$500 each. Mr. Blacow showed us a fine alfalfa field of forty acres coming up finely. Also, a field of red clover of four acres. His grounds are well and strongly fenced, and he has good barns for stock. We were highly gratified to see Mr. B. among his stock. They all seemed to know him, every animal having a name. They verified scripture: the ox knoweth his owner.

We are grateful to Mr. B. and his wife for their attentions, courtesies and hospitalities, and wish him abundant success in his business.

John Blacow, Esq., has also about forty head of fine Durham and select stock. "Favorite," a very extra animal and seven or eight young bulls of value, with other stock, make up a fine herd. Mr. J. B. is also, like his brother, well-skilled in stock-raising, and makes his business his pride. He recently sold three young bulls for \$350 each, and cows for \$300 and \$400. Also graded stock for \$150 each. Such men in our State are public benefactors for thus introducing fine stock, and we trust such men will be amply rewarded after all the trials incident to California life.

Another Flock of Splendid Sheep.

We call the attention of all Sheep-raisers to the Advertisement of Messrs. Jones & Rockwell, which appears in our columns, this week. These gentlemen have been raising Sheep, in Vermont, since 1844, and they have been selecting, from time to time, the best Breeders everywhere.

In 1855, as will be seen, they purchased the entire flock of Mr. Solomon W. Jewett, who then gave up the business to them, thus largely increasing their flock in quality as well as quantity.

The present importation of Messrs. Jones & Rockwell is not large, but very select indeed. They have some of the best and finest-wooled Sheep yet shown in this State; this we can prove by the samples in our possession.

These gentlemen will visit various parts of the State, to show their Sheep; and it will be a fine opportunity for Sheep-raisers to see these fine-wooled Sheep. Messrs. J. & R. have done well in introducing this class of Sheep among us; for we have the evidence, from every source, that our State will soon beat the world in the character of Sheep raised here. We can raise larger and handsomer sheep, produce more wool at a clip, and raise more lambs from a hundred ewes, than any other country under heavens. And such Sheep as these now offered, secure to us the chance to raise the finest wool in the world.

We shall be happy to show the Sheep and samples of the Wool to all who desire to see the splendid Samples from the Sheep now offered for sale. We hope Messrs. J. & R. will receive a kind reception from the Sheep-growers, and make prosperous sales, thus benefiting our whole State.

We notice this fact in these fine Spanish Merinos: a soft silky texture of peculiar beauty, being full of that oily substance so indicative of pure blood, and one of those evidences needed to secure a good cross. Of the fine Spanish Merinos it is asserted that they will give more and better wool to the six-carcase, and at less cost of keeping, than any other sheep in the world. The cost of raising the Spanish Merinos is said to be much less than the French. We have facts to prove that Sheep of 140 pounds have clipped 21 pounds of fine wool. This is enormous; yet we have facts to prove it.

THE OAKLAND BAR.—We trust our Legislature will take hold of this matter in right good earnest. We see that a demand has been made to complete the work of clearing the bar. After the expenditure of the sum of \$14,000 raised by subscription, it seems that \$10,000 more is wanted. A little reflection must convince any one that a channel can never be cut, that will not again fill in. Let a good committee of *sea-captains* be appointed by the Legislature, and send suitable engineers with them, and we believe that after a thorough investigation they will abandon the present plan and announce that a pier must be built out into deep water as the only available way. The communication with the great agricultural district over the Bay demands that this work should be done.

IMPROVE THE PRESENT WEATHER.—The late cool weather, together with these most propitious showers, will give many persons who have been delayed in their plans, or who have not yet been ready, an opportunity to plant trees, vines and garden plants. The present is a most propitious moment; now improve it.

GROWING HOPS.—Those who have good hop land should improve the present fine weather for planting to put out a hop field.

FRESH STRAWBERRIES.—Strawberries have appeared in our market, and are sold at \$2 50 a pound.

The Pet Calf.

In our recent trip among the stock-ranches we found a specimen of an "animal" which we shall denominate the "Pet Calf." The owner gave us the full history, and we give it to show how a valuable animal may be totally ruined by *petting*, and it fully reminded us of many other creatures that are spoiled by similar treatment. This calf, when young, was one of more than ordinary beauty, and gave promise to make an animal of great value. The owner became so attached to it that, as he told us, he was continually feeding it until he found himself giving it cake and all the "tit bits" usually offered to pets. This calf was of Durham breed with good points, fine head, fine neck, bright glossy hide, a handsome deep-red heifer of fine limb and form perfect—so was this animal when weaned. But by this constant feeding, this repeated dosing, the pet looked for this kind of food only, and now in about one year we saw the result of this *petting*, this constant feeding and dosing with food unnatural to animals, we saw before us a lank, lame, deformed, unsightly animal—one that was so weak every way as to become despised by the rest of the herd, they even showing their dislike to it by goading it and running it away from among them. We saw this poor despised thing alone by itself, crouching in one corner of the yard, so weak that it was obliged to get down upon its knees to feed, the very hair worn off by the habit of kneeling, and many deep marks of the horns of the cattle where it had been gored because of their dislike. And what said the owner of this "petted calf" when we examined the poor thing: *I have spoiled a once very valuable animal by bad feeding, and besides lost an animal that would have been worth \$500.* What a confession for a stock-raiser, a man who should have known better. As we looked upon this animal and saw what it might have been if properly trained, we felt a keen sorrow. When we asked him what he could do with the poor creature, he said, "All I can do is to *kill it*," we felt a relief, for its life was a burden, for it were better dead than alive, and so with much that we see around us that is in human form. They gave great promise in early life, but have been spoiled, ruined by being "petted."

How many parents are now doing the same thing by their lovely and beautiful children? How many are making of them the "petted calf," and how many will have to mourn in coming years that such a course has changed the original beautiful boy or girl into a pale, sickly, deformed creature that must drag out an existence that is a curse to themselves and to others.

New Stage Route to Mariposa.

We were much pleased, while on a trip across the Amador Grant, in going from Hayward's, at San Lorenzo, across the Stockton route, to find so great an interest felt for a new stage route from Hayward's, on by Livermore's, up through the upper pass, and on to Mariposa. We learn that the entire distance from San Antonio to Mariposa, is only 110 or 112 miles—about equal to the distance from Stockton to Mariposa. What a saving it would be to our city, and those who desire to visit the great Yosemite would gain all the distance from this to Stockton. By such a new route a vast amount of travel and business from that great mining district would be brought to our city. Will not such openings be made available? Where are the merchants that want an increase of business, and where are the stage companies that will first seize this route? A great business can be secured, surely. We know of no better man than Mr. Hayward, of Hayward's Hotel, to start such an enterprise; he has done more to improve the public roads in that vicinity than any twenty men besides, in that section. We venture the assertion that Mr. H. will readily help liberally any enterprise of this kind. It can be made a very great and profitable route, and of great public benefit.

California Horses.

ALTHOUGH California is a young State and has given but a few years' attention to stock-raising, and very recently only to the highest class of stock—Blood Horses—yet probably no other State in the Union has made so rapid progress in rearing really splendid horses as has our own favored State; and could a public exhibition of all the best horses and their progeny be made the present year, we have no doubt but that California could show over SEVEN THOUSAND HORSES, all of high character, including the colts, and all of improved and blood stock, and among them some as fine as can be found in any State or country.

To Millwrights and Machinists.

We invite attention to the advertisement in our columns of W. W., an experienced and practical Millwright who has recently come among us. He possesses a knowledge of machinery of great moment to the owners of flouring mills, and has with him drawings of valuable improvements whereby a great saving of expense can be realized, besides many other very important new ideas. Persons wishing to avail themselves of his skill will do well to address him, as from the testimony shown us we feel he should be not only well known but well employed.

EDITORS, STUDENTS, SCHOLARS, and all who read and write during evening or night hours, should bear in mind that the *eye-sight* is a part of the *real life* of every mortal, and that without good *eye-sight* life loses half its value. Let all who would preserve the eye and keep it in full power, see that the instrument that supplies them with light after the sun has been withdrawn from us is of the best kind. The most desirable light yet invented, is now admitted to be the Coal-Oil Light. STANFORD BROTHERS are now opening new and very beautiful patterns of lamps, and their coal-oil is of the purest kind. If you would preserve your eye-sight to good old age, try this kind.

THE ILLUSTRATION THIS WEEK.—We present cuts of a Devon Bull and Cow, this week, to call particular attention to the valuable Devon Hard advertised in our Journal. Persons not familiar with the Devon Stock, will see the peculiar points, and a little study will make them always familiar.

District Agricultural Convention.

THE adjourned meeting of the delegates of the San Francisco Bay District Agricultural Convention was held at the City Hall, San José, on Wednesday last, according to announcement. From the Morning Reporter we copy the doings of the Convention, as follows:

At ten o'clock, A. M., the Convention was called to order. Wm. Daniels, President; John Centre, of San Francisco, and George P. Loucks, of Contra Costa, Vice President; and F. F. Fargo, of Alameda, Secretary.

The minutes of last meeting were read and approved.

A Committee, consisting of G. P. Loucks, John Cumming, and H. C. Melone, was appointed to report on order of business.

John M. Jones, of Contra Costa, H. D. McCobb, of Santa Clara, John Cumming, of Santa Mateo, Judge Blackburn, of Santa Cruz, John Centre, of San Francisco, and Alfred Edmonston, of Monterey, were appointed a Committee on Credentials. The Convention took a recess until one o'clock, P. M.

The Convention reassembled at the appointed hour. The Committee on Credentials reported the following persons as members of the Convention: Alameda—Dr. H. Hall, R. Blacow, A. W. Harris, James Shinn, H. C. Smith, John Lewelling, E. L. Beard, F. F. Fargo, and H. Finden.

Contra Costa—George P. Loucks, H. H. Fassett, Nathaniel Jones, C. P. Cutler, W. Bradford, John M. Jones, J. M. Allen, John T. O'Brien, W. J. Caldwell and L. M. Brown.

Santa Clara—William Daniels, Carey Peebles, James F. Kennedy, H. C. Melone, Coleman Younger, Jackson Lewis, H. D. McCobb, H. H. Winchell, James C. Cobb, and L. H. Bascom.

Santa Cruz—William Blackburn.

Monterey—Alfred Edmonston.

San Mateo—John Cumming.

San Francisco—Samuel Brannan, J. W. Walker, J. A. McDougal, Michael Hays, W. A. Woodward, W. Green, J. L. Sanford, J. L. Burtis, and John Centre.

The Report of the Committee was adopted.

The delegates present from any county were allowed to cast the whole vote of the county.

Letters from A. H. Myers and Dr. Rabé were read and placed on file.

Everybody present was then invited to participate in the proceedings of the Convention.

The committee appointed at last meeting, to draft a constitution and by-laws, reported.

The subject of adopting a constitution was taken up, and the draft proposed by the committee discussed at great length.

OFFICERS FOR THE ENSUING YEAR.

President—Samuel Brannan, of San Francisco.

Vice Presidents—Wm. Green and Wm. Wadsworth, of San Francisco.

Secretary—Frank F. Fargo, of Alameda.

Treasurer—Charles R. Bond, of San Francisco.

Directors—John Centre, Michael Hayes, and F. A. Pioche, of San Francisco.

Vice Presidents of the Counties—James L. Burtis, San Francisco; John Cumming, San Mateo; Wm. Reynolds, Santa Clara; Wm. N. Slocum, Santa Cruz; George W. Crane, Monterey; J. Lewelling, Alameda; Nathaniel Jones, Contra Costa.

San Francisco was selected as the place for holding the first Annual Fair. The first Thursday in October was selected as the time for the commencement of the Fair, and continuing until the Tuesday following.

At a late hour, the San Francisco Bay District Agricultural Society adjourned.

More Valuable Stock.

THE "Sonora" brought to California a splendid bright bay stallion about four years old, a descendant of the famous trotting stallion "Bithan Allen." This fine animal was raised in Kentucky. Two very valuable "jacks" also came, owned by Mr. Shaw. Another flock of about thirty French Merino Sheep from the Bingham flocks of Vermont, came to S. Brannan, Esq. Messrs. Jones & Rockwell also received twenty-five splendid Spanish Merino Sheep, the finest yet imported.

SALE OF THE FAMOUS DURHAM BULL.—That splendid Durham Bull "Earl the Fourth," that has recently been exhibited at the Black Hawk Stable, and owned by J. D. Patterson, of New York, was recently sold to Capt. J. B. Frisbie, of Vallejo, to be taken to Solano county. Price paid, \$4,000. Thus we have secured to our State this fine animal—an honor to the purchaser as well as the seller, and a great honor to our State to possess so fine a breeder.

STAGE LINE TO CARSON VALLEY.—Dillon & Co., stage proprietors, of Stockton, have purchased the necessary stock for a stage line between that city and Carson Valley. The line will be placed upon the road at the earliest moment possible, according to the Republican.

THE LAWTON BLACKBERRY.—There is probably no fruit grown that will pay so well as the Lawton Blackberry. Once established, and it is a perpetual crop, and almost without labor. One acre of this vine will easily yield \$2,500—reports from the Atlantic have doubled that amount. Now is the time to plant the vine.

PACIFIC EXPOSITOR, No. 9.—We have received this work. It is, as usual, replete with solid matter, as is always expected from one who wields so able a pen as Dr. Scott.

ST. PATRICK'S DAY, the 17th, was duly celebrated in this city, on Saturday last. The different Associations of those hailing from Erin's Isle, formed in procession, with the usual banners and badges, and marched to Russ' Garden, where they were entertained with orations and other exercises. The day was closed with balls and dinner-parties, which were numerous and attended. Some occurrences in the early part of the day came near causing trouble. Early in the morning an effigy, supposed to have been intended for St. Patrick, was found suspended to the Liberty Pole, on the Plaza. About 8 o'clock, the effigy not having been removed, and being so far up the pole that it could not be conveniently reached, some Irishmen cut down the pole, which in falling, was partly broken. The image was then burnt. Much regret was felt at the prostration of the Old Liberty Pole, and by the prompt action of several citizens, the break was mended, the hole dug, and before night, the pole, only a few feet shortened, was triumphantly raised, and the American flag hoisted, amid shouts of a crowd of interested spectators.

The first Overland "Pony Express," is advertised to leave this city, April 3d, by the Sacramento route, at W. W. Finney, having advertised to that effect. The route is by way of Placerville, Carson Valley and Salt Lake. The agent at this end of the route, is W. W. Finney, having advertised to that effect. The route is by way of Placerville, Carson Valley and Salt Lake. The agent at this end of the route, is W. W. Finney, having advertised to that effect. The route is by way of Placerville, Carson Valley and Salt Lake. The agent at this end of the route, is W. W. Finney, having advertised to that effect.

Valuable Hen's Eggs.

A few dozen eggs of the Brahma Pootrah and Black Poland varieties, can be had by applying to this office.

STATE SUMMARY.

At San Jose, says the Reporter of the 19th: We see that the peach and pear-trees are now in glorious bloom and they present a lovely sight.

The Sacramento river has risen ten feet above low-water mark, during the week. The warm weather melting the snow in the mountain is the supposed cause.

A vein of coal has been found near Lone City, Amador county, says the Calaveras Chronicle. It is ten feet in thickness, and of as good quality as the best Pennsylvania coal.

The Mariposa Gazette says: If the Legislature do pass the "Parson's bulkhead" bill, it will be considered that other and weightier influences have been brought to bear than a desire for the advancement of the public interests.

The steamer Visalia, Capt. Carroll, was to leave Stockton yesterday for Fresno City. The Visalia is a staunch and beautiful boat, and the Republican doubts not, will be successful in the venture which her owners have made.

The heavy rains, this winter, caused a pine-tree, which grew on the side of a gulch, two miles west of Sutter, to be torn up by the roots, thus revealing a vein of Cannel coal, about forty feet thick. It is said to burn well, and other veins have been found adjoining.

As opposition lines of ocean-steamers, it is said, will be started by Mr. Wright, on his own hook, either on the 20th of April, or 6th of May. The Hermann is now being fitted up for that purpose in this harbor. She will connect at the Isthmus with the Ericson.

MORE SILVER.—The Solano county Herald says a company of men, from Fairfield, have been working a supposed silver lode, in the hills north of Suisun valley. An assay of the ore was made, the result of which compared so favorably with some Washoe ore they had in their possession, that they are highly elated with the prospect.

The Marysville election for city officers, held on Monday last, resulted in the choice of a Republican Mayor, Recorder, Clerk and Treasurer. The Democrats elected the Marshal and Assessor, together with ten Aldermen, the Republicans having elected two. The candidates for School Commissioners were nominated by both parties, and of course received all the votes cast.

THE CROCKETT CITY HERALD says: From a test made by Dr. Henry Smith, of this city, it is found that gypsum exists in large quantities on this Coast to the northward, which in some parts of the world is much sought after as a fertilizer. Samples of this gypsum were sent some time since by one of our residents to the Scientific American, for test, and they returned answer that it was common chalk.

The Placer Courier says a new building material has been found at Forest Hill, called "cement," which, from tests made, proves to stand fire equal to the best brick. The proximity of the material to the town will enable persons to erect fire-proof houses from it at a cost two-thirds less than that of brick. It will be used for the construction of ten or twelve large buildings at Forest Hill, the coming season.

The Mariposa Gazette of the 20th says: Grass and grain never, we think, looked better at this season than at present, whereas half-famished cows and bunged-up horses laugh exceedingly. The donkeys held a quarterly meeting last week, near Mormon Bar, to congratulate one another, it is supposed, over their improving aspects. Peach and almond-trees are bursting into bloom, in many places, in this vicinity. It is too early, for hard frosts may yet be expected.

We regret to learn that the mail stage line, between Oakland and Stockton, has been discontinued. The contractors give as a reason that their pay was not forthcoming. Still, it is said, that the travel over the road now, would pay all the expenses and yield a revenue to the proprietors. The Stockton papers say a petition will be circulated and largely signed, asking a restoration of the line.

In Calaveras county, says the Independent of the 17th inst.: During the last eight or ten days, what with warm showers, bright sunshine and bland "west-wind blowing," old Nature has been coaxing into spring-time attire. The peach, almond, nectarine, cherry, plum and manzanita, are now in full bloom in orchard and woodland; the hills and vales are green as the sea, with here and there a just perceptible mixture of yellow, white, and blue, where the first flowers are reaching out their timid petals towards the southern sun.

The Placerville Democrat of 10th March remarks that every day large pack trains of mules leave that town for the Washoe diggings. The streets of Placerville are crowded with strangers, and the stages from Folsom daily arrive loaded down with mere, all eager to get to the "promised land" as quick as possible. The rush is already great, but nothing in comparison to what it will be in a month or two. There is much snow in the mountains, and the crossing is rather tedious and difficult, but not dangerous at present. The public houses all along the route are filled with weather-bound emigrants. In a few days, says the Democrat, if the present pleasant weather continues, the road will be free from obstructions and in good traveling order.

An extensive flouring mill is about being erected in Tuolumne county, on the Sonora road, near the Philadelphia House, by J. Spier & Co. The Courier says: Its working capacity will enable it to turn out 100 barrels of flour a day, running three sets of stones, screening, cleaning and bolting apparatus, complete, and driven by overhead, 20 feet diameter water-wheel. An unfailing supply of water is secured from the T. C. W. Co.'s ditch, at an expense much less than steam. This is a great enterprise, and we rejoice at its prospect of success. The effect will be to make the "staff of life" come much cheaper to us than ever it did before. This mill will grind all the wheat, barley, corn, etc., grown in the mountains, in the valleys of the Merced, Tuolumne and Stanislaus, and all that from Stockton and the San Joaquin valley, which is now brought up here in the shape of flour; while it makes the bran, shorts, etc., so much wanted here for cattle, milk cows, etc., come at a great per centage cheaper. All the machinery is on the road, shipped from San Francisco, and the company commences their operations soon.

In Tulare county, says the Delta: Never before since the settlement of the valley have the prospects of the citizens been better than the present spring. The heavy rains during the fall and winter caused the grass to spring up abundantly, and the light spring-showers, falling every few days, keep the grass and grain growing most luxuriantly. The water from the mountain-streams, arising from the melting of the snow, which is generally used for irrigation during the dry part of the summer, will scarcely be needed at all this season. The present indications are that the farmers will have the most abundant crops and the stock-raisers the fattest cattle, hogs, and sheep, that have ever been seen in this section of country. The population of the valley is increasing rapidly—every portion of the timbered land is being settled upon, houses erected, orchards planted, and fences built, all of which indicate permanent settlements and happy homes for the numerous families now coming amongst us. In addition to this, stock-grazers are pitching their camps all around the foot-hills on both sides of the valley, as well as in the little valleys on the foot-hills of both the Coast and the Sierra Nevada ranges of mountains. The time is not far distant when what is known as Tulare Valley will have a population unsurpassed in point of numbers and wealth by any agricultural portion in California.

PRESBYTERY OF CALIFORNIA.—This reverend body held its Spring session during the past week, in Calvary Church. It was opened with a sermon by the Rev. Frederick Buel, the retiring Moderator. The Rev. Albert Williams was elected Moderator for the ensuing year, and Rev. A. W. Loomis, Clerk. The interests of religion seem to be prospering with this denomination. The reports from the churches were highly encouraging. The Rev. Dr. Scott, as minister, and James B. Roberts, as ruling elder, were appointed delegates to the General Assembly, to meet at Rochester, New York, in May next, and Rev. A. Williams and Mr. W. W. Caldwell, alternates.

FRENCH AND SPANISH MERINOS.

The Undersigned, having long been established as sheep breeders in the State of Vermont, desire to announce to the wool growers of California, the arrival of a VERY SELECT FLOCK OF FRENCH AND SPANISH MERINO BUCKS AND EWES, of the VERY HIGHEST BLOOD.

Having been breeding Merino sheep since the year 1841, and having received the Best Bred from the Best Flocks in Europe, for the express purpose of breeding, to the number of hundreds, they feel confident they can speak in strong terms of the flock now offered by them to the sheep raisers of this State.

The Undersigned have only to ask that purchasers should see these sheep to insure satisfaction to them.

EVERY ANIMAL SOLD CAN BE FULLY

GUARANTEED TO BE OF PURE BLOOD.

They feel that they only need to copy from a valuable work, recently published (An Historical Account of Addison county, Vermont, a place long famous for fine-wooled sheep), to show the character of the flock now offered by them. These extracts are given to show the origin of the sheep:

"Messrs. Jones & Rockwell, since their connection, have been eminently successful. In 1852, owing to repeated applications for French Sheep, which had been introduced into the country about six years before, they invested in the purchase of these sheep \$2,200; a part of which included a first choice from the flock of Merrill of Bingham. These sheep, they say, were the most perfect of the kind they had ever seen. In 1853, they purchased of Solomon W. Jewett, of Weybridge, one entire shipment of French sheep, imported by him in April of that year. These purchases, with some subsequently made, cost \$15,000. For several years previous to the spring of 1855, when this information was communicated, their annual sales varied from eight to twelve thousand dollars. For the eighteen months next preceding, they amounted to \$35,000. Their flock on hand, at the date above mentioned, numbered six hundred; one-half imported French Merinos, and their descendants. They have a high opinion of the French as well as Spanish Merinos, and think a cross between these breeds would be advantageous."

"William R. Sanford, Esq., of Orwell, and Messrs. William S. and Edwin Hammond, of Middlebury, have for several years, been extensively engaged in breeding and dealing in sheep. For our convenience we treat of the operations of these parties together, as they have been to some extent connected, and much of our information relating to both, has been obtained from Edwin Hammond, Esq. They both breed the pure Spanish Merinos, descendants of the flock, which Col. Humphreys, who was at the time American Minister to Spain, imported into Connecticut in 1802, or of the flock which William Jarvis, Esq., then American Consul in Spain, imported in 1803, 1810, and 1811. These they greatly prefer to any more recently imported, or to any other breed."

The best buck of W. R. Sanford, Esq., alluded to above, which was used by Mr. R., and which won the first prize in Vermont, and at the National Fair at Boston, in 1855, was purchased by us, and from him we have raised a splendid flock, a part of which can be seen in the present importation, descended from this famous buck. The record further says of one class of sheep as follows:

"Mr. Edwin Hammond thinks the Spanish sheep have improved greatly since their importation into this country, and especially in this county; and that there are better sheep in the county of Addison than in ANY OTHER PART OF THE STATE. This opinion is founded on his own personal examination of the best flocks in this country, and the examination by Mr. Sanford and others of the most celebrated flocks in Europe. He offered, he said, to Mr. Sanford, on his going to Europe, one thousand dollars for a pair of imported sheep, as good as his, with a view of crossing them with his present flock; but Mr. Sanford found none such during his tour. In 1854 they sold two ewes for \$1,200."

"In 1851, Mr. Jewett went to Europe, for the purpose of examining and purchasing sheep, and has been twice since for the same purpose. In France he purchased, at fifteen or twenty shipments, seven hundred French Merinos, which he selected from the three best flocks in that country, owned by Messrs. Gilbert, Cugnot, and Guerin, and a few from the government flock at Rambouillet. His sales amounted to from fifteen to twenty thousand dollars annually."

In 1855, the Undersigned purchased of Mr. Solomon W. Jewett, who had been so long established as a sheep dealer, and to whom allusion has been made, his entire flock of the State, and he will be happy to make the acquaintance of sheep raisers in their various routes, of which notices will appear in the FARMER.

Letters addressed to us at San Francisco, will come to us, and will be promptly answered.

N. B. We are permitted to refer to the following gentlemen to whom we are known:

REV. DR. PECK, San Francisco.
REV. DR. THRALL, San Francisco.
FRANCIS D. LONG, Esq., Marin county.
ROCKWELL & COY., San Francisco.
J. L. SHAPPEL, Esq., San Francisco.
COL. W. ARREN, Editor FARMER, who can show our sheep and samples of their fleeces.

JONES & ROCKWELL.

Fine Vineyard and Orchard

TO LEASE.

WANTED, to lease for a term of years, A MOUNTAIN FARM, upon which is now a fine Vineyard and Orchard of Choice Trees. The terms will be such as to be an inducement to a good Horticulturist; none other need apply. For particulars inquire at this office, or at the Golden Gate Ranch, near Mokelumne Hill, Calaveras county. 6-1m

WANTED TO BE KNOWN

As a Mill-Wright.

THE undersigned would respectfully submit for the consideration of merchants and farmers, that being lately from the States, with the experience he has had in Mill building, he can construct a more effective Mill for flouring wheat, with much less expense than is usually incurred.

The improvements that can be exhibited cannot fail to secure approbation. Owners of mills, merchants, or farmers will be favored with an interview, or a response to any communication, exhibiting all particulars.

Letters addressed W. W. and left at this office will be promptly attended to.

The advertiser is permitted to refer to Col. Warren, Editor of the FARMER.

BERKSHIRE SWINE.

THREE FULL-BLOOD BERKSHIRE BOARS, and three FULL-BLOOD BERKSHIRE SOWS, just received by the Great Republic. Persons wishing to purchase will please call at Fish's stable, Pine street, or at our office. They are in fine condition.

Letters addressed to Editor CALIFORNIA FARMER will be immediately responded to.

Important to Stock Raisers!

GREAT SALE OF THOROUGH-BRED CATTLE: DEVONS.

THURSDAY, - - - April 19th, 1860, At 10 o'clock M.

AT FISH'S STABLE,

PINE STREET,

SALE OF DEVON CATTLE.

Twelve Devon Bulls, Cows, and Calves,

THOROUGH-BRED.

Imported and Raised by CHARLES A. ELY,

Esq., Lorain County, Ohio.

The First Sale in California

OF

PURE DEVON CATTLE!

We invite the attention of parties interested in the raising of Blood Stock, to the following sale of PURE DEVONS,

assured them that each and every one of these Thorough-bred animals has either been imported directly from England, by Charles A. Ely, Esq., or raised by him from those that were imported by him. And as an evidence of their quality and value, several of them have already WON THE BLUE RIBBON at a number of Cattle Fairs in various parts of the United States.

We feel a pride in presenting this fine lot of Devons to our California Farmers, as they comprise the best judges of Stock that are to be found in the United States, and are always seeking the best blood to rear from.

These Devons have been brought from Mr. Ely's farm in Ohio, at an immense expense, knowing their peculiar adaptation to California climate and grazing, and from his long experience in the raising of Blood Stock, all may rest assured that these are of the Very Purest Blood.

BULLS.

DUKE OF DEVON—Calves April 16, 1849. Bred by Mr. Derry, of North Moulton, Devonshire, England. Imported, 1851, by R. C. Garper, of Richmond Hill, Canada, West. Owned by Mr. C. A. Ely, Esq., Lorain county, Ohio. His sire took the prize at the great Agricultural Show, held at Windsor, England, in 1851. Dam bred by Mr. Derry. DUKE was taken prize at the State Fairs in Ohio, Michigan, Indiana, New York, and Pennsylvania; also the first prize at the Great National Fair held at Louisville, Ky., in 1857.

EMIGRANT—Calves June 6th, 1852. Bred by Mr. C. A. Ely. Dam, Catherine; bred by F. V. Smith, Branch county, Michigan. G. dam, Lady (1816); gr. g. dam Devon (658); sire Duke of Devon.

WYANDOTTE, Jr.—Calves March, 1859. Bred by C. A. Ely. Sire Wyandotte; bred by U. S. Walcott, of Dutchess county, N. Y. Gr. sire, imported May Boy (71); dam, imported, imported (584); g. dam and gr. g. dam bred by Mr. John Haley, of Milledale, Devonshire.

COWS AND HEIFERS.

JENNY LIND—Calves May 1847. Bred by F. V. Smith, of Branch county, Michigan. Sire, Wallace; g. sire, Dibble (176); dam, Beauty (361); bred by Mr. Sheldon, Wyoming county, N. Y.

DELICATE—Calves April, 1854; sire, Duke of Devon; dam, Lady 2d; g. dam, Lady (1816); gr. g. dam, Devon (658).

CALF NELLY—Calves February 10th, 1859; sire, Wyandotte; g. sire, imported May Boy; dam, Delicate.

ROSA 2d—Calves March 30th, 1853; sire, Duke of Devon; dam, Rose, by Santa Anna (338); g. dam, Diana, bred by Mr. Beck, from importations of King & Patterson; gr. g. dam, Dairy Maid.

CALF LOUISE—Calves February 18th, 1859; sire, Wyandotte; g. sire, imported May Boy; dam, Rosa 2d.

VICTORIA 2d—Calves May, 1858; bred by Mr. C. A. Ely; dam, Victoria, by Dibble (476); g. dam, Sophia (1033); gr. g. dam, Victoria (1106); gr. g. g. dam, (158); sire, Duke of Devon.

CATHARINE 3d—Calves October, 1858; bred by Mr. C. A. Ely; dam, Catherine; g. dam, Lady (1816); gr. g. dam, Devon (658); sire Wyandotte.

LADY 4th—Calves April 5th, 1859; bred by C. A. Ely; dam, Lady 3d, which took the prize at two years old, at the Great National Fair, Louisville, Ky., 1857; g. dam, Lady 2d; sire, Wyandotte.

BONITA—Calves on the Plains, August 20th, 1859; dam, Jenny Lind; g. dam, Beauty (361); sire, Duke of Devon.

The above described Cattle are especially commended to citizens of California, as offering the best opportunity they have ever had for supplying themselves with the most valuable breed known to stock raisers.

The large proportion of Cows and Heifers in this sale, gives purchasers an opportunity, not only of improving their common stock, but also of personalizing the breed in its purity.

For further information, apply by letter or otherwise, to ourselves, or C. A. Ely, Esq., at our office, 144 Washington street.

LIZZIE WILEY WARREN, M. D., EDITRESS.

Tea and Coffee.

The following with this caption, from Hall's Journal of Health, appearing in No. 3 of the Farmer, states: "That tea and coffee are proved by science and fact to be nutritious as well as stimulant, and consequently they will do a new good to the system every day," and other statements quite as absurd, to say nothing of their falsity. The world is generally monomaniac on stimulants. "They are indispensable to our existence," "we live by the stimulation of heat, electricity and light," etc., are delusions which seem to have taken possession of the human mind, and the result is disease and dissipation in their wildest and worst forms. All the condiments of the epicurean-dinner are used because of their stimulating effects; so with coffee, tea, and ultimately the alcoholic drinks. It is a misuse of terms to call light, heat and electricity, stimulants. There would be quite as much philosophy in saying, living is stimulation. The delusion that stimulants are necessary to our existence is hurled broadcast, without an investigation of the premises of such a conclusion. One fundamental principle in the science of physiology, "that all stimulants debilitate in the same ratio that they stimulate," is quite sufficient to disprove the assertion. Giving a tonic to a dyspeptic stomach to digest a big dinner produces no action, as it is repelled to its presence there causes an increased action in the stomach to get rid of it, as an offending and poisonous substance, and by this increased energy the food for that time is digested, always leaving the organ in a weaker condition than when it was taken. If some one should shovel a tun of refuse-matter into your cellar, and you have to shovel it out to get rid of it, would the action be on the part of the matter, or on you? We opine that the action would be wholly on your part, while the matter would remain completely inanimate; and, no doubt, your vital energies would be very much taxed and materially weakened, if you had already completed your day's work, and had used up all the vital powers you had to spare.

A reader of the Farmer wishes to know why we published an article of that kind, giving persons who want a plausible excuse for using tea and coffee, free license to indulge in those beverages, to the extent of their capacity of purses and stomachs? We can only say that it was not in "our Department," and we did not select it for the "Miscellaneous Department."

The fundamental principle on which this delusion of stimulants rests, is: 1st, The physiological capability of the human body to adapt itself, by depravity, so perfectly to the action of the most baneful substances, that it will manifest no immediate symptoms of the poisonous effects of such substances; 2d, The stimulation produced by even the most deadly poisons to which the system is accustomed, is identified in the mental consciousness with the natural and healthy physiological stimulation of the body, and is enjoyed in proportion to the physiological depression which it removes, and the agreeable exhilaration which it causes; 3d, The use of tea and coffee is commenced at so early a period in life—they are first used in such small quantities, and so gradually increased, and the physiological powers of the body are deprived by such imperceptible degrees—that those violent and distressing symptoms which indicate the immediate actions of a powerful poison, very rarely if ever result from the habitual use of those substances. The consequence is, that the depraved appetite which they create, the physiological depression and the demand for stimulation which they cause, and the grateful exhilaration which they produce, make all who use them, love them in proportion to the freedom with which they are used, and with equal confidence believe they are perfectly salutary cordials and indispensable necessary to comfort and health. But if, instead of commencing the use of these substances in very small quantities, a full cup of strong coffee or tea were taken at the first time, either by a youth or full-grown person of a healthy and undepraved body, the violent and distressing symptoms which would inevitably result, in every case, would leave no doubt of the poisonous character of these substances.

A noted physiologist says: "A notion has prevailed quite extensively that green tea is more harmful than black, on account of the former being cured on copper; but this is wholly incorrect. Green and black teas are varieties of the same plant; and the only reason why green tea is a somewhat more active and powerful poison is, that its natural properties are less impaired by the process of curing. We are informed, however, that since 1833, a large proportion of the green tea imported into the United States has been manufactured from damaged black, by a process in which a small quantity of Prussian-blue is used; yet with this addition, the tea thus manufactured is not more injurious or poisonous than the genuine green tea of the best quality. But in regard to tea and coffee, as of all other intoxicating substances which human beings use as means of habitual stimulation, there is a blind determination on the part of those who thus employ them to defend their character, and to ascribe whatever evils may be connected with the use to something besides the intrinsic properties of the substances themselves. Yet, considering how early in life tea and coffee are introduced into the diet of children, and how universally and freely they are used by both sexes of every age, it is greatly to be doubted whether they are not at present actually doing more injury to the human constitution, than any other intoxicating substances used in Christendom. Besides the injury done to the body by the very high temperature in which they are usually drunk, their strong narcotic property, in proportion to the freedom with which they are used, has the same deleterious effect as tobacco, opium and alcohol—impairing and serving to destroy all the physiological powers of the human system. The appreciable morbid effects which they produce are, of course, modified by the different degrees of consti-

tutional power in different individuals, and by all varieties of situations, circumstances, conditions and habits of life; but, in all cases, they impair the functional powers of all the assimilating, circulating, and other organs concerned in the general office of nutrition, cause more or less of unhealthy irritability to the nerves of organic life, debilitate the brain and whole cerebro-spinal system, diminish the muscular power, in every respect pre-dispose the body to disease, always aggravate disease when induced, cause frequent and distressing physiological depression and mental disquietude and despondency, and strongly tend to delirium and insanity." There is no doubt but that tea and coffee will induce *delirium tremens*, if used to the excess that alcohol is. If the evils and pain-suffering, etc., resulting from the use of tea and coffee, were confined to the individual who uses them, it would merely be an individual affair, an individual pain, disease, *delirium tremens*, insanity and individual death; but, unfortunately, it is like every other sin: contaminating to all who come under its influence. The mother transmits their evil effects to her unborn child; and then it has to subsist on her milk with that poisonous infusion in it; thus creating a depraved appetite for stimulants, and the final result is, that the child, if ever it grows to adult-life, is a weak, dyspeptic, consumptive, muscleless, and almost lifeless, being, ready to transmit all its disease to its progeny, with the additional effects of stimulants, tobacco, liquor, and perhaps opium, which its unnatural and depraved appetite demanded. Thus, the race is degenerating. Who can imagine the happy and beneficial results, if the State of California should abolish the importation of tea and coffee, and keep the almost innumerable amount of gold paid out for those articles, at home, and plant fruit orchards, and eat the fruit thereof instead. Why, we would be the happiest, healthiest, and wealthiest people on the earth. Happiest, because we would have done right instead of wrong; healthiest, because we would have eaten fruit instead of poison; and wealthiest, because removing the first cause of the necessity of stimulation; the people would not require or demand any of the greater stimulants, which tea and coffee induces; and we would save all the money paid for tobacco and alcoholic drinks! If Californians would consult their best interests, this could and would be done. Americans, and particularly Californians, can do anything within the power of mortal man; and this would be "purely Californian," and no doubt highly gratifying to those who plead for that which is "purely Californian." What an honorable and exemplary act it would be for this young, beautiful, and wealthy, State, to abolish the importation and prevent the growth and manufacture of those substances, so destructive to human life and health and happiness. She would increase in beauty and wealth, *ad infinitum*; and her resources would exceed those of all the other States in the Union. More anon.

(For the California Farmer)

OF THE GOODNESS OF GOD.

EXTRACT NUMBER V.

Now the blessings God has given,
Will not crumble nor depart;
All the world combined together,
Cannot tear them from the heart.

When the smiles of earth have vanished,
And its crushing cares begin,
We are happy when we murmur:
"I have not committed sin."

Fruitful harvest, rains in season,
Come to all from God above;
But he gives the "hidden manna,"
To the children of his love.

Earth may snare the careless footsteps,
Ere its arts are understood;
Therefore be as wise, oh Norrel,
As you have been kind and good.

This is why our Lord commanded
The disciples of his love,
Saying, "Be ye wise as serpents;
Be ye harmless as the dove."

Choose your steps with watchful prudence,
Walking on the even sod;
But a surer path of safety,
Is to put your trust in God.

I was walking sad and lonely,
In the melancholy night,
Yearning for the friendly shelter,
Cheered with warmth, and love, and light.

When athwart the dismal darkness,
Like the beaming of a star,
Lo, the *ignis fatuus* glimmered,
Like a friendly light afar.

Say that it was dim and changeful,
And uncertain to the eyes:
Norrel, it was all the glimmer
I could see beneath the skies.

That I followed it so careless,
Showing thus my want of skill,
Was the error of my judgment,
"Twas not of my heart or will.

Well, I drew my mantle round me,
Thither now I bent my way;
Foolish dreams of bliss and loving,
Now in tender fancies play.

And I wandered on, and onward,
Though the light no nearer drew,
Till my heedless steps had led me,
To the tangled marsh and slough.

Dangers now began to gather;
Naught but thorns to walk upon;
Flickering faintly in the distance,
Now at last the light was gone!

Then the storm came sweeping downward,
Driven by the howling blast;
Piercing with its chilling coldness,
And the rain came falling fast.

"Why am I," I pined and pondered,
"Vexed with all this petty strife?"
Seeking bliss in dreams unreal,
Ignis fatuus of life!"

Earth has never yet afforded
Any bliss without alloy;
Only those who "live for something,"
Drink the draught of perfect joy!

Think of this, who live for nothing:
Man is of a royal birth,
Wearing his Creator's image!
Should he cumber then the earth?

Wandering in life's tangled mazes
Till he faint and perish there,
And I cast my eyes to heaven,
In a deep and fervent prayer.

Oh the bliss! the holy pleasure!
That from faith and trusting flow,
Suddenly my skies were brightened,
With a glittering golden bow.

And a bird was perched upon it,
Warbling with lifted wings
(Golden plume and snowy breast);
Sweetly thus it seemed to sing:

"In life's tangled maze and mazes,
All is dark as dark can be;
Leave the dream of youthful folly;
Turn from earth and follow me."

Then I drew my mantle round me,
Wiped the tearsdrops from my eyes,
For a light was thrown about me,
And I found my garments dry.

And I followed where it led me,
Seeming to the darkest way!
Where it led and where I followed,
Only gleamed the light of day.

Howling winds were changed to sighs,
And the threatening bog and slough
Were transformed as I approached them;
And a bed of violets grew.

Though the storm was beating round me,
Strange, it never wet my clothes!
Every thorn I touched in stepping,
Suddenly became a rose.

And the bird was sweetly singing,
Making music glad and free;
Norrel, shall I sing unto you
The sweet song it sung to me?

"Tis," it said, "the path of duty,
Free from danger, free from harm,
Thorny oft to look upon it;
Follow, for it wears a charm."

In life's tangled maze and mazes,
All is dark from left to right,
But the even path of duty,
Shines with everlasting light.

Christ has called you from the mazes,
To the green and pleasant grove;
Follow onward, looking upward,
To the angel of his love."

BERTHA RAY.

WHEELER & WILSON'S FIRST PREMIUM FAMILY SEWING MACHINES!

AT
REDUCED RATES!

The character of Wheeler & Wilson's Sewing Machine is too well established to admit of any controversy in regard to its merits. They have received the commendation of all the papers in the country. Notice what the Scientific American says—the leading mechanical and scientific paper of the age: "We are having a great many inquiries for Sewing Machines, from all parts of the country, and as we cannot conveniently reply to them all by mail, we have thought proper to state our opinion of them in this public manner. We have used Wilson's Patent, manufactured by the Wheeler & Wilson Manufacturing Company, No. 95 Broadway, and we can say in regard to it, that it is without a rival. It is simple, not easily out of order, and, in point of effectiveness and finish, no other Machine stands ahead of it. We state this much in regard to the excellent Machine on our own responsibility."

The Highest Premiums Were Awarded THESE MACHINES

At the following Fairs in 1855:

Missouri State Fair, Illinois State Fair,
Mississippi State Fair, New York State Fair,
New Jersey State Fair, Maryland State Fair,
Virginia State Fair, Wisconsin State Fair,
Michigan State Fair, Pennsylvania State Fair,
Kentucky State Fair, Indiana State Fair,

CALIFORNIA STATE FAIR,
Chicago Fair, St. Louis Fair, Richmond Fair, Baltimore Fair,
San Francisco Mechanics' Fair.

EVERY KIND OF SEWING

Can be done with

Wheeler & Wilson's Machine!

ONE MACHINE DOES THE WORK!

Hemmers, for Wide and Narrow Hems, with each Machine.

Among the undoubted advantages of WHEELER & WILSON'S Sewing Machines are:
1—Elegance and simplicity of construction, and consequent freedom from derangement and need of repair.
2—Durability.
3—Unexampled ease and rapidity of operation.
4—Noiseless movement.
5—Beauty of stitch and firmness of seam.
6—Economy of thread.
7—Applicability to a variety of purposes and materials. They are applicable to every kind of sewing for family wear, from the lightest muslin to the heaviest cloth. It works equally well upon Silk, Linen, Woolen, and Cotton Goods; Seaming, Quilting, Hemming, Gathering, and Felling; performing every species of sewing except making button-holes, stitching on buttons, and the like. Various appliances are furnished for regulating the width of Hems.

MACHINE WARRANTED

Thread, Silk, etc., Constantly on Hand.

R. H. HAYDEN, Agent.

FIRST PREMIUM AGAIN!

BEING THE

SEVENTH TIME RECEIVED

Against All Competitors.

R. H. VANCE,

Corner of Montgomery and Sacramento Sts.,

SAN FRANCISCO.

Having again received the FIRST PREMIUM awarded at the State Fair for the BEST AMBROTYPES and PHOTOGRAPHS, it is guaranteed that all who favor me with a call are sure to obtain better work than can be produced at any other rooms in the State. I would say to my patrons that I am now producing better work than ever, at much REDUCED PRICES, to conform to the times.

Having reduced my prices more than 30 per cent, no one need hereafter go to second-rate establishments on account of price. Instructions given in the art, and stock furnished. Having over \$20,000 worth of Cameras, Glass Plates, Cases, and Chemicals, on hand and on the way, I shall hereafter dispose of them at about New York prices.

TO SHEEP FARMERS.
The undersigned, having had many years' experience as a (farmer), offers his services either to CURE Diseased Sheep affected with Scab, Footrot, &c.; or would take a situation to Superintend a Sheep Ranch. Having cured some badly diseased sheep in California, he can give satisfactory references. Address, by express, W. M. KIRBY, Taylor and Greenwich streets, 2, San Francisco.
Reference—L. H. Hall, Jr., California and Front streets; Col. Warren, Ed. Cal. Farmer; Edw. Bosqui, No. 23 Market street.

WANTED.

BY AN AMERICAN FARMER, WHO UNDERSTANDS Stock-raising and dairy business, a SITUATION to take charge of a large Ranch; or would be willing to take dairy on shares, in a locality suitable for honey-bees. Please address "M. D. CALIFORNIA FARMER" Office, San Francisco. References given and required.

THE LARGEST AND BEST ASSORTMENT OF

FIRST PREMIUM ROSES and DA

BIRTHDAY MEDITATIONS.

BY CRANFORD KENNEDY.

A youthful traveler bath reached, to-day,
A deep-post erected on life's way,
Which points back to birth, and on to death,
Which tells the years since first he drew a breath,
But shows not the time 'twixt him and death.

I have a year the less on earth to be,
Mine eyes another year the less to see,
My brain that space of time the less to think,
My soul another year the less to drink
Deep thoughts from inspiration's sacred well,
Where truths eternal and immortal dwell.
True knowledge from creation's wondrous book,
Which prompts for the invisible to look,
Whose attributes are never known aright,
Save in the rays of revelation's light.

The past is passed, the present only's mine,
For death upon my pathway lies behind;
And I rush downward to an open grave,
As 'fore the tempest speeds a foam-capped wave!
Most solemn thought! How while I live I die;
My life's a race whose beauty chains the eye,
Whose leaves, to-morrow, scattered, withered lie!
A life of joy is but a fleeting day,
From an eternal sun a transient ray!
A life of ease is but a dream-drawn sigh,
For liberty a captive-spirit's cry!
A life of mingled happiness and woe,
A passing cloud in which a rainbow glows!

Jehovah! may I now my heart apply,
To know Thee, as a Savior, ere I die,
That from the "wrath to come" my soul may fly,
And live through all eternity thereby,
Unlike the souls who would, but can not die,
And both in earth and heaven Thee glorify?

Thou art life's fountain, I a trickling rill,
Meandering down the side of Time's steep hill!
Thou art clarity, I but a day,
Yet hearken, for Thy Son's sake, when I pray!
Until the day of death, O may I strive
To make the world believe I am alive!
Alive, to sympathize with men who groan
In honest poverty and grief—alone;
Alive, to utter hopeful words of cheer,
Which downcast mortals shall rejoice to hear;
Alive, to wipe away the orphan's tears,
And soothe the broken-hearted widow's fears;
Alive, to join in every effort made
The cause of truth and liberty to aid;
Alive, to stem transgression's mighty flood,
That bathes our universe in vice and blood;
Alive, to dissipate the gloom of night,
Diffuse the radiance of celestial light;
Disseminate the precepts of Thy Son,
And bless the world until my course is run!

O God, bestow what for myself I crave,
And from the power of sin Thy people save!
Then, Satan, angels damned, and heavenly hosts
Shall feel that Christians are not myths or ghosts;
But living, acting, mighty sons of God,
Who tread the pathway that Thy Savior trod!
Then all the world in love shall worship Thee,
Through Christ our Lord. Amen. So let it be!

[For the California Farmer.]

Leaves from My Journal—No. 12.

BY M. A. SABLES.

WHAT a transcendent beauty clothes the spring
landscapes of California; the sky so gorgeously
radiant, so blue, that even the eyes of the loveli-
est maiden, when listening to the enthusiastic lan-
guage of her chosen lover, are not as enchant-
ingly perfect in color; the soft, smooth verdure,
embroidered with myriads of charming wild-flow-
ers, that deck the hills and carpet the plains;
the delicate tint that is a reflection of the sky,
that marks the winding of the Straits, except
where the sun transforms the quiet water into a
sheet of burnished gold so magnificent for the
eye to rest dreamily upon; and the soft, balmy air
that fans us to rest, or causes us to build castles
in the air, or dream of the past.

I am on Pioneer Hill, and with the crushed-
grass and the broken-down wild-flowers for a
couch, and dreaming of the past. See! a cloud
has arisen behind the majestic brow of King Di-
ablo. Hark! toll, toll, toll; that train winding
slowly and darkly up the hills, in the midst of the
sunshine, must be a funeral, or the bell would not
sound so regretfully mournful. The cloud and the
bells have directed the current of my thoughts.

The city, New York; the place, the Broadway
Tabernacle; the occasion, a political meeting;
the time, "many and many a year ago." Upon the
platform stands a speaker not very tall, but com-
manding in appearance; not handsome, but with
a face wonderfully expressive; his voice rings out
clarion-like; his language is fluent, elegant, and
eloquent, and his gestures are full of power and
remarkable for portraying to the minds of his
hearers most admirably the figures pictured by his
words. "Yes, fellow citizens," he was closing,
"in every family there must be a generous charity
to insure happiness, a tender and an unselfish
treatment of the faults that are common to all,
and I feel that the union of this country can only
be preserved by a cultivation of the noblest and
the most magnanimous charity that I hope and
pray to God may be found living and active when-
ever a crisis shall arrive in national affairs."

The place is Wall street; two gentlemen are
talking; one is a distinguished counselor, the
other a student. "And so you think, sir, a law-
yer can be at all times conscientious, even in the
commencement of his career." "Certainly, my
dear boy, it is the man not the profession that is
dishonest."

The time is a rainy afternoon, the scene is Irving
Place. "Be kind enough to wait a moment, Mr.
S., and I will give you the brief." The speaker
returns to his manuscript and writes with the
rapidly characteristic of all his movements. A
door opens and a sweet-voiced, beautiful child
runs in. "Papa, dear papa, you are very busy,
but you have been writing all, all day, and I
thought I would run in just for a moment to tell
you I have learned every lesson, for you say this
always rests you. Am I not your own dear girl?"
"Darling," and the father's eyes were full of light,
and his words soft and low as a woman's, and
every word trembled with love, "you are indeed
my own dear girl; you have rested me. God bless
you."

The bell has ceased tolling, the train is already
at the top of the hill, and I am a bare-headed
spectator of a mournful scene in life, if one does
not look upon the sublime beauty surrounding us
as convincing proof the existence of God, if Na-
ture does not make us feel the glorious faith in
immortality.

For away in New England, I am told that the
sun shines on a simple slab of marble in a rural
cemetery. The letters spell the name of a politi-
cian who was a patriot, of a lawyer who was hon-
est, of a father whose love was indeed unselfish.
The grass has not yet grown up to the letters, and
the flowers do not yet bloom upon the grave.
Shall I write them here? It will tell that even in
distant California a cloud has darkened the sun-
shine and the tolling of the bell has been felt in
imagination, although we know that affectionate
remembrance will ever hallow the memory of
while the lips pronounce with tender reverence the
name written upon the marble slab, "Thomas
Sawney."

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with
SPRING AND CURLED-HAIR MATTRESSES AND LINENS
than any other House in the State. It is one of the largest
Hotels in California; a fire-proof building, and provided with
Bentley Water throughout the House. It has a frontage on
Jackson street of 57 1/2 feet, by 173 feet deep. There are no
dark rooms in this house, all having free and open frontage,
with pure air, which is of great advantage to a California
climate, there being no large buildings adjacent thereto.
The undersigned invites the attention of the Traveling
Public, and Strangers in particular, to the merits of this
House. It was established under its present Management, on
the 1st of January, 1887, as a

First-Class Hotel,
IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to
encroach upon the merits of other Houses, cannot but recall
the marked favor with which his enterprises has been received
by a discriminating public, in a constantly increasing patronage
of the FIRST RESPECTABILITY, showing conclusively the
SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most Popular
Places of Amusement, the Principal
Thoroughfares, the Fashionable
Promenades and Steam-
boat Landings;

Thus rendering it at all times the most
DESIRABLE STOPPING PLACE FOR
FAMILIES AND SINGLE GENTLEMEN,
During their sojourn in this city.

For a year past we have studied how we can maintain a
FIRST-CLASS HOTEL, and at the same time effect some re-
duction of price below three dollars per day to our friends.
We are happy to announce to you that we have succeeded in
our effort.

We have obtained a reduction of our heavy rental; and we
have now under cultivation, in the suburbs, a Rancho, which
produces our Vegetables fresh from the ground, with a Dairy
that secures the purest Milk and Cream, and a stock of
Cattle that supplies Eggs and Poultry always fresh; with many
other economical advantages. By this means we can promise
our friends that we shall even improve upon the proverbial
excellence of our Table; and the same matches beds, and
sollicitous attention to the comfort of our Guests, will con-
tinue to be the pride of the Hotel International.

We have Elegant Suites of Family Rooms, together with
highly furnished single apartments for Families or Single
Gentlemen, which, together with the untiring energy of the
Proprietor, makes this House one of the most Popular Hotels
in the United States. For comfort and luxury this house is
not surpassed.

JOHN J. HALEY, Proprietor.
The International Coach will always be found at the
landing of the steamers, to carry passengers to the Hotel. (15

Self-adjusting Post-Driver.
A valuable Implement for Farmers.

HYDE'S PATENT SELF-ADJUSTING POST-
DRIVER is now offered to Farmers, as a valuable
implement in FENCE-BUILDING. It is a hammer works
in a swinging frame, rendering it self-adjusting on un-
even or hilly land. It has been used on hills where it
had to be hauled up with a tackle; any common carpen-
ter can construct one. The two pulleys, one on the drum,
and the other on the crank, are to be covered with
leather or rubber belting, and when pressed together by
the foot lever, the friction of one on the other is sufficient
to raise the hammer, and on lifting the foot from the
lever the drum is free and the weight drops; and so on,
setting posts far better and much more expeditious than
can be done by digging and ramming.

A model of this Machine can be seen at the FARMER'S office,
where HIGHS are for sale. Price of Right for single
machine, \$10; and County Rights according to population,
etc. 20

OLIVER HYDE, Patentee.

OFFICIAL NOTICE!
POLHEMUS' DRUG STORE.

No. 100 J Street, corner of Seventh.
SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since
the ever glorious FORTY-NINE, have suffered with
you in three fires and three floods, and intend to live
among you with my family during the term of my natural
life, if not longer. I return you my most sincere thanks
for your unflinching patronage in that respect, which has
enabled me to pay One Hundred Cents on the Dollar
through all my adverse fortune. I would also give you
a few reasons for your continued patronage, and induce-
ments to new patrons likewise.

FIRSTLY.
I claim to be the Oldest Established Legitimate
Druggist in this City.

Persons in this connection will please observe that there
is as much difference between a DOCTOR and a DRUG-
GIST as there is between a Doctor and a Doctor, and
rather more so between those who have picked up the
Drug Business and those who have devoted their whole
life to it. To this latter class I have the honor to belong,
having learned my business in the Atlantic States, and
been engaged in said business for the last eighteen years.

SECONDLY.
Believing that life is sweet to all, and that the people
wish to know where they can get their prescriptions filled
with safety, I will hereafter fill them for
Half the Price Usually Charged.
By other Druggists, legitimate or illegitimate, and of
The Furthest Druggists and Chemists.

THIRDLY.
I intend my store shall be ONE of the best, if not THE
BEST place in California to obtain everything, NEW,
OLD and STRANGE in the Drug line, and especially to
make it the most extensive depot for every valuable
Patent Medicine, Drug and Chemical. We invite pro-
prietors of valuable and reliable Patent Medicines to send
them along. We have a large and thoroughly fire-proof
Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.
We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.
We will furnish those in indigent circumstances with
MEDICINES AT COST! the same being attested by two
or three good citizens.

SIXTHLY.
Hereafter we will do a business on a CASH BASIS
ONLY. The amounts we have lost heretofore by credit-
ing we intend to distribute equally among our patrons, in
the future, in the decreased price of our goods.

SEVENTHLY.
We have received the agencies for the following valu-
able articles:

Dr. Carl Warburg's Tincture. This article is par-
ticularly recommended for Ague and Fever, when every other
article fails to cure. Buddha's Nerve and Bone Lin-
iment, warranted the best in California.
Delight's Spanish Liniment, for the Hair.
HUDSON'S CALIFORNIA GROWN MUSTARD.
Also, agencies for all the other popular medicines too numer-
ous to mention.

EIGHTHLY AND LASTLY.
We import nearly all of our goods. We think we know
how to import them, and how to sell them to satisfy the
public as to price and quality. At all events, give us a
call, and WE WILL TRY.
v6-12 J. L. POLHEMUS

NURSERY BUSINESS, &c.

J. R. RAY,
SEED AND NURSERY DEPOT,

No. 106 J STREET,
SACRAMENTO.

HAS IN HIS NURSERY, SUBJECT TO THE
order of good cash customers, the most exten-
sive assortment of

TREES, SHRUBBERY, AND VINES.

To be found in the State, consisting of every variety of

Almond, Mulberry,
Apple, Nectarine,
Apricot, Peach,
Blackberry, Pear,
Cherry, Plum,
Fig, Strawberry,
Gooseberry, Quince,
Grape, Raspberry.

Beside a good stock of SHRUBBERY and SHA-
TREES, for beautifying homes.

Samples, comprising a few thousand trees, may be
found at my Seed and Nursery Depot.

SHADE TREES,

For sale this season, consisting of—
10,000 Locust Trees,
1,000 China Trees,
Lombardy Poplar,
Mountain Ash,
Magnolia Acuminata,

Together with
Elm, Linden,
Ash, Weeping Willow,
Maple, Arbor Vitae,
And other Evergreens—all warranted.

The Locusts are certainly not equalled, by any lot in
the State, for beauty and size; they are from two to
three years old, straight and well grown, varying from
ten to twenty feet in height.

SEEDS! SEEDS!

The extensive SEED DEPARTMENT contains a
complete stock—

FOR THE GARDEN, FIELD, FOREST & NURSERY.
Either from the best seed-growers in the country, or
raised under my own supervision. Much care is taken
to have Seeds free from mixture, and every package of
seeds sold is, with proper care, warranted to grow and
produce what is marked on the label.

Hop Vines, Rhubarb Roots, Asparagus Plants, Grape
Cuttings, Dahlia Roots.

And everything appertaining to the Seed and Nursery
business, for sale at greatly reduced prices from last year.

ARTICHOKEs, CHUFAS—articles deserving special
notice—are for sale in quantities.

Dealers will be supplied on the most liberal terms.

Small seeds can be sent per Mail to any part of the
country. 22-3m

HOP ROOTS.

THOSE DESIRING TO ENGAGE in that lucrative
business—HOP CULTURE, now exciting so much
interest—can be furnished with good vigorous roots,
of the best variety, from the oldest Hop Yard in the State.
The crop from this yard has just been sold for \$1 per lb.
My Hop Yard is twenty-five miles below this city, on the
Sacramento river. The vines, covering one acre, were
planted about four years ago. Parties wishing to engage
largely in the business will be supplied on liberal terms.
Address
Seed and Nursery Warehouse,

BULBOUS ROOTS.

The undersigned, from his long experience in the business,
and his extensive facilities for procuring his seed from the best
seed growers in the United States, France, and England, is
enabled to sell at lower prices than any other house.

The Agents of Wells, Fargo & Co.'s and Freeman & Co.'s
Expresses are hereby authorized to act as Agents for the under-
signed in taking orders for Seeds and receiving for the same.

Orders by mail also promptly attended to. A liberal dis-
count will be made to the Trade. Particular attention given
to the careful packing of Seeds for shipment. Your early
order will be filled, which shall have immediate and faithful
attention.

S. W. MOORE,
Seed Warehouse, 110 California street.

Boxes of Seeds containing 100 Papers for retailing, in
such amounts as desired, will be furnished. 11

CHUFAS

OR

Earth-Almonds!

50 Pounds of CHUFAS or EARTH-ALMONDS, for sale by

S. W. MOORE,

Seed Warehouse, 110 California street.

To the Seed Trade,

HAVING THE LARGEST AND MOST EX-
tensive stock of

SEEDS

Now growing and harvesting in the Union, we are pre-
pared to supply Dealers on the most favorable terms.

Our American Seeds

Are with few exceptions raised under our own immediate
supervision, and we can warrant them as First-class in
every respect.

Dutch Bulbous Roots,

such as
Hyacinths, Tulips, Polyanthus, Narcissus,
Crocus, Crown Imperials, &c.,
in great variety.

TRADE CATALOGUES just published, which may
be had of our Agent, MR. THOMAS DAY, 188 Mont-
gomery street, San Francisco, Cal.

J. M. THORNBURN & CO.,

Growers and Importers of Seeds,
15 John street,
NEW YORK.

New York Seed Warehouse,

No. 11 SANSOME STREET,
SAN FRANCISCO.

C. L. KELLOGG & CO.,

IMPORTERS AND DEALERS IN

Garden, Flower, Fruit and Tree Seeds.

HAVE FOR SALE, OF LATE IMPORTATION, a large
assortment of every desirable variety of Seeds, and are
receiving supplies by every steamer. Our Seeds are obtained
from experienced growers in the Eastern States and Europe,
and can be relied on as being true to their kind.

DUTCH BULBOUS ROOTS:

PASSENGER TRAIN TO WASHO.—We are requested, says the La Porte Messenger, to inform our Washo-seeking friends (and report says they are numerous) that after the first of next month (April) a passenger train will leave La Porte daily for the Washo mines by the way of Jamieson. Dr. Brewster intends to put good stock on the road, and agrees to convey passengers to the Eastern slope in quicker time than can be made by any other route. When the traveling becomes good, a line of stages from Marysville to Virginia City, by the way of La Porte, will be put on; and passengers will be carried through in two days. The entire trip, with the exception of twelve miles, from the State Creek House to Jamieson, will be made by stages.

CHICKEN MORTALITY.—The Sacramento Bee has the following: "There has been a great mortality among chickens in this city, lately, and for a long time the cause of death was a mystery. Jesse Morrill, a well-known resident of this city, thinks that he has ascertained the cause. Mr. Morrill having had between twenty and thirty fowls successively deceased, was induced to watch their actions closely, and last week saw a matronly old hen eat portions of some roadstools or other fungi, which were growing in the yard. In a few minutes after the hen departed this life, her sudden exit being very evidently brought about by her partiality for cryptogamic plants. Those persons who have been afflicted by the loss of their poultry, have only to look out for two destroyers: Chinamen and roadstools."

ANOTHER CALIFORNIA MECHANICAL TRIUMPH.—It seems a cracked bell can be repaired and made as good as new. The bell of the Oakland ferry-boat, Contra Costa, having been cracked seven inches in extent from the mouth upwards, the agent, Mr. Charles Mintram, called on Messrs. H. T. & J. Garrett, brass-founders, in Market street, for the purpose of having a new one cast. The Messrs. G. proposed first to test a theory which had for some time engaged their thoughts, namely, the re-uniting or fusion of the several parts of the old bell. In a short time the result was entirely satisfactory, far surpassing the most sanguine hopes of the experimenters. The two sides of the broken bell cannot be re-united, is now disproved. Mr. Mintram has given a certificate in accordance with the above facts, in which he states that the sound of the bell is as musical as it was before being broken.

SAN FRANCISCO AND MARYSVILLE RAILROAD.—Parties interested say that the \$20,000 in Yuba county bonds, and the \$100,000 in Solano county bonds, now in the treasury of the Marysville and San Francisco Railroad, make a sum amply sufficient to grade that road from the Sacramento, in Yuba county, to the city of Suisun, in Solano county.

MRS. LIZZIE WILEY WARREN, M. D., ELECTRICIAN AND HYDROPATHIST.—Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *depleting the sick*. Believing in the old adage, "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the applying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent, the most potent and all-pervading element which can be used, as it is approximately to the principle of life, apparently identical with vitality. In therapeutic uses *are reasonable and safe*, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. ANNIE L. AVERY, HOMEOPATHIC PHYSICIAN, Residence, 249 Pacific Street (two doors from Stockton Street), SAN FRANCISCO.

Special attention paid to diseases of women and children.

The Bascom Institute, San Jose.—The Summer session of the Bascom Female Institute, will commence on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$5 to us, and we will mail a copy of the FARMER, as you shall direct for one year, and we will pay the postage. Begin now, with the New Volume.

TO GRAPE PLANTERS. As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planting will be so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them all with much increased value. May we not expect this from all planters of the vine everywhere?

Large Potatoes and Onions.—We are very desirous of procuring some very large *Onions* and *Potatoes*, for a special purpose; we only want a few, but will cheerfully pay a liberal price for fine samples, and be very grateful besides. We also want a variety of curious or rare vegetables of any kind—*Beet, Parsley, or Carrot*. Those who have such and will send them to our office, we will reward them for so doing.

Galvanic Batteries and Medical Works. MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale. Apply at her residence, corner of Mason and Pacific streets.

Ferrets. VERMIN DESTROYERS. A PAIR OF SUPERIOR FERRETS (Male and Female) for sale. The attention of Farmers troubled by Rats, Gophers, or Skunks, is invited. They instinctively follow into the holes, attack and exterminate all burrowing animals. Apply at the Office of the California Farmer, 214

RANCH WANTED. Any person having a GOOD RANCH in a pleasant location, already stocked, with Orchard, Vineyard, &c., who would be willing to rent the same to a careful and responsible party, can hear of such, who have the means to improve the same further, by addressing G. W. B., Farmer Office.

Wholesale Produce Report.
This represents the prices paid by the dealer to the producer.
(Corrected weekly by Loomis & Miller, Commission Merchants, foot of Washington street, San Francisco.)

Barley, per cwt.	\$1.75	Potatoes, per 100 lb.	\$0.21

SAN FRANCISCO CATTLE MARKET.
Reported for the CALIFORNIA FARMER, by W. J. Whittington, corner of Sutter and Sansome streets (Stock Corral).

There has been no change in the Cattle market since our last. Beef has declined one cent a pound, for first quality; other qualities remain the same. Veal, same as our last quotation. Hogs have advanced. Store hogs are quick at our quotations; also, fat hogs on the hoof and dressed. Mutton remains the same. Milch Cows have declined, there being not much call for them, and the market well supplied.

Average Slaughterers' Prices:

Beef—American, first quality	10c@11c	2d quality	8c@9c
3d quality	7c@8c	Spanish, 1st qual.	8c@9c
2d quality	6c@7c	3d quality	5c@6c
Yearling—first quality	11c@12c	2d quality	10c@11c
3d quality	9c@10c	Hogs—on the hoof	7c@8c
Hogs—on the hoof	7c@8c	Dressed	12c@13c
Mutton—dressed	10c@11c	according to quality	
Milch Cows—1st quality	\$40@50	2d quality	\$25@30

Retail Prices at Washington Market—March 9.

PATENT RIGHTS FOR SALE.
The following Patent Rights of very new and valuable inventions (of which we have models to show their value) are now offered for sale. We will sell the rights for the States of California and Oregon, and Utah and Nevada Territories.

No. 1. A New Rotary Subsoil Plow.
Patented April 6, 1883.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.
Patent pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and then the corn is sown smoothly and perfectly hills up and hoes the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Rail and Bar.
Patented January 3, 1880.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental, standing in the same relation as a piece of important furniture as the Wash and Wringing Machine; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.
Patented September 13, 1880.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet out. 2000 were ordered for the New York market, just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Mucketo Bar.
This will be much wanted in California. It is simple in its construction, perfect in its working, and can be affixed very cheap to all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver.
A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our columns. Holding the rights to all these new inventions, we invite the public to call and see the models. All persons who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor Farmer.

WOOL, HIDES, and SKINS, Purchased AT THE HIGHEST MARKET RATES, 50 FRONT STREET.

WE ARE ALSO PREPARED to make liberal Cash Advances on WOOL shipped to our friends in New York. Every lot of Wool entrusted to us under advances, will be shipped under separate mark. For further information, apply to us as soon as possible.

WOOL! Purchased at the Highest Market Rates.

GEORGE OWEN & CO., 155 Sansome street.

BEE-HIVES!
The following is an extract taken from the advertisement of the Agent for the Langstroth Bee Hives, in the CALIFORNIA FARMER of February 23:

"See Huber on Bees, published in London, 1841." The page and section not given. This is a very convenient and lawyer-like way of setting forth by inference what is not the fact. The extent of Huber's invention was a section hive, in which the sections were attached by hinges. This was used and used only for an observatory hive. It cannot be made predicable for anything else."

The aspiration sought to be cast on the veracity of the eminent Patent Attorney, whose opinion on the validity of certain patents, published in the same number of the FARMER as above alluded to, calls for the following in vindication: Extract from Boyan's work on Bees, published in 1844, page 32, chapter 2.

"Huber carried the principle of these experimental hives still further; he joined several of them together with hinges which were so contrived as to admit of easy removal, and as the frames or leaves as Huber called them, were not glassed, they afforded a free communication with each other."

"Huber EXTENDED and rendered the system more complete, probably approximated it more nearly to that of its ancient GREEK INVENTORS."

"The experiments, however, of Mr. Golding, myself and others, already detailed, have shown that the hive admitted of still further improvement: the leaves were too narrow to be applicable to all purposes, and the hive altogether has been so much simplified by Mr. G., that I shall confine myself to a description of the particular form and dimensions which he has adopted."

"The general width of the leaves should be an inch and five-eighths, but slightly varying in the same proportion recommended for the BARS in page 32."

"The exterior dimensions of this hive are one foot two and a half inches high, by one foot one inch deep; the width will depend on the number of leaves; the number usually employed is eight."

"The perpendicular bars at the front and back converge at the bottom towards each other, so that at the top the interior of the hive from front to back measures eleven inches, at the bottom only ten inches."

"The upright pieces are of course kept in their position by having the top pieces tensioned into them, and are further held together by a small cross-bar, also tensioned into them, about half an inch or an inch from their lower ends, so as to allow a free passage for the bees beneath."

"A series of these leaves being placed in juxtaposition, secured at the front by sliding butt-hinges, and at the back by hooks and eyes, and having a glazed door, covered by a shutter at each end, constitute what I think will be found to be an improved modification of the hive of Huber."

J. S. HARRISON.

STATE OF CALIFORNIA, CITY AND COUNTY OF SACRAMENTO, ss.
I, John C. Barr, a Notary Public, in and for the county of Sacramento, do hereby certify that I have carefully read over and compared the above extracts with the original publication, viz., "Huber's work on Bees," and find the same to be a true copy.

Witness my hand and official seal this 24 day of March, A. D. 1880.

JNO. C. BARR, Notary Public.

The California BEE-HIVE!
The BEST, and hence the CHEAPEST Hive ever offered to Bee-keepers.

The above hive was awarded the FIRST PREMIUM at the State Fair held at Marysville in 1878, and also by the Mechanical Institute of San Francisco, held the same year. And again at the State Fair, 1879, the FIRST PREMIUM; also a SPECIAL PREMIUM was awarded by a Committee of the Fair, for the best hive exhibited. The hive was SIX DIFFERENT HIVES in competition at the latter Fair.

Bee-keepers wishing to purchase HIVES, or RIGHTS to MAKE and USE, will please address the undersigned or either of the following Agents:

L. WARNER, Sacramento (General Agent).
THOMAS OGDEN SHAW, San Francisco.
SAMUEL MORRISON, Santa Clara.
CHAS. C. WARNER, Stockton.
E. A. SHERMAN, Los Angeles.
JACOB V. HOAG, Washington, Yolo county.
B. H. HOAG, Napa.
E. C. WINCHELL, Millerton, Fresno county.
G. W. HARRISON, Marysville.

The Price of INDIVIDUAL RIGHTS is \$15, which may be forwarded through Wells, Fargo & Co., at my expense.

County or State Rights will be sold on terms advantageous to the purchaser.

The Specifications and Claims of my Patent will be given to the public in due time.

N. B. Notice is hereby given, that I WILL DEFEND any legitimate suit commenced by L. S. Langstroth or his Assignee, against persons using my Hives under authority from me.

J. S. HARRISON, Patentee.
SACRAMENTO, March 1, 1880.

(SPECIAL)
Highly Important News!
To Purchasers of

DRY GOODS!
Takes great pleasure in informing the Ladies of San Francisco and surrounding country that he bought the entire stock of

LABATT BROS., 120 Kearny Street.
At a great reduction of cost, and made great addition to the same, in

Rich Silks, Shawls, Dress Goods, Furs, &c., which he selected with great care at the lowest market prices; and is now ready and willing to give his customers the benefit of it.

Each Department is now complete.

HOUSEKEEPING GOODS, **HOSIERY and GLOVES,** a complete assortment. If it is an object for purchasers of DRY GOODS to find the CHEAPEST STORE in the city, let them call at

H. Bachman's, Successor to LABATT BROS., 120 Kearny street.

FARM STOCK, &c.
FINE STOCK!
FOR SALE.

BY THE STEAMERS WHICH SAILED FROM NEW YORK on the 2nd of January, 1880, I have made another shipment of

THOROUGH-BRED STOCK
to the Pacific Coast, consisting of

SHORT-HORN DURHAM CATTLE,
Pure FRENCH MERINO, SOUTHDOWN and COTSWOLD SHEEP.

Including the celebrated **BOTTENBURN** and **BUCK JONAS WERN**, believed to be equal, if not superior, to any buck of this breed in America—**ESSEX, HERKSHIRE, LICESTER and SUFFOLK SWINE.**

All of these animals are of Pure Breed, and of the BEST QUALITY, having been imported from the most celebrated herds and flocks in England and France, or bred directly from such imported stock.

The full "PRINCE GEORGE OF CAMBRIDGE," No. 8534 in the American Herd Book, was got by "Third Duke of Cambridge," bred by the late Thomas Bates, of Kirkcaldy, England, and his dam was got by "Yorkshireman," also bred by Mr. Bates.

The full "HAROLD 4th," No. 934 American Herd Book, was got by "Hild 2d," bred by Robert Golding, Hutton, Kent, England, and his dam was got by "Meteor," got by "Duke of Wellington," also bred by Mr. Bates.

The FRENCH EWES were either bred in France, or have been raised by myself from stock imported from there, and they have been served by the best Ram I have ever imported from France.

The SOUTHDOWN EWES have been bred from stock imported from the flocks of Jonas Webb, Lord Walsingham, Mr. Elman, and the Duke of Richmond, who are known to have the best flocks of Southdowns in England. The most of them have been served by a Ram bred by Jonas Webb, of Braham, England, and the others by Mr. Samuel Turner's Celebrated Prize Ram, bred by him from his Webb stock.

My brother, JAMES M. PATTERSON, goes out with the stock, and is authorized to make sales, and any information can be obtained by addressing him at SAN FRANCISCO, California. He will also send to all applicants Catalogues and Circulars describing the animals.

JOHN D. PATTERSON.
WESTFIELD, Chautauque Co., N. Y., January, 1880.

The Stock referred to above have arrived, in fine health and condition.

The BULLS and SWINE can be seen at the BLACK-HAWK STABLE, on Pine street, or by calling on me, at the TREMONT HOUSE.

I have imported, and have for sale,

50 HIVES OF BEES, which I will sell on favorable terms.

J. M. PATTERSON.

French-Merino BUCKS.
THE undersigned begs to inform SHEEP RAISERS, that he is now permanently located on the

SADINAS PLAINS, AT LEESE'S RANCHO, and is now prepared to supply them with MERINO BUCKS from the celebrated Bucks "Samson," "Louis Napoleon," and "Brigham Young," imported into this country by Messrs. SEARLE & WYNN, and purchased by them of J. D. PATTERSON, Esq., of Westfield, Chautauque county, N. Y.

The RAM can be contracted for either delivered here or on the Rancho.

J. B. WYNN,
At Messrs. FALKNER, BELL & CO'S, California street.

San Francisco, July 8, 1879.

N. B.—COL. WARREN, Editor of Farmer, is authorized to contract for the sale of these Bucks.

BUCKS FOR SALE.
YEARLING BUCKS, the produce of the splendid FRENCH MERINO BUCKS "SAMSON" and "NAPOLEON," out of first-class American Ewes. The Bires were bred by J. D. PATTERSON, and imported into this State by Seale & Wynn.

For sale by

JOHN SEARLE & WYNN, Montclair county, N. B.—The 324th Fleecings of "Samson" may be seen at the Farmer's office.

SHEEP WANTED ON SHARES.
Having a splendid range for sheep, well watered, etc., the subscriber would take 200 or 500 Ewes to keep on share of increase. Address

C. HAVEN, Milpitas, Santa Clara County, or J. K. WHITE, 102 Front street (up-stairs), San Francisco.

BERKSHIRE AND ESSEX SWINE.
We have a lot of very extra Berkshire and Essex Swine, of the pure sort, which can be imported in sixty days. The origin of this stock is very celebrated—none superior. Inquire at this office.

AMERICAN EWES WANTED.

SHEEP-RAISERS who have a fine lot of AMERICAN EWES for sale, can hear of a purchaser by calling at the CALIFORNIA FARMER'S Office, or addressing a letter to the Editor, stating the number of sheep, age, condition and price.

FULL-BLOOD MERINO BUCKS.
A FEW full-blood MERINO RAMS from the Patterson flock, for sale if applied for immediately. Inquire at this office.

Domestic Fowls.
PERSONS desirous of purchasing splendid GAME FOWLS, and the best HENS for laying, can be supplied by calling at the Farmer's Office. A few of extra kinds for sale. They are a cross of the BRAHMA, POOTRA, and of very superior kind, valued at \$10 and upwards per pair. Samples can be seen at above

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

Advertisements and Subscriptions must be paid for in advance.

Practical Information on Fruit-growing.

Discussions by the Fruit-growers' Society of Western New York.

The Annual Meeting of the Fruit-growers' Society of Western New York was held at Rochester, Jan. 4, 1880. This Society includes among its members some of the largest and most experienced Fruit-growers and Nurserymen of the Atlantic States; their discussions must convey valuable information to those interested in the subject, and they are looked to with much interest all over the Union. At the meeting above, after the election of officers and the transaction of the regular business, discussions of the various departments of Fruit-raising were had. As the facts brought out will be of more or less interest and value to our readers in this State, we copy from the N. Y. Horticulturist, what it calls a "brief abstract" of the doings, and which doubtless contains the most important, as it extends to considerable length:

The discussions were commenced upon the question, *Is the Dwarf Pear a Humbug?*

Mr. Pinney, of Clarkson, was most decidedly of opinion that there is at least one sort which is not a humbug. The Louise Bonne de Jersey will bear as much fruit on the same size of limbs as any other stock; when full grown it will bear two bushels to the stock. Has seen one and a half and even two bushels upon a tree eight years old—two years old when set. There are other sorts which bear in proportion. The Vergoulose, if it would do well, is nearest to Louise Bonne de Jersey, as grown by myself. There are some sorts in which I have but little confidence compared with Louise Bonne de Jersey. If I had 100 acres to set out now to pears, I would set at least half of them dwarf pears.

Mr. Townsend, of Lockport. The crops of fruit from Louis Bonne de Jersey dwarf trees have been three to one of any other variety I have ever cultivated, and I join heartily with Mr. Pinney in asserting that the dwarf pear is not a humbug. Were I to commence planting pear-trees again, I am sure, from the experience which I have had, that I would not plant a standard tree. I plant dwarfs in rows twelve feet apart and six to eight feet in the row; give the tree thorough cultivation; and if upon a soil moderately clayey, your dwarf will certainly succeed.

Samuel Jay, of Yates. In these orchards, and in all orchards, we need a thorough stirring of the whole surface of the ground; no portion allowed to weeds or grass. A fruit orchard should be a fruit garden, and this is where most men fail. Post holes spaded around trees won't answer.

Mr. Coppock, of Buffalo, would endorse all that friends here have said. Dwarf pears around Buffalo do well; Vicar of Winkfield does very well. In cultivation of dwarf pear-trees any spading near the trees is decidedly bad; the fibrous roots near the surface are cut off. No implement should be used near the tree except a fork.

O. M. Hooker, of Rochester. The question is often asked how many sorts of pears can be successfully cultivated on quince. Our pear orchard of eighty varieties has been set three years, and over seventy sorts are doing finely.

In answer to question, what sorts do not do well as dwarfs, Mr. Ellwanger named Beurre Bosc, Sheldon, Dix, Paradise d'Automne. Vergoulose is better for doubleworking. Some are always poor as standards, as the Belle Lucrative.

Mr. Beadle, of Canada. Belle Lucrative as dwarfs invariably had borne very large fruit and fine crops.

Mr. Frost, of Rochester. Duchesse d'Angouleme is peculiarly good as a dwarf; two trees in 1858 had yielded two and three bushels, and in 1859 three and a half bushels.

Mr. Brooks, of Pearl Creek. If anything needs particular cultivation, don't send it out to us farmers. You can't by any possibility induce a farmer to drive a cultivator through an orchard once in two weeks—four weeks—no, nor two months! If dwarf pear-trees need good cultivation, better not recommend them.

Mr. Smith, of Syracuse. The gentleman might as well advise us not to sell Durhams or other fine breeds of cattle to farmers, because they thrive better under care, and because fine breeds sometimes fail. Yet, when cattle are well treated they generally do well, and when pear-trees are well treated they also do well.

Mr. Brooks. Farmers make some one thing prominent. Farmers will use stock well; but fruit-trees are a little one-sided—a little out of their line. Some gentlemen have advised that every farmer should have dwarf pear-trees in his garden, thinking that in a nice garden the trees will of course have good cultivation. Now, what we in our country call a garden is a place back of the house, where we have a few hills of potatoes, and several hundred—(hesitates and blushes)—several hundred—(great laughter).

Mr. Ainsworth, of Bloomfield, some time ago said something against dwarf pear-trees: but would admit that some varieties succeeded far better as dwarfs than as standards. Louise Bonne de Jersey, for instance, bears double the crop for the same amount of space, and is better in flavor also, and larger. Another advantage is, that the fruit ripens every year. Vicar of Winkfield on standards is not worth anything, unless for cooking; while from dwarf trees this sort bears well and ripens well. The ground of Mr. A's orchard is stirred all over every week with a double-horse cultivator, and the trees are pruned thoroughly, so as to get a vigorous growth of wood each year.

Soil is a good wheat soil; has raised thirty-four bushels to the acre.

Mr. Yeomans spoke of one-third of an acre of Duchesse d'Angouleme, eight years from the bud last spring, planted in a strong loam soil, and bore last summer thirty barrels of pears—netted \$500. Can keep four or five acres of orchard clean as easily as I can take care of one acre of potatoes.

Mr. Ellwanger, in answer to a question, said that eight by ten feet apart would be one thousand trees to the acre, and Louise Bonne de Jersey will average one bushel a tree. Fruit should be regularly thinned as it grows, and when picked should be assorted, and only the finest sent to market.

Mr. Barry. One great advantage of the dwarf is its earliness in bearing; even aged people can plant the trees and eat the fruit thereof. Again, the dwarf is more easily and safely removed than the standard, and not one in a hundred need fail, while they are not liable to any more diseases than the standards. Trusts the day is coming when farmers will plant dwarf pear-trees in abundance, and enjoy their fruits. To the nurserymen the dwarf-pear is one of the greatest blessings. In every part of the United States the nurseryman is able very speedily to test all these sorts, and to recommend them, while it would not have been practicable to test them upon standard stocks. Would not advise farmers to plant a great many varieties. Anybody can succeed with some kinds (Jaminette, for instance), that knows enough to shorten the branches, and cultivate as well as a hill of corn.

Best protection of fruit-trees from the effects of severe winter—shelter—underdraining, etc., and the hardest sorts of apples and pears.

J. J. Thomas, of Macedon, spoke of parts of the United States, like Illinois, where winds are high, and farmers feel the necessity of shelter from windy winds. Trees must have plenty of sun and air; but the more they are protected from violent winds, the better they stand the winter.

Mr. Barry. In pear cultivation, particularly, shelter is of especial consequence. It not only protects the trees in winter and spring, but in autumn prevents the fruit from being shaken off by the winds. "Underdraining": the soil must be dry; draining is the great essential. As to hardest sorts, our Western New York is hardly a fair test. For instance, Baldwin is perfectly hardy here, and at the West is not so. A capital shelter can be formed of evergreen hedges; plenty of them grow three or four feet a year. You can make in ten years, with larch and spruce, such a barrier against fierce winds as cannot be made of boards.

Mr. Brooks. Farmers do not realize how important these barriers are for shelter even of their grain crops. Believed such barriers should cover the entire area of the country.

Col. Hodge. The fact is, that the great body of farmers care nothing about putting out trees; but at the West some are commencing to plant Locust and other rapid-growing trees.

Mr. Beadle has confidence that belts of timber will be put out: for the shelter benefits the cattle. The wheat crops are improved by belts of trees, and in Canada farmers are beginning to plant them at the west sides of their farms. If Norway spruce, etc., are planted at the same time with our orchards, they will soon be as high as our orchards, and higher, and speedily we shall have good shelter.

Mr. Barry mentioned the case of two wheat fields side by side, on one of which the crop was good, and on the other none. The farmer could assign no reason except that the field bearing the fine crop was sheltered against the sweeping west winds. Now, the loss in that one wheat field alone from the failure of the crop, was enough to have bought and planted full shelters of evergreen trees to the farm.

Judge Miller. We cannot leave the forest trees, because from their place of growth twenty or thirty feet of the body have no limbs, thus giving when their comrades are cut away, a strong leverage power to the wind against the head of the tree, while the looseness of the soil permits the roots to be speedily torn up and the tree to fall.

Mr. Ainsworth. Where fields slope toward the east, crops are generally good; seldom killed by frosts; while on land sloping to the west the wind strikes hard; snow blows off, and crops are apt to be winter-killed.

Mr. Yeomans. About the planting of these belts of timber, people anticipate that the advantage is to come so slowly they won't do it. Have seen great advantage from planting apple and peach-trees alternately. The great mass of the orchard won't be injured at all by sweeping winds.

Grape Culture—Propagation, Growth, and Market Value.—The question was asked, Cannot we graft a good substitute upon our vines, and get them to bear the first or second year?

Mr. P. Bissell. The grafting of the grape-vine during the full flow of the sap is a difficult matter, but there is an old process called inarching (it is spoken of in the Horticulturist for January, 1880), by which nearly all the risks are removed to a skillful operator. Root-grafting the grape is not difficult. We "saddle-graft" all our "single eyes." As to the growth. In the summer of 1855 we propagated Dianas and other grapes in this way. In the spring of 1859 the plants stood in the pots, and nurserymen and other buyers selected such as they wished from the stock. About 700 were left, which were of course not the best, and we set them out in our nursery rows. Not one of those culls died; all made good growth, and some of them fruited. Agents took those two-year old vines, and delivered to customers with the fruit on. Can a layer bear quicker?

Mr. C. L. Hoag. Likes pot plants better than layers. In spring of 1846 set out slender Dianas from pots, and they averaged forty clusters in three years.

Mr. Ellwanger has grafted the Diana just as well in the open ground as the apple. Wait until just after the vines have made a fair start, then graft on a level with the surface of the soil; heap soil around the junction, and cover all the cion except one bud with earth.

Mr. Townsend. Must wait until after the first great rush of the sap.

Mr. Ainsworth. The grape can be grafted with very little difficulty in the winter. When growth begins, the lower part of cion calluses over, and throws out roots, while the roots upon which it was grafted will die. The advantage of pot vines is, that you have every fiber of the root; while in layers many must necessarily be cut or broken off. While the layer is recuperating its energies and

throwing out new roots, the pot vine has nothing to do but grow. Have had Delawares, which this year have grown fifteen feet, which in spring of 1859 were hardly the size of a knitting needle. Layers, as they are commonly taken up, have plenty of big roots; but of the fibrous roots, the real food vessels of the plant, they have not one-third as many as the pot plants. Shake all the dirt out and spread the roots thoroughly. Diana and Concord plants that I started in pots in a cold glass house in spring of 1859, were turned out from the pots into the nursery, and grew so as to form layers, and in some cases double-layered and rooted.

L. B. Langworthy. The first Clinton grape in this county I grafted upon an old vine, waiting till the sap had pretty well run in the spring. I have grafted upon old wild vines, and had the cion bear fruit in two years.

F. B. Peck thinks it advisable to protect the Isabella during our winters. In the winter of 1858-9, the vines killed worse than ever before. Knows it was the exposure, because vines that happened to be dropped off the trellises did not kill as badly; part that lay on the ground grew vigorously. It was not the wood that winter killed, only the buds.

J. J. Thomas. Dr. H. H. Farley left 2000 grape-vines unprotected in the winter of 1858-9, and had far smaller crops than usual in the summer of 1859; would have saved \$2000 if he had covered the vines.

Mr. Peck. A neighbor has 1000 vines same age as mine (three years set), which stand in a sheltered situation near some woods, and he gathered 3000 pounds from his 1000 vines as his first crop.

D. W. Beadle, of Canada. Easiest and best mode of protecting is to lay the vines on the ground, and cover them lightly with soil. Straw is objectionable, because it furnishes a harbor for the ground mice. Evergreens are difficult to get.

Mr. Ringeburg tried three parallel rows, leaving one row fastened to the stake, the next row simply laid on the surface of the ground, and third row covered. The first row did well; the next row better, and the third row fruited 20 per cent better than those which were simply laid down. Thinks it paid him well to cover every Isabella vine in his vineyard.

Mr. Ainsworth laid down his vines each year; while a neighbor who does not cover, has lost his crop partially each year for the last five years. Mr. A. trains on the renewal system. Branches should not be allowed to run nearer than eighteen inches to the earth; else fruit gets sandy.

P. Barry thinks upon east or south side of board fence the fruit will ripen much better than on a trellis or stake.

Mr. Peck. Much more liable to mildew on south side of fence. My Catawbas ripened this year very well upon an open trellis; but they are not the grape to cultivate here; not early enough.

P. Barry. Plants are not in danger from mildew if the trellis be a little way from the wall. Has tried Delaware, Diana, Rebecca, &c., in that manner. Delaware was remarkably vigorous; last season's canes were fifteen to eighteen feet in height, and thick.

H. B. Miner. Never had a really ripe Isabella or Catawba on an open trellis, while on south and east sides of house both ripen well. Diana ripens on open trellis.

W. P. Townsend. As to ripe Catawbas, a neighbor has ripened three successive crops of Catawbas upon a hill-side sloping to the south and south-east, well sheltered; leached ashes the only manure. This year sold 1,100 pounds for twenty-two cents per pound, box and all. Unless in special cases like this, would not recommend Catawba.

J. J. Thomas here spoke of Dr. Farley's vineyard. 1st. Dr. F. thoroughly ill-drained the land. 2d. Plowed and subsoiled. 3d. Put on 100 to 200 loads of lake-mud, and worked it into a soil which was fertile before. Results in 1859, when under ordinary circumstances I did not see an Isabella fully ripe, Dr. Farley's were perfectly ripe. I never saw a sight equal to it. The vines were planted in rows ten feet apart, running north and south, and set twelve feet apart in the rows; were trained to wire trellises seven feet high, and were pruned according to the renewal system.

Mr. Brooks appealed to farmers. Hoped the culture of grapes might be extended; wished the increase of all fruit, and even of dwarf pears. (Audible smiles.)

Comparative Merits, all things considered, of pears, apples, and small fruits, for extensive market cultivation, by skillful cultivators!

Mr. Sharpe. Will guarantee that as soon as the farmers in my section of country can be convinced that there is money to be made in the culture of dwarf pears, they will take good care of the trees.

Mr. Brooks. The cultivators of pears for the market should be small land-holders. Large farmers must have things easily cultivated for the present; but the day will come when every holder of land, however great or small, will be considered disgraced if he don't supply his family freely with such luxuries as we see here before us (waving his hands to the loaded tables), and they are the greatest under heaven.

P. Barry. The merits of the different fruits depend on the circumstances and situation of cultivators. Near large cities perhaps small fruits would exceed the others; but where the crops must be barreled up and sent by railroad, then apples and pears will be best. Do not depend solely upon any one sort of crop. Considering our soil, climate, help at command, convenience of transportation, etc., we in Western New York can't go amiss. The estimated value of the apple-crop in Niagara county alone, was \$500,000. Just think of nice pears bringing \$18 and \$20 a barrel in New York city, and good winter-pears would sell for more. There are risks to be run in the cultivation of the pear, and so there are risks in raising wheat, and potatoes, and maize; but to the skillful cultivator the pear now offers the greatest inducements.

In answer to a question, Mr. B. said: I think the pear-crop is uniformly more certain than the apple. If trees die from blight, fill up from a reserve which you have ready.

Mr. Townsend, of Lockport, mentioned a gentleman who had traveled in every State of the United States, and in all Europe, within sixteen months, and had seen no apples like those exhibited here to-day; and except very few pears, none like ours. Western New York will become the

home of the pear in the United States. If I were going to set pear-trees again, would never set a standard. Would not recommend a man to plant trees unless he means to take care of them.

Mr. Smith, of Syracuse. The taste of the people is being cultivated, and they are willing to pay for good fruit. A few years ago I met at Syracuse a man going home with his pears because he could not sell them at \$1 25 a bushel. The price this year for the same variety is \$4 a bushel. In planting pears I would not care to plant any but dwarfs.

Mr. Hodge, of Buffalo. It has been an argument against the culture of pears because prices have gone up. The fact is, that half the people never saw a good pear; and now that they have seen and tasted good fruit, they are willing to pay for it; and instead of being an argument against pear-culture, it is one of the strongest arguments in favor of good, proper, and careful cultivation.

S. Miller. Judging from the habits of gentlemen in the city of New York, that market is entirely inexhaustible. Is perfectly certain it will absorb all that the western part of the State can produce.

Mr. Brooks, of Wyoming County. Has seen Baldwin apple-trees in this garden of Western New York, when each tree netted a greater profit than the average acre of land in Wyoming county. Some persons fear lest the market will be glutted. If so, give fruit to the horses—to cattle—to hogs—to hens—there is nothing that lives, or ought to live, will refuse a good apple. (Great laughter.)

Mr. Ainsworth. The net profits per acre of the apple crop will average five times as much per year as the wheat crop. If dwarf pear-trees bear early, standards are long-lived. Judge Howell, of Canadagua, has for forty years sold his crop from the same trees at \$3 per bushel. I believe we can get a bushel of pears from a standard tree before we can get that quantity of apples from a tree: you can set 160 standard pear-trees to the acre, and only forty apple-trees; and in market pears will bring \$3 and \$4 a bushel, and apples only \$1 a bushel. Pears need more care than apples; but not so much as wheat or corn. Certainly the pear, with present prices and prospects, is six or eight times as profitable as the apple. The great secret is good tillage and proper pruning.

Mr. Beadle. Neighbors in Canada, upon a soil admirably suited to pears, are raising apples and shipping to Scotland for \$2 50 a barrel. Pears are certainly the most profitable.

Mr. Ellwanger. Twenty-five years ago there were not 100 pear-trees in this city. It was in 1845 that the first dwarf pear-trees came. I brought them myself. Pears are not propagated as extensively as apples.

Mr. Barry. It requires skill and care to grow pears. Farmers have not experience yet except in wheat, etc.; but one by one will go into pear culture as fast as they can get information.

Value of Super-phosphate of Lime and other Special Manures for Fruit-trees and Vines.

Several gentlemen spoke, but all inclined to the opinion that the same money spent in stable manure produced as good effect as any of the special manures.

The Percentage of years that the Peach-Tree Bears in the various portions of Western New York, and what places are best for it.—Mr. Yeomans had had not more than three or four failures of the entire crop in thirty years. In one part found my trees dying, and underdrained the land and succeeded. A single acre bore 270 bushels of peaches on trees only six years old. Each year after the tree has borne, cuts out about one-third of the top, which gives increased vigor to the centre of the tree.

President Hodge. Whenever the thermometer shows 15° below zero the peach-crop is sure to be destroyed, especially if the sun shines after the frost. The trees must be vigorous and healthy to succeed, and if in non-producing years they are pruned very closely, they will throw out vigorous shoots all through the centre of the tree and bear full crops.

J. J. Thomas. Close to Cayuga Lake the peach-crop scarcely ever fails. Prunes same as Mr. Yeomans does.

What is the Best Manner of Preparing Ground for Orchards?—Mr. Smith, of Syracuse. 1st. Under-drain, especially if it be a strong soil. 2d. Sub-soil to at least 20 inches deep. 3d. Make it rich enough to be suitable for corn.

Mr. Barry. Has been looking at land a good deal this summer, and has hardly seen an acre suitable for a nursery or orchard without tile-draining. Land may be dry in summer, and yet need draining very much, for trees which are to stand in it the year round. My drains are 2½ to 3 feet deep, and average about six feet apart, following the conformation of the land. Cost about \$30 an acre. For an orchard I would prefer land which has been seeded down to clover. Would tile-drain it. Would turn the clover under eight inches; follow with subsoil plow and four horses. Our men never plow deep enough. We keep a foreman to watch them all day, and then they don't go deep enough. Would not apply manure in an excavation near the tree.

What is the Best Manner of Preparing and Planting Trees?—Mr. Yeomans. Before the tree is planted, cut off all the branches to restore balance between roots and plant; the winds will away it less, and new branches will be thrown out in abundance. Apples should be pruned so that the lower branches shall be about five feet from the ground; the nearer the ground the poorer the fruit. Lower branches do not bear as good fruit as upper.

Here a gentleman recommended pruning so as not to leave any lower branches!

Mr. Yeomans plants his apple-trees forty feet apart each way, and the peach-trees alternately in rows.

Mr. Barry, in planting dwarf pear-trees it is better to cover the stock as high as the union of the quince with the pear. To train trees with low heads is one of the first principles of fruit-raising, so that if even set on the prairies, they would present to the wind nothing but a mass of branches and foliage: no tall trunk for leverage.

B. Fish. In planting his orchard, cut off some of his trees a couple of feet from the ground; some only partially cut back. Those where I cut off the entire top made a rapid growth, and are now the handsomest trees altogether.

Mr. Langworthy. Some gentlemen have spoken of plowing along their trees. I never plowed in an orchard but I heard the roots crack. Would

never advise anything heavier among trees than a common cultivator.

What is the most suitable age for Planting Fruit-trees?—Mr. Hodge. Peach, 1 year from bud. I would give more for a yearling than for one 2 or 3 years old. Cherry, 2 years from bud, and only 4 to 6 feet high. Pear—dwarf 2 years from bud. Standard 4 to 6 feet high. Apple, 3 to 4 years from graft, about 6 feet high. In small trees we are apt to get all the fibers, the spongy-tissue, which do the real nourishing to the roots and tree.

J. J. Thomas. Peach-trees will bear cutting back better than most other trees. They have a great power of reproducing shoots. If thoroughly cut back, you may remove even a large peach-tree.

H. N. Langworthy. Danger in buying peach-trees older than one year, that you get the peach-borer brought. Never saw the borer in a yearling tree, and if you have not got them you need not have them; only don't buy trees with them in.

In Spring or Fall Planting preferable on dry soil? Mr. Frost, of Rochester. Apple, Pear, Plum, and Cherry, plant in fall; Peach in Spring. A great advantage in fall planting is, that the planter has a whole long season to get the ground ready.

Mr. Bloss, of Rochester. Sudden alternations of heat and cold in spring, so that the season is not to be depended upon. A fall-planted tree gets fixed and ground-settled well.

Jno. J. Thomas. One advantage of spring-planting is that the ground has been recently stirred. Cultivators who never cultivate had better set out in the spring.

A committee was appointed, who brought forward appropriate resolutions on the death of David Thomas, the botanist, the pomologist, and the christian gentleman.

The Society adjourned to meet at Buffalo in June next.

San Joaquin Valley Agricultural Society.

At a meeting of the Executive Committee of this Society, held on the 24th ult., "a resolution was adopted calling a meeting of the Committee on the 18th of April, and instructing the Secretary to notify the Vice-Presidents of the Society residing in the counties embraced within the District, to assemble on that occasion for the purpose of adopting a Constitution and By-Laws, and drafting a premium list."

A communication from E. S. Holden, Esq., the newly elected President of the Society, was read. While grateful for the honor conferred on him, he was sorry that one more competent had not been chosen; but said, "As the harness is on, I will exercise my best ability and energy to 'speed the plow'; I will take up 'the shovel and the hoe' for the good work, and God speed the cause." He then presented in an able manner the abilities, resources and duties of the new Society. He hoped that all would prepare for the coming exhibition every varied production, and not only excel all previous State Fairs, but be the banner Agricultural Society of California. He recommends the erection of a Pavilion, and offers to place in the building for the inspection of the public, a museum containing 5000 specimens of minerals, natural history, etc., the second largest collection in the State; also the preparation of a race-track, for which land is offered in the vicinity.

This prosperous awakening is just what we have expected of San Joaquin district. With active liberal men, abundant natural resources, to begin with, we look to this District as the Pioneer of redeemed "Tule land," Rice and Cotton crops, fields of sugar-cane, vineyards like "La Belle France," and an efficient District Society. We are glad to see so able, willing and efficient a gentleman at the head of the Society; it augurs of complete success. We regret we cannot in this number publish the whole of his able address-letter to the Society.

Wool and Wool in New York.

By the last accounts we learn that wool is only in moderate demand, and it is supposed that the present rates are about as high as wool will go. We notice a sale of 75,000 pounds of State and western fleeces at 40 to 62 cents; 25,000 California, fair to fine, 18 to 23 cents. The approach of the new clip and the moderate demand for manufactured goods, causes a very quiet market.

Grain is in fair demand. The sales of various kinds of wheat are from \$1 35 to \$1 50 a bushel, equal to 2½ and 2½ cents a pound. Barley is in demand at 87 to 90 cents a bushel, about 1½ cents a pound, a little more than half California price. Oats are quoted at 41 to 46 cents. Markets are well supplied.

Keep your Wool free from the Clover-bur.

WOOL-GROWERS have realized much loss in the value of wool from the clover-bur, which mixes with it; it has been found so very difficult to extract it without loss of wool, that it is desirable to avoid it if possible. To do this an early shearing is desirable, and thus clip before the bur forms. We have conversed with several large sheep-raisers upon the subject, and we suggest shearing early in April. By doing so, the bur will be avoided, and the value of the wool be increased.

SKETCHES OF THE WASHOE SILVER MINES.—We have received from Messrs. Hutchings & Rosenfield Degroot's Sketches of these Mines, a valuable and interesting work. It will pay well for reading. The history of silver mines will hurt no one, if it does not create too great a thirst for wealth.

THE FARMER'S GRAVE.

Ain-Napoleon's Grave.

On a green grassy knoll, by the banks of the brook,
That so long and so often has watered his flock,
The old farmer rests in his long and last sleep,
While the waters, a low, lulling lullaby keep.
He has plowed his last furrow, he's reaped his last grain,
No more shall awake him to labor again.

You tree that with fragrance is filling the air,
So rich with its blossoms, so thrifty and fair,
By his own hand was planted; and well did he say,
It would live when its planter had moldered away.
He has plowed his last furrow, he's reaped his last grain,
No more shall awake him to labor again.

There's the well that he dug, with its waters so cold,
With its wet-dripping bucket so mossy and old;
No more from its depths by him it is drawn,
For the "pitcher is broken," the old man is gone.
He has plowed his last furrow, he's reaped his last grain,
No more shall awake him to labor again.

'Twas a plow-giving day when the old farmer died—
The stout-hearted mourner, the affectionate cried;
And the prayers of the just for his rest did ascend,
For they all lost a brother, a man, and a friend.
He has plowed his last furrow, he's reaped his last grain,
No more shall awake him to labor again.

For upright and honest the old farmer was;
His God he revered, he respected the laws;
Though fearless he lived, he has gone where his worth
Will outshine like pure gold all the dross of the earth.
He has plowed his last furrow, he's reaped his last grain,
No more shall awake him to labor again.

Curious Fancy of a Hen.

We recently saw a nest high up in an oak-tree,
Some eighteen feet from the ground. A hen had
taken a fancy to a very desirable position in the
tree, having four large branching limbs from the
body. Here a place was formed sufficiently large
for a hen to make a nest, and here she deposited
some dozen or more eggs. As she was noticed to
fly from the tree every day, it caused an examination
to be made, when the nest was found; but
rather than disturb it a box was made round it,
and the mother hen is now thankfully sitting
upon it, and when her young shall break the shell
she will be assisted in bringing her cackling brood
down to terra firma.

Never Waste Your Ashes.

How often we find large heaps of ashes around
the farms and ranches of the country, and often
where there is some danger from fire. We would
urge all our farmers who have fruit trees, to re-
member that wood ashes is excellent for peach trees,
and also for garden-soil when the land is wet or
heavy. Coal ashes should be given to pear and
cherry-trees, and all waste brine and pickle to the
plum. There is a use for everything. If you have
no trees, throw ashes into the cattle-yard, or upon
the manure-heap, and if you will not take the
trouble to save your manure, just tell your neigh-
bors they can have it. Somebody will be wise
enough.

Use your Straw.

How many tons of straw are burned annually in
California, or permitted to lie upon the fields and
rot, that would prove like a "good lead of gold"
if only carted into the corral to keep cattle clean
and make manure. The preservation of cattle
and sheep in health, the saving of stock from
death by reason of cold rains and chilling winds,
would more than doubly pay all the cost of time
and labor.

Sheep Raising.—The editor of the Hydraulic
Press gets enthusiastic on the subject of sheep
raising. After advising the farmers of Nevada
County to engage more extensively in the business,
he commences with a small flock of fine woolled
merino, Saxony or Australian sheep, or of the
Southdown breed, which is said to be the best for
mutton, keep careful account of the cost and of
the receipts by increase and wool yields, and see
if the experiment does not warrant a more liberal
investment; he thus exclaims:

"Why, if we were a cultivator of the soil there
should be a flock of sheep on our farm just for
the picturesqueness which they would give it.
How lovely are the green hills of spring, dotted
with little groups of nibbling sheep and playful
lambs, as the blue sky is dotted with clouds!
How poets have sung the charms of pastoral scene-
ry, have revelled in similes suggested by the
quiet feeding of the woolly innocents, and even
sublimely dared to compare the stars of heaven
to them! How the traveler would be delighted
with the whole foothill country, if flocks of sheep
here and there dotted upon the swelling mounds,
beneath the graceful oaks or the outcropping rock.
Habitations give a human interest to scenery, and
a sheet of water, even if artificial, is like an eye
in the landscape, full of beauty and expression;
but this interest and this expression are always
increased by the presence of flocks and herds,
which link themselves to our sympathies as they
minister to all our wants, and enable us to com-
bine the beautiful with the useful."

Profits From Poultry.—At a late discussion
by the Concord Farmers' Club, as reported in the
New England Farmer, J. B. Farmer remarked as
follows: "Last year he had twenty hens, and raised
one hundred and fifty chickens; did not know how
many eggs; his hens cost half a cent per day. This
year he had thirty hens; in January he had fifty
dozen. Bought one hundred and fifty pounds of
beef, and kept it by them while it lasted; he pound-
ed up the bones; the hens eat pounded bones
greedily. He gives them warm dough once a day
in cold weather. If we keep hens for the eggs
only, he thinks the Poland, or Black Spanish, or
Bolton Grays are better than the larger breeds.
It is more profitable to raise chickens; his hens
range over a ten acre pasture; he keeps scraps by
them. Hens should be treated gently; hens that
are perfectly tame will lay twice as many eggs as
wild ones. He thinks hen manure better than guano;
last year he had enough to manure three
acres of corn in the hill."

Chewing Gum.—Trifling as the subject may ap-
pear, yet it is of importance. If it is of impor-
tance to have sound teeth in middle life and old
age, proper precaution must be used in childhood.
The habit of chewing gum is like applying small
air-pumps to the bases of the teeth. When the
gum is separated from the tooth, it forms a vacu-
um between itself and the tooth, and the conse-
quence is a violent strain on the dental nerves.
The bad results may not show themselves imme-
diately, but the boy or girl who indulges in the
habit may calculate on having rotten teeth when
in the prime of life. Nor is this all. The habit,
like tobacco chewing, induces an unnatural flow
of the humors toward the mouth, where it must
be ejected as saliva. This is bad enough when it
can be ejected; but when, from sickness or other
causes the habit must be discontinued, the result
may be, and no doubt has been, fatal. Let young
persons and their parents take heed.—[Brunswick
(Me.) Telegraph.]

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM
and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his
most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his
Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will
offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for
measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined
Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made
at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in
October last.

Your attention is also called to a notice given it, below, by numerous members of the State
Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County
Fair.

With the experience of the past season, this machine is so improved as to be, without question,

The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S,
PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—
EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;
WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse
power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES AND SNATHS, notched heels; the very best pat-
terns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES AND RAKES.

SKELETON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE-PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS AND EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM
at the State Fair, and which is the very best bee-hive in use, for sale; and, also, persons
wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,
33 SACRAMENTO STREET,
San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the
newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW,
of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of
the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to
the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers
and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

NURSERY CIRCULAR.

FOREIGN AND NATIVE GRAPES,
AND GENERAL NURSERY STOCK,

OFFERED THE PRESENT SEASON OF 1859 AND 1860, BY

A. P. SMITH,

AT THE

POMOLOGICAL GARDEN AND NURSERIES,

SACRAMENTO, Two-and-a-half Miles from the City,

AND AT THE

OFFICE AND DEPOT FOR TREES, 44 J street, between Second and Third streets,

SACRAMENTO CITY.

THE CULTIVATION OF THE GRAPE, AND THE PLANTING OF VINEYARDS UPON AN
extensive scale, is at the present time exciting a lively interest among the people of our State.

The congeniality of our soil and climate, and the success which has thus far attended the opera-
tions in the vineyard, are exciting the attention of hundreds to this subject, and destined to make vine-growing
and wine-making one of the great interests of our State. With the world for a market, who can estimate the
wealth that will hereafter accrue to our people in the manufacture and exportation of wine. This State and this
interest yet in infancy, and this great interest is of such magnitude that it is of the first importance to begin
aright. To do this, we should now ascertain what is to be the most desirable grape to cultivate, especially
for wine-making. The California or Los Angeles grape makes a good and pleasant wine, and while some claim it
to be as good as any for making wine, the majority of experienced growers pronounce it inferior, and some assert
that it will be superseded by some other and a much better grape. Among over one hundred varieties of grape
cultivated by us, the CALIFORNIA GRAPE has always proved to be the most tender, while the French and Ger-
man grapes invariably resist the frosts that have been so very destructive to our California grape. This is a very
important point to establish, as the loss by frost in some wine-districts alone, would be very great, and therefore
the attention of the cultivator should be directed to attaining a hardy class of grapes. Experiment alone must
determine this, and whatever experience we have already attained should be carefully noted and improved upon.

For some years we have been most carefully experimenting upon and propagating from a very large
stock of the finest kinds of foreign grapes, and while most of these have proved perfectly hardy, the CALIFOR-
NIA grape has been entirely killed. At the same time no two opinions exactly agree as to their superiority in
other respects over our native grapes. Thus it will be seen that the wine-grapes of Europe have so far proved to
possess a very decided advantage over the grape now being cultivated and known as the Los Angeles grape.

With these points established, and with the opinions of practical wine-growers of Europe to sus-
tain us, there can be no reasonable doubt of the re-production in this State of the finest wine-grapes of Europe.

The foreign grapes having a world-wide reputation as wine, table, and raisin grapes, and having
been proved to be harder than our own grape, and better adapted to our soil and climate, they must and will be-
come very extensively cultivated. We cannot sufficiently impress upon those about to plant vineyards, our own
opinions and preferences for this class of grapes, believing as we do, that the varieties to be eventually selected
from this class will be grown to the exclusion of all others. We would not by any means wish to discourage the
planting of the CALIFORNIA GRAPE, which is indeed a useful and valuable grape, and of which we sell largely;
but when it has to come in competition with varieties of superior merit, it must necessarily give place to them.

From many of the foreign grapes we have experimented in wine making, and while all have proved to be good
wine-grapes, some of the kinds have produced wine of such decided superiority as to leave no doubt in the
minds of competent judges of this class of grapes being run grape from which we may hope to manufacture an
article of wine that will improve by age and be fit for exportation. The present season we have made wine from
several of our foreign kinds of this class of grapes, as well as a large quantity from the California grape, and
another season we hope to be able to report more fully. We have also made some very interesting experiments in
the grapes for RAISINS, and notwithstanding our process has been crude and imperfect, our success was very flatter-
ing, and we have no doubt but that the very finest quality of raisins can be profitably prepared in this country.
We wish to draw the attention of parties to our extensive stock of this class of grapes which are very select, and
which we have been preparing for several years at large expense, having heretofore limited our sales full the
stock now in hand is the largest in this State. Such varieties as we have specified we can furnish by the hundred
or thousand, and when taken in large lots we will put them at much lower rates than heretofore offered.

We wish it to be distinctly understood that our stock has been all grown by ourselves from bear-
ing vines in our own vineyard, and we enumerate only such as we can furnish in large quantities.

When a thousand or more vines are ordered, the selection of kinds will partly rest with us, but will
be comprised within the following assortment:

WE would suggest to our customers that they should name to us the proportions they desire for TABLE and
for WINE grapes. The following is the list for the present season:

Black Hamburg—An immense bearer, a large and purple berry, one of the finest and most lus-
cious of black grapes known.

Willmott's Black Hamburg—Extraordinary bearer, and fruit with immense sized berries, differ-
ing in shape from other berries.

Black Prince—Large, very productive, rich and very delicious.

Black Morocco—Very prolific, large clusters, and gives promise of being a very fine wine grape.

Black St. Peters—Long and large clusters, a late fruit, sweet and very delicious.

Black Frontignan—A good grape with a sweet and musky flavor.

Cannon Hall Muscat—One of the largest white grapes known. From our experience this year we
think it a fine wine grape.

Chasselas of Fontainebleau—A white, very productive grape, medium size.

Early White Sweet-water—A well known early sweet grape, being more than three weeks earlier
than the California grape; and a great bearer.

Early White Malvoison—Early, and sweet, and good.

Frontignan Muscat—Very fine.

Syrian—An immense bearer, very large, a late sort.

Grizzly Frontignan—A good bearer, fine flavor, good table grape.

Lashmire's Seedling—White, good size, medium bearer, high flavor, believed to be good for wine.

Large Rose of Peru—A large and superior grape, and very prolific.

McReady's Early White—Very prolific, and a fine white grape.

Muscat of Alexandria—Large and fine, the very finest of table grapes, and of exquisite flavor.

Royal Muscadine—A delicious grape, great bearer, incomparable as a table grape, and promises to
be first rate as a wine grape.

Red Frontignan—A very fine grape.

White Frontignan—A very delicious grape.

Our native grapes consist of the California grape from one to three years, Isabella, Catawba, Clin-
ton, Concord, and Rebecca. Some of the latter are new sorts, and of these we are not largely
stocked this season. We particularly ask planters of vineyards to review our remarks in this card.

FRUIT AND ORNAMENTAL TREES.

The Trees offered from the above establishment this season are more than usually fine, and in the
NUMBER OF VARIETIES, of each kind of fruit, we possess the largest collection in the State, our catalogue
embracing OVER NINE HUNDRED VARIETIES, among which are

APPLES, about 250 varieties;

PEARS, 400 varieties;

PLUMS, 60 varieties;

CHERRIES, 60 varieties;

PEACHES, 75 varieties;

NECTARINES, 20 varieties;

APRICOTS, 12 varieties;

GRAPES, 100 varieties.

We hesitate not in saying that our Pear and Cherry trees are the finest ever offered for sale in this State, of all
sizes, being from 5 feet to 12 and 14 feet high. The greater portion being not only of very large size, but also
handsomely shaped, are elegantly adapted to planting near residences, affording the double advantage of
shade and fruit. Of the above two fine Fruits we offer 25,000 Trees for sale, of different sizes and prices, and as
low as good Trees can be bought at any first-class Nursery in the State. Many persons have had but poor success
with Cherry Trees in this State. We state for their information that

Our Cherry Trees are grown upon the true imported Mazzard stock, and not upon common
Native or Oregon stock of this Coast,

the former being the only stock fit to grow them on. We have also a very fine stock of the following, viz

Apple, Plum, Peach, Nectarine, Apricot, Fig, and Almond,

Besides a miscellaneous collection of other small fruits. Particular regard has been paid to the growing of the
trees in good shape, and purchasers of our two-year-old trees will find that they have been well "cut back," and
are now in a vigorous state of growth. We guarantee no finer healthier trees, will be found in the market this
season. We also offer a superior assortment of

Shade and Ornamental Trees, Shrubs, Roses, and Greenhouse Plants,

Embracing all the old and well known varieties, as well as a great many others both good and new. Also, a very
fine lot of different sizes, of that very popular shade tree, so full of reminiscences of home, the good old-fashioned
Elm Tree of many varieties, but most of the American and Scotch Elms, which are of good size and when well
established in the soil, they are of very rapid growth. Also,

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct Letters to "COL. WARREN, California Farmer Office," as there are frequent misarrangements for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as Colonel Warren, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing that any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels miscarried, and as the subscriber has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustices may come to any one.

JAMES L. L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

Not Too Many Full-Blood Sheep!

GREAT anxiety has been manifested within the past six months, relative to the large numbers (as it is called) of splendid French and Spanish Merino Sheep which have been introduced into our State, and as this subject has been spoken of in a letter received from A. L. Bingham, Esq., (but which we are unable to find room for this week), it is proper we should make some comments upon it.

When the immense flocks which are now roaming over our hills are considered, when we can show counties with flocks of twenty, thirty and forty thousand sheep, nearly every owner of which intends sooner or later to improve his flock, what will be two hundred breeders, for a State like ours? As Mr. Bingham says, it is not too many for one county! From a little excursion we made into Alameda county, we think the flocks there will acquire that number before long.

As was said by another distinguished sheep-breeder, of which we spoke some time since (J. D. Patterson, Esq. of N. Y.), he says California would demand for her wants all the fine sheep now for sale in America, and not overlook her market; and we believe it. In a letter from Mr. Patterson, received last mail, he has spoken to us on that subject, and although his letter was a private one, the facts he gave us are such we can use them, we know, to advance great public good. Mr. P. says on this subject: "California cannot be overstocked with the best class of cattle and sheep, for the reason that there are not a sufficient number of that kind in America to do it."

While on this subject we should not forget to say to our readers that all the stock that comes to our State either by steamer or overland is not first-rate. Speculation induces to importation of much stock that is represented as pure, while at the same time it is not. Purchasers of stock, those who want pure blood stock, should never boggle about \$100, \$200, or \$300, in the price of a buck, or bull, or any breeder. Purchase from first hands. Buy the best, and it will prove the cheapest in the end. We believe every purchaser of pure-blood stock in our State has been more than satisfied with the purchases they have made, and they will find great credit and profit to themselves, and honor to our State by such enterprises. We can only repeat this great truth: California will never be overstocked with blood stock, and the man is not living who will ever see the time when good stock will not command high prices. We prophesy that in coming years California will export blood stock to the old States and to Europe too. Will our readers please remember the statement?

Notices of Artesian Wells.

Complimentary Notices of our Journal from old States.

We have letters and notices sent us continually, of the most complimentary kind, from our exchanges and from readers of our papers abroad, for which we are duly grateful. We have preserved most of them, and shall at some future time publish them, as is this fashion. Having had some considerable discussion the past autumn upon the subject of "artesian wells," we recently had a letter shown us from New York, which was very pleasant to read. A copy of our journal having been sent regularly by a young gentleman from this city to his father, he made the inquiry of his father: "How he liked the Farmer?" The answer was as follows: "First rate. The Colonel takes decided ground and heaves to the line without regard to how the chips fly. Such minds, speaking as they think, will of course meet with opposing elements, as in the case of his articles against 'artesian wells.' But I have yet to learn that the Colonel was not in the right, E. Gates' views to the contrary notwithstanding. The Rural New Yorker and the Farmer are alike in taking high ground."

The above we esteem truly complimentary, the writer being a disinterested judge upon the artesian well question, and known to the person whom he names as opposed to our views.

The Sale of Devon Cattle.

In our editorial notice last week, of the sale of Mr. Ely's Devon cattle, we inadvertently stated that the sale would come off on the 12th. The sale takes place on the 19th, at the Black-Hawk Stable, Pine street. Let this be remembered. At this sale there is one important fact which should be borne in mind. Here is an opportunity to breed full-blooded at once, as at this sale some of the finest female breeders ever yet shown, will be offered, and as we said in a former notice, every stock-raiser in our State, that wishes to improve his stock should be present and secure a portion. Every animal will bear a pedigree of known worth and each animal sold will be exhibited so as to show them fully.

Fine Flocks of Sheep.

Among the several herds of Sheep on the Alameda or Livermore valleys, and thence to Mission San Jose, we found many excellent lots of Sheep, bearing marks of advancement, although most of them were common sheep. Mr. Patterson's flock contained some fine half-breeds, and we were pleased to learn from him that he will soon add full-bloods to this well. One of the prettiest small lots we found was that of B. F. Rynders, Esq., up on the mountain-side—a selected lot of over 300 American Ewes, with which are now half-blood Bucks, and about 200 Lambs, the prettiest, we can say, we have seen: all choice American Ewes. Of these, we have made mention elsewhere as having twenty pairs of twins, etc. Mr. Rynders may well be proud of his little flock. It is just our idea—only choice. From these Mr. R. intends to breed up, soon adding Full-bloods. Here we found an admirable shepherd, one that understood his calling, and we were really interested. It was the time of lambing, and we witnessed his care, and saw the meaning of that great truth of Scripture: "the sheep know their shepherd and will follow him." How important to a sheep-raiser to have a "good shepherd," and we felt our friend R. had such. He would sleep with his sheep to care for and guard them. Patrick is a true Shepherd.

Mr. Rynders has a splendid Mountain-ranch of many thousand acres, of hill and valley too, and pasturage enough for a hundred thousand sheep, which we believe he will own ere many years. We enjoyed a couple of days here very much, and return thanks for hospitalities received.

Mr. Michael Murray, near Livermore's, has a fine flock of 3000 Sheep; these were however away in the mountains. We regretted we could not see them. To Mrs. Murray and family we return thanks for hospitalities received. Here we found several bright boys who loved their books, and we were pleased to find they were "good boys" in school also, as we learned of the teacher, at the school-house, where we spent a pleasant hour. Mr. Gallagher, the teacher, is truly attentive, and his scholars were proof of his care. We found much to admire in our trip over this Great Valley, and to all those we have named, we were more or less indebted for kindness received and information rendered, of which we shall hereafter speak.

The Honey-Bee Business.

We are now beginning to see our prediction verified relative to the results of the importation of honey-bees. It will be recollected that we prophesied heavy losses to a majority of those who should enter the business ignorantly. We have been gathering the result of all these matters, and we learn that the losses are greater than was first supposed. Not more than one-third of the number of swarms that were purchased in the Atlantic States and shipped, ever reached here in good condition, and a large half were actually lost.

At the present time, not more than one-half of those that were considered good on arrival are now doing at all well: the greater part are badly affected with foul-brood; a large portion of some importations were badly eaten with the moth. In one small lot that we received to transfer, large masses of the worm were found in the comb. By letters, received from various apiarists, we learn of the bad condition of the Imported Swarms. These letters inform us that in San José, Stockton, Napa, Marysville and other places, the same complaint is made. This terrible disease has now been thrust upon us. Those whose desire to "get rich" have introduced among us a disease that will take years to eradicate, for it will reappear so long as any taint of it remains in our State. This is most unfortunate, for there was never known any blight of any kind to affect our hives, before this bee-mania began. But the result has been just as we predicted—a very general loss to all who engaged in it without knowledge or judgment.

In letters received from J. S. Harrison, Esq., the able Apiarist, of Sacramento, all these facts are affirmed. Some assert that the swarms were injured in transit. There is no doubt of this, that the disease was in them previously, and we have now brought it upon us, and it will require great care to eradicate it. As we have always said, a California swarm is worth five imported ones.

We shall soon give other facts, which we have in preparation; only remarking, for the present, let those who have imported bees look well to them.

The Visit of the Japanese Ambassadors.

The steamer Kandimarrah, with the Admiral, who did act in fact as Ambassador, has excited no small interest in our city and State. The circumstance of the arrival of a war steamer from Japan (a nation hitherto shut out from the world and the world shut out from them) may truly be said to be an event worthy of public notice.

There are many persons who look upon all such demonstrations as foolish, but we should remember that the great object is to make a just and suitable impression upon that nation of our vast resources, so that they shall feel it to be their interest to maintain a friendly and reciprocal relation with us. We should remember, also, that the Japanese are in one sense ignorant of the world, and will be likely to act in return as impressions are made on them. If we receive them kindly and treat them with courtesy, attention and respect, as we ought, because they are a great, a rich, and a powerful nation, then they will reciprocate this courtesy and feel that we are indeed a great and an intelligent nation, for greatness and intelligence yield due respect to others always.

During their brief stay thus far, they have been received by all our Authorities—National, State, and City—in a most becoming manner; and it must be a gratifying affair to them, and we are glad it has been so. Were it possible, we should be glad to give full accounts of some of the proceedings, but space forbids. What has been done must result in good to our nation, and San Francisco has made an impression on them that will not be lost.

LETTERS ON SHEEP-BREEDING.—Valuable letters from distinguished Sheep-breeders, which came too late for this week's issue, will appear in our next number.

Japan and the United States.

Everything that relates to the newly opened country of Japan, must be not only interesting but important. The arrival of the Ambassadors of Japan will form an epoch in their history and the history of their opening intercourse with us. The event will no doubt be one of great moment, and we trust it will be duly celebrated here. We notice the public demonstrations and receptions given to the Ambassadors at Honolulu, at which port the U. S. steamer Powhatan stopped on her way hither. From the Commercial Advertiser, of Honolulu, we take the following very interesting sketch of Jeddo, written by the Rev. H. Wood, the Chaplain of the Powhatan, who was formerly an editor, and takes a deep interest in newspapers, of which he has copies from the ports he has visited around the world; and for his interest in the Press we hope every valuable paper will be sent him. This will be read with interest:

THE CITY OF JEDDO.

Mr. Editor: I have not the time to give your readers an elaborate description of the capital of Japan, which just now creates so much interest and inquiry, as well as the charming islands of which it is, both geographically and politically considered, the great centre. A few notes, however, may gratify your readers, incomplete and hasty as they may be.

The great Bay or Gulf of Jeddo is entered by a strait about six miles wide, the land on each side of which is hilly and broken, and never rising into what can properly be called mountains. In approaching the strait, vessels run near the island Oosima, in the centre of which a mountain rises about 2400 feet high, from whose top a crater sends up a great volume of smoke, while at the same time it escapes through various small apertures near the base. No flames have issued for many years. The bay opens in its full extent upon passing the strait; a magnificent sheet of water, like a little inland sea, being almost square, and each side, as it is said, from twenty-five to thirty miles long. Nothing can be more picturesque in a clear day than this bay, with the square sails of more than a thousand junks and boats spread to the gentle breeze, and the towns and villages close down to the shores, the cultivated fields and the groves lying back, and the great mountain cone of Fuji-ama, which rises into the clouds, and above the clouds, some thirty miles from the bay and about the same from Jeddo. A great mountain chain extends from one end of the island to the other, running north and south, some of whose peaks are seen occasionally covered with snow, while Fuji-ama, the "incomparable mountain," rises in solitary dignity, as if disjoined from the rest, and ashamed in its autocratic pride of being touched by inferiors. Some give 12,000 feet for its height, and others 16,000. The summit is always covered with snow, and for a great part of the year the deep ravines are filled with it, which were furrowed out in olden times by the torrents of descending lava. The summit is a vast crater, once overflowing with burning matter, and sending it down into the plains; but since the year 1707, the volcano has been inactive. The mountain seems to be utterly naked, no solitary trees dotting its sides, and no dark forests overhanging its precipices and cliffs, and even no grass giving life and beauty to its valleys. It is a sacred mountain to the Japanese, almost as much so as Sinai and Horeb to the Jews, far up whose sides they have built temples, to which the devotees resort in great numbers to fulfill their vows, and pilgrims to expiate their sins by acts of penance, the rich often going as beggars, clothed in rags, subsisting all the way there, and while there, and on their return, upon the charities they receive. Almost all the articles of porcelain and lacquer, and their books and pictures, are ornamented with different views of Fuji-ama. Such sunsets I never saw as several times I did behind this mountain, when the skies for a vast extent seemed converted into gold, like the thick and rich work on the finest Miako articles, while the sun itself seemed to linger and refuse to go down in the pride of showing his glory. It seemed to me that the Japanese must have borrowed some of their fine ideas of art from what they so often see in sunset behind Fuji-ama.

Jeddo, or rather Yeddo, as the natives always pronounce it, is situated on the western coast of the bay, and nearly half way between the northern and southern shores. Large vessels are obliged to anchor five or six miles from the city, on account of the shallowness of the water, and nothing is seen indicating one of the greatest cities in the world till, in approaching it, the five massive forts loom up, a mile or two from the shore, assuring one that there must be a city, instead of a mere forest, as it seems, lying back to be defended. On reaching the shore, a wall of hewn stones is seen built up eight or ten feet high above the water, and extending as far as the eye can reach, and as far as any of our party extended their walks. A street levelled with the top of this sea-wall runs along its whole length, which is lined on each side with houses, the front part of the lower story being always used as a store or as a shop for mechanical purposes. There are no jetties, or wharves, or custom houses, so far as our walks and observations extended; and when the tide is low, it requires in some places considerable effort to climb the ladders, or cling to the neck of some stalwart Japanese boatman, whose shoulders we have mounted, seize and mount a plank running out, supported by props at one end, and resting upon the sea-wall at the other. Such is the introduction into this great city.

The five forts are nearly in a line, and are said to be well constructed by those competent to decide, and though mounted with cannon, they are not of large caliber. These military works, as well as another large fort in the process of construction at Kanagawa, show that the Japanese are fully aware of the duties imposed upon them by their new position since they have entered into fraternity with other nations. It is a sad commentary, however upon human nature, that the moment a heathen opens itself to commerce and intercourse with Christian nations, it is compelled, by the inclination to self-preservation, to put itself in a condition to resist and repel them.

The new-comer feels a deep disappointment when he first plants his feet in Jeddo, and standing erect, and intently gazing in all directions in search of wonders, sees no Paris there, no London, no Rome, nor a single structure or monument worthy of a moment's observation; instead of this, he sees streets which are interminable, and generally wide and clean, but unvaried, with the most ordinary houses, seldom above two low stories, and always unvaried, while a part of every one is usually filled with small wares, though nothing is seen like trade and manufacturing except on the smallest scale. He becomes disgusted, and indignant even, that he should have so deceived himself, or been

deceived by others, and would at once return to his ship if it was convenient, or else had let the suspicion that there must be something better urge him onward. One thing strikes him, it is the number of trees, sometimes standing alone, some more frequently in small groves and groups, some of the trees being large in size and old with age, and tall as the tallest of the forest. Indeed the whole looks like a forest, or a city in a forest, buried in it, and overshadowed by it as though all the population had turned monks and nuns, and converted the whole area of the city into a monastery or convent. As he proceeds in his excursions, in whatever direction he wanders, unexpected beauty and wonders meet his eye, and compel him to stop and admire. Just opposite our usual place of landing, on the opposite side of the street, is the residence of Mr. Alcock, the English minister, reached through a gateway, and acres of ground, with fine, graveled paths and matted with green grass, and shaded with trees which seem not to have been planted, but to have started up into life ages ago, while far back embowered in groves, and surrounded by artificial ponds, gleaming with golden fish, with artificial knolls and hillocks, and cascades, and gardens filled with plants, shrubs, and flowers, are seen at length a fine temple and spacious houses once occupied by the priests, who have been routed, and given their beautiful and comfortable quarters to a highly honorable representative of European civilization and Christianity. Yet all this is unseen and unsuspected till one enters the gateway and wanders about the grounds, when he sees enough to occupy days in observation and admiring. Such is the case throughout the city. In several parts of it there are swells and hills and sharp declivities, the peaks of the hills being always covered with large trees, thus adding to the picturesque effect, and giving the idea of a city in a forest.

Several small rivers run through the city, and one of considerable size, which is crowded with boats and junks even in the heart of the city, and across which a celebrated bridge is constructed, which our party crossed, called *Yapon-bar*, or "the bridge of Japan," because from this point distances are calculated to all parts of the empire. The bridge is well built and kept, and about 300 feet long.

Some of the streets of Jeddo are half-a-dozen rods wide, or even more, and though not paved, are kept remarkably clean, gutters being constructed on each side with hewn stone which carry off all foul matter. They are always straight, and cross each other at right angles; some of them are almost half-a-dozen miles long, and the houses the whole way on each side are so closely crowded together that sufficient space does not seem to have been left for another. Gates are erected at different distances which are guarded by policemen, who close them whenever they wish to stop a crowd. I did not see a row or a fight, or an altercation, in all my walks and rides in the city, nor even one instance of drunkenness. The Japanese, however, are fond of liquor, but have the modesty and good sense to drink it in their own houses, and at night.

The Imperial Castle is to be seen only in the exterior by strangers, unless they are officials who have been invited by the Imperial Ministers for the transaction of public business, or for the sake of courtesy and honor. Commodore Tattnall, Captain Pearson, and Mr. Harrison, U. S. Minister, were invited to make a visit to the Prime Minister a few days before we left, who went, accompanied by several other officers, and were most honorably received and sumptuously entertained in the Prime Minister's palace, but saw nothing within the sacred inclosure, in palaces and other structures, worthy of admiration, unless it was the simplicity and neatness. Even the palaces are but one story high, the constant recurrence of violent earthquakes making higher structures perilous. The roofs, instead of being covered with gold, as was once fabled, were covered with tiles, like those of common mortals, while the wood-work was only neatly varnished. The walls which surround the castle are thick, and above twenty-five feet high, over which nothing can be seen from without except the tops of trees, and some few houses through the gates when they happen to be opened. The circumference of the castle inclosure is said to be five leagues, which, however, seems to me an exaggeration, having twice ridden around it; should it be ten miles, which would be nearer the truth probably, it still gives an impressive idea of Japanese majesty. The form of the area embraced by the castle is not a square or a circle, but an oblong, somewhat in the shape of a pear; nor is it a plain, but rises from the level of the river upon a gentle slope of the hill, and spreads over the level above. From this elevated ground, a grand view is had of nearly the whole city, spreading out below from the citadel to the bay, and in the other direction so far that nothing seems to be seen but this division of the city and great Fuji-ama beyond. Still not a spire is to be seen, or a tower; it is a vast expansion of roofs joined one to another, and glittering in the sun like the still waters of the great bay. A moat surrounds the castle, which is said in some parts to be seventy feet deep, and one hundred wide at the top, whose sides are walled up with hewn stone of the very best masonry, but without cement. The water is of considerable depth, in which flags and lilies grow in some places luxuriantly, while ducks and storks swim and wade with a fearlessness and bearing as if conscious themselves, if not of Imperial blood, at least of Imperial protection.

In this quarter of the city are the palaces of the daimios, or great princes of the empire, whose premises are very large, and fronted by a high wall, on the other side of which nothing is to be seen from the street, except the roofs of the houses, unless when the gates are left open, and the recesses disclosed. These palaces are built with roofs in the Chinese style, and all after the same model, though of different dimensions.

From the shore of the bay on the east to the boundary of the city on the west is said to be thirteen miles, while from north to south the limits are not determined, there being no city walls or monuments to determine the limits, and the population being as dense for ten miles in each direction as in the heart of the city. Mr. Harris says there is nothing extravagant in saying the city covers an area twenty miles or even twenty-four miles long, by twelve or thirteen wide. The amount of population is not known to foreigners; but the Japanese interpreters assure me it is known to the government, as the census is taken every year, and not only of the capital, but of every city, every town, and every village, the returns of which are deposited only in the archives of the governors. It has usually been computed at three millions, and Mr. Harris, after three years' residence in Simoda and Jeddo, says it cannot at any rate be less than that of London. As giving some idea of the extent of the city and the immensity of the population, I would state that one day, having walked two or three miles, I took a spirited horse at twelve o'clock, and accompanied by two Japanese policemen, rode at the top of our horses' speed, sometimes breaking into a gallop, to visit a celebrated temple far in the outskirts of the city. Reaching it at last, we dismounted, and through infinite crowds pressed our way into the gorgeous temple, which I found it judicious soon to leave as adorned by a shower of small stones which fell around me and on me. Returning at the same rate reached the point where we took our horses, and yet we did not remain out of our saddles above thirty minutes, while the city spread out still finer than my eye could reach, and the streets were finer, the stores better filled, the business much

more active, and the crowds more dense, than in the very heart of the city. Humanity indeed seemed to be consolidated, and thousands of heads to grow out of one body.

Hoe! For Washoe!

We really hope the cry will be "Hoe and Hoes for Washoe"; and if the *Hoe* and *Spade* should be wanted as well as the *Pick* and *Shovel*, we should have greater faith for the permanency of Washoe. Gold only will not keep people from starving; they must have Bread. At the present time, we learn that the freight of a barrel of flour is only about \$40, and all kinds of provisions cost from 25 to 40 cents a pound to get them there.

Now, if some wise men would only go up and start a good vegetable garden as soon as the snow is off the ground, we think they would find it equal to a good lead of silver ore; in fact, we believe they would find it a lead of gold already coined.

This rush for Washoe is like the mad rushing for Fraser river, and many hundreds and thousands will bitterly mourn the hour that lured them from a good business and a happy home, in their thirst for sudden riches. "All is not gold that glitters," and it will be found that all who go to Washoe will not get it.

We have no objections to having all persons who are in want of employment, all politicians out of office, and all idlers and loafers, going to Washoe: the first class will find work, and the others should work—or starve. We don't want them here; can spare them just as well as not—and a little better.

Young active men, single men, adventurous spirits: these all, may do well; some of them will; and we hope all may; but family-men, those of good business, and Home-men, better let Washoe alone. "Them's our sentiments."

Graham Crackers.

It is a law of the animal economy that a certain amount of coarse, indigestible matter must be contained in food, to make it perfectly healthy. This fact is ascertained by physiologists, in experimenting with animals. Thus, if dogs are fed on sugar, butter, gum Arabic, or superfine flour-bread, their appetites become macerated, and invariably die in five or six weeks; and if fed on bread that contained the bran, they were found to thrive and did not seem to suffer in any respect. The same principle is applicable to the human body, and as a general thing, in civilized life food is too highly concentrated; hence the absolute necessity, if we desire to be healthy, of having a certain proportion of coarse material in our "breadstuffs," and there is nothing that will serve the better, nor quite so well, as the unbolted wheat flour of which Deeth & Starr's "Graham Crackers" are made. These Graham Crackers are comparatively little known, but so far as they have been tried, are perfectly satisfactory, and are undoubtedly great promoters of human health and happiness. They are really much better in quality than the New York renowned Graham Crackers, owing to better quality of wheat or superior skill in making them—perhaps both. Deeth & Starr's Bakery is on Sacramento street, near Davis.

ACKNOWLEDGMENTS.—New Music.—We have to acknowledge the reception of a fine collection of new music from the great publishing house of O. Ditson & Co., Boston, who are known throughout the United States as music publishers, the oldest, longest established and most justly celebrated Music Warehouse in New England. The following are received: *The Ship*, by Dr. Charles Mackay; *Midnight Hour* (new), by E. Panaboe; *O, ask me not to smile again*, by Lillie Lindsay; *Again I see my native hills*, by M. W. Kelsey; *I'm waiting for to-morrow*, by I. E. Carpenter; *This own dear girl of mine*, by the same; *The autumn of our year*, by Geo. Barker; *This world is full of beauty*, by Franz Pettersilea; *The rose and the row*, by Samuel Lover; *Sunny memories*, by Ellie Hill; *Precious*, by Beyer; *The Trees are in Blossom*, by George Lindley. Mr. Kohler is always in receipt of music from this house and elsewhere, publishing and republishing everything new, and the Music Warehouse of Kohler is destined to become the most popular on this coast.

IMMENSE GROWTH OF THE LAWTON BLACKBERRY.—HEAVY CROP OF ONE VINE.—We saw in a garden at Oakland, among a very nice lot of the Lawtons, many very large vines. One attracted our attention; it had three or four branches or canes, some eight or ten feet high, trained up like a grapevine. This vine was trained to canes. The product last year was six quarts; the present year we think the product will be ten or twelve quarts. Think of this, those who have even a small patch of garden, how easy to have a good increase from a few vines.

ABUNDANT RAINS.—There can be no ground of complaint this year for want of rain. Even now we hear grumblers saying, the seeds are rotting and grain will lodge. There are some persons that are so constituted that they would grumble if their "necks were broke." But the rains fall on the unjust as well as on the just. The present rains have given assurance of one of the most fruitful seasons ever known, and the most abundant grain crop.

HOTEL INTERNATIONAL.—This Hotel is constantly full of visitors from every part of the State. The perfect order of the rooms, the cleanliness that pervades every department, the excellent table and the courteous and prompt attention, are winning golden favors from the public. The Japanese Ambassadors and Suite, numbering fifty persons, are to be the guests of our city, and take rooms at this Hotel.

VANCE'S GALLERIES.—Go to Vance's Galleries by all means. The new and splendid Pictures recently taken, the finely finished full and extra sized Ambrotypes, together with the vast collection of Stereoscopic Views, make this collection the largest and finest in the State. Every effort at taking perfect likenesses, at first sitting, is proverbial. Mr. Vance has also a wonderful stock of New Goods for his business.

STATE SUMMARY.

The statutes relative to the killing of game out of season, seem likely to be rigorously enforced this season.

The Petaluma Journal reports a peach tree in full bloom in that city, which is but one year from the pit!

The steamer Visalia has made a successful trip up the San Joaquin to Fresno and back to Stockton.

Occummas raised this Spring in the gardens of Placer county, are to be met with occasionally in the mountain hotels in that region.

About fifty hogs were lately poisoned at Stockton by eating phosphorus, placed on the outside of gardens for killing squirrels.

The Crescent City Herald reports the farmers in Smith River and Elk Valleys, as stating that the crops all look finely, and promise good yields.

The butchers of Downsville, of their own accord have reduced the price of beef, which has been selling at 20 and 25 cents, to 12, 15, and 20 cents a pound.

Twenty-six whales have been caught at Monterey since February first, from which about five hundred barrels of oil have been obtained.

A trout was caught in Santa Rosa creek recently, says the Democrat, by Mr. Ames, teacher of the District School, which measured twenty-two inches in length, and weighed two and a-half pounds.

On the morning of March 11th, the wife of Wm. Gilkey of Santa Clara, gave birth to a fine boy; and on the 13th inst., she gave birth to another boy. The mother and children are doing well.

Mr. Doyle, of Petaluma, offers to run his horse "Stormy John," from four to six hundred yards, for \$3000, against any horse in the State, any time after his season expires.

The claim of M. G. Vallejo, to the Suscol Ranch, in Napa and Solano counties, was confirmed by Judge McAllister, in the U. S. District Court, on the 21st March. This claim is valued at over \$2,000,000.

The county bridge at Napa fell on Sunday last, from the weight of a hundred head of cattle, precipitating them into the stream a hundred feet below. Several were killed, others maimed, and some drowned.

In Solano county, as we learn by the Herald, it is said by old settlers that the season is far in advance of former years. Never have the hills looked greener, or the valleys given better evidence of an abundance of food than now. Grain too is coming on finely in many localities.

The Los Angeles Star advises men who desire to be rewarded for their toil in prospecting, to seek the mountains and canyons, from the Soledad Pass to the farthest point of the San Bernardino range, where the gold and silver lie in virgin purity in the bosom of mother earth.

The Governor has approved the "Dog Act." It makes the stealing of dogs petit larceny, punishable by imprisonment in the county jail not more than six months, or by fine not exceeding one hundred nor less than twenty dollars. If the dog is not paid, the defendant shall serve in the county jail at the rate of two dollars per day until it is discharged.

Some specimens of wines manufactured by Maj. Bidwell, of Chico, of grapes grown on his ranch, the Butte Democrat thinks, would compare favorably with the pure imported articles of the same kind. The varieties were Catawba, White, Sweet and Pink wines. But few years will elapse, ere California will become one of the greatest and best producing wine countries in the world.

The Capital question has, as is supposed, been definitely settled. The bill appropriating \$100,000 for the erection of a capitol building at Sacramento has become a law. The location is the square bounded by L and N, and Tenth and Twelfth streets. It is to be condemned by the State, and the county of Sacramento is to defray the expense. It is said to be the best site in the whole city, and is admirably adapted for the purpose.

At Los Angeles, says the Star, the condition of the fruit trees gives indications of a crop of unequalled abundance. The peach, pear, almond, apricot, in fact all kinds of fruit, are now passing out of bloom and forming the fruit. It is a critical period, which, if passed over without a visit from old Boreas or Jack Frost, will eventually in a yield unexampled in the district.

The San Jose Reporter says that during the last twelve months, four cows belonging to one Briggs, who resides at the Narvaes ranch, in that county, have produced four pairs of calves. Lately the wife of the same gentleman presented him with two fine boys and a bouncing girl, all at a single birth. If anybody in California, or in any other State, can beat this for one year's work, we should like to hear of it.

ANGLING in the vicinity of Santa Cruz, says the News of the 23d, is one of the principal inducements to the weary votaries of business and fashion to spend a season of recuperation in its quiet and romantic retreats. Trout, among fish, are as the fox among animals, and their capture is one of the most exhilarating and rejuvenating recreations. A gentleman from our office, on Tuesday of this week, after a few hours' absence, returned with a string of seventy of the spotted little beauties.

The new ditch plow constructed upon a plan originated by Mr. Kinney Laning, of Stockton, has been tested and found to operate in a satisfactory manner. The Argus says it cuts a ditch three feet deep and two and a-half feet wide at top and bottom, and performs its work with greater precision and much more effectually than the same could be performed by hand. With three men and two horses, the plow cut a ditch fifty-two rods in length in a day. There need be no further question on the practicability of reclaiming tule lands by the ditching plow.

It is a pleasurable evidence of permanent prosperity, says the Marysville Express, to witness the constant sale of three or four large nursery establishments in the city, of large numbers of fruit trees, both to our town people and our country people. We have no certain or reliable data, by which to be governed, but we venture the opinion that there have been twice as many fruit trees sold in this city this season, as ever have been sold before in any one season. Teams have been loading almost hourly at our nursery establishments for the last few weeks, for different parts of this and adjoining counties, and many trees have been carried into the different parts of the mountains.

As an evidence of the forwardness of the season, the Red Bluff Beacon of the 28th inst. reports receiving from Mr. Riggs a bunch of beautiful green wheat, grown this year on his ranch near Antelope, which measures two feet in length. It says: For this latitude, so early in the season, this sample speaks well for the quality of the soil and the prospects of the grain crop. Since our last issue we have been favored with a heavy fall of rain, the effects of which are seen in every quarter, but nowhere are they more manifest than in the new life and fresh appearance of the crops, all of which promise a more abundant yield than was ever before known in Tehama county. Fruit-trees are looking finely, since the frosty nights and northerly winds have ceased to retard their development.

Public Notice.

We quote the following notice for the especial benefit of our cotemporary the Cultivist, now J. B. Morse was once the agent of this journal, as will be recollected by some of our readers. We suffered the benefit(?) of his labors, and can therefore sympathize(?) with our neighbor, to whom the said Morse went when he was discharged by this journal:

"To the Patrons of the 'Cultivist' and the public generally.—J. B. Morse, heretofore Traveling Agent of the 'Cultivist,' having failed to transact his business with the office in an honorable manner, notice is hereby given, that from and after this date he is in no way connected with the magazine aforesaid, and all persons are cautioned against paying him any money on his account."

W. WADSWORTH,
"Editor and Proprietor Cal. Cultivist."
"March 28, 1860."

VALUABLE STOCK FOR SALE.—We invite the attention of all who desire valuable Milch Cows, Merino Sheep, and Blood-Swine, to the Card of A. L. Bingham, Esq., upon the "Brannan Ranch," on the Feather river. This Ranch now contains more full-blood Stock than any other in our State, and it is well worthy a visit to examine the fine Animals that can be seen. Mr. Bingham will be most happy to show the Stock to all who can appreciate such Animals; and the information that can be derived by a visit, will fully pay the cost.

SPANISH MERINO SHEEP.—Messrs. Jones & Rockwell now offer some of the most superior Spanish Merino Sheep ever offered in our State. Messrs. J. & R. are old and well-established Sheep-raisers of Vermont, and their Flocks are in high repute. Referring to our columns, purchasers will see their Card, and we shall be glad to show samples of their Sheep and Wool.

CALIFORNIA BLANKETS.—Remember to patronize Home Manufacturers. Every Californian should take pride in purchasing Home-made Goods always. We have spoken the word—let all now act.

DON'T FORGET Kohler's Opening of splendid Bohemian and Porcelain Goods, and his splendid Lot of Pianos and Music, at his New Rooms on Sansone street.

LARGE INVOICE OF REAPERS AND MOWERS.—See the card of Messrs. Knapp, Burrill & Co., of the Vermont Reaper and Mower. It is new, will cut a wide swath, and is worthy special attention.

The rates to New York by the next steamer will be as follows: First cabin, \$250 and \$225; second cabin \$150; steerage, \$100, with \$7.50 additional as stamp tax.

JACKSONVILLE QUARTZ MINES.—The Oregon Sentinel of March 17th, says, at Gold Hill the gold-quartz ledge of the Ith Company continues to pay as extravagantly as ever, and we have no diminution of the average products of preceding weeks to chronicle. Far as the ledge is sunk into, the same astonishing auriferousness is displayed, and in one or two new places where the vein has been tapped, similar richness with what has been worked is exhibited. The company are preparing to have ample steam machinery erected to facilitate their operations. On cleaning up their assays, from 1000 pounds of quartz, 33 pounds of gold were realized. The Vannoy & Wait Company just below, have done handsomely during the week. On Wednesday they gathered forty pounds of exceedingly rich quartz, and over 50 pounds of medium bearing. Quite a fresh excitement was created at the hill by the discovery of what is believed to be a continuous genuine ledge on the claim next below the Vannoy & Wait claim.

Valuable Patents.—We call the attention of parties who are interested in PATENT RIGHTS to those advertised by us. Each of them will secure a very handsome sum to any person of enterprise and energy. The models and rights can be shown and explained by calling at our office, when the price and terms will be made known.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

HOW many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$5 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the New Volume.

TO GRAPE PLANTERS.—As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planting will be so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them at much increased value. May we not expect this from all planters of the vine every where?

Large Potatoes and Onions.—We are very desirous of procuring some very large Onions and Potatoes, for a special purpose; we only want a few, but will cheerfully pay liberal price for fine samples, and be very grateful besides. We also wish a variety of curious or rare vegetables of any kind—Beet, Parsnip, or Carrot. Those who have such and will send them to our office, we will reward them for so doing.

CALIFORNIA BLANKETS.

The Subscriber is now prepared to execute orders for Any Description of Blankets which may be desired.

Dealers may be supplied by giving reasonable time for the execution of orders; and consumers will not be slow to discover the merits of

ALL-WOOL BLANKETS,

As compared with those made from mixed materials.

Samples can be seen at the Factory, or at the Warehouse of Messrs. HEYNEMAN, FICK & CO., 50 and 51 California street, through whom sales will be made, or orders received.

DAVID S. TURNER,
Agent San Francisco Woolen Factory.

ALEXANDER H. TODD,

Produce and General Commission Agent,
No. 45 CLAY STREET, NEAR DAVIS,
SAN FRANCISCO.

ALEXANDER H. TODD has been engaged in selling Grain and Produce for five years past in this market—was the Pioneer Expressman of California in 1849—has an extensive acquaintance, and possesses advantages unsurpassed for Buying or Selling. Has permission to refer to many of our most substantial merchants in the city, and to a large number of farmers throughout the country.

N. B.—My terms for buying and selling produce are: For amounts under \$5,000, 2 1/2 per cent; for \$5,000 and upwards, 2 per cent.

THE VERMONT MOWER AND REAPER.

The attention of Farmers is invited to the celebrated

Vermont Mower and Reaper,

Which is unsurpassed for SIMPLICITY, DURABILITY, CONVENIENCE AND THOROUGHNESS OF WORK; and now makes its

First Appearance on the Pacific Coast.

Some of the points of excellence and peculiar advantage which this machine has over others, are as follows:

- 1st. Having the cutter-bar hinged to the frame, so as to adjust itself to uneven surfaces.
- 2d. Having two driving wheels, if one slips the other does the work.
- 3d. When the machine moves to the right or left, the knives are kept in constant motion by one or other of the wheels.
- 4th. It can be oiled, thrown in or out of gear, and the cutter-bar raised, without the driver leaving his seat.
- 5th. The whole weight of the machine is on the wheels, where it is required to give power and stroke to the knives.
- 6th. When the machine is backed the knives cease to play; consequently you back away from obstructions without danger of breaking the knives.
- 7th. The cutter-bar being hinged to the machine, can be packed up without removing bolt or screw.
- 8th. The cutter-bar is easily raised by a lever, which is very convenient at the corners of the land; when raised the machine will turn as short and as easily as any two-wheeled cart.
- 9th. The machine is made of iron, simple in construction, and easy to manage with ease.
- 10th. It has no side draught.

We invite every farmer wishing a machine, to call and see this before purchasing.

We have them now set up and ready for inspection. Call and examine for yourselves.

KNAPP, BURRELL & Co.,
80 Washington street,
(Near Front) [7] SAN FRANCISCO.

THOROUGH-BRED

French Merino Sheep

AND

BERKSHIRE AND SUFFOLK SWINE.

The undersigned would offer a valuable collection of the above kinds of stock, imported and bred by himself, and guaranteed to be equal to any stock that can be found.

ALSO:

Of superior quality, being the best selection from Jerome C. Davis, one of the best breeders of the West.

The above are offered for sale at Brannan's Ranch, Feather River, opposite Nicolaus, sister county, by

A. L. BINGHAM.

Merino Bucks,

ONE-HALF AND THREE-QUARTER BLOOD,

FOR SALE.

YEARLING AND TWO-YEAR-OLD BUCKS, the produce of the splendid FRENCH MERINO BUCKS "SAMSON" and "NAPOLEON," out of first-class American Ewes. The Bucks were bred by J. D. PATTERSON, and imported into this State by Seale & Wynn.

ALSO:

THREE QUARTER-BLOOD BUCKS,

Almost equal to pure blood. These will be ready for delivery this autumn; only a few for sale.

For sale by

JOHN SEARLE, Rancho Arroyos, six miles from San Juan, Monterey county.

N. B.—The Great Flock of "Samson" of 33 1/2 Bucks may be seen at the Farmer's office.

FIRST PREMIUM GOLDEN STATE

SHIP-BREAD AND CRACKER BAKERY

AND

Flour Store,

31 Sacramento street,
(Between Front and Davis).....SAN FRANCISCO.

DEETH & STARR,

MANUFACTURERS OF

SHIP, NAVY, AND PILOT BREAD.

Special attention given to preparing the

GRAHAM CRACKER.

Butter, Boston, Pilot, Milk, Wile, Sugar, Soda, Navy, Water, Picnic, and Graham Crackers, fresh baked Every Day.

7:30

WANTED TO BE KNOWN

As a Mill-Wright.

The undersigned would respectfully submit for the consideration of mill-owners and farmers, the plan lately adopted by the State, with the experience he has had in Mill building, he can construct a more effective Mill for flouring wheat, with much less expense than is usually incurred.

The improvements that can be exhibited cannot fail to secure approbation. Owners of mills, merchants, or farmers will be favored with an interview, or a response to any communication, exhibiting all particulars.

Letters addressed W. W. and left at this office will be promptly attended to.

The advertiser is permitted to refer to Col. Warren, Editor of the FARMER.

Fine Vineyard and Orchard

TO LEASE.

WANTED, to lease for a term of years, A MOUNTAIN FARM, upon which is now a small Vineyard and Orchard of Choice Trees. The terms will be such as to be an inducement to a good Horticulturist; none other need apply.

For particulars inquire at this office, or at the Golden Gate Ranch, near Mokelumne Hill, Calaveras county. 6:10

L. HASKELL & CO.

Dealers in

HIDES, TALLOW,

WOOL, FURS, AND SKINS.

PRINCIPAL OFFICE,
On Davis street, between California and Pine,
SAN FRANCISCO.

AGENTS

LIZZIE WILEY WARREN, M. D., EDITRESS.

"I AM THE MOTHER, 'TIS BEST"

BY MRS. DENISON.

"I sit with our darling to-night, John; lie down and take your rest; You are worn out with watching, and I am the mother, 'tis best."

His lips have grown red since morning, that were yesterday deathly white, And I think that his soft eyes sparkle with a wondrously vivid light.

You must not go out in the rain, John—you tremble with vague alarm; Yours is a womanly heart, John, and yours a right manly arm.

But you cannot bear like a mother the sight of such anguish and pain— You will feel our sorrow, the keener going out in the dark and the rain.

Till it fill the morning alone, John, alone with God and our child, And I think that Heaven will answer the prayers that are almost wild.

I see a sign for the better—a rose-tint changing from white, His dear little hands grow moister, and his eyes have a clear light.

Kneel down for once in your life, John, as you never knelt before, From the very depths of your heart, John, God's merciful help implore;

Ask him to save our darling, the soul that through our souls came, And tell him of our great sorrow—yet humbly in Christ's dear name.

There, now, you are calmer; your forehead has lost that ice-cold dew, And your eyes, that were gray and stony, are gentle again and blue.

O! if it were not for God, John, how could our poor hearts bear This burden of weary watching that is lightened only by prayers?

And oh! if He spare our darling, we'll never, never forget, And we'll strive to serve him more fervently than ever we've striven yet.

I'm sure our blessing is better—he's looking out for the light, Thank God! and go to your rest, John, I shall not need you to-night."

So the mother knelt down by her darling, nor saw that an angel was there; One white hand laid on its bosom, and one on its golden hair;

Its wings of a cloud-white splendor shading the innocent brow, Its fingers changing to marble the features life-flashed but now.

And the sun in the summer morning laid the rustic floor with gold, And streamed with a wondrous glory on the cradle's linen fold.

Again was the woman tearless, and the father had left his rest, Yet there came from her pale lips moaning, "I am the mother, 'tis best!"

While she raised the dear cold body with a lustrous white impetrial, Its little arms all helpless, its flaxen locks uncured, And as her lips clung to it, the heavenly guest knelt by, And softly said to her spirit, "Their angels can never die."

[Boston Transcript.]

[For the California Farmer.]

The Influence and Duty of Wives and Mothers.

"Tolerance and ignorance are the parents of many vices." SISTERS AND FRIENDS: What an immense responsibility rests upon us, especially those of us who wear the sacred names of wives and mothers! Let us sit down and ask ourselves the solemn question: How are we fulfilling those little self-denying and often thankless duties which many are so often called upon to perform? Some of us, perhaps, have kind and loving husbands, who know how to provide for the house, and appreciate a wife's fond devotion, and who never find fault if the house is not in precise order upon a washing day, and are willing to eat a cold bite for dinner when wife is harassed and fatigued with her too numerous duties, and can even amuse him while she is setting this upon the table.

While some have husbands who return home with their cheeks bloated with brandy and their mouths filled with that noxious weed called tobacco, which they very deliberately spit upon the floor or carpet, and look at their wives with anything but a pleasant look, as much as to say, "Always behind time; I do wish I could have my dinner in season!" and take one child by the arm and give it a flogging, and scold the poor little innocent babe, who sits wearily upon the floor looking cold and hungry, and imploringly into its father's face. And if they have no children (which is not often the case), they will pinch the cat and strike the dog on the head, and pour forth a volley of oaths, as if they were bound to do something to annoy the otherwise sweet-tempered being whom they call wife. And then they themselves upon the lounge and commence reading, if they cannot provoke their wives to a retort, never deigning to pick up the babe, or to speak one kind, loving word to little sis, who stands with her eyes overflowing with tears in sympathy for her dear little brother whom her brutal father pushed so rudely aside as he entered. Now, I suppose some will ask what are we to do in such a case? "Why, the picture you have drawn would make a saint angry and scold." But women are expected to be more than saints; they must be angels in purity and goodness, or they will never get along in such circumstances. And I am just going to enlighten you how to get along so that at least these evils will be done away in the next generation.

Is not woman in a measure responsible for this conduct on the part of husbands? I think she is, and will endeavor to show you why. Man is molded by woman; he receives his blood and his first nourishment in tender infancy directly from his mother. Now, how can these be pure if poisoned by that noxious weed before-mentioned? And how can the expect her babe to become a noble self-denying man, if she daily partakes of stimulants such as coffee, fat pork, and strong Hyson, and eats every condiment which dyspepsia and a depraved appetite shall dictate? She cannot warrant him health under such circumstances, and ten chances to one she lays him in the grave before he has completed his fifth year. But on the other hand, if she rigidly abstain from everything of a doubtful character, and follow the laws of health by daily taking a soothing bath, and giving her babe the same, and feeding him only at regu-

lar intervals, she can add much to his happiness and her own by increasing her child's pleasures, and instead of having to be aroused every night to wait upon sickly, pining children, she can rest when nature demands it, and as her children grow up around her like "olive plants," she will find them more firm and self-reliant, ready for every difficulty and obstacle that presents itself to their minds. I speak from experience when I say that I agree with an old physician whom I once heard express his opinion in Michigan, that "tobacco was a greater evil than whiskey, to the young and rising generation." He said it had a worse effect bodily and mentally on offspring than liquor. Truth, every word of it. I nursed in tobacco with my mother's milk, and my father seldom passed a day without a pipe in his mouth. It was recommended to my mother as a cure-all for dyspepsia, and from her girlhood she had used the pipe. O, when will physicians learn wisdom? I believe the time is not far distant when this error, at least, will be corrected, and when, instead of ordering tea, coffee, tobacco and whiskey, as the great panacea of the universe, they will say to the poor invalid universally, "wash and be clean." Here is water, what doth hinder you to be baptised? Brothers and sisters, think of these things, and do not think that I mean to censure you, or would willingly cause pain to any living human. But as a wife, as a mother, I cannot refrain from speaking of the evils, and enlightening the people as to the true cause of many of the evils that darken the domestic fireside. We are all in a measure dependent one upon another; but children, poor innocents, are made to suffer through life from hereditary weaknesses and diseases, or are carried to an early grave, while parents do not consider themselves in the least responsible, but exclaim, "Providence hath done this," and fold their hands and pursue the old way. It is time we looked into the pure light of the gospel and followed the Savior in every "good word and work." Sisters, shall we be idle and hide our light under a bushel, or shall we "let our light so that men seeing our good works, may glorify our Father who is in heaven?" "A word to the wise is sufficient." And I stop writing. ROSA.

HOPKINS, March 6, 1880.

Pet Birds.

CAGED birds are the source of much pleasure, and while they give great happiness if they are kept in good healthy condition, seem to enjoy life nearly, if not quite as well, as their mates in the bush or the wildwood, especially if, either from lack of memory, or from blissful ignorance, the caged birds do not know what pleasure they lose. "Where ignorance is bliss, 'tis folly to be wise." One of the great drawbacks to the happiness of the birds, and to the pleasure of keeping them, is lice, and having recently learned of a safe and sure way of removing them, we give it to our readers. The Michigan Farmer says:

Lay a piece of Canton or cotton flannel over the cage at night, several nights in succession, taking it off at daylight. Multitudes of the lice will be found upon it, which are easily killed. After a few days all will be removed. A case in which this was very successful, has just been brought to our notice: from a pair of bobolinks hundreds of these parasites were removed in this way.

How to Keep Men at Home.—There would be fewer wretched marriages, fewer dissipated, degraded men, if women were taught to feel the angel duty which devolves upon them, to keep the wandering steps of those who are tempted so much more than they, in the paths of virtue and peace—to make them feel that in the busy world is noise and confusion—that at home there is order and repose—that their "eyes look brighter" when they come there—that the smile of welcome is ever ready to receive them, the book ever ready to be laid aside to minister to the husband's pleasure; they would find amusement then at home, and not try to seek it elsewhere. And not alone to the higher classes of society should this be taught; it should be a lesson instilled into the minds of all, high and low, rich and poor. Fewer heart-broken wives, weeping and scolding, would stand waiting at the doors of public houses, to lead the unsteady step of their drunken husbands home, if that home had offered a room as cheerful, a fire as bright, a welcome as ready and cordial as at the tap-room they frequent. Duty has seldom so strong a hold on men as women; they cannot, will not, for duty's sake, remain in a dull, tedious, ill-managed, or quarrelsome house, but leave it to seek elsewhere the comfort and amusement which falls them there; and when riot and revelry have done their work, the wives and sisters who have done so little to make them otherwise, are pitted for their bad husbands and brothers.

WOMAN.—Women that are the least bashful are not unfrequently the most modest; and we are never more deceived than when we would infer a laxity of principle from that freedom of demeanor which often arises from a total ignorance of vice. [Colton.]

What is the situation in which woman and woman's love may not be the jewel of our fate? What is the state or condition which she may not be what is, or so often, or in spirit.—[James.]

WILHELM VON Humboldt says, "Old letters lose their vitality." Not true. It is because they retain their vitality, that it is so dangerous to keep some letters—so wicked to burn others.—[Mrs. Jameson.]

When is a chair like a lady's dress? When it is sat in.

PACIFIC TIN-WORKS,

No. 94 CLAY STREET, SAN FRANCISCO.

B. C. AUSTIN,

MANUFACTURER OF TIN AND SHEET-IRON WARE,

REPAIRING—Done in a workmanlike manner, and at the shortest notice.

Orders from the Country, promptly attended to.

MRS. ANNIE L. AVERY,

HOMEOPATHIC PHYSICIAN,

Residence, 249 Pacific Street (two doors from Stockton Street), SAN FRANCISCO.

Special attention paid to diseases of women and children.

MRS. LIZZIE WILEY WARREN, M. D., ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *deceiving the sick*. Believing in the "old adage," "As once an ulcer is cured, it is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism, and the known relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and wise, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale.

Apply at her residence, corner of Mason and Pacific streets.

WHEELER & WILSON'S

FIRST PREMIUM

FAMILY

SEWING

MACHINES!

AT

REDUCED RATES!

The character of Wheeler & Wilson's Sewing Machine is too well established to admit of any controversy in regard to its merits. They have received the commendation of all the papers in the country. Notice what the Scientific American says—the leading mechanical and scientific paper of the age:

"We are having a great many inquiries for Sewing Machines, from all parts of the country, and as we cannot conveniently reply to them all by mail, we have thought proper to state our opinion of them in this public manner. We have used Wilson's Patent, manufactured by the Wheeler & Wilson Manufacturing Company, No. 35 Broadway, and we can say in regard to it, that it is without a rival. It is simple, not easily put out of order, and, in point of effectiveness and finish, no other Machine stands ahead of it. We state this much in regard to the excellent Machine on our own responsibility."

The Highest Premiums Were Awarded

THESE MACHINES

At the following Fairs in 1855:

Missouri State Fair, Illinois State Fair, New York State Fair, New Jersey State Fair, Virginia State Fair, Wisconsin State Fair, Michigan State Fair, Pennsylvania State Fair, Kentucky State Fair, Indiana State Fair,

CALIFORNIA STATE FAIR,

Chicago Fair, St. Louis Fair, Richmond Fair, Baltimore Fair, and San Francisco Mechanics' Fair.

EVERY KIND OF SEWING

Can be done with

Wheeler & Wilson's Machine!

ONE MACHINE DOES THE WORK!

Hammers, for Wide and Narrow Hems, with each Machine.

Among the undoubted advantages of WHEELER & WILSON'S Sewing Machines are:

1—Elegance and simplicity of construction, and consequent freedom from derangement and need of repair.
2—Durability.
3—Unexampled ease and rapidity of operation.
4—Noiseless movement.
5—Beauty of stitch and firmness of seam.
6—Economy of thread.

7—Applicability to a variety of purposes and materials. They are applicable to every kind of sewing for family wear, from the lightest muslin to the heaviest cloth. It works equally well upon Silk, Linen, Woolen, and Cotton Goods; Seaming, Quilting, Hemming, Gathering, and Felling; performing every species of sewing except making button-holes, stitching on buttons, and the like. Various appliances are furnished for regulating the width of Hem.

MACHINE WARRANTED

Thread, Silk, etc., Constantly on Hand.

J. C. HAYDEN, Agent.

FIRST PREMIUM AGAIN!

BEING THE

SEVENTH TIME RECEIVED

Against All Competitors.

R. H. VANCE,

1,000 China Trees,

Lombardy Poplar,

Mountain Ash,

(For the California Farmer.)
BELLE.

Yes, Belle is a beauty; she's bright as a birdling
That carols all day its melodious song,
While it bathes in the sunshine, and drinks in the perfume
Of Summer's sweet flowers while sitting along.

Her eyes are like dew-drops, so clear yet so liquid;
When glancing, they look like Night's crystallized tears;
They flash with Thought's sunlight, or darken with shadow,
Reflecting back quickly Life's hopes and its fears.

Her voice is as soft as the faintest echo,
That mingles back the wind on mountainous steep;
It's as sweet in its tones as the sighing of willows,
When heard in a calm on the moonlighted deep.

Her heart, like a harp that is fingered by angels,
Will vibrate alone for each beautiful thought;
Its chords are like bells that are chiming for vesper,
Which cheer with a magical music are fraught.

M. A. SABLE.

Sir Raleigh Raleigh once said—"Thou mayest be sure that he who will in private tell thy faults is thy friend, for he adventures thy dislike, and doth hazard thy hatred; for there are few men that can endure it: every man, for the most part, delighting in self-praise, which is one of the most universal follies that bewitcheth mankind."

You must persuade a child to place confidence in you if you wish to form an open and upright character; you can not terrify it into habits of truth.

A person speaking of a drink he once had occasion to indulge in, says he could not tell whether it was brandy or a torch-light procession that was going down his throat.

"It does one good to look at you," as the fox said to the chickens when he found the wall too high for him to leap.

Value the friendship of him who stands by you in the storm; swarms of insects will surround you in the sunshine.

Hear no ill of a friend, nor speak any of an enemy; believe not all you hear, and appear what you are.

When a man has no design but to speak plain truth, he may say a great deal in a very narrow compass.

Satan's chain is in thy Saviour's hand; he says to him "Hitherto shalt thou come, but no further;" Fear not.

It is not what people gain, but what they save that makes them rich.

It is not what people read, but what they remember, that makes them learned.

No man can avoid his own company—so he had best make it as good as possible.

An old man in Indiana recently cowed his daughter, nineteen years of age, for wearing hoops.

BEE-HIVES!

The following is an extract taken from the advertisement of the Agent for the Langstroth Bee-Hive, in the CALIFORNIA FARMER of February 22d.

"See Huber on Bees, published in London, 1841. The page and section not given. This is a very convenient and lawyer-like way of setting forth by inference what is not the fact. The extent of Huber's invention was a section hive, in which the sections were attached by hinges. This was used and used only for an observatory hive. It cannot be made practicable for anything else."

The aspirer ought to be cast on the veracity of the eminent Patent Attorney, whose opinion on the validity of certain patents, published in the same number of the FARMER as above alluded to, calls for the following vindication: Extract from Bevan's work on Bees, published in 1843, page 31, Chapter 9.

"Huber carried the principle of these experimental hives further; he joined several of them together with hinges which were so contrived as to admit of easy removal, and as the frames, or leaves as Huber called them, were not glued, they afforded a free communication with each other."

"Huber EXTENDED and rendered the system more complete, probably approximating it more nearly to that of its ancient GREEK INVENTORS."

"The experiments, however, of Mr. Golding, myself and others, already detailed, have shown that this hive admitted of further improvement: the leaves were too narrow to be applicable to all purposes, and the hinge altogether has been so much simplified by Mr. G., that I shall confine myself to a description of the particular form and dimensions which he has adopted."

"The general width of the leaves should be an inch and five-eighths, but slightly varying in the same proportion recommended for the BARS in page 32."

"The exterior dimensions of this hive are one foot two and a half inches high, by one foot one inch deep; the width will depend on the number of leaves; the number usually employed is eight."

"The perpendicular bars at the front and back converge at the bottom towards each other, so that at the top the interior of the hive from front to back measures eleven inches, at the bottom only ten inches."

"The upright pieces are of course kept in their position by having the top pieces tenoned into them, and are further held together by a small cross-bar, also tenoned into them, about half an inch or an inch from their lower ends, so as to allow a free passage for the bees beneath."

"A series of these leaves being placed in juxtaposition, secured at the front by sliding butt-hinges, and at the back by hooks and eyes, and having a glass pane covered by a shutter at each end, constitute what I think will be found to be an improved modification of the hive of Huber."

J. S. HARRISON.

STATE OF CALIFORNIA, } ss.
City and County of Sacramento, }
I, John C. Barr, a Notary Public, in and for the county of Sacramento, do hereby certify that I have carefully read over and compared the above extracts with the original publication, viz., "Bevan's work on Bees," and find the same to be a true copy.

Witness my hand and official seal this 24 day of March, A. D. 1890.

JNO. C. BARR, Notary Public.

The California

BEE-HIVE!

The BEST, and hence the CHEAPEST

Hive ever offered to Beekeepers.

The above hive was awarded the FIRST PREMIUM at the State Fair held at Marysville in 1883, and also by the Mechanics' Institute of San Francisco, held the same year. And again at the State Fair, 1889, the FIRST PREMIUM, also a SPECIAL PREMIUM, was awarded by a Committee named by the parties exhibiting the Langstroth hive.

There were SIX DIFFERENT HIVES in competition at the latter Fair.

Bookkeepers wishing to purchase HIVES, or RIGHTS to MAKE and USE, will please address the undersigned or either of the following Agents:

L. WARNER, Sacramento (General Agent).
THOMAS OGG SHAW, San Francisco.
SAMUEL MORRISON, Santa Clara.
JAS. C. WARNER, Stockton.

E. A. SHERMAN, Los Angeles.
JACOB V. HOAG, Washington, Yolo county.
B. H. HOAG, Napa.
E. C. WINCHELL, Millerton, Fresno county.
G. W. HARRISON, Marysville.

The Price of INDIVIDUAL RIGHTS is \$15, which may be forwarded through Wells, Fargo & Co., at my expense.

County or State Rights will be sold on terms advantageous to the purchaser.

The Specifications and Claims of my Patent will be given to the public in due time.

N. B. Notice is hereby given, that I will DEFEND any legitimate suit commenced by L. L. Langstroth or his Assignees, against persons using my name, under authority from me.

J. S. HARRISON, Patentee.
SACRAMENTO, March 1, 1890. 4-1m

Who Wants a Farm Cared For?

A PERSON fully qualified to take charge of a large Farm, Orchard, or Vineyard, with a reasonable amount of stock to share, would like to secure a chance to take such a place as shares.

The advertiser has it in his power to make many valuable improvements, if the contract is made for three or four years. Any person who may have such a place, can hear of it by addressing a note to W. B. and J. S. HARRISON, the FARMER'S OFFICE.

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with SPRING and CURED-HAIR MATTRESSES and LINENS than any other House in the State. It is one of the largest Hotels in California; a fire-proof building, and provided with hot and cold water throughout the House. It has a frontage on Jackson street of 57 1/2 feet, by 170 feet deep. There are no dark rooms in this house, all having free and open frontage, with pure air, which is of great advantage to a California climate, there being no large buildings adjacent thereto.

The undersigned invites the attention of the Traveling Public, and Strangers in particular, to the merits of this House. It was established under its present Management, on the 1st of January, 1887, as a

First-Class Hotel,
IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to encroach upon the merits of other Houses, cannot but recall the marked favor with which his enterprise has been received by a discriminating public in a constantly increasing patronage of the FIRST RESPECTABILITY, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is Contiguous to all of the most Popular
Places of Amusement, the Principal
Thoroughfares, the Fashionable
Promenades and Steam-
boat Landings;

Thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR
FAMILIES and SINGLE GENTLEMEN.

During their sojourn in this city.

For a year past we have studied how we can maintain a FIRST-CLASS HOTEL, and at the same time effect some reduction of price below three dollars per day for our friends. We are proud to announce to you that we have succeeded in our efforts.

We have obtained a reduction of our heavy rental; and we have now under cultivation, in the suburbs, a Rancho, which produces our Vegetables fresh from the ground; with a Dairy that secures us the purest Milk and Cream, and a stock of Fowls that supplies Eggs and Poultry always fresh; with many other economical advantages. By this means we can promise our friends that we shall even improve upon the proverbial excellence of our Table; and the same matches Beds, and solicitous attention to the comfort of our Guests, will continue to be the pride of the Hotel International.

We have Elegant Suite of Family Rooms, together with highly furnished single apartments for Families or Single Gentlemen, which, together with the untiring energy of the Proprietor, makes this House one of the most Popular Hotels in the United States. For comfort and luxury this House is not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the landing of the steamers, to carry passengers to the Hotel. 115

Self-adjusting Post-Driver.

A valuable Implement for Farmers.

HYDE'S PATENT SELF-ADJUSTING POST-DRIVER is now offered to Farmers, as a valuable assistant in FENCE-BUILDING. The hammer works in a swinging frame, rendering it self-adjusting on uneven or billy land. It has been used on hills where it had to be hauled up with a tackle; any common carpenter can construct one. The two pulleys, one on the drum, and the other on the crank, are to be covered with leather or rubber belting, and when pressed together by the foot lever, the friction of one on the other is sufficient to raise the hammer, and on lifting the foot from the lever the drum is free and the weight drops; and so on, setting posts far better and much more expeditious than can be done by digging and ramming.

A MODEL of this Machine can be seen at the FARMER'S OFFICE, where RIGHTS are for sale. Price of Right for single machine, \$10; and Country Rights according to population, &c. 20

OLIVER HYDE, Patentee, Benicia.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J Street, corner of Seventh.

FELLOW CITIZENS: I have suffered among you since the year glorious FORTY-NINE, and have suffered with you in three fires and three floods, and intend to live among you with my family during the term of my natural life, if not longer. I return to you my most sincere thanks for your unflinching patronage and support, which has enabled me to pay One Hundred Cents on the Dollar through all my adverse fortune. I would also give you a few reasons for your continued patronage, and inducements to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate Druggist in this City.

Persons in this connection will please observe that there is as much difference between a Druggist and a DRUG-GIST as there is between a Doctor and a Doctor, and rather more so between those who have picked up the Drug Business and those who have devoted their whole lives to it. To this latter class I have the honor to belong, having learned my business in the Atlantic States, and been engaged in said business for the last fifteen years.

SECONDLY.

Believing that life is sweet to all, and that the people wish to know where they can get their prescriptions filled with safety, I will hereafter fill them for

Half the Price Usually Charged

By other Druggists, legitimate or illegitimate, and of The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE BEST place in California to obtain everything, NEW, OLD and STRANGE in the Drug line, and especially to make it the most extensive depot for every valuable Patent Medicine, Drug and Chemical. We invite proprietors of valuable and reliable Patent Medicines to send them along. We have a large and thoroughly fire-proof Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night

And charge no more for medicines than in the day time

FIFTHLY.

We will furnish those in indigent circumstances with MEDICINES AT COST the same being attested by two or three good citizens.

SIXTHLY.

Hereafter we will do a business on a CASH BASIS ONLY. The amount we have lost heretofore by credit we intend to distribute equally among our patrons, in the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valuable articles:

Dr. Carl Warburg's Tincture. This article is particularly recommended for Ague and Fever, when every other article fails to cure. Buid's Nerve and Bone Liniment, warranted the best in California.

Flower of the West, for Fever and Ague.

Delightful Spanish Liniment, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numerous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know how to import them, and how to sell them to satisfy the public as to price and quality. At all events, give us a call, and WE WILL TRY.

J. L. POLHEMUS

EDUCATIONAL.

ACADEMY OF NOTRE DAME,

SAN JOSE.

THE NINTH ANNUAL SESSION of this Institution will commence on THURSDAY, August 18th.

The course of instruction embraces all the branches of a polite and useful education. Its aim is to form young ladies to virtue, accustom them to early habits of order and economy, and to cultivate in them those qualities which render virtue both amiable and attractive.

TERMS:
Entrance, to be paid but once.....\$ 15
Board and Tuition, per session.....\$ 75
Washing.....\$ 50
Physician's fees per session (unless it be preferred to pay the bill in case of sickness).....\$ 10
Piano, Vocal Music, Drawing and Painting form extra charges, but there is none for the French, Spanish or German Languages, nor for Plain Sewing and Fancy Needlework.

Payments are to be made half a session in advance, and no deduction will be made for half a session commenced, except in case of sickness.
Pupils will find it much to their advantage to be present at the opening of the session.

There is a Day School attached to the Academy for the convenience of those parents in the neighborhood who may prefer that their children should return home every day.

TERMS:
Tuition, including the branches specified.....\$ 85
Senior Class, per month.....\$ 5
Junior Class, per month.....\$ 4
Primary Class, per month.....\$ 3

Letters may be addressed to the SUPERIORESS,
Academy of Notre Dame, San Jose.

SANTA CLARA COLLEGE.

THE NINTH ANNUAL SESSION of THIS institution will commence on MONDAY, August 22d. The plan of instruction embraces two regular Courses—the Classical and the Commercial, besides a Preparatory Department.

TERMS:
Entrance, to be paid but once.....\$ 15
Board and Tuition per session.....\$ 35
Washing and mending of articles washed, per session.....\$ 45
Stationery, per session.....\$ 10
Medical attendance and medicines, (unless it be preferred to pay the bill in case of sickness,) per session.....\$ 10
Vacations, if spent at the College.....\$ 35
N. B.—When there are more than two brothers, each one over two pays only half price.

Use of Instruments in Chemistry and Natural Philosophy, Vocal Music, Piano, Violin, and Drawing, form extra charges. School Books are furnished at store prices. No extra charge for any of the languages.

Payments to be made half a session in advance.
For further information apply to the President of Santa Clara College, Santa Clara, Cal., or to Rev. A. Maraschi, S. J., St. Ignace's Church, Market street, between Fourth and Fifth, San Francisco. 2

THE COLLEGIATE INSTITUTE,
AT BENICIA.

THE Next Semi-annual Session will commence Jan. 10th, 1890. Parents are requested to send their sons so that they may be present, if possible, at the opening of the session.

For full particulars in regard to prices, teachers, &c., address the Principal for a circular.
C. J. FLATT, Principal.

THE Bascom Institute, San Jose.—The Summer Session of the Bascom Female Institute, will commence on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

MR. BROADWAY PINNED TO THE WALL.

READER, DON'T STOP TILL YOU GET TO THE END, or you'll lose the fun. The following Circular has been scattered about your hotels and other public places:

"INSTANTANEOUS VIEWS."

"From certain advertisements and circulars which have been recently sent out, it appears that a New York house, whose efforts at Stereoscopic Photography have not very lately commenced, lay claim to the earliest publications of Instantaneous Views."

"Doubtless they have inadvertently fallen into this error. At the same time, justice to the London Stereoscopic Company demands that the mistake be promptly corrected. More than twelve months since the London Company's eminent artist, Mr. Williams, succeeded in taking Instantaneous Views from the Stereoscopic of New York City, Harbor, River, &c. Justly therefore it is claimed for London Stereoscopic Co., and universally it is admitted by all impartial testimony, that their productions, instantaneous and otherwise, were the FIRST and the Finest that have ever been offered to the public."

"To confirm this statement, nothing is requisite but an actual inspection of the views in question."

"504 BROADWAY, N. Y."

Now who this Mr. Broadway is who has taken up the cudgel so valiantly we do not know, but it is evident by the allusion to N. Y. to his name that he means to let it be understood he is "No YANKEE."

In reply to this card, however, we would offer friend Broadway two little pills to swallow, which will no doubt "permanently correct" the difficulty he finds in digesting our Instantaneous Views.

The first pill is compounded by "The Autocrat of the Breakfast Table," a right royal medicine which goes direct to the spot. Read:

MR. DEAR SIR: I have received and examined the beautiful specimens of your art, you have had the kindness to send me. They are very fine, and realize the possibility of which I spoke in a marvelous way.

"The Crowds caught in the very attitudes which lasted but for the space of a heart beat are really wonderful. They show us how impossible it is to reproduce nature except by making nature reproduce herself."

Since I wrote my article I have obtained a few specimens by a London Company, but no Instantaneous Views that I have seen appear to me to be at all equal to some of yours. Thanking you very sincerely for this generous token of your regard, I am Very truly yours, O. W. HOLMES.

To Mr. E. ANTHONY, 308 Broadway, New York.

There now, dear Broadway, take its medicine like a good boy. It has sent some of the best specimens to the "Autocrat," but he did not find them at all equal to some of yours. A nice pill—do you good—let better in the morning.

What was that you said? The "Autocrat's" is only an AMERICAN opinion! American pills perhaps don't agree with your constitution, and we will give you a nice English medicine. Open mouth wide now and swallow a little from the "Journal of the Birmingham Photographic Society."

"We have received a letter from Mr. Anthony of New York, containing three Stereoscopic Views of Broadway, taken in London. The first is a noble street scene, with two feet of the ground, boys are running—men walking, riding, driving, carrying weights—ladies sweeping the dirty pavement with their long dresses, or dragging their carriages and displaying their pretty ankles as they trip over the crossings, exactly as they do in Europe. We learn from a whole library of books of travel, in particular the picture taken in the rain has a charming atmospheric effect—the sky is overcast, and a whole of noble houses and shops, each more hazy than the last, until you lose everything in an infinity of misty distance."

"In reply to Mr. Anthony's query about our European photographs we can only say we know of no pictures, save two or three of Wilson's, which are not in comparison with those which he has sent; and we old-world sticklers for the fellows must take care or the Yankees will go ahead of us."

And now, dear Broadway, we are sure all that naughty conceit will be carried out of you, and as soon as you feel well enough to walk out again in the street, we will show you what an Instantaneous Stereoscopic View is, for we don't think you have ever seen one.

Your friend, E. ANTHONY.

That the Public may judge, each man for himself, of the merits of the respective INSTANTANEOUS VIEWS, we have samples of both, side by side, at our store.

They will find that our INSTANTANEOUS VIEWS taken in the city are better than "so called" of the London Co. taken in the bright sunlight.

We do not speak without the evidence to show. Call and see.

American & Foreign Stereoscopic Emporium.

An extensive and varied assortment of American and Foreign Views and Groups always on hand at the lowest prices, and of the best quality.

New invoices received per every arrival from Europe. Having agents in England and France, we are certain to receive the latest views published in either country, and our stock will be found both extensive and well selected. A liberal discount to the trade.

Parties at a distance sending us \$3, \$5, \$10, \$15, \$20 or \$25, can have a good instrument and such pictures as they may request sent by Express. All orders will be executed with care, and our friends may depend upon receiving a good and satisfactory selection.

Merchants from every section of the country are respectfully invited to make an examination of our stock before purchasing elsewhere.

A circular will be forwarded to any address on application.

E. ANTHONY, 308 Broadway, New York.

Photographic Materials for Amateurs and the Trade.

Our long experience in the business, and

From the Atlantic Side.

LETTER BY OUR REGULAR CORRESPONDENT.

NEW YORK, March 25, 1882.

EDITOR FARMER: Business that I could not possibly put aside prevented my writing by the last two steamers, and I shall be able to give you but a meagre sketch by this day's mail. It gives me great pleasure to see your paper improving so steadily in all of the essential elements of permanent prosperity and wide-spread usefulness. As your State looks up far above her elder Sisters, and her true character and position are more distinctly defined upon the golden horizon of the Pacific, the CALIFORNIA FARMER occupies a commanding position among the prominent features of interest. On this side of the Continent, we can gaze upon the colossal grandeur of the very threshold of the proud temple of Fame, whose foundation you are now preparing, and whose massive walls will ere long be reared and at once become the wonder and admiration of all mankind. There you can see but comparatively little that is transpiring, surrounded as you are by the turmoil, dust and smoke of the exciting scenes that you yourselves are enacting. Here we are obliged to stand aloof and can calmly survey the influences that are urging you onward, and can imagine the mighty results of the efforts of the good and true men of your State. We can see that the Press forms public opinion, and that public opinion sways the heart of the masses. Political papers are often limited in their influence, and subservient of the best interest of the people, in their tone, manner and matter. The FARMER is welcomed by all political parties, by every religious sect, by the learned professions, by the skillful mechanic, the successful merchant, and by the toiling, cheerful, thrifty, and happy, husbandman. The reason is, that it diffuses the very information all need and desire. It advocates and ennobles those pursuits that are really the foundation of all wealth, prosperity and happiness. Its stirring appeals set men to thinking and impel them to act in the right direction. I, sometimes, almost envy you and others, who stand at the very fountain of power, and can do so much to establish and perpetuate those wholesome influences that make men better and happier.

I have been induced to make these remarks, by two incidents that recently occurred. Having occasion to meet a gentleman at the St. Nicholas Hotel, a few weeks since, while waiting for him in the reading-room, I took from my pocket the CALIFORNIA FARMER that I had that morning received, and began to read it. A stranger, sitting near me, said, "I see you have a California paper; will you permit me to see it for a moment?" He had arrived a day or two before from Cairo, Egypt, where he had resided for about nine years, and of course had seen and heard but little of the mighty Empire of the West. He was perfectly astonished to see such a paper published in a land of which he had scarcely heard before leaving our shores. It was the first paper of any kind he had ever seen from California. I gave it to him, with others, to carry back to his distant home in the East. He has since said to me, that he could find no words to express, sufficiently strong, his admiration and wonder at what he saw and read in your columns, and he assured me that he had read every word of the paper, advertisements and all, a dozen times, and could hardly realize any country or any people on the earth could make such rapid strides; as to require such a paper, and be able to sustain it. He is a gentleman of great intelligence, of rare attainments, and is extensively engaged in mercantile pursuits, and would be glad to have the paper sent to him, but they have no regular and reliable mail facilities, and hence it would be idle, he said, to think of getting it there; but he requested me to spare him a few copies to carry with him, to show the few there who could read the English language what American enterprise could achieve in a few years. So you see that in a few months a dozen or so of your journals, with several copies of our friend HITCHING'S Magazine will be in the heart of Africa, speaking to your countrymen and others on the other side of the globe.

Another gentleman from India, more than a thousand miles from Calcutta, was equally astonished and gratified to see by the several copies of the FARMER placed in his hands, the kind of progress you are making there. You will thus see that your paper will soon be read and re-read under the shadows of the Pyramids built thousands of years ago by the Pharaohs, and beneath the graceful Palms towering far above the Ganges' "Sacred vale", in central Asia. "Onward, still onward," let your motto be. Let your burning thoughts and glowing words be spread upon the public page, scattering light, until the star of the golden State shall be seen and admired, and its influence felt, where oceans roll or waters flow.

It is now fairly at work, and it is to be hoped that something may be done for the good of the country. Many of its members are really anxious to remove the stigma so justly resting upon that body, and will do all in their power to earn a fair name for themselves and their country. But it is feared that President-making will be about the only work done at this Session.

THE PACIFIC RAILROAD BILL.

Will pass this Session, if we are to judge from present indications, unless there should be a political earthquake sufficiently powerful to frighten them into the path of duty. To effect that change it will take such a shaking as will frighten President, Congress, and all, which you know is simply impossible.

There is now going on a great strike at Lynn, Mass., and other places in New England, among the shoemakers. How it will terminate, we shall probably know hereafter. Wise legislation in Congress, and in our several States, might do much to restore contentment and prosperity to many who are now struggling with difficulties which they can neither direct or control.

MR. SEWARD.

Has made a great speech in the Senate, which is said to be one of the greatest efforts of his life. Even his enemies concede that it is conciliatory in tone and statesman-like in its comprehension and enlarged view. It is thought that it will do much to soothe the better feelings that have been so prominently paraded before the world, from the North and South, for the few past months.

THE STEAMSHIP HUNGARIAN.

Has been recently wrecked near Cape Sable, and every one on board perished—not even one of the passengers or crew is known to have escaped. It is supposed that there were at least one hundred persons on board. Oh, how many loving hearts will bleed at the sad news! Will there be no end to these wholesale slaughters? California is now so far as water communication by steam with the East is concerned, dependent upon

VANDERBILT.

Who will make those who travel on his steamers pay just what it may please him to ask, and it will be no small sum, you may be sure. I know that many Californians will long regret that they did not furnish the means to carry forward the noble

enterprise of Capt. Randall. If California had done what we all had reason to expect she would do, she would this day, have had one hundred thousand more people in her midst, and several millions more dollars in the homes of her citizens, and have had the credit of bringing out one of the best steamship lines in the world.

It is not too late yet to build his steamers, for that line, if they will furnish the money. If his plan should be adopted, there would be a reliable line at reasonable and uniform rates, with swift and safe steamers, not liable to the accident of the ill-fated Hungarian and Northerner, upon your own beautiful Pacific's waves.

FROM EUROPE.

We have late intelligence. The news is not unusually important. The Nations there are yet in a feverish state, and there will be trouble before long—of that you may be sure. The Pope is blindly obstinate. Napoleon resolutely firm, Austria mulishly and doggedly stupid, Hungary restless, hopeful, wide-awake and watching an opportunity to throw off the yoke of Hapsburg.

Spring is upon us. The weather is warm and pleasant, business is active, the city healthy, the streets "lawful muddy," and your New York correspondent is, as your readers have found before this time—sleepy, and so good night.

FRENCH AND SPANISH MERINOS.

The Undersigned, having long been established as sheep breeders in the State of Vermont, desire to announce to the wool growers of California, the arrival of a VERY SELECT FLOCK OF FRENCH AND SPANISH MERINO DUCKS and EWES, of the VERY HIGHEST BLOOD.

Having been breeding Merino sheep since the year 1841, and having received the Best Breeds from the Best Flocks in Europe, for the express purpose of breeding, to the number of hundreds, they feel confident they can speak in strong terms of the flock now offered by them to the sheep raisers of this State.

The Undersigned have only to ask that purchasers should see these sheep to insure satisfaction to them.

EVERY ANIMAL SOLD CAN BE FULLY GUARANTEED TO BE OF PURE BLOOD.

They feel that they only need to copy from a valuable work, recently published (An Historical Account of Addison County, Vermont, a place long famous for fine-wooled sheep), to show the character of the flock now offered by them. These extracts are given to show the origin of the sheep:

"Messrs. Jones & Rockwell, since their connection, have been eminently successful. In 1852, owing to repeated applications for French Sheep, which had been introduced into the country about six years before, they invested in the purchase of these sheep \$2,200; a part of which included a first choice from the flock of Merrill Bingham. These sheep, they say, were the most perfect of the kind they had ever seen. In 1853, they purchased of Solomon W. Jewett, of Weybridge, one entire shipment of French sheep, imported by him in April of that year. These purchases, with some subsequently made, cost \$18,000. For several years previous to the spring of 1855, when this information was communicated, their annual sales varied from eight to twelve thousand dollars. For the eighteen months next preceding, they amounted to \$36,000. Their flocks on hand, at the date above mentioned, numbered six hundred; one-half imported French Merinos, and their descendants. They have a high opinion of the French as well as Spanish Merinos, and think a cross between these breeds would be advantageous.

"William R. Sanford, Esq. of Orwell, and Messrs. William S. and Edwin Hammond, of Middlebury, have for several years, been extensively engaged in breeding and dealing in sheep. For our convenience we treat of the operations of these parties together, as they have been to some extent, connected, and both of our friends relating to both, has been obtained from Edwin Hammond, Esq. They both breed the pure Spanish Merinos, descendants of the flock, which Col. Humphreys, who was at the time American Minister to Spain, imported into Connecticut in 1812, or of the flocks which William Jarvis, Esq. then American Consul in Spain, imported in 1809, 1810, and 1811. These they greatly prefer to any more recently imported, or to any other breed.

The best flock of W. R. Sanford, Esq. alluded to above, which was used by Mr. S., and which won the first prize in Vermont, and at the National Fair at Boston, in 1855, was purchased by us, and from him we have raised splendid sheep, a part of which can be seen in the present importation, as descended from this famous flock. The record further says of one class of sheep as follows:

"Mr. Edwin Hammond thinks the Spanish sheep have improved greatly since their importation into this country, and especially in this county; and that there are better sheep in the county of Addison than in any other part of the world. This opinion is founded on his own personal examination of many of the best flocks in this country, and the examination by Mr. Sanford and others of the most celebrated flocks in Europe. He offered, he said, to Mr. Sanford, on his going to Europe, one thousand dollars for a pair of imported sheep, as soon as his visit to Europe was terminated, and he had secured the best flock of sheep he could find in the present flock; but Mr. Sanford found none such during his tour. In 1854 they sold two ewes for \$1,200.

In 1851, Mr. Jewett went to Europe, for the purpose of examining and purchasing sheep, and has been twice since for the same purpose. In France he purchased, at fifteen or twenty shipments, seven hundred French Merinos, which he selected from the three best flocks in that country, owned by Messrs. Girard, Caron, and Gaudin, and few from the government flock at Rambouillet. His sales amounted to from fifteen to twenty thousand dollars annually.

In 1855, the Undersigned purchased of Mr. Solomon W. Jewett, who had been so long established as a sheep breeder, to whom allusion has been made, his entire flock then on hand, about 250 sheep, and they have since, with a view of crossing them with the best breed, we offer the above flock, quoted from the work named, and leave purchasers to judge of the value of sheep raised under such favorable auspices.

The flock now offered is not large, but THEY ARE ALL CHOICE. The subscribers intend to exhibit their sheep and offer them for sale in all the principal wool districts of the State, and they will be happy to make an acquaintance of sheep raisers in their various routes, of which notices will all appear in the FARMER.

Letters addressed to us at San Francisco, will come to us, and will be promptly answered.

N. B. We are permitted to refer to the following gentlemen to whom we are known:

REV. DR. PECK, San Francisco.

REV. DR. THURALL, San Francisco.

FRANCOIS L. LONG, Esq. Marin County.

ROCKWELL & COY., Esq. San Francisco.

O. L. SHAFER, Esq. San Francisco.

COL. WARREN, Editor FARMER, who can show our sheep and samples of their fleeces.

JONES & ROCKWELL.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions (of which we are made to show their value) are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1859.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expected.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly hills up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

Patented January 3, 1860.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornate, and is standing in the same relation as a piece of important furniture as does Wheeler & Wilson's Sewing Machines; neat when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

Patented September 13, 1859.

This implement will be of great value to Contractors and Builders, being the most valuable invention yet out.

2000 were ordered for the New York market, just before the sailing of the steamer. Builders will do well to examine this model.

No. 5. A Mucketo Bar.

This will be much wanted in California. It is simple in its contrivance, perfect in its work, and can be adapted to very cheap to all styles of beds. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver.

A most excellent labor and money-saving machine, for which we offer rights, as will be seen by a card in our column.

Holding the rights to all these new inventions, we invite the public to call and see the models. All who may be desirous to purchase either County, City, Town, or Individual Rights, can do so on application to

COL. WARREN, Editor FARMER.

WE ARE ALSO PREPARED to make for you, Cash Advances on WOOL shipped to our friends in New York. Every lot of Wool intrusted to us under advances, will be shipped under a separate mark. For further information, apply to us as soon as possible.

12-17 LONING & FUERSTEIN, No. 50 Front street.

WOOL! Purchased at the Highest Market Rates.

GEORGE HOWES & CO., 155 Sansome street.

FRENCH-MERINO BUCKS.

THE undersigned desire to inform SHEEP RAISERS, that he is now permanently located on the SALINAS PLAINS, AT LEESE'S RANCHO, and is now prepared to supply them with MERINO BUCKS from the celebrated flocks "Samson," "Louis Napoleon," and "Brigham Young," imported into this country by Messrs. SEARLE

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 5, 1860.

NUMBER 8.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 110 Washington street (op stairs), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

Sheep-Breeding and Wool-Growing.

We present the following letter from one whose name alone would be a passport to the confidence of the public in all the facts upon which he writes, and we feel much gratified to present these important truths from so high a source as the gentleman who has here addressed us. The name of A. L. Bingham, Esq., stands often on the records of Vermont and of other States, as the most successful breeder of Merino sheep. Mr. B. has taken a large number of the premier prizes at numerous exhibitions, and for more than a score of years has been known in Europe and America as one of the largest thorough breeders of sheep in the United States. His pride and glory is to produce fine sheep, and we feel proud to know that California is now to be the "home" of Mr. B., and that our State will have the influence of his means and skill. We ask our readers, especially sheep-breeders, to give Mr. B.'s letter a careful reading. We are happy to be convinced of any error we may have committed in announcing two Mr. Bingham's instead of one, and still more glad to know we shall be favored with continued letters upon sheep-breeding and wool-growing from a gentleman of such experience. We can refer to the above letter with some considerable degree of self-satisfaction from the fact that the statements made by Mr. Bingham relative to the capabilities of our State for sheep-raising, its real condition, its present and future prospects, are what we have so often stated to our readers, and the present condition of this great interest is what we have prophesied.

NICHOLAS, Sutter Co., Cal., March 29, 1860.

EDITOR FARMER—Dear Sir: I notice in the FARMER for February last, a notice of the arrival of myself and sheep, and also observe that in that notice I am represented as being connected with my brother or some other Bingham. This is incorrect, as I am in no way connected with any Bingham, but have come to California to test the advantages of breeding sheep on California soil (if there be any), over and above those in Vermont. I have with me on S. Brannan's Feather River Ranch, where I am located for a few months or years (as the case may be), eighty thorough-bred, French-Merino ewes and forty bucks, as well-bred sheep as ever stood on any soil. I am satisfied, from the observations I have made among the different flocks since I have been here, that the climate and soil in such portions of the country that I have traveled over, are decidedly favorable to the growth of wool and carcass. When men will learn by experience to adapt every favorable circumstance to the promotion of sheep-raising, it will prove one of the most favorable countries in the world. In Vermont we have reduced it to a system. We know just what we can do every year. We have learned it by experience and practical observation. There is no State in the Union where there is so much attention paid to the breeding of sheep as in Vermont; and no State where there is so much money made. This I know, for I have been breeding sheep the last thirty years, and imported the first French Merino sheep from the two celebrated flocks of France (Mons. Gilbert and Caynot), that ever stood upon Vermont soil or any other soil in the Union, and more of them since their first introduction than any other man, therefore claim to know something about French sheep, and what they will do when crossed with other sheep. I have learned it by experience and men have yet to learn it before they can make it entirely successful. Wool-growing and sheep-raising cannot be jumped into at haphazard. It has got to be looked into and made a study, like any other branch of business. It must be watched closely. We in Vermont have been compelled to count the cost, from the fact that our expenses are far greater than what they are here. Four pounds of wool can be produced here with as little expense as one in Vermont; "then," perhaps you may say, "how can Vermont wool-growers make money?" I will tell you in my next letter; I have not time now.

Men in California need not be alarmed because two hundred French sheep have come into the country, that the country will be flooded with them; this cannot be, for in the whole United States there are but two reliable flocks; one belonging to myself, the other to J. D. Patterson. I sold Mr. Patterson the first sheep he ever owned, and I will venture to say that if all the thorough-bred French sheep were put together they would not number 2,000. Surely, there is no cause of alarm. If they were all here there would not be enough. The more good stock you get into any country the richer it is, and the more money to be

made. I never saw an opportunity yet, where I could make more money out of poor stock than I could out of good. There is no such thing. The most money is made out of the best, all things considered; the best is poor enough. There are thousands upon thousands of part-bloods in the Eastern States, and part of them may come here, as I see there are some already, and some of them resemble the thorough-breeds so closely that it takes an experienced eye to detect them; therefore, some men may be deceived, as they have been in other States. I made up my mind long ago, that it was better for me to buy from reliable, thorough-bred flocks. I can produce nearer what I want from a thorough-bred animal than I can from a mixed-blood. In breeding from mixed-blood animals you get the representatives of both breeds. This I will explain at some other time. And another thing can be relied upon. There are but two reliable flocks in all France. Money cannot buy enough to flood any country with thorough-bred French sheep; it costs too much to get them here. As long as men have to pay just about \$100 a head expenses to get them here there is no need to be alarmed.

Yours truly,

A. L. BINGHAM.

Summer-Fallow Practically Considered.

LA GRANGE, Stanislaus Co., March 29, 1860.

EDITOR FARMER: It being a rainy day, I now take a few leisure moments to comply with the request of "Rusticus," notwithstanding I have so long delayed to comply with his wish. I now purpose to give some of my experience in the matter of growing wheat.

As much has been said on the propriety of fallowing land for wheat, if you will permit, I beg your indulgence to go back a few years, and in as plain a manner as possible, give "Rusticus" and your many readers, a little of my experience in wheat-growing. As early as the year 1833, whilst living with my father in the State of New York, which was quite a new country (at least that portion where I lived), we plowed not far from four acres of land for wheat; this was done in the latter part of May, on a stiff June grass-sward; after which we gave it two more plowings, together with many smart harrowings; sowed the seed 10th September. At harvest we cut not far from 30 bushels to the acre.

Previous to 1823, the land was too new to summer-fallow, on account of roots. Previous to this, 1823, we had from year to year cleared off a piece of new land, and put the wheat in with the harrow, and almost invariably had smut; in some seasons smut and rust both. Since the year 1823, until 1837, I have each year been in the habit of summer-fallowing for wheat; and most every season used lime on our wheat for seed, to prevent smut. Many years before I left New York, we were not affected with smut; yet we did not have the most distant idea of getting a good crop of wheat, or even a fair crop, without plowing our ground in May and June, and then at least plow once or twice after, and deep and thorough, before planting the seed; sometimes plow in the seed; and if possible, sow old seed, which we found by experience to be best; then we seldom failed to get a good crop, say from 15 bushels to 40 bushels an acre.

In 1838 moved with my family to the State of Indiana, then a new (and in the portion I located), heavy-timbered country. Here again, we had to clear away the timber for the first three or four years, sow on the new fallows, and harrow in. Here in this new country, we again had an abundance of smut; and it was the same in the States of Michigan and Ohio, where I thrashed tens of thousands of bushels of grain; yet as soon as the plow could with success be introduced in the way of summer-fallowing, deep plowing, and great care used in selecting and preparing seed, we had little trouble from smut. And there, even in that country, without deep plowing and great care being used in selecting seed, we had no warrant of a good crop; we might look for smut and cheat, which many had in good abundance. All that farmed well, most invariably had good crops.

In the year of 1852, came across the Plains to this Eureka State, and not by far the poorest State in the Great Compact, and commenced to plant a crop of barley and wheat, in November the same season: this was a tolerable good crop, owing to the wet season. Was told by many old Californians (Americans), that the time to plow for wheat and barley was after the rains had fallen in the fall season. At the same time I asked many farmers here if it would not be far better to plow in the spring season, and let the ground lay exposed during the summer months, and therefore be able to put in the grain much earlier in the season, and before the severe storms should come on, and by so doing have all the benefits of the rainy season. For even hinting at the idea of summer-fallowing, I was laughed to scorn, called a fool, and told that this was not like the Atlantic States; told the hot sun would ruin the land. Yet, fool-hardy, at it I went, determined to know for myself. So, in the month of April, 1853, I plowed from one to two acres; this was sowed in December, the same year, and at the same time I sowed other lands along-side. This grain on fallowed ground was 10 to 15 inches taller than the grain sowed on

newly-plowed lands, and yielded at least one-third more to the acre. From that to this time, I have been an advocate of fallow-plowing in California, as I had been for many years in the Atlantic States; and, regardless of all my notions being called foolish on the subject of summer-fallowing, many in these parts are practicing spring-plowing for wheat and barley, and find they get double the crop, if not more. Yet we have, too, many in this country that love ease and wait until fall before they do anything towards putting in a crop, and then complain because they have poor crops.

Now I will more fully answer my friend Rusticus's request. I plow with T. Ogg Shaw's large steel plow 14-inch cut, a deep tiller; on some of my land, use three pairs of oxen, some I plow with four horses and some with three horses abreast (this last quite equal to four with one pair forward of the other). In this way can plow one and a half to two acres a day. Sometimes have plowed as early as 10th January; mostly commence later. The first of March is the best time; 15th February will do, if the season is forward and not too wet. By all means I avoid plowing too soon after a heavy rain-storm. The vegetation should be well started before you plow. The ground should be plowed deep, say 8 to 14 inches, and it is far better to use the subsoil-plow at the time of turning ground over. The deeper the land is plowed the more water it will endure, and the longer it will stand the drought. Some of my land I sow in the fall, before the rains come, and harrow in. This is not the best way, to harrow in, as too many weeds come amongst the grain. The greater portion I sow on the furrow, after the first rains fall in October or November; also, in December, and cross-plow with light or small plows. Plowing seed where the land is not too stiff a clay, is the best for me; then the birds are prevented from getting it, it gets stronger root, and is more able to endure drought, hence, makes the best crop. For myself, having tried most ways of putting in grain, this I find to pay best. I want to be distinctly understood, that without good plowing is done, you need not look for a good crop.

I am fully satisfied that more grain can be grown on 50 acres put in by spring-plowing, seed plowed four inches deep or put in with a good cultivator, so as to thoroughly move the ground, than can be grown on 100 acres winter-plowed and sowed on the cold sour land; and by spring-plowing, one-half the land is left for the next crop, and only one-half as much land is to be harvested each year, while as much grain is obtained as by the hundred acre principle.

And now, friend Rusticus, I will refer you to some of my articles in the CALIFORNIA FARMER, over the signatures "D.," "M.," "Dodge," "I. D. M.," and "I. D. Morley," in regard to my notions of Farming and Experiments in California, to wit: Vol. V, Nos. 2, 5, 9, 14, 15, 21, 23, and 25; Vol. VI, Nos. 1, 2, 5, and 22; Vol. VII, No. 24; Vol. VIII, Nos. 1, 2, and 11; Vol. IX, Nos. 7, 10, and 21; Vol. X, No. 19; Vol. XI, Nos. 4, 15 and 17; and I might go on, but I think this will suffice; if not, if you or any of your friends will favor me with a call, I will take pleasure in showing you or them the difference between summer-fallowing grain and that sowed on lands plowed this winter. Remember, I use Bluestone and Lime on all of my seed-wheat. No matter what men say, I have experimented enough to convince me of the good result. Yours, in haste, I. D. MORLEY.

Sheep-killing Dogs.

A LARGE SLAUGHTER.—A few nights ago, a large native dog entered the sheep-pen of Mr. Daniel Montgomery, at Puclos, and killed no less than thirty-three out of a flock of 350. The walls being very high, the dog was unable to get out again, and was captured. A tax of five dollars a head would soon clear the islands of the surplus of dogs which infest every neighborhood. It would be a capital method of increasing the revenue, provided the native representatives would allow it to be passed.—[Com. Adv.]

The notice of the immense slaughter of Sheep in Ohio and other places, by dogs, should awaken the attention of our Legislators, to the importance of some laws against the increase of worthless curs among the canine race. There is probably no city in the world where so many miserable and spiteful dogs infest the streets as in the city of San Francisco, and the sooner there is a remedy the better.

Potato Sprouts for Planting.

AFTER my corn was up and hoed last season, there were some hills missing. I told my son to go into the cellar and pick off some of the largest sprouts, from six to eighteen inches long, and set them out in the corn-missing hills which had been hen-manured in the hill for corn, which he did. They all grew, and yielded equally as good and as many in the hill as the same kind did in the same kind of ground the year previous. There was no rot among them; they were the Coburg and Sand Lake varieties. Please remember that the sprouts or vines were picked off with the fingers as close to the potato as possible. The potato after this, was given to the hogs, whole and sound. So I say to you, may let your potato sprouts grow, as did mine, in a warm place, and then set out the top, and raise them as well, I believe, as in the usual way, saving the whole of the tuber for other purposes.—[W. Sheldon in N. E. Farmer.]

Experience of a Fruit-grower—Grapes.

A New York fruit-grower communicates the following to the Gardener's Monthly of Philadelphia: No department of fruit culture is at present exciting more interest in all parts of our country, North, South, East and West, than the grape, and every article that appears in the public prints pertaining to that subject is eagerly sought after and read by the people; and in this section, grape-growing for the new York market is certainly the most profitable of all the branches of fruit culture. If we get a crop of peaches or apples every other year, we think we are doing pretty well; but the grape-grower can, with proper care, secure a good crop annually, which will find a ready sale in the market, at prices ranging from \$200 to \$300 a ton.

In various sections of the country, grapes of wonderful excellence, productiveness, earliness, and hardy enough to grow in the most Northern section of our country, are discovered and introduced to the public as candidates for special favor. Among this multitude of varieties there are indeed some of intrinsic worth, some that will bear the test of time; but the great mass are of little value and will never become popular with the grape-growers of our country. Some are too sour, some too foxy, and some too late to be of any value to the market grower.

Again, others are of the best quality, but, unfortunately, in most cases, where very great excellence is attained, it is at the sacrifice of the wood-producing principle, and most of the richest and highest-flavored sorts that have been brought to public notice are either wholly or in part of foreign origin; and every one familiar with the history of the grape in America, knows that such never will be of any value in the vineyard, but may in the hands of an "amateur": one who has but a few pet plants to care for, can well afford to spend his time nursing them and fighting the mildew in order to obtain such luscious fruit. Again, it is a fact well known to men of experience, that the mildew is held in check with far less difficulty where there are only a few specimens, than where there is a vineyard or very large collection of vines.

No prudent man will, however, plant extensively of any variety unless it be of a hardy and thrifty grower, not subject to mildew, and fruit in quality as good as the Isabella. Unless these qualities are combined, no one can expect to make grape growing profitable, no matter how high it sells in the market. Isabella.—This popular variety is extensively grown on the Hudson, and more tons of it are annually sold in the New York market than of all others put together. It is a good grower, and when properly planted and pruned, it does not suffer from the mildew either in the leaf or fruit in this locality. It is so amazingly productive that when not pruned close enough it is apt to set twice as much fruit as it can mature, and the vine will yield up all her strength in order to mature the fruit; which, however, in such cases, does not ripen or become sweet if it remains on the vine till winter, and the vine, in such case, will almost invariably be found in a bad condition for either standing the winter or fruiting the next season. The wood will be found soft and immature, with scarcely a bud well ripened, and such vines usually require a year or two of good treatment to restore them to their former fruitful condition.

Hence the importance of pruning with care and skill, and he who is master of the business will seldom leave more bearing wood than the strength of the vine will admit of, but if he should be will before the fruit is half grown, then it so the vine will suffer no injury. No grape that we cultivate is so prone to overbear as the Isabella, and every one who grows this grape in a rich soil, should be careful to remove superfluous shoots from the old wood and all the spurs from the bearing branches, and only one fruit-bearing shoot should be suffered to grow from a bud. If these directions are followed, the result will be fine large clusters which will ripen by the first of October, with as much certainty as apples or pears. We generally commence picking and sending to market about the middle of September; but to attain its highest excellence, it should hang on the vine long after it appears to ripe, which it can and suffer nothing from birds, insects, or high winds; nothing but pilfering boys and men will disturb it, and I am glad to say that this practice is far less common than formerly, and fruit is beginning to be considered as private property.

How to Keep Sweet Potatoes.

A correspondent of the Oskaloosa Herald gives the following method of keeping the sweet potato through the winter:

"I use dry sand and put them in—it don't matter how the sand is dried, in a kiln, in a log heap, or in the sun, so it is dry, that is all that is required. I prefer drying in a log heap, as it costs at least four times less, and is just as good. Any family that has a little room with a stove in it, may keep a box or two of eight or ten bushels, without much inconvenience. The boxes must be raised six or eight inches from the floor, and they must not be nearer than four inches from the wall. Fill the box with potatoes, and then put in sand, cover the potatoes with sand. There is a good deal said about kiln-dried sand, but it is all fudge. I have also known them kept well in buckwheat chaff. In order to keep potatoes with success, there must be a thermometer kept in the room. The mercury must not sink below 40°; if it does, the potatoes will chill and rot; it also must not rise above 60°, or they will grow. I never lost any of my potatoes only by letting the room get too cold. A thermometer only costs a dollar, and every man ought to have one."

Reaping and Mowing Machines.

In an age of inventions, of labor-saving machines nothing has tended more to develop our national wealth than those contrivances which enable the farmer to increase the amount of the product of a given number of acres—to raise and convert into marketable condition a greater annual value of the means of life without a proportionate increase of cost or labor. Steam has indeed increased and cheapened the facilities for the transport of commodities, and while it has opened new fields for labor, has also given us new markets for the product of labor. Printing has disseminated knowledge, and the electric telegraph furnished a lightning-express for the conveyance of information that cannot wait the slow movements of steam or horse-power. But the earth is the primal source of wealth and power, which sets all this machinery in motion; and though it is said man cannot live by bread alone, it is certain that he cannot live without it.

Reaping machines have been of peculiar benefit to California, a country which can produce wheat enough to supply the continent, and which has now the prospect of a crop surpassing the product of Egypt, or the harvest which is annually shipped from the ports of the Black Sea.

We cannot too earnestly impress upon our farmers the policy of being provided with good and reliable implements of husbandry. Any other policy is "penny-wise and pound-foolish." Without disparagement to any of the various styles of reaping-machines offered in our market, we feel justified in commending to our agriculturists the celebrated reaper of Warder & Child, of Ohio, now in its fifth year of successful trial in California and Oregon. Messrs. Arthur & Son, the agents, have sold over four hundred of these machines on this coast, and they inform us that the past four years not one machine has failed to give complete satisfaction, and that not \$25 worth of extras have been sold by them during that time. The editor of this paper had occasion to speak in flattering terms of the performance of this reaper last year, at the Alameda County Fair, which awarded it a premium. The combined machine is, however, the machine of which we now particularly wish to speak. This machine has a cut of 6 1/2 feet for reaping or mowing; the platform lifts off by unscrewing three bolts, and the cutter-bar then hugs the ground, the machine being thus changed in five minutes time from a reaper to a mower; the tongue plays loose to ease the horses' necks; a lever close to the hand of the driver throws the knife in or out of gear, and another lifts the cutter-bar over any impediment. The wood-work is varnished to show the quality of the timber, which is of the very best seasoned ash. The workmanship of these machines is most superior. They were built expressly for this market with every improvement. That over 6,000 of them have been made and sold in the United States, is an evidence that they are no mere experiment. The number of acres cut in a day by these machines, both reapers and mowers, would challenge our belief, had we not seen their performance, and read the certificates of well-known farmers here and in the Middle States. The Messrs. Arthur have now two hundred of both single and combined machines, and those who take pleasure in examining a beautiful piece of mechanical invention, whether they wish to purchase or not, would do well to call at the warehouse, corner of Washington and Davis streets, and judge for themselves.

King Phillip Corn.

This variety of corn is the variety for California. One cause of loss in the article of corn, is its moulding after harvest. This arises from the fact that the cob is green when the corn is often dry on the outside, and this creates heat and moisture, and injures the corn. This cannot be prevented in the varieties known as the large Gourd-seed or Western Corn because the cob is so large; it does not ripen. The King Phillip has a small red cob; it ripens quick and fully, and the corn dries upon it; besides, it is the finest kind of farina, being a bright golden yellow. It is the best kind of corn grown.

Carrots as Food for Stock.

The value of Carrots as food for horses and dairy stock is beginning to be appreciated. We learn from Messrs. C. L. Kellogg & Co. that they have sold more than double the amount of carrot seed for this purpose the present year to any year previous. Carrots are now selling at \$30 to \$35 a ton. This should not be when the acre can produce twenty to thirty tons. We hope all who have spare land, will not allow the present opportunity to pass without preparing ground for a good field of carrots. They will always sell for stock-feed.

Sugar Beet.

DAIRYMEN should now improve the opportunity which is offered them by the late rains, to plant a good field of Sugar Beet for their milk cows. Sheep-raisers should also have an abundance of this article for their sheep, especially their breeding-sheep. Those who have large flocks of sheep will find great economy in it, as we have often said, forty or fifty tons an acre can be raised easily of the Sugar Beet.

[From the London Daily News, Jan. 13.]

Mr. Rarey and the Cabmen.

Mr. Rarey, who is about departing for the East, with the view of making acquaintance with the steeds of the Prophet in the Arabian Desert, gave, yesterday evening, his farewell lecture to an English audience, in Mr. Allen's Riding School, Seymour street, Bryanston square. He might have previously addressed more distinguished audiences, but certainly never a more critical one than that which applauded him to the echo on this occasion. There were certain infallible English marks of gentility about the company also, as each visitor came in his own carriage, and all wore the badge of a well-known metropolitan order, the exhibition of their decoration being the indispensable passport of admission. To speak more plainly, the audience consisted almost entirely of the cabmen and omnibus-drivers of the metropolis, who had been thus gathered at the invitation of the Society for the Suppression of Cruelty to Animals, to oblige whom Mr. Rarey gave his lecture free. The invitation was most enthusiastically responded to. The multitudinous Jesus of London streets thronged to Seymour lane in thousands, and that locality, as well as the whole neighborhood, was completely blocked with carriages, or rather cabs of the company. The pit-door of the Victoria Theater on boxing-night was a solitude compared to the crushing, striving, and we regret to add, partial swearing, which beset Mr. Allen's unassuming portal from an early hour. The riding-school was filled in about thirty seconds, after the doors had been opened, and the protection of the reserved seats became one of the most arduous tasks that ever fell to the lot of that heroic corps, the metropolitan police. Even the straw was seriously infringed upon, and the rush, the clamor, and the excitement, became almost alarming for people of a delicate nervous organization. However, all was good humor and natural politeness throughout. Those who were thrown down in the hub-bub picked themselves up with hilarious agility; those who had their hats crushed moralized on the small comparative value of the article; and those who succeeded in getting to the front, sat down comfortably in the straw, forgetful of the fact that the equine performers would most probably make some rather awkward plunges in their immediate vicinity, in the course of the evening. Mr. Rarey, on his entrance, was loudly cheered, and immediately proceeded to deliver a short but exceedingly appropriate opening address. He struck the chord of loyalty first, by informing his audience that he was about to exhibit to them the same experiments which had delighted her Majesty, the Prince Consort, and the rest of the royal family, and then delicately hinted that silence and good order were absolutely necessary, in order that his observations should be heard and understood. The suggestion was received with a loud cry of "hear, hear," from all who had been so fortunate as to obtain admission, varied, however, by a terrible outcry from a nearly equal number outside, who were just then vigorously endeavoring to break in the doors. The invaders at last succeeded and came tumbling in in hundreds, but in a few moments they got fixed somehow with the original mass, and order was at last obtained. Then, Mr. Rarey told them that he had recently delivered a lecture to five thousand Scotch cabmen in the City of Glasgow, and never had the pleasure of addressing a more polite, attentive, or intelligent audience. Surely, the London gentlemen of the vehicular profession would not be behind their brethren of the North, in the minor morals, but would, even those who could not find seats, or who could not possibly see through men who were eight inches taller than themselves, show that London, which was in politeness and intelligence before any other city in every other class of her society, would not fall behind in the case of her professional charioteers. This master-stroke acted as a spell—it was Rareyism on the human subject; and after one hearty responsive cheer, the remainder of the proceedings was a perfect pattern of attentive decorum. Cruiser, the model pupul and Chesterfield of the stables, was presented to the audience as a curiosity. Every one knew his accomplishments, and there was no necessity for wearying him by a repetition of his performances. A stout ordinary hackney was then introduced, and thrown according to the usual form, to the great admiration of the majority of the cabmen, although there were one or two cynics who were "blowed if they see anything in it." During the process, however, the Rarey-theory was explained, and many practical hints were given as to the usefulness of cruelty and the efficiency of gentleness in the management of the horse. The company, while indignantly repelling the slightest shadow of personal application, cheered all this vehemently, and several gentlemen simultaneously declared that the professor was "a regular brick." Mr. Rarey then announced that the patient upon whom he was then manipulating was not remarkable for any particular ferocity, but that a dreadful cart-horse, which had defied groom and stableman for two years, who had eaten manglers, and knocked out one of his own eyes in a fit of ungovernable fury, was about to be introduced, and would, he had no doubt, be subdued with as much facility as a lady's palfrey. The delight of the audience at this announcement was almost ungovernable, especially when they were told that the debutant was also a bit of the first eminence, and was as likely to devour the professor as to submit to his gentle charmin'g. This was a real and most satisfactory experiment. The brute, when he entered the show, seemed a perfect Leviathan. He kicked and plunged like an excited Megatherium, and opened his immense jaws to such an extent, as to have ample room for Mr. Rarey's head, should the latter unhappily get near enough for the experiment. The lecturer approached him, however, without the slightest trepidation, calmly expounding as he went along, and explaining to the company that this equine Orson was, under his rough exterior, a perfect model of gentleness, after all, and only required sympathetic handling to develop his really amiable characteristics. All this time, the horse was performing various terpsichorean evolutions, plunging, pawing, kicking, and lashing out to the manifest inconvenience of the gentlemen who were sitting in the straw, while he at the same time made demonstrations with his mouth strongly indicative of a desire to eat his pangerist. The latter, however, came up quite close, patted stroked, reasoned with, and then dexterously "hobbled" the furious animal, who, as soon as he found himself resting on three legs, became at once open to conviction. After one or two gigantic struggles, which alarmed everybody, he fell with the shock of an earthquake and lay stretched "maany a rood" on the straw, while Mr. Rarey sat on his quivering haunches, wiped his forehead, took off the strap, put it methodically into his pocket, and proceeded with his eulogium on the many admirable qualities of his prostrate pupil. He showed that the animal did not bite by putting his hand into his mouth, proved his reform in the kicking department by placing his own head between the two immense heavily-shod hinder hoofs, and finally permitted him to rise and exhibit his complete subjugation by submitting to a loud sonata on the drum. The once furious horse, a notorious vicious animal, the property of a Mr. Chatfield, in the city, was in fact now completely tamed, and was literally led round the arena by a straw, of which he held one end in his mouth, while Mr. Rarey led him along by the other. Finally, the professor mounted this tremendous

Destrier, and rode him out of the ring, amid such cheering as is seldom to be heard in public assemblies. This finished the lecture, with which the cabmen expressed themselves delighted, and most of them perfectly convinced that by decision, tempered by gentleness, the horse can be best managed, and that cruelty, beside being so bad in itself, is the least profitable system of the manage.

NURSERY BUSINESS, &c.**J. R. RAY,**
SEED AND NURSERY DEPOT,

No. 106 J STREET,

SACRAMENTO,

HAS IN HIS NURSERY, SUBJECT TO THE order of good cash customers, the most extensive assortment of

TREES, SHRUBBERRY, AND VINES.

To be found in the State, consisting of every variety of

Almond,	Mulberry,
Apple,	Nectarine,
Apricot,	Peach,
Blackberry,	Pear,
Cherry,	Plum,
Fig,	Strawberry,
Gooseberry,	Quince,
Grape,	Raspberry,

Beside a good stock of SHRUBBERRY and SHA TREES, for beautifying homes.

Samples, comprising a few thousand trees, may be found at my Seed and Nursery Depot.

SHADE TREES,

For sale this season, consisting of—

10,000 Locust Trees,
1,000 China Trees,
Lombardy Poplar,
Mountain Ash,
Magnolia Acuminata.

Together with
Elm, Linden,
Ash, Weeping Willow,
Maple, Arbor Vitae,

And other Evergreens—all warranted.
The Locusts are certainly not equalled, by any lot in the State, for beauty and size; they are from two to three years old, straight and well grown, varying from ten to twenty feet in height.

SEEDS! SEEDS!

The extensive SEED DEPARTMENT contains a complete stock—

FOR THE GARDEN, FIELD, FOREST & NURSERY.
Either from the best seed-growers in the country, or raised under my own supervision. Much care is taken to have Seeds free from mixture, and every package of seeds sold in, with proper care, warranted to grow and produce what is marked on the label.

Hop Vines, Rhubarb Roots, Asparagus Plants, Grape Cuttings, Dahlia Roots,

And everything appertaining to the Seed and Nursery business, for sale at greatly reduced prices from last year.

ARTICHOKEs, CHUFAS—articles deserving special notice—are for sale in quantities.

Dealers will be supplied on the most liberal terms. Small seeds can be sent per Mail to any part of the country.

HOP ROOTS.

THOSE DESIRING TO ENGAGE in that lucrative business—HOP CULTURE, now exciting so much interest—can be furnished with good, vigorous roots, of the best variety, from the oldest Hop Yard in the State. The crop from this yard has just been sold for \$1 per lb. My Hop Yard is twenty-five miles below this city, on the Sacramento river. The vines, covering one acre, were planted about four years ago. Parties wishing to engage largely in the business will be supplied on liberal terms.

**TO THE AGRICULTURAL PUBLIC:**

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1880:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question,

The Very Best Harvester in Use.**SICKLE SECTIONS.**

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S,

PALMER & WILLIAMS', and MANNY'S (with Wood's Improvement) REAPERS. Also—

EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;

WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELETON CLOD CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM

at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of us.

THOS. OGG SHAW,

83 SACRAMENTO STREET,

San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

FRIDAY, APRIL 5, 1880.

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct Letters to "Col. WARREN, California Farmer Office," as there are frequent misarrangements for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as Colonel Warren, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscriber has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

Thorough-Bred Horses.

We often see horses offered as "thorough-bred," and sent forth as blood-stock, which upon inquiry, we find to be an error, they being only, strictly speaking, graded-stock. "Thorough-bred" is intended to carry the meaning that the horse has been bred from the best blood, and so, thorough-bred, completely bred from best stock, accomplished, the whole entire lineage being "best blood." These facts should be borne in mind by all who are in pursuit of "thorough-bred stock," for it is too often the case that persons who show a fine colt from a thorough-bred horse, claim for it the name and fame of a thorough-bred, while in fact, the dam from whence the colt came, had no lineage at all. That colt may be fine and valuable, but it is not a thorough-bred. Let these facts be borne in mind by those who are not wholly acquainted with the rules of thorough-bred breeding. There must be a full pedigree on both sides, of the breeders, otherwise the progeny is not thorough-bred.

While speaking on this subject we ask attention to the advertisement of two "thorough-bred" horses, which figure in our advertising columns this week. These noble horses have been before the public, have been tested, and by competent judges have been pronounced, as appears, the premium animals of our own State.

Abdallah is eminently a very splendid animal; for size, action, color, and appearance, he is every way without a superior.

Young Gilbert is the very finest horse for all work, offered.

We have seen them, thoroughly examined them, and can speak in the strongest terms in their behalf. We advise all who have a desire to advance their stock, all who wish thorough-bred stock, to go to Benicia, and see these animals; their characters are fully described in the advertisements. Drive to the "Solano Hotel" and the proprietor will send parties direct to the stables.

Mountain Cultivation—Benicia.

Now the success of mountain-culture will show for itself, for the recent rains will give an opportunity for all who have high lands to plow and plow deep, and bring them into use. We were highly gratified to see many large and high hills back of Benicia showing a good crop of grain. Many persons who own high lands that have been looked upon as almost worthless, are now satisfied that they will ere long become of great value. Thousands of acres are now being fenced in. Dr. Peabody has recently fenced in from one thousand to fifteen hundred acres, and has done so successfully, using Hyatt's Patent Post-Driver, with much economy of time and expense. We call the attention of all who are now fencing, to this important aid in fence-building. [See advertisement in our columns.]

We notice a high degree of taste manifested in the fine gardens of Captain Walsh, Judge Hastings, and D. N. Hastings, Esq., of Benicia, and also fine plans and designs for those at the Collegiate Institute, and St. Catherine's Academy, and several other places. We venture to say that in a few years fine vineyards and orchards will be found flourishing high up on what now seems the waste and barren hills of Benicia.

Summer Fallow.

Plow your high ground now! The copious rains that have fallen will have so completely saturated the high dry lands upon our mountain sides, that even to their very tops they are now in a condition to plow. Now is the time for farmers to plow their high ground that is not in use, and leave it in fallow for another year. There has never been a year when this work could have been so successfully done.

It is now an admitted fact, that our hill-tops produce fine grains; and vineyards are being planted to a large extent the present year; orchards are being planted to a great extent upon high lands, and it is to be hoped that every farmer will improve the present favorable moment, and use the plow to the latest moment in preparing land to summer fallow. We found large tracts of land fenced in and improved, upon the Benicia hills, which in a few years will be fine vineyards, orchards and gardens.

Stock Horses.

Those who have entire horses intended as stock-getters, should lose no time now in making them known, as all persons are preparing to find the best breeders. We invite horse-owners to remember that our columns will be the place for them to advertise, so as to make them known over the State early in the season.

Consistent Legislation—China and Japan.

What will other States of our Union or Europe think or say, when they review the action of our Legislature upon the Chinese and Japanese questions. With China our Government and Europe have held intercourse and transacted business to the amount of many millions annually, and for years; while the Japanese Empire has been shut against the world. But now, when by the force of circumstances, the ports of that nation are opened to us, and their trade is about to offer us wealth, we send our ships to receive their Ambassadors, and our Governments, National, State and City, all unite to pay them homage, and our Legislators donate thousands of dollars complimentary to the Japanese, at the same time they are attempting to drive the Chinese from our shores. We are led to these remarks from the simple yet clearly apparent inconsistency of such legislation, which, if it should be followed by other States or our National Government, would be sufficient cause to close the ports and trade of China to us. The Chinese and Japanese are great and powerful nations, in their capacity to injure or harass our intercourse with them. If we are unjust in the present action of our people toward the Chinese, it will be soon known to the Japanese and raise a suspicion of our good faith and sincerity, even with all this seeming deference to them in our showy hospitality.

Collegiate Institute at Benicia.

This admirable institution is now most successfully accomplishing its great object of educating young men. We had the pleasure of spending a little time the present week at this Institute, and to notice the steady onward march in every department. Several valuable improvements in the buildings and grounds, the interior and exterior, all tending to the good of those connected therewith.

C. J. Platt, Esq., the able Principal, with M. A. Scales, Esq., the accomplished Professor of Music and Elocution, and the other teachers, enables this Institute to make noble progress in teaching. This Institute has many advantages: it stands in a commanding and lofty position; the buildings are spacious and convenient; the grounds embrace fifteen acres, with ample gymnastic apparatus and ground; the students are healthy, happy, and studious, and the college in a very flourishing condition, which we are happy to record.

Parents who have sons to educate will do well to remember this Institute. A parental influence of the highest kind will always be exerted over the pupils; Mrs. Platt presiding within the "home circle," where her supervision is felt and appreciated. There are about sixty pupils now present. Here, where there are so many bright minds, we hope many will turn their attention to the science of agriculture which is now being taught in our colleges.

Van Pelt's Self-regulating Mill.

We have noticed that many who have been using those Stationary Wind-Mills have now commenced to have them repaired, or renewed, for they require renewing very often, as the strong winds of our State break them; frequently, those wooden structures cannot successfully combat the wind: they yield sometimes, by going off in splinters. Now, it does seem to us bad economy for persons to adhere to those common and stationary wooden Wind-Mills, which give so much trouble—when a good Wind-Mill can be had. We have, heretofore spoken of the Wind-Mills, made by D. Van Pelt, No. 80 Bush street, San Francisco, as the most perfect of any that we have ever examined. One of these Mills will last a life-time, and give no trouble, always ready to do its work; they are, no doubt, the cheapest Mills made in the State; and we do now, as we have done heretofore, advise every one needing a Wind-Mill, to procure one of those made by D. Van Pelt, as they are sure to last a generation, and are a Perfect Self-protector and Regulator. For a more full description of this Wind-Mill, we refer to the Advertisement of the Manufacturer, in another part of this paper.

AGRICULTURAL IMPLEMENT FACTORY.—A very serious drawback to the California cultivator has always been the large cost of his tools, and the great expense in keeping them in repair. The great majority of the imported implements of all kinds have not been made strong enough; the material of which they are made not being seasoned sufficiently to endure our hot suns; they shrink, get rickety, and soon fall into disuse. Within a year or two, however, the various implements imported have come in greatly improved material and manufacture. Of this we speak in many instances of implements advertised by us in the columns of the FARMER, where harvesting machines of several makers have been improved within two or three years, one hundred per cent, in quality and style of workmanship, because California demanded the very best machines. Our object in these remarks, however, is to draw the attention of purchasers of all agricultural implements made here, to the Factory of T. Oso Shaw, on Davis street. We ask farmers to go and see the way in which the work is put together. At this factory they can see the wood, iron, and steel in the rough; they can see the furnace at work, and the work finished, and they can judge for themselves.

The late rainy "spell," which commenced in March and has continued till the present, including the big storm of Wednesday, seems to be unprecedented at this season, both as to long continuance and the quantity of rain deposited. Well, it will be a fine thing for the farmers if they don't get too much, of which there is not much danger; however, the rivers and streams are running full, and some of the low lands are likely to be flooded, causing more or less damage. The prospects for the crops throughout the State are now very flattering.

YOSEMITE.—The present season will be one of great interest for the Yosemite Valley. The increasing interest felt abroad for this wonderful valley will bring many strangers from a distance, to visit this Jerusalem of Nature.

Rain Statistics.

Dr. Henry Gibbons, a well known scientific gentleman formerly of this city, reports to the Alameda Herald the statistics of rain in April and May, from 1850 to 1859, which will be found exceedingly interesting and important. He says:

As the subject of rain has great interest for our farmers, I propose to state the quantity that has fallen in April and May, as measured in my rain-gauge, in San Francisco from the summer of 1850 to the summer of 1857, and since that time at Alameda. The number of days on which rain fell is also noted.

April.	May.
1851, 1.14 in. on 8 days.	0.69 in. on 3 days.
1852, 0.19 in. on 3 days.	0.30 in. on 1 day.
1853, 5.05 in. on 8 days.	0.35 in. on 4 days.
1854, 3.31 in. on 6 days.	0.02 in. on 1 day.
1855, 5.59 in. on 10 days.	2.14 in. on 5 days.
1856, 3.14 in. on 7 days.	0.88 in. on 5 days.
1857, none.	0.04 in. on 2 days.
1858, 1.14 in. on 4 days.	0.11 in. on 3 days.
1859, 0.33 in. on 4 days.	2.03 in. on 4 days.

The average for the nine years is about two and a quarter inches in April, and three-fourths of an inch in May.

Some of our heaviest rains have been in April. On the night of April 16, 1853, no less than three inches and two-tenths fell in twelve hours, the heaviest rain at any time during the last ten years. On the 28th of April, 1854, very nearly two inches of rain fell. On the 14th and 15th of April, 1855, there were two inches and three-fourths. These quantities will be better appreciated by comparison with the rains of the present season. Since last summer, the greatest amount of rain in any one day was but a fraction over two inches, and the greatest quantity on any two consecutive days was two inches and one-tenth. This was in November. The reader will scarcely credit the statement, that less than an inch and a half of water fell during the late rainy paroxysm, viz: from March 27th to April 1st. Last year, we had within a small fraction of two inches on the 23 day of May. In 1855, there was an inch and a quarter on the 14th of the same month.

In the remarkably dry winter of 1850-'51, there was seven inches of rain; in 1851-'52, eighteen inches; in 1852-'53, eighteen inches. In all the other seasons since 1850, the quantity has been greater. Up to this date (April 3d), the whole amount is 12.64 inches, which is not a great deal over one-half the average supply.

We notice that at Sacramento Dr. Logan reports the amount of rain that has fallen there this season up to the end of March, as over sixteen inches, thus considerably exceeding the amount reported above in Alameda, and being nearer the average of other years. We are inclined to think that Dr. Logan's report is none too high for San Francisco and the average of the State, and that Alameda must be a little behind in the receipt of pluvial dispensations. But the liberal outpourings of the past few days must contribute largely to bring the season's supply of rain up to the average, if it do not exceed it even.

A DIALOGUE.—The following conversation recently occurred between one of our dilatory subscribers and his better half:

Wife—"I see husband, that you had a bill, two or three weeks since, in the Vox Populi. Have you sent the money yet?"

Husband—"Hem. Well, no, my dear; I have been delaying it, but will send it in a day or two. The sum is a small one, and can make but little difference to the publisher."

Wife—"That is not the way you talk about the small sums due you. You know that many such, amount to a large sum."

Husband—"Well, well, wife, I did not think of that before, and will send the money to-day."

We find the above in the Rural Farmer, Maine. This is to the point, and if all wives would talk thus, and also use their influence in selecting the newspapers placed before them and their children, there would be better times for newspapers, and better newspapers, too.

It is a lamentable fact that the remissness of many subscribers to newspapers, arises from the simple reasoning stated above. The husband didn't think of that. No; he only remembered the sum he owed was a small one. He forgot that, perhaps, 100, 500, 1000, or 2000 persons, might all owe the same sum to the same paper, and the want of these little sums make an aggregate amount that was so great as to hinder many a noble enterprise, and even prevent many plans in behalf of the very journal of which he was a subscriber, that would in turn result in good to himself. We wish every wife in the land would make it a duty to see that Newspapers were always promptly paid for, it would make many of them better, and give them means for improvement.

We can boast of as good a list of subscribers as any journal in the land; but, as we cannot visit all our subscribers, we are obliged to send bills, and we hope they will be regarded when sent.

PRIIZES FOR AGRICULTURAL FAIRS.—It should be

the aim of all directors of agricultural societies and mechanical institutes to give such prizes as could be kept as mementoes of real merit—something that parents and children could look at, to serve as a stimulus for every generation to emulate, and to induce them to "go and do likewise." To this end, premiums should only be paid in plate, books or diplomas, according to the value of the prize offered. Heretofore silver plate has had to be imported from the Atlantic States, at extra cost now it can be made here, at as low or even less rates than it was possible to import, and the style of the work more in keeping with California history, as every style of work can be made here, and designs purely Californian can be prepared on the spot, at short notice. We can refer to an artist—W. K. Vanderslice, silversmith, on Washington street—who is now making splendid work, and will be happy to execute orders for all the societies in the State, on liberal terms, and we hope every society will employ him, as he is a California artist, and truly deserves encouragement. Call and see the work at his rooms, and all will be satisfied.

SPLENDID FOUNTAINS.—W. H. Moore, brass-founder, has cast and completed some of the most beautiful patterns of water-fountains that have ever been designed. Mr. Moore has been at great expense in getting up designs, having endeavored to surpass all former designs, which he has done; and what is also of great importance, he can offer all the beautiful patterns at prices as low or lower than New York prices. Mr. Moore's Foundry is back of the American Exchange Hotel. Every person who desires a handsome fountain, at a low price, can secure one now.

Remember the Devon Cattle Sale.

THURSDAY, April 19th, the sale of Devon Cattle will take place on Pine street, in front of the Black Hawk Stable. Each animal will be shown separately, so that purchasers can view them fully—their form, action, and general appearance. The following notice appeared in the Hartford Courant, relative to Mr. Ely's stock, which we take pleasure in republishing:

Devon Cattle for the Pacific.—Mr. Ely of Ohio, owner of a celebrated herd of the best North Devon blood that money and skill could procure [the same herd that took the first premium in a recent National Fair], sent them across to San Francisco, and the California agricultural papers are loud in their praise, and in anticipating that the fusion of the pure and strong blood of the Devons will tell upon the crosses, and that in a few years the grade Devons will be as abundant in California as are now the wild relics of the Spanish race. The enterprise of Mr. Ely, who is now at San Francisco, looks well at present. It is claimed that the California climate, and the practice of moving herds in the dry season up into the mountain valleys, ranging for pasturage, requires cattle that can bear travel without loss of condition; and that the Devons, compact and strong, and not too large, can undergo this ordeal with impunity. Californian stock-breeds have crossed their Eastern herds with Spanish bulls, in order to get the essential quality of hardiness, at the expense of narrow hips, shallow flanks, and thin withers; but the Devon cross will improve the form and quality, while at the same time it gives endurance and vigor. The Devons fatten well on dry food, and endure abstinence from water as well as Spanish cattle, thus fitting them for the California "dry season," which has upset so many farming plans of men who had no practical knowledge of the California climate.

The Oakland Fair.

The Oakland Fair will commence, as is reported, JUNE 5th. It is now only two months, and there is a large amount of work to do. Every citizen in Alameda county has an interest in this Fair. The more successful the Fair, the more prosperous the county. Every family can do a little in the way of household articles; every mechanic can do something; artists of every class can add to the beauty of the Fair, by their genius and taste; farmers and gardeners, fruit-growers and florists, each and all, can now be preparing. It should be a grand show.

Bay District Agricultural Society.

By the advertisement, which is found in our columns, it will be seen that this new society is beginning to work in earnest. We learn from the Board of Managers that they are determined to have a large and successful Fair. This can be done, for they have wealth and energy in the officials, and the old saying is true. "Money makes the mare go." The rooms of the Society are in Armory Hall, where all are invited to call and enroll themselves as members.

Plant Millet.

THERE is probably no species of grasses that contains more rich nutrition than Millet. It might be classed as a grain almost, in this country, for we have seen heads of Millet as large as four heads of barley, and the mass of rich, farinaceous food found in Millet must make it invaluable for stock of all kinds. The seed is now offered generally at the seed-stores in our city, and now is the time to plant it after these copious rains, as soon as the earth is fit to plant.

GOOD PRICE FOR A LAMB.—We take the following

from the Middlebury (Vt.) Register, of Feb. 29: "We learn that Mr. Henry Hammond of this town recently sold a buck lamb, eleven months old, for six hundred dollars. Mr. Samuel McFarland, of Washington county, Pa., was the purchaser. This lamb is said to have been one of the best in the State, and we are not disposed to question it."

This lamb, from the following facts, is presumed to be Spanish Merino. From this journal we learn the doings of the Addison County Society of Agriculture; their premiums and the names of the various committees; the liberal arrangements made for a good Fair, embracing all articles of produce, manufactures, and the mechanic arts, liberal also for the stock department; and in looking over the list of premiums for sheep, we were surprised to notice only Spanish Merino sheep are named, excepting one premium for mixed blood and one for mutton ewes. This at least is singular, from the great sheep county of Addison, Vermont. Does this mean to exclude French Merino?

INCREASED DEMAND FOR FURNITURE.—We repeat

that we have a certain assurance that our population is rapidly increasing, from the fact that the demand for household furniture is rapidly increasing. The immense amount of furniture sold by J. G. Clark & Co., is a proof that our population is increasing. Messrs. Clark & Co. have large warehouses in Sacramento, Stockton, and San Jose, besides their immense warehouse in this city. Their trade is the most extensive on this coast. They are at all times prepared to answer orders of the largest character. They manufacture the very richest furniture, and sell at the most reasonable rates, and on liberal terms. Their trade is nearly equal to all the trade else in California in furniture.

TO WINE-DEALERS.—Wine-makers over the State

should remember that when they come to offer their wines or wish to find agencies for the sale of their wines, Messrs. Graves & Williams, on Merchant street, should be visited by them. Messrs. G. & W. are now well established, have all conveniences for storage, with a large circle of business connections. They can give the most undoubted references that they do their business promptly and to the entire satisfaction of all who commit business to them.

ATTENTION TO SUMMER-FALLOW.—We can with much pleasure refer to the letter of the well known practical farmer, and correspondent of the FARMER, I. D. Morley, Esq., of La Grange, Stanislaus county, for sound views, on this important subject. Mr. Morley has long been known as a practical man, acting out his theories and testing them most thoroughly; and we know his letters have been widely read and his suggestions as widely accepted and put in practice.

MEDICAL EDUCATION ON THE PACIFIC COAST.—

It is refreshing to notice, from time to time, the various efforts that are made to promote the advancement of the liberal professions throughout this Great Republic. Traverse what part you will, whether it be in the frigid North or tropical South, in the expansive East or flourishing West, you cannot fail to be impressed with the veracity of our assertion. Take, for instance, the infant State of California, isolated as she is from her sister States by a broad belt of water and expansive tract of land, and until recently her people deprived of the facilities of comfortable and safe migration to and from her shores—nevertheless, the spirit of American enterprise has not been dormant in establishing not only theological, literary, but medical institutions, to the latter of which we propose to call the attention of our readers. Until within a few years, the student of medicine living on our Pacific border, in order to complete his studies, was compelled to resort to the far distant East—New York or Philadelphia—a trip fraught with danger and expense. This state of things would, no doubt, have existed up to the present period, were it not for a handful of her enterprising philanthropic citizens, aided by the counsel of some of her best medical men, who, with their undivided energy, ushered into existence that noble monument of medical education, the Medical Department University of the Pacific, San Francisco. The facilities for receiving a thorough medical education in the State of California, are now equal to any other State in the Union; and in this connection, we cannot but congratulate the Trustees of the Medical Department University of the Pacific, for the selection they have made to fill the various chairs in the medical department, for the names of Cooper, Rowell, Barstow, etc., are enough to sustain the institution with honor to themselves and satisfaction to the students.

We copy the above from the Brooklyn Star, N. Y., with much gratification. Nothing we like better than to see all Institutions of Learning flourishing on our Coast, and our best efforts shall always be directed to their encouragement.

We predicted great success to the Medical College of this City, at the very dawn of its existence, even when others looked upon its future with doubt and suspicion. We are proud and happy to see our most sanguine hopes, which were experienced in former days, so rapidly being verified. Already the remotest parts of the civilized world make favorable comments upon this flourishing institution, which is indeed honorable and encouraging to its persevering founders.

NOT AN EQUINOCTIAL.—The most severe storm

of the season occurred on Wednesday last. Nearly all day there was a strong gale from the south, and during the night it was accompanied by a heavy rain. In this city the streets were flooded, and much damage was done by water making its way into cellars, and otherwise. The storm appears to have extended over the State. In the mountains it was a snow-storm, and the most severe one experienced for a long time, seriously obstructing the travel on the now much thronged routes to Washoe. It is a pity this storm did not occur about a fortnight earlier, it would have been such a splendid equinoctial storm; the little blow we had on the 22d ult. having been classed as such, and this of course cannot be. Well, it seems we do have some storms other than "equinoctial."

THE POXY EXPRESS started from this city at Tuesday last, on its first trip across the continent. The pony left the Alta Telegraph Office, in Montgomery street, a little short of four o'clock, for the up-river boat, amid the cheers of the crowd assembled to wish it god-speed. The boat arrived at Sacramento at two o'clock A. M., and the Express was immediately started for Placerville, where it arrived at six A. M., and immediately proceeded on its trip over the Sierras. It made good time as far as heard from, and will doubtless reach Missouri in the schedule time, nine days. About eighty letters were sent from this city, the price being five dollars each. The commencement of this enterprise is an event of no ordinary character, and we heartily wish it success.

MAY-DAY FESTIVALS.—A little time hence, the Goddess of Flora will claim the accustomed annual tribute of her votaries. May-Day! with all its glories, with all its happy associations, will come to us claiming a share of our time, our interest, and our affections. It is a day that should only be associated with the innocent and the beautiful of Earth. Little children, bright flowers, and home affections, and with all such dear and happy surroundings, let this day be joyously remembered.

Mrs. Norcross' Establishment on Sacramento street deserves more than an ordinary notice. It is a Family Store, having all the real articles wanted for a family—a Utilitarian Store—beside a large stock of necessary, useful, beautiful, and fashionable, articles for those who have the means. One grand desideratum is: The Store is wholly under the care and attention of a Lady, every one qualified to have charge, and with her lady attendants receive lady customers for ladies' goods. This is as it should be. We have a notice of the Articles manufactured here, too long for this week, but which will soon appear.

PACIFIC TIN-WORKS.—Families that want tinware, tin-ware, Japan-ware, and household goods of this kind, will find it for their interest to call on B. C. Austin, 92 Clay street, who will wait upon them promptly, and show them out the largest and finest assortments of this kind of wares in our city, and at very moderate rates. B. C. Austin has long been established, and as one of our permanent citizens deserves a generous patronage.

MORE REAPERS.—Persons looking for Reapers and Mowers should take a look at all kinds. Messrs. Knapp, Burrell & Co., on Washington street, will serve a special call; they have a large lot of which contain new improvements in working machines.

WHAT A MAN CAN DO.—The Columbia Democrat says: Every citizen of this place knows Dr. Graves, who recently left this city for the purpose of locating a ranch outside of the mines. The Doctor, who must be nearly or quite 60 years of age, hale and hearty as hickory, with the aid of his son, a lad some seventeen years of age, in since November last, plowed and harrowed inwards of forty acres of grain; planted more than 10,000 grapevines, besides a large number of apple and peach trees. As to his garden, it will be when completed, the best in this part of the State. The doctor has located about six miles from Stockton, towards the Calaveras River, and has called his place "Greenwood Cottage," where he will be happy to see any of his many friends and acquaintances from "Old Tuolumne."

Ladies' Department.

LIZZIE WILEY WARREN, M. D., EDITRESS.

A CHILD'S SMILE.

BY THE AUTHOR OF JOHN HALIFAX.

"For I say unto you that in Heaven your angels do always behold the face of my Father which is in Heaven."

A child's smile—nothing more;
Quiet, and soft, and grave, and seldom seen;
Like summer lightning o'er,
Leaving the little face again serene.

I think, boy well-beloved,
Thine angel, who did grieve to see how far
Thy childhood is removed
From sports that dear to other children are,

On his pale cheek has thrown
The brightness of his countenance, and made
A beauty like his own—
That while we seek it, we are half afraid,

And marvel, will it stay?
Or, long ere manhood, will that angel fair,
Departing some day,
Faint the child's smile and leave the shadow care?

Nay, fear not. As is given
Unto this child the father watching o'er,
His angel up in heaven
Beholds Our Father's face forevermore.

And he will help him bear
His burden, as his father helps him now;
So may he come to wear
That happy child's smile on an old man's brow.

The Honored Guest.

A BRIEF CHAPTER FOR WIVES.

"Well," said I, one fine morning last week, "I have the prospect of a leisure afternoon, a somewhat unusual thing for me, and all being well, I will do a little needful shopping; call and pass an hour with my old friend Mrs. Ashburton, whom, on account of the distance I have neglected of late; and then drop in and take a friendly cup of tea with my niece Clara Whitford."

Having completed my household arrangements, I accordingly set out after an early dinner, and the shopping done, made my first call. Mrs. Ashburton's warm welcome, pleasant talk, and cheerful friendliness, would have proved strong temptations to remain for the evening, had I not felt anxious to see my niece, whose residence was much nearer my own.

On arriving at Clara's door, I was a little surprised to see no light in the front part of the house. "I am afraid they are from home," thought I, with a regretful mental glance backward at the pretty home picture I had just left. But I was mistaken. A servant came in answer to my ring at the door-bell, and ushered me into the dining-room, lighted the gas, and went to summon her mistress. I had ample time to look about me before Clara made her appearance, and could not help admire the perfect order and good taste which prevailed in both the apartment and its furniture. I was the more pleased to note this, as my niece, when unmarried, did not promise to become very notable as a housewife.

I was beginning to tire of waiting, as my brisk walk over, I felt chilly in the fireless room, when Clara entered fastening a little article of dress, evidently just assumed. Her greeting was most cordial, and yet there was a shade of regret in her tone when, her first salutations over, she said, "Why, my dear aunt, did you not let me know you were coming, and I should have been better prepared to receive you?"

"Surely, Clara," I replied, "no preparation is needed before you can bestow a cup of coffee on so near a relative as I am. Pray do not make my friendly call into a ceremonious visit, or I shall be tempted to run away again in place of waiting till after tea, and begging Mr. Whitford's escort home."

"Pray, do not think of such a thing. I will light this fire in a moment, and the room will soon be warm and comfortable."

So saying, Clara was about to apply a light between the bars of the grate, when I stopped her. "You must have a fire somewhere, my dear," said I, "and where you were sitting when I arrived, will I am sure, suit me the best. If I am to disturb any of your arrangements, I will leave you forthwith."

"Then, if so, aunt, you will have to excuse my taking you into the nursery."

"Anywhere to a warm fireside, Clara; but is Mr. Whitford from home?"

"No, aunt; he is here," replied my niece, her color rising as she spoke.

I laughingly congratulated her on her husband's liking for the company of his first-born; but perceiving no evidence of pleasure on her countenance, I asked if the baby were well.

"O yes, quite so, thank you, aunt. To say the truth, it is my darling that we are in the nursery to-night, and Frederick is not too well pleased about it; but it saves so much trouble, and the other rooms have just been cleaned and put in order. But do not say a word," she added, as she opened the nursery door.

My nephew advanced, shook me warmly by the hand, and then turning to Clara, said: "I hope, my dear, you do not intend to make your aunt a nursery guest. If you do, I shall not wonder if her visits become still more rare."

I hastened to assure him that I had been brought there at my own request, and begged no difference might be made, but quietly ringing the bell, he desired a servant to light the dining-room fire, and bring word when it was well-burnt. Clara bit her lip, and looked red and uncomfortable, while I, feeling still more so, occupied myself in admiring the baby. I could, however, distinguish easily enough, two or three little articles which convinced me that the tea equipage had just been removed; and certainly, this was not what I should have expected to see in Clara's home, knowing the comfortable and even affluent income of her husband. I felt sorry my unceremonious visit should have produced such an alteration in the arrangements; for I could tell, from the production of sundry keys, etc., that many articles not in common use, were to be brought out, and the evening meal deferred on my account. Besides, I felt grieved at Mr. Whitford's ill-concealed vexation, not displayed towards me, but his wife.

At length we were summoned to the dining-room; and truly a wonderful change had been effected there. A bright fire illuminated every corner; an elegant tea-equipage was on the table; in short, everything looked, as I had hoped at first to find it, in accordance with the position of the owners. Moreover, the pleasant aspect of affairs banished the cloud from Mr. Whitford's face, and so agreeably did the time pass, that I regretted when obliged to bid my niece "good-night."

"Good-night, dear aunt," said Clara, affectionately kissing me; "do come again very soon, but let me know when to expect you."

"And then," added Mr. Whitford, after the door was closed, "the dining-room fire will be lighted before your arrival. I am sure, what do you think of Clara's new notions respecting domestic economy? When we were first married, she was rather ignorant of household matters; now, we are so exceedingly orderly and careful that everything is so good to use. The dining-room underwent a thorough renovation; and the nursery, resorted to for temporary convenience during the repairs, has become our regular abode, the others being only used on

state occasions. Probably our next remove will be into the kitchen. I go into other houses and find that their masters can introduce a friend at any time, with the certainty of causing no embarrassment. In my home, on the contrary, the call of a relative even produces quite a domestic revolution; for plate, china, in fact everything presentable, is laid up in lavender, like the rooms. I wish you would say something to Clara on the subject, as I know you to possess great influence in that quarter."

"Have you named the matter, Frederick?" I asked.

"O yes, a thousand times, I think; but I cannot effect any change. I trust you will be more successful."

"I will try at any rate," said I, as I took leave of my nephew-in-law.

Having thought over the matter, I arranged my plan of operations. I decided that it would be better to try the effect of an opposite picture on Clara's mind, before giving utterance to any remonstrance; for I well knew that young housewives do not generally relish the pointed interference of their elders. I therefore called for Clara, having previously given her due notice of my intention, to accompany me in a long ramble; and I contrived to be near Mrs. Ashburton's just as tea-time was approaching, and we were thoroughly tired.

"Clara," said I, "what is to prevent our obtaining rest and refreshment? I can insure you a welcome to both, and besides, you are not quite a stranger to Mrs. Ashburton."

"O dear aunt, I could not think of such a thing; we should be sure to cause inconvenience."

"You shall judge for yourself, Clara," I answered; "and if you think so half an hour hence, we will journey homeward."

The moment we were admitted, I frankly told my friend that I had come expressly to claim her off-tendered hospitality for my niece and self, as we were tired, but still had a long walk before us.

"How glad I am that my house lay in your route!" replied she. "Tea is just coming in, and my husband will be here directly."

In a few minutes he arrived, and we were all seated, prepared to join in the social meal. I noticed Clara's glances at the perfect order which surrounded us, and the elegant but simple preparations for the repast. Besides these, it was impossible not to feel the thorough comfort diffused around us.

"My niece," said I to Mrs. Ashburton, was afraid of causing you inconvenience by coming unawares, and taking two places at your tea-table by storm."

A cheery laugh from Mr. Ashburton, and a bright smile from his wife followed my words. "Mrs. Whitford," said the gentleman, "I am the most fortunate fellow in the world, for nothing ever causes my wife inconvenience. You understand me, I dare say; I mean none of those domestic invasions which are usually expected to cause a bustle. She has a peculiar theory of her own, which she most thoroughly reduces to practice, consequently we are always able to welcome a friend, however unexpected the guest may be."

Clara blushed, and stammered a few words in reply, and perceiving her confusion, I changed the conversation.

On our way home, after spending a delightful evening, my niece was unusually silent; but at length she asked me if I could tell her to what theory Mr. Ashburton alluded when he said—here she hesitated.

"I understand you, Clara," I answered, "and I can explain it in very few words. Mrs. Ashburton says that being sure of the daily presence of one guest at her table, whom she wishes to honor above all others, she always prepares for that one, and is of course ready for any visitor, and at any time."

"But I saw no guest beside ourselves, aunt."

"Did you not? And yet the person I allude to was there."

"Where? Whom do you mean? You are jesting."

"Indeed, my dear Clara, I am not. The one whom Mrs. Ashburton considers worthy of all honor is her husband. She says, and I think justly, that she should deem her marriage vow but ill-performed, did she bestow pains to make her home attractive in the eyes of a stranger, and grudge doing so for him whom she has promised to love, honor and obey—her husband and the father of her children."

Clara did not speak in reply; but when we parted, the moistened cheek that touched mine convinced me the lesson was taken home; and I have little doubt that when I next visit my niece, I shall find her opinion is changed as regards the guest most deserving of honor.—[London Leisure Hour.

Cutting Robbie's Hair.

BY MARY E. BRYAN.

AND so this little household flower of ours must be shorn of some of its superfluous beauties. Even roses and geraniums must be pruned sometimes, and these uncut, silken rings, with the golden sunshine of three summers entangled in their meshes, must make the acquaintance of scissors at last. Grandpapa says so, and adds that if it is not done shortly, the low plum bougain will make another Abolom of Robbie, sometime, when the blue-eyed gander is in hot pursuit.

There is no denying that the curls need trimming; they are too many and too thick, and they make the little head drop uneasily to one side, like a half-blown moss rose-bud under the weight of its own moss, and straggle sometimes into the mouth and eyes. Yes; they must be cut; but it seems such a pity! Little curls that we have twined around our fingers when all wet from the morning bath; little curls that we have played with while singing the evening lullaby; little curls that our tears have fallen upon when the baby eyes were shut in sleep!—ah! only mothers know how dear such curls are to mothers' hearts.

Here are the scissors. Robbie must sit very still, now, while his hair is being cut. Why, sir, why do you smile and look at me so beamingly with your blue eyes? How do you know that I am not going to cut off that saucy head of yours, with these great, sharp, cruel scissors? O, holy faith of childhood! If we could only trust our God, as implicitly as babes do in their mothers! "Except ye become as little children, ye shall not enter the kingdom of Heaven."

Be very still, now, while I comb out those threads of shining flax. The mother is the first barber to her boy; no other fingers can perform the sweet office so gently; but when fifteen or twenty years have flown, rougher hands will comb and cut these locks, all bronzed by suns and winds, and clustering about the brow of manhood. The white-aproned, clean-handed barber will then arrange them in the latest style of trimming; pomading, perflu—no; my boy will not be a dandy by these strong limbs and the sturdy look of those eyes—no.

But to think the down of manhood will gather on this cherry upper-lip and on chin and cheek, dimpled as though by the touch of an angel's finger! To think that this round neck of alabaster

will be choked up with a man's necktie, and these lily-bud feet will wear high-heeled boots, and—Faugh! I will not think of it. I can not realize that this fair baby of mine—but three summers out of Paradise, and still smiling in his sleep, remembering what the angels said there—shall ever be so metamorphosed.

And yet the boy's babyhood is rapidly fleeting, and the severing of these ringlets seems like cutting the golden thread that links his infancy to his childhood. O, Robbie! I can call you "baby" but little longer. You blue-eyed elf you are already rebelling at being treated as one. You had rather run, now, after your painted wagon, than lie in your rose-curtained crib, and hear me sing of the baby whose cradle was the tree-top, and whose nurse was the wind. You will not wear your corals, because grandpa says they are for babies, not for men; you had rather hunt hens' nests than play bo-peep; and when I hold out my arms to you, as you stand in the doorway, twirling your hat, you turn your head on one side, like a half-tamed bird, a perch on one's finger, while your dancing eyes seem to say, "You'll see, you'll see! I'll soon take flight!" Pretty soon you will not believe in the wolf that talked to Red-Riding-Hood, and will lose faith in Santa Claus.

I cannot keep the bud in its sheath; I cannot stay the little bark that slips so rapidly down the hurrying stream of life. Soon, the rill will broaden into a river, and the realm of roses and sunny skies will be passed. And the gold of these ringlets shall be dimmed by time, and the roses perchance drop from these pretty cheeks, and sorrow and sin, it may be, cloud the clear, blue heaven of these innocent eyes.

There! I am crying. How grandpapa would laugh if he caught me, and say it was because I wanted the curls to stay and make a girl of his boy. See! there are tears glistening in these sunny clusters of hair, like dew among the golden-blossomed jessamine vines, and your eyes are looking at me with wide-opened wonder, and your red lip beginning to quiver with ready sympathy. O, Robbie! even if the worst should come, and I should have to lay this bright head with its locks of undimmed lustre under a coffin-lid, and see the grass grow between my darling and the bosom he once slept upon, I should still thank God for having given him, for having crowned my life with the holy blessing of motherhood; for it is such little arms as these around our necks, Robbie, that make us feel strong to do, and to suffer; it is drawing such little heads as these close, close to our breasts, that keeps the hearts of some of us mothers from breaking.

There! that is grandpapa's step upon the stair—and the task is just completed—the little lamb is shorn. Look at this bright heap of glistening silk, such as Persian looms never weave into richest fabric. Here is "golden fleece" for you, such as never the lover of Medea sought! You did not know that such a glittering wealth grew on your little head—did you, blue-eyed baby?

No, you must not clutch it with those destructive fingers. Go—grandpa is calling you—let him see his little man; but leave me these—little curls cut from my baby's head. I will put them away to remind me, in other days, of his sweet, lost infancy.—[Southern Field and Fireside.

MRS. LIZZIE WILEY WARREN, M. D.

ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of *doctoring the sick*. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organism than the diseases themselves; therefore she dispenses with the use of drugs, relying on the creative power within the living organism and the supplying such conditions as the natural remedial agents afford.

The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it is approximate to the principle of life, apparently identical with it. Its therapeutic uses are *reasonable and wise*, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the southeast corner of Mason and Pacific streets.

MRS. ANNIE L. AVERY,

HOMEOPATHIC PHYSICIAN,

Residence, 249 Pacific Street (two doors from Stockton Street).

SAN FRANCISCO.
Special attention paid to diseases of women and children.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale.

Apply at her residence, corner of Mason and Pacific streets.

Valuable Patents.—We call the attention of parties who are interested in PATENT RIGHTS to those advertised by us. Each of them will secure a very handsome sum to any person of enterprise and energy. The models and rights can be shown and explained by calling at our office, when the price and terms will be made known.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

HOW many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$3 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the NEW VOLUME.

TO GRAPE PLANTERS.

As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planning will be so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them at much increased value. May we not expect this from all planters of the vine everywhere?

Large Potatoes and Onions.—We are very desirous of procuring some very large Onions and Potatoes, for a special purpose; we only want a few, but will cheerfully pay a liberal price for fine samples, and be very grateful besides. We also wish a variety of curious or rare vegetables of any kind—*lett, turnip, or carrot*. Those who have such and will send them to our office, we will reward them for so doing.

Who Wants a Farm Cared For?

A PERSON fully qualified to take charge of a large Farm, Orchard, or Vineyard, with a reasonable amount of stock to work it, would like to secure a chance to take such a place to himself. The advertiser has it in his power to make a very valuable improvement, if the contract is made for three or five years. Any person who may have such a place, can hear of a responsible party by addressing a note to W. B. and leaving it at the FARMER'S Office.

WHEELER & WILSON'S

FIRST PREMIUM FAMILY SEWING MACHINES!

AT

REDUCED RATES!

The character of Wheeler & Wilson's Sewing Machine is too well established to admit of any controversy in regard to its merits. They have received the commendation of all the papers in the country. Notice what the Scientific American says—the leading mechanical and scientific paper of the age:

"We are having a great many inquiries for Sewing Machines, from all parts of the country, and as we cannot conveniently reply to them all by mail, we have thought proper to state our opinion of them in this public manner. We have used Wilson's Patent, manufactured by the Wheeler & Wilson Manufacturing Company, No. 95 Broadway, and we can say in regard to it, that it is without a rival. It is simple, not easily put out of order, and, in point of effectiveness and finish, no other Machine stands ahead of it. We state this much in regard to the excellent Machine on our own responsibility."

The Highest Premiums Were Awarded

THESE MACHINES

At the following Fairs in 1855:

Missouri State Fair, Illinois State Fair,
Mississippi State Fair, New York State Fair,
New Jersey State Fair, Maryland State Fair,
Virginia State Fair, Wisconsin State Fair,
Michigan State Fair, Pennsylvania State Fair,
Kentucky State Fair, Indiana State Fair.

CALIFORNIA STATE FAIR,

Chicago Fair, St. Louis Fair, Richmond Fair, Baltimore Fair, and San Francisco Mechanics' Fair.

EVERY KIND OF SEWING

Can be done with

Wheeler & Wilson's Machine!

ONE MACHINE DOES THE WORK!

Hemmers, for Wide and Narrow Hems, with each Machine.

Among the undoubted advantages of WHEELER & WILSON'S Sewing Machines are:

- 1.—Elegance and simplicity of construction, and consequent freedom from derangement and need of repair.
 - 2.—Durability.
 - 3.—Unexampled ease and rapidity of operation.
 - 4.—Noiseless movement.
 - 5.—Beauty of stitch and firmness of seam.
 - 6.—Economy of thread.
 - 7.—Applicability to a variety of purposes and materials.
- They are applicable to every kind of sewing for family wear, from the lightest muslin to the heaviest cloth. It works equally well upon Silk, Linen, Woolen, and Cotton Goods; Seaming, Quilting, Hemming, Gathering, and Felling; performing every species of sewing except making button-holes, stitching on buttons, and the like. Various appliances are furnished for regulating the width of Hems.

MACHINE WARRANTED

Thread, Silk, etc., Constantly on Hand.

H. C. HAYDEN, Agent.

FIRST PREMIUM AGAIN!

BEING THE

SEVENTH TIME RECEIVED

Against All Competitors.

R. H. VANCE,

Corner of Montgomery and Sacramento Sts.,

SAN FRANCISCO.

Having again received the FIRST PREMIUM awarded at the State Fair for the BEST AMBROTYPE and PHOTOGRAPHS, it is guaranteed that all who favor me with a call are sure to obtain better work than can be produced at any other rooms in the State. I would say to my patrons that I am now producing better work than ever, at much REDUCED PRICES, to conform to the times.

Having reduced my prices more than 30 per cent, no one need hereafter go to second-rate establishments on account of price.

Instructions given in the art, and stock furnished. Having over \$20,000 worth of Cameras, Glass, Plates, Cases, and Chemicals, on hand and on the way, I shall hereafter dispose of them at about New York prices.

Orders received by Post, Lock Box 565, promptly filled.

JOHN C. ROBINSON.

BEE-HIVES!

The following is an extract taken from the advertisement of the Agent for the Langstroth Bee-Hives, in the CALIFORNIA FARMER of February 22d.

"See Huber on Bees, published in London, 1841." The page and section not given. This is a very convenient and accurate way of setting forth by a fence what is not the fact. The extent of Huber's invention was a section hive, in which the sections were attached by hinges. This was used and used only for an observatory hive. It cannot be made practicable for anything else."

The aspersions sought to be cast on the veracity of the eminent Patent Attorneys, whose opinion on the validity of certain patents, published in the same number of the FARMER as above alluded to, calls for the following vindication: Extract from Bevan's work on Bees, published in 1843, page 39, chapter 9.

"Huber carried the principle of these experimental hives still further; he joined several of them together with hinges which were so contrived as to admit of easy removal, and as the frames, or leaves as Huber called them, were hinged, they afforded a free communication with each other."

"Huber EXTENDED and rendered the system more complete, probably approximated it more nearly to that of its ancient GREEK INVENTOR."

"Two experiments, however, of Mr. Golding, myself and others, already detailed, have shown that this hive admitted of still further improvements: the leaves were too narrow to be applicable to all purposes, and the hive altogether has been so much simplified by Mr. G., that I shall confine myself to a description of the particular form and dimensions which he has adopted."

"The general width of the leaves should be an inch and five-eighths, but slightly varying in the same proportion recommended for the BAIRS in page 32."

"The exterior dimensions of this hive are one foot two and a half inches high, by one foot one inch deep; the width will depend on the number of leaves; the number usually employed is eight."

"The perpendicular bars at the front and back converge at the bottom towards each other, so that at the top the interior of the hive from front to back measures eleven inches, at the bottom only ten inches."

"The upright pieces are of course kept in their position by having the top pieces tenoned into them, and are further held together by a small cross-bar, also tenoned into them, about half an inch or an inch from their lower ends, so as to allow a free passage for the bees beneath."

"A series of these leaves being placed in juxtaposition, secured at the front by shifting butt-hinges, and at the back by hooks and eyes, and having a glazed door, covered by a shutter, as each end, constitute what I think will be found to be an improved modification of the hive of Huber."

J. S. HARRISON.

STATE OF CALIFORNIA.

CITY AND COUNTY OF SACRAMENTO.

I, John C. Barr, a Notary Public, in and for the county of Sacramento, do hereby certify that I have carefully read over and compared the above extracts with the original publication, viz., "Bevan's work on Bees," and find the same to be a true copy.

Witness my hand and official seal this 23d day of March, A. D. 1860.

JNO. C. BARR, Notary Public.

The California

BEE-HIVE!

The BEST, and hence the CHEAPEST Hive ever offered to Bee keepers.

[For the California Farmer.]
FLORA.

LOVELY FLORA! sweetest blossom
Budding on the face of earth!
Spreading fascination round thee,
Even from thy happy birth.

Eyes, that beam like sun-lit diamonds,
Glorious both in tears and smiles,
Light a face that's changing ever
With a world of pretty wiles.

Cheeks that blush like summer roses;
Features perfect in their form;
Teeth that look like pearly fragments;
Lips to coral, red and warm.

Hands and feet so plump and graceful;
Words that drop like silver sounds;
Movements that are little poems,
Beauty her as the clouds.

Lovely Flora! opening rose-bud!
Fairer blossomed there at thy birth—
May they now as apple guard thee,
While thy presence decks the earth.

COLLEGE INSTITUTE, BENICIA.

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with
SPRING AND CURLED-HAIR MATTRESSES AND LINENS
than any other House in the State. It is one of the largest
Hotels in California; a fireproof building, and provided with
Bosley Water throughout the House. It has a route on
Jackson street of 274 feet, by 125 feet deep. There are no
dark rooms in the house, all having free and open frontage
with pure air, which is of great advantage to a California
climate, there being no large buildings adjacent thereto.

The undersigned invites the attention of the Travelling
Public and Strangers in particular, to the merits of this
House. It was established under its present Management, on
the 1st of January, 1887, as a

First-Class Hotel,

IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to
encroach upon the merits of other Houses, cannot but recall
the marked favor with which his enterprise has been received
by a discriminating public in a constantly increasing patronage
of the FIRST RESTAURANT, showing conclusively the
SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most Popular
Places of Amusement, the Principal
Thoroughfares, the Fashionable
Promenades and Steam-
boat Landings;

Thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR

FAMILIES and SINGLE GENTLEMEN,

During their sojourn in this city.

For a year past we have studied how we can maintain a
FIRST-CLASS HOTEL and at the same time effect some re-
duction of price below three dollars per day to our friends.
We are happy to announce to you that we have succeeded in
our efforts.

We have obtained a reduction of our heavy rental; and we
have now under cultivation, in the suburbs, a Rancho, which
produces our Vegetables fresh from the ground; with a Dairy
that secures us the purest Milk and Cream; and a stock of
Poultry that supplies Eggs and Poultry always fresh; with many
other economical advantages. By this means we can promise
our friends that we shall ever improve upon the proverbial
excellence of our Table; and the same matches Bed, and
admission to the House of the most Popular Hotels in
the United States. For comfort and luxury this house is
not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the
landing of the steamers, to carry passengers to the Hotel. 115

Self-adjusting Post-Driver.

A valuable Implement for Farmers.

HYDE'S PATENT SELF-ADJUSTING POST-
DRIVER is now offered to Farmers, as a valuable
implement in FENCE-BUILDING. The hammer works
in a swinging frame, rendering it self-adjusting on un-
even or hilly land. It has been used on hills where it
had to be hauled on with a tackle; any common carpenter
can construct one. The two pulleys, one on the drum,
and the other on the crank, are to be covered with
leather or rubber belting, and when pressed together by
the foot lever, the friction of one on the other is sufficient
to raise the hammer, and on lifting the foot from the
lever the drum is free and the weight drops; and so on,
setting post for post and much more expeditious than
can be done by digging and ramming.

A want of this Machine can be seen at the FARMER office,
where RIGHTS are for sale. Price of Right for single
machine, \$10; and County Rights according to population,
etc.

OLIVER HYDE, Patentee.
Benicia.

OFFICIAL NOTICE!

POLHEMUS' DRUG STORE,
No. 190 J street, corner of Seventh.

SACRAMENTO, CAL.

FELLOW CITIZENS: I have lived among you since
the ever glorious FORTY-NINE, have suffered with
you in three fires and three floods, and intend to live
among you with my family to the term of my natural
life, if no longer. I return you my most sincere thanks
for your unfailing patronage and support, which has
enabled me to pay One Hundred Cents on the Dollar
through all my adverse fortune. I would also give you
a few reasons for your continued patronage, and inducements
to new patrons likewise.

FIRSTLY.

I claim to be the Oldest Established Legitimate
Druggist in this City.

Persons in this connection will please observe that there
is as much difference between a DOCTOR and a DRUG-
GIST as there is between a Doctor and a Doctor, and
rather more so between those who have picked up the
Drug Business with my family than those who have devoted their whole
life to it. To this latter class I have the honor to belong,
having learned my business in the Atlantic States, and
been engaged in said business for the last eighteen years.

SECONDLY.

Believing that life is sweet to all, and that the people
wish to know where they can get their prescriptions filled
with safety, I will hereafter fill them for.

By other Druggists, legitimate or illegitimate, and of
The Purest Drugs and Chemicals.

THIRDLY.

I intend my store shall be ONE of the best, if not THE
BEST place in California to obtain everything NEW,
OLD and STRANGE in the Drug line, and especially to
make it the most extensive depot for every valuable
Patent Medicine, Drug and Chemical. We invite pre-
scribers of valuable and reliable Patent Medicines to send
them along. We have a large and thoroughly fire-proof
Drug Warehouse to hold them, and patrons to buy them.

FOURTHLY.

We Keep Open all Night!
And charge no more for medicines than in the day time.

FIFTHLY.

We will furnish those in indigent circumstances with
MEDICINES AT COST! the same being attested by two
or three good citizens.

SIXTHLY.

Hereafter we will do a business on CASH BASIS
ONLY. The amounts we have lost heretofore by credit-
ing we intend to distribute equally among our patrons, in
the future, in the decreased price of our goods.

SEVENTHLY.

We have received the agencies for the following valu-
able articles:

Dr. Carl Warburg's Tincture. This article par-
ticularly recommended for Ague and Fever, when every other
article fails to cure. Builds Nerve and Bone. Un-
dermined, warranted the best in California.

Flower of the West, for Fever and Ague.

Delightful Spanish Calumet, for the Hair.

HUDSON'S CALIFORNIA GROWN MUSTARD.

Also, agencies for all the other popular medicines too numer-
ous to mention.

EIGHTHLY AND LASTLY.

We import nearly all of our goods. We think we know
how to import them, and how to sell them to satisfy the
public as to price and quality. At all events, give us a
call, and WE WILL TRY.

Y-12 J. L. POLHEMUS

THE VERMONT
MOWER AND REAPER.

The attention of Farmers is invited to the celebrated

Vermont Mower and Reaper,

Which is unsurpassed for SIMPLICITY, DURABILITY,
CONVENIENCE and THOROUGHNESS OF WORK; and
now makes its

First Appearance on the Pacific Coast.

Some of the points of excellence and peculiar advantage
which this machine has over others, are as follows:

1st. Having the cutter-bar hinged to the frame, so as to adjust
itself to uneven surfaces.

2d. Having two driving wheels, if one slips the other does the
work.

3d. When the machine moves to the right or left, the knives
are kept in constant motion by one or other of the
wheels.

4th. It can be belted, thrown in or out of gear, and the cutter-
bar raised, without the driver leaving his seat.

5th. The whole weight of the machine is on the wheels where
it is required to give power and stroke to the knives.

6th. When the machine is backed the knives cease to play;
consequently you back away from obstructions with-
out danger of breaking knives.

7th. The cutter-bar being hinged to the machine, can be packed
up without removing bolt or screw.

8th. The cutter-bar is easily raised by a lever, which is very
convenient at the corners of the land; when raised the
machine will turn as short and as easily as any two-
wheeled cart.

9th. The machine is mostly iron, simple in construction, and a
boy can manage it with ease.

10th. It has no side draught.

We invite every farmer wishing a machine, to call and see
this before purchasing.

We have them now set up and ready for inspection. Call
and examine for yourselves.

KNAPP, BURRELL & Co.

80 Washington street,
(Near Front) [7] SAN FRANCISCO.

MR. BROADWAY PINNED TO THE WALL.

READER, DON'T STOP TILL YOU GET TO THE END.

Or you'll lose the fun. The following Circular has been
scattered about our hotels and other public places:

"INSTANTANEOUS VIEWS."

"From certain advertisements and circulars which have
been recently issued, it appears that a New York house, whose
efforts at Stereoscopic Photography have by very lately com-
menced, lay claim to the earliest publications of Instantaneous
Views."

"Doubtless they have inadvertently fallen into this error."

"At the same time, justice to the London Stereoscopic
Company demands that the mistake be promptly corrected.
More than twelve months since the London Company's
eminent artist, Mr. Williams, succeeded in taking Instantane-
ous Views for the Stereoscope, of New York City, Harbor,
River, &c. Justly therefore it is claimed for the London
Stereoscopic Co., and universally it is admitted by all impar-
tial reasoning, that their productions, instantaneous and other-
wise, were the FIRST and the Finest that have ever been
offered to the public."

"To confirm this statement, nothing is requisite but an
actual inspection of the views in question."

"504 BROADWAY, N. Y."

Now who this Mr. Broadway is who has taken up the cudgel
so valiantly we do not know, but it is evident by the affix of
N. Y. to his name that he means to let it be understood he is
"No YANKEE."

In reply to his card, however, we would offer friend Broad-
way little to swallow, which will no doubt "perceptibly
correct" the difficulty he finds in digesting our Instantane-
ous Views.

The first pill is compounded by "The Autocrat of the
Breakfast Table," a right royal magazine which goes direct to
the spot. Read:

BOSTON, August 31st, 1859.

MY DEAR SIR: I have received and examined the beautiful
specimens of your art, you have had the kindness to send me
they are very fine, and realize the possibility of which I spoke
in a marvellous way.

These Crowds caught in the very attitudes which lasted but
for the space of a heart beat are really wonderful. They show
us how impossible it is to reproduce nature except by making
nature reproduce itself.

Since I wrote my article I have obtained a few specimens
by a London Company, but no Instantaneous Views that I
have seen appear to me at all equal to some of yours.

Thanking you very sincerely for this generous gift of your
treasure, I am, Very truly yours, O. W. HOLMES.

To Mr. E. ANTHONY, 308 Broadway, New York.

There now, dear Broadway, take this medicine like a good
boy. It had sent some of its best specimens to the "Autocrat,"
but he did not find them "at all equal to some of ours." A
nice pill—do you see?—and he never in the morning.

What was that you said? The "Autocrat" is only an
AMERICAN opinion! American pills perhaps don't agree with
your constitution, and we will give you a nice English medi-
cine. Open mouth wide now and swallow a little from the
Bureau of the Birmingham Photographic Society.

We have received a letter from Mr. Anthony of New
York, containing three Stereoscopic Views of Broadway, taken
instantaneously. The noble street is represented thronged
with carriages and foot passengers. All is life and motion.

The rotting omnibuses are caught with two feet off the
ground, boys are running—men walking, riding, driving, car-
rying weights—ladies sweeping the dirty pavement with their
long dresses, or tripping over their crinolines and displaying their
pretty ankles as they trip over the crossings, exactly as they
do in Europe. You see this Stereoscopic glimpse of
Broadway then from a whole library of books of travel. In
particular the picture taken in the rain has a charming atmos-
pheric effect—the eye is carried along a mile of noble houses
and shops, each man, each woman, each child, each dog, each
thing in an instant of misty distance.

In reply to Mr. Anthony's query about as European pho-
tographers, we can only say we know of no pictures, save two
or three of Wilson's best, which could be put in comparison with
this. We have seen more than one old-world work in the-mind
fellows must take care of the Yankess will go ahead of us!

And now, dear Broadway, we are sure all that naughty
conceit will be carried out of you, and as soon as you feel well
enough to walk out, call at 308, and we will show you what an
Instantaneous Stereoscopic View is, for we don't think you
have ever seen one.

Your friend, E. ANTHONY.

That the Public may judge, each man for himself, of the
merits of the respective INSTANTANEOUS VIEWS, we have
sent out a number of copies of the views, taken in the rain, in
the form of a circular, and we will send you one free of charge.

They are better than "so called" of the London Co., taken in
the bright sunshine.

We do not speak without the evidence to show. Call and see.

American & Foreign Stereoscopic Emporium.

An extensive and varied assortment of American and Foreign
Views and Groups always on hand at the lowest prices, and of
the best quality.

New invoices received per every arrival from Europe.
Having agents in England and France, we are certain to
receive the latest views published in either country, and our
stock will be found both extensive and well selected. A liberal
discount to the trade.

Parties at a distance sending us \$1, \$5, \$10, \$15, \$20 or \$25,
can have a good instrument and such pictures as they may
request sent by Express. All orders will be executed with
care, and our friends may depend upon receiving a good and
satisfactory selection.

Merchants from every section of the country are respect-
fully invited to make an examination of our stock before
purchasing elsewhere.

A circular will be forwarded to any address on application.
E. ANTHONY, 308 Broadway, New York.

Photographic Materials for Amateurs and the Trade.

Our long experience in the business and our extended
connection make our rooms the Central Emporium for Photo-
graphic Materials and Stereoscopes. This is the only large
house in the United States whose attention is exclusively
devoted to these branches.

THE
AMERICAN PUMP!

Patented April 5, 1859.

Without Suction, Without Packing!

This is a DOUBLE ACTING FORCE PUMP, with but one
bore and one piston, worked by a too place, having as much
leverage and less friction in its working than any other pump
heretofore invented. The object of the whole invention was
strength, simplicity, economy, durability, and to lessen the
power to raise water from great depths, all of which have
been attained to a perfection heretofore unknown in force
pumps.

The working parts all stand under the water, as does the
air chamber, beyond the reach of careless or malicious inter-
ference or frost; there is no loss of water and no loss of
labor in any depth; a constant flow of water is kept up. The
different sizes (five in all) work in diameters of from fourteen
to twenty-four inches, and cost \$15, \$30, \$25, \$40, and \$60
each, and are worked by hand, horse, water, wind, or steam;
adapted to cisterns, wells, tanks, machinery, engines, mines,
railroads, docks, forcing water under or above ground to
great heights and distances; discharges at various points;
throws by hose and pipe, thirty to forty feet; is extremely
useful and convenient in watering gardens, flowers, vineyards,
washing windows, and, in sudden emergencies, for checking
fires in their earlier stages, and no pump equals it in economy
or success for purposes of irrigation. The fixtures for power
cost \$12, \$15, and \$18 each, according to size. It has now
been in successful operation for eight months, in every depth
from 8 to 100 feet, and for nearly every conceivable purpose,
in twenty-four States of the Union, commencing at Maine
and extending to the Rio Grande, and in New Brunswick and
Cuba. The pumps have been sent everywhere on trial, and the
failures to give entire satisfaction have averaged two to the
hundred! I append a few notices, certificates and extracts
of letters to justify my position.

"The pump needs no priming to obtain water. The ar-
rangement and operation are very simple, and easily under-
stood."—Life Illustrated, N. Y.

"This is a new Pump which is offered for public favor.
Construction is greatly simplified, and appears to be designed
for durability and efficiency. Those who have used it speak
highly of it."—N. Y. Observer.

"The piston discharges at both ends into the air-chamber,
causing a regular flow of water at the discharge pipe at top.
It preferred, every part can be galvanized, except the piston,
which keeps itself clean, and is proof against rust."—N. Y.
Evangelist.

"This is a new invention, a working model of which has
been shown us, which presents several novelties for a double
acting pump, being exceedingly simple in construction, ap-
parently very strong and durable, rendering the labor of
working it, on account of the very small amount of friction
in its working parts, very trifling in comparison to other
pumps of a similar nature."—N. Y. Christian Advocate and
Journal.

"As a specimen of the ease and efficiency with which this
pump works, we can state that one man, working regularly,
forced water from the pump a distance of 340 feet, being 57
feet perpendicular height, which is good work, as every one
who is in the habit of raising water knows."—[Scientific
American, N. Y.]

"There are no suction valves nor complicated fittings;
neither valves, pulleys, nor pulleys. It is easily raised
for any motive power, and lifts water to any desirable height
without any waste of force. A woman or boy can work it
with ease to raise water fifty feet, and a man can raise it 100
feet all day. The curiosity of it is the absence of all compari-
sons, it is a new pump, very simple in construction, the motion
going directly from the handle to the valve by simple lever-
age."—The Independent, N. Y.

"The construction is simple; and it works with an ease
that will surprise those acquainted only with the old fashioned
ones in this line. One of these pumps now in use in this
vicinity, enables us to state that full confidence can be placed
in the statement contained in the advertisement."—[Presby-
terian Banner and Advocate, Pittsburgh, Pa.]

"It is calculated for work at any depth desired, and the great
advantage of it is the height to which water is raised is far
beyond anything we have yet seen or could have imagined.
The pump we personally tested, was connected with a pipe
sixty feet high, and it required but a very slight exertion
with one hand to deliver a stream of water at this height
at the rate of eight or ten gallons per minute. A small boy
could have done it with ease."—[The American Mining
Chronicle, N. Y.]

"We got one of them which we have put into operation on
our farm, and like it very much. It brings up a con-
siderable stream of water, with little or no labor to the person
working it. It must meet with a ready sale, and speedily
grow very popular."—[The Southern Planter, Richmond, Va.]

"Having had considerable practical experience in the use of
machinery of this character, after testing this pump, we can
say we have no objection to its being put into circulation, and
we are confident it will be a success in all its applications."
—[The American Mining Chronicle, N. Y.]

"We speak from personal knowledge, and say, that of all
the pumps we ever saw, we never saw one at all comparable
to this. A man can scarce find it to be pleased with them. If
you want a good pump get one of these."—[St. Louis (Mo.)
Ch. Advocate.]

"A Working Model and Pumps always to be seen on
application at the office. Complete drawings, price, and par-
ticulars in detail, sent free of postage. Address:

JAMES M. EDNEY,

147 Chambers street, New York.

ROSS, DENPSTER & Co., Agents,
SAN FRANCISCO.

Where Models may be seen and Pumps had, with Circulars
and drawings. 5

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable in-
ventions, for which we have no models to show their value,
are now offered for sale. We hold the rights for the States of
California and Oregon, and Utah and Washington Territories.

No. 1. A New Rotary Subsoil Plow.

Patented April 6, 1858.

This invention completely pulverizes the soil after lifting it,
a very valuable implement, and one which will receive un-
iversal commendation.

No. 2. A Corn Cultivator.

Patent now pending; papers expedited.

SETH W. FOWLE & Co., Proprietors, 18 Tremont street
(Music Building), Boston, Mass.
For sale by—**CHARLES MORRILL, HENRY JOHNSON & Co.,**
REDINGTON & Co., San Francisco; CHAS. MORRILL &
H. McDONALD & Co., Sacramento; Smith & Davis, Portland
Oregon; and by all good dealers in medicine everywhere.

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 20, 1860.

NUMBER 9.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

The Honey-Bee Business.

We give place to the following pointed letter most cheerfully, as we are always willing to open our columns to a free discussion on every subject identified with the interests of the State—and we shall be glad to hear from all portions, not doubting but that Mr. Harbison and others will readily sustain the position they have assumed that "foul broods" has been introduced into this State.

We ask attention to the fact that the position we took relative to the importation of bees by persons ignorant of their nature and care, is fully confirmed by Mr. Kennedy, and even he believes that a greater portion of the bees that were imported were lost. What we said relative to the condition of imported bees we can fully prove. We have seen the disease, have seen the rotten bees in the comb, and the amount of loss by foul brood and by the moth and worm we knew was large, but we had not estimated it as high as Mr. Kennedy has fixed it, *nint-tenths*. We were informed by one importer of one hundred hives that his loss was \$2500.

It will be seen by the words of Mr. Kennedy that we were right also in our statement that only those who understood the business could do it successfully, for Mr. Kennedy says he selected between fifty and sixty swarms. *They being all new swarms and new hives*, the after care given them, their safe arrival, and their success, proves our position. Mr. Kennedy and son understood the business and were successful. Mr. Kennedy did not purchase any and every swarm he could find without reference to their state, for he knew the condition necessary for such a voyage. But many persons have seen the kind of swarms brought hither and their condition, many of them with combs black and rotten, and with worms actually crawling from the hives; this we have seen. As it regards Sacramento being exempt from the disease, we don't believe it. Hives carried to Sacramento convey the disease there as well as any where else, and we presume Mr. Harbison will so assent, and the remarks of Mr. Kennedy relative to Mr. Harbison we leave for him to respond to.

To the remarks of our correspondent relative to whether the first bees were had of the "Digger Indians" or not, we reply, no; they were first introduced by the lamented "Sheldon" who in connection with Commodore Stockton first brought them hither at great cost, and they were nearly all lost by the want of that knowledge which has since been obtained by a costly experience. Mr. Kennedy after he has had a little longer experience in California life will learn this real truth, that the climate of our glorious State will eradicate, purify and regenerate bees that are diseased; and eradicate disease in animals and in man if the proper remedy is applied and the laws of nature carefully observed. We witness this in all classes of animals, that although poor, sickly and lean, their progeny improves in each generation. As with animals so with humans—the children of pale, and sickly, and even diseased parents take on a new type of health and strength by the atmosphere they breathe. And thus with the bees; the early swarms were more or less diseased and sickly in various ways, and those evils were nearly or quite eradicated, when this new and increased importation of some three or four thousand swarms was thrust upon our State in all conditions, and we re-assert that it will take a long while to get rid of this evil. That it is so is verified in the fact, that while imported swarms can be purchased at from \$50 to \$80 each according to their strength, California bees are worth \$100.

We did not mean to assert that importers intended to introduce diseased bees, or that those who sold them did so fraudulently. They sold their entire lot of bees for so much, leaving the purchaser to make his selection of each as he pleased; and the speculator thinking all would pay, brought good and bad, and thus inflicted an evil on our State but a greater on himself, for the speculation was a bad one.

We shall be glad to be corrected at all times by our correspondent or any one else, and when in error will quickly take back any assertion not based on sound logic.

MARYSVILLE, April 15, 1860.

EDITOR FARMER: A friend has handed me your paper of the 30th ult. and called my attention to an article headed "The Honey-Bee Business." This article seems to call for a word in reply.

You certainly prophesied correctly if, as you say, you foretold heavy losses by a majority of those "who should enter the business ignorantly." I am quite certain you have not over-estimated these losses. I very much doubt whether even

one in ten of the stocks imported the past season will be of any value on the 1st day of May next. But after ascribing a sufficient cause for this great loss, viz., the ignorance of those who are engaged in the business, you pass on and ascribe the loss to another cause which, if it really existed to the extent you name, would make it impossible for the most skilled apianist to import bees successfully. The first cause being sufficient, are you not sounding an unnecessary alarm when you say the "greater part are badly affected with 'foul brood'?" It is true you state that in "letters received from J. S. Harbison, the able apianist of Sacramento, all these facts are affirmed," and Mr. Harbison himself, in the *Culturist*, over his own signature, makes similar statements; and even charges the principal bee keepers in the Eastern States with having "emptied their apiaries upon the unsuspecting speculators and purchasers of California."

I hope this article will come to the notice of these Eastern gentlemen, that they may be made aware of the estimation in which they are held by the great apianist of California.

If indeed the contagion "foul brood" is among us to anything like the extent named by Mr. H. and yourself, it is quite important that every precaution should be taken to prevent its spread among the natives. One would naturally suppose in reading your article that the honey-bee was found here long before the discovery of gold, and that the stock on hand previous to the "fall of '59" was obtained from the "Digger Indians" or some other of the old settlers; and those of us who have recently come to California for a residence, and brought over bees with us, are the first importers, and to us is applied the imputation of introducing a disease that will take years to eradicate. For one I am not willing to sit down silently under this charge.

I left Wisconsin last fall in company with my son with between fifty and sixty hives of bees gathered by ourselves, they being all new swarms in new hives. We took them to New York in October, and left that city on the 6th of December for San Francisco, where we arrived on the 3d of January, and came immediately to this city. After selling five stocks at full California prices, we have fifty left in as good condition, I venture to say, as any fifty taken promiscuously from Mr. Harbison's or any other person's apiary.

I have felt called upon to say this much in self-defence, as the articles referred to are so sweeping that I see not how we could avoid considering ourselves included among the proscribed.

If the press were to raise the hue and cry that the Asiatic cholera had been introduced into San Francisco, and that almost every person who had come from the Atlantic States in "the fall of '59" was infected with it—that these persons had spread themselves over the State, "in San Jose, Stockton, Napa, Marysville, and other places," omitting Sacramento as above suspicion, would it be wise in the City Fathers to make large appropriations for the building of hospitals, and warn the natives against even shaking hands with any of these newly-arrived persons, for fear of contagion, without even asking the question, "Are these things so?" And if, on investigation, it should appear that all of the sickness could be fully accounted for without assuming it to be a contagious disease, would it not be as well to defer these notes of preparation, more especially if it should be found that the able physician who had "affirmed these facts" was greatly interested in having them prove true?

The steamer on which we came brought out some five hundred hives of bees. They were not in very bad condition on the start, yet a large number of them were lost on the passage, or so injured as to be of little worth on arrival at San

Francisco. Much of the comb became very dark, as, I think, caused by want of ventilation in passing through a hot climate. It is said that a large number of the poorest of this stock were taken to Sacramento, and I certainly noticed in the *Union* a sale of some forty or fifty hives, as belonging to an individual who brought out some two or three hundred on the same steamer with us. This blackened comb, evidently made so on the passage, seems to have been mistaken for "foul brood." Several small lots were sent to this city and sold to innocent purchasers. They certainly were in very bad condition. A large number of them have already left their hives, not, I am satisfied, because of "foul brood," but in most cases, of no brood at all, and in all, no honey. I have examined many of these hives, and smelt of them, but have not been able to scent out the infection. Perhaps if I were a little older citizen, and hoped to have a large number of swarms for sale, derived from native stock, they might have smelt differently. I very much doubt whether there is any real, contagious "foul brood" in the State, though it is said to be in Sacramento, and the removal of the apiary of an extensive bee-keeper, from that city, would seem to indicate the honesty of his opinions on that subject. I am quite certain there is none in Marysville; but if it is found in San Francisco or Sacramento, I trust some one competent to the task will give us a description of it, not by quoting from Langstroth's extract from a German author, and misquoting at that, but let us have a post mortem supposed to have been destroyed by this pestilence, and let us know if a new swarm, with new comb, has been affected; for if so, I shall be ready to believe this disease is in Sacramento. And should such be the fact, the result of these indiscriminate charges upon the importers of bees "in the fall of '59," the author of them may find himself in the predicament of the owner of a certain fowling piece, which, "Though truly aimed at duck or plover Was sure to kick its owner over."

Hoping to be able at no distant day to send you a box of honey, gathered by bees imported "in the fall of '59," provided you are not afraid of the contagion, I remain your obedient servant,

L. KENNEDY.

Sheep Raising.

NICOLAUS, Branden's Ranch, April 2, '60.

EDITOR FARMER: I notice in the last number of the *FARMER* some things which need a little correcting or a little looking after, and for the truth of what I have to say I refer you to J. D. Patterson, and John A. Taintor of Hartford, Ct., who together with myself imported the first French Merino sheep from the celebrated flocks of Gilbert Cuyonot, that were ever imported into the United States. I notice your account of the arrival of my French Merino by the Sonora; and your flaming account of a few sheep received by the same steamer for Jones & Rockwell. I also see by a long advertisement the merits set forth of these few sheep, as being far superior to anything ever brought into this State. If this is a fact, the sheep must have been bred by some other man than the gentlemen above-named; for in Vermont they are not known as thorough breeders of any sheep; they buy and sell perhaps more sheep than any other set of men, but their purchases are as a general thing made up of a medium class of sheep; their flock is constantly changing from year to year, and in fact I never have known of their buying but one high-priced sheep, and that is the one referred to in their advertisement. I never have known of their receiving any sheep directly from the best flocks in Europe, or any flock there; this would be news to the breeders of Vermont, if published. I would like if the people of this State could see their flock at home. I doubt very much whether they have one sheep here raised by themselves.

They may guarantee them to be of pure blood, of one thing or the other, but they cannot guarantee them to be thorough-bred. There is a mighty wide difference between a full-blood animal, and a thorough-bred animal; a full-blood animal may be one that is a cross between two distinct breeds, but never a thorough-bred. I am not aware that in 1852 they invested any money in thorough-bred French Merinos; they may have done so in the cross-bloods; if they did, they were sold; neither do I ever recollect of their buying any thorough-bred French sheep of my brother, Merrill Bingham; neither do I recollect that in 1853, of their purchasing one entire shipment of French sheep, made by S. W. Jewett. I do recollect that after Mr. Jewett had got through importing sheep, and that he had sold all he could comfortably sell, and his flock had run down in condition, they bought the remnant of his flock at a low figure, for the purpose of speculation; and those sheep were shorn off into the Western States, and sold as fast as they could get them in condition to sell; and were not bred at home, only those that were in too poor flesh to sell. There were no importations of sheep made into Vermont, since May, 1853, when Mr. John A. Taintor and myself imported 196, at a cost of \$112.50 per head; this was the last importation of French Merinos into Vermont. The truth is in regard to these gentlemen, that ever since the first introduction of the French sheep into Vermont (which was made by myself in the fall of 1846), they have done their utmost to put down the French sheep and build up the Spanish; for the truth of which I have written to Vermont for evidence of what I say, and in due time you shall have it "line upon line, and precept upon precept." They used their utmost endeavors to prevent men from buying them; called them every thing that was calculated to discredit them and destroy men's confidence in them. They talk about imported sheep; they never owned an imported sheep, except what perhaps they accidentally bought to speculate upon, and now they say that they have a high opinion of the French; a wonderful change has come across their better judgment. This change has been brought about because they find that the French are the sheep sought for in this country, and therefore change their tune. If these men raise sheep at home of so high repute, why have not they exhibited their sheep at the different State Fairs and won prizes on them? If they were of such remarkable merit as they would have you believe, they could have made a general sweep of nearly all of the prizes; but the truth is they never dared to offer a sheep for a prize, because not worthy of it; and I never knew of their exhibiting a single sheep at a State Fair; and further, if they had been the owners and breeders of such pure, excellent sheep (?), why did they not accept of one of my challenges? I have held four public sheep-shearings in Vermont, in which I challenged any man in the United States to shear against me for quality and quantity, according to live weight, washed or unwashed or cleaned; no man ever appeared or dared to. This is the way to test these matters. I go for the best sheep, and for that sheep which will put the most money into a man's pocket, all things considered. I hold myself open, here in California, on the same challenge. I have not come here on speculation, but to see what I can do in breeding French sheep on California soil; not to boast that I can do more than many other men can do, or ought to do; therefore will say that I will shear one year from this date fifty breeding ewes, lambs by their sides or in lamb, against an equal number owned by any one man in the United States, at some point in this country, which shall be named in time, for quality and quantity, washed or unwashed, according to live weight, that the matter may be fully tested. If the French sheep are not

the best sheep, all things considered, the sooner we know it the better, and therefore can act accordingly. I feel constrained to answer to these matters, and do it with the utmost feelings of friendship; but I believe in letting every tub stand on its own bottom. If I am not correct in what I have said, of course I expect to be corrected; and then we will have these matters fully developed, by such evidences as will fully straighten the whole matter out, to the satisfaction of all. There are many more things that might be said, but I will wait for a reply. Yours truly,

A. L. BINGHAM.

We publish the above letter on the responsibility of Mr. Bingham, not knowing anything of the circumstances to which he refers, other than the advertisement given us by Messrs. Jones & Rockwell. The facts stated were taken from a printed work published in Addison, Vermont, and reported to be under authority. What we advertised was upon the responsibility of those whose names were presented with the advertisement, and presume the parties will reply. It is not our purpose or desire to enter into any controversy ourselves, each party being able to speak for themselves.

The Season—The Crops.

From every quarter of our State come glorious tidings of the "prosperity of Agriculture." The abundance of the "latter rains" have given a tone and a vigor to vegetation never seen or known before, and never was the promise so flattering of a "Season of Plenty."

Never have the grain-fields looked so well; the grasses give assurance of a great hay-crop, and the orchards are now showing the early formation which here too shows a crop never before equaled.

With these prospects before us, there is reason for rejoicing. We shall not starve, for we have already a large surplus of wheat, and the appearance indicates that the harvest season will be an early one. Were we to estimate the stock of flour that will be on hand at the coming of new wheat, we should place it at one hundred and twenty-five thousand barrels, or equal to three months supply. Others rate it higher. With such prospects, our State is rich indeed, and even the poor may rejoice, for food will be abundant and cheap.

Warder & Childs' Ohio Combined Reaper and Mower.

We present an illustration of this newly improved and valuable Reaper and Mower, of which we gave a minute detailed sketch in our last issue. This implement was put in operation last season, at the Alameda County Fair, and won general praise. It has many valuable points, and would have been sold in large numbers, had not the ship been lost at sea which was freighted with some two hundred for Messrs. Arthur & Son, who are the selling agents for this State.

ERRORS CORRECTED.—Mr. Ellwanger writes us (says the N. Y. Horticulturist) that several errors occur in connection with his remarks in our report of the Fruit-Growers' Society of Western New York (published in the *Farmer* of March 30). We regret this very much, for we believe our reporter tried to give a fair abstract of the proceedings. We desire to have matters of this kind put right, and, therefore, append Mr. Ellwanger's own account of what he said:

Varieties of Pears that will not grow on Quince.—In answer to a question, What variety of Pears will not grow on Quince? I named the following varieties: Beurré Bosc, Paradis d'Automne, Dix, and Sheldon. These are good sorts, and should be double-worked; and added, that I preferred the White Doyenné or Virgile for a stock for that purpose, being very hardy. *Belle Lucrèce*, I said, was one of the best varieties on Quince stocks, while on Pear stocks, on our grounds, the fruits were generally inferior.

Quince Stocks.—Mr. Ainsworth said that he had found the Angers the best, to which I replied that the Fontenay is as good, or even better, for a stock, being harder and closer grained. The Angers grows faster for a year or two, but the Fontenay afterwards expands more and makes a better union, though some varieties are partial to one and some to the other. Never found the Duchesse d'Angoulême of any value on Pear stocks.

Price of Pears.—The fruit of Louise Bonne de Jersey which we sent to the New York Market were all selected, and sold for from \$16 to \$20 a barrel. From the experiments already made, I thought that eight to ten-year-old trees, with good cultivation, would safely yield, at an average per annum, at the rate of over a thousand dollars an acre; and that this variety on our soil would produce at least twice as much money from the same land as any other sort. Our trees are about five to six feet apart.

Grafting Grapes.—In answer to Mr. Bissel, who said that grafting the Grape was difficult, I said that I had found no difficulty whatever in grafting; that we graft them within doors as successfully as the Apple. Had cleft-grafted some Diana in the open ground. Graft after the stock vine has made a growth of an inch or two in the spring; tie up with wax-cloth (for in-door grafting we use wax-paper), and bury under ground all but one eye. Always graft under ground, as the wood is firmer there. Have had them grow twenty to thirty feet the first year, and they generally bear the second year. Yours very truly,

L. ELLWANGER.

Plant Seeds Now.

The late rains have, in many instances, rotted seeds, and they should be again planted. Messrs. J. P. Sweeney & Co. have large stocks of fresh seeds and will be glad to wait on all who call on them.

NEW-YORK COMBINED REAPER AND MOWER.

Made by Warder & Child, Springfield, Ohio. J. D. ARTHUR & SON, Agents, San Francisco.

MAKE HOME BRIGHT AND PLEASANT.

More than building showy mansion—
More than dress and fine array—
More than domes or lofty steeples—
More than stables, power and away,
Make your home both neat and tasteful,
Bright and pleasant, always fair,
Where each heart shall rest contented,
Grateful for each beauty there.

More than lofty, swelling titles—
More than fashion's flogging glare—
More than mammon's gilded honors—
More than thought can well compare,
See that home is made attractively,
By surroundings pure and bright,
Trees arranged with taste and order,
Flowers with all their sweet delight.

Seek to make your home most lovely,
Let it be a smiling spot,
Where, in sweet contentment resting,
Care and sorrow are forgot;
Where the flowers and trees are waving
Birds will sing their sweetest songs,
Where the purest thoughts will linger,
Confidence and love belong.

Make your home a little Eden,
Imitate her smiling bowers,
Let a neat and simple cottage
Stand among bright trees and flowers.
There, what fragrance and what brightness,
Will each blooming rose display!
Here, a simple vine-clad arbor
Brightens through each summer day.

There each heart will rest contented,
Seldom wishing far to roam,
Or, if roaming, still will cherish
Memories of that pleasant home;
Such a home makes man the better,
Pure and lasting its control;
Home with pure and bright surroundings
Leaves its impress on the soul.

A Silver Pitcher Given to a Farmer.

Swags, gold-headed canes, plate and other testimonials of gratitude and respect, have been presented to public benefactors from time immemorial, for aught we know; at any rate we have often read and heard of such things. But we find in the N. Y. Tribune an account of a presentation, that strikes us as something new, so far as the character of the services rewarded are concerned. A silver pitcher and two goblets have been presented to a farmer, in recognition of his services as a farmer.

Many years ago, a poor young man bought a farm near Seneca Lake, New York. Much of the soil was a cold, heavy clay. As fast as he could, he drained off the water, put in the manure, and demonstrated, by example, that farming may be made profitable. In 1835 he imported patterns of drain-tile, and commenced his experiments in this line of improvement with tiles made by the slow process of hand labor. Machinery was soon used in their manufacture, and in 1851 he had laid sixteen miles of tile-drains. Finding that the more he drained, and the more he manured, the richer he grew, he ventured to recommend his course to other farmers, and became a frequent contributor to the agricultural journals of New York. In one of his articles, written the 17th of December last, and published in the Rural New Yorker, in reply to some strictures on his system of "high feeding," he says:

"I will state that I can with more certainty calculate on three tons of hay the acre, now than I could on one, thirty-six years ago, and I can safely calculate on one acre in pasture feeding more stock, and much better, than three would have done at that time, while I can almost always make one-half more grain of any kind than I did then; of oats or corn far more than double. High feeding and high manuring did all this."

By affixing his own signature to these publications, the name of John Johnston has long been familiar to the readers of agricultural papers, and he is sometimes called the "Great Tile-Drainer," of New York.

The presentation of a service of plate to such a man, by a number of the most respectable citizens of a great State, we regard as an event of interest to farmers generally, as indicating a willingness on the part of the public to honor those who introduce improvements in the cultivation of the soil, and to admit them to rank among the benefactors of the race.

The Tribune gives the following description of the articles presented to Mr. Johnston: "The testimonial consists of a massive silver pitcher and two goblets, on all of which are engraved and embossed appropriate agricultural emblems. On one shield of the pitcher is represented a reaping field as it appears in our day, on another a mowing machine at work, and the third bears the following inscription:

Presented to John Johnston, in recognition of his services to the Agriculture of New York, by his fellow-citizens, John A. King and thirteen others.

The goblets bear the representation of men laying tiles for drains, a ditch-digging machine, the machine, and all manner of small tools used in the stupid burial of crockery, as an English lord was pleased to term tile-draining a few years ago."

How to Make a Bailey Horse Pull.—A correspondent of the Cotton Planter gives a method for making an obstinate horse or mule pull up a hill or any where else, when his muscles are equal to the work. Take a small rope, double it, make a loop at the double end, and draw it snugly around the under jaw of the animal, just below his front teeth, with the loop underneath. Throw the loose end over your shoulder, and "walk in the way he should go," holding fast, and pulling steadily and firmly. Don't be troubled about him, for he will follow without fail after he has discovered how you have "got him." This method will also compel an animal to stand still and allow a bridle or collar to be put on him.

COAL ASHES AS A FERTILIZER.—An exchange gives the following experiment by an English farmer. He marked off three patches in a clover-field, each containing one rod of ground. The first produced 35 pounds of clover, cut in full bloom. To the second was applied four quarts of sifted coal ashes that had not been exposed to the weather; this produced fifty pounds of clover. On the third patch one quart of plaster was sown, and the crop from it weighed fifty-four pounds. In other words, the land without anything gave 35 pounds of green clover an acre; with coal ashes, 80 pounds; and with plaster, 84 pounds. These experiments were on too small a plot of ground to be reliable.

ECONOMY OF DRUG STRINGS.—Irring used to tell a story illustrative of the Yankee talent at "making things pay." A man who sent turkeys to market also swept chimneys for a living; tying a cord around the neck of the bird so as not to choke it too suddenly, and then drawing it up and down the chimney, so that the flutter of the expiring struggle might do the sweeping. The papers tell us also that there is a grocer in Pennsylvania, who is said to be so mean that he was seen to catch a fly on his counter, hold him up by the hind legs, and look in the cracks of his feet, to see if he hadn't been stealing some of his sugar.

A South Carolina paper notices the death of a mule, whose age was known with certainty to be sixty-two years at the time of his death. Such an instance of longevity is without a parallel.

MRS. LIZZIE WILEY WARREN, M. D., ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. WARREN proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of deceiving the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves, she dispenses with the use of drugs, relying on the curative power within the living organism, and the supplying such conditions as the natural remedial agents afford.

The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are briefly and comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and safe, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. WARREN makes use of the New and Highly Improved BOSTON ELECTRO-MAGNETIC BATTERY, one of the MOST PERFECT Electrical Machines on this Coast.

MRS. ANNIE L. AVERY, HOMEOPATHIC PHYSICIAN, Residence, 249 Pacific Street (two doors from Stockton Street), SAN FRANCISCO.

Special attention paid to diseases of women and children.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale. Apply at her residence, corner of Mason and Pacific streets.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

HOW many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$2 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the New Volume.

NURSERY BUSINESS, &c.

J. R. RAY, SEED AND NURSERY DEPOT,

No. 106 J STREET, SACRAMENTO,

HAS IN HIS NURSERY, SUBJECT TO THE order of good cash customers, the most extensive assortment of

TREES, SHRUBBERY, AND VINES.

To be found in the State, consisting of every variety of

Almond, Mulberry,
Apple, Nectarine,
Apricot, Peach,
Blackberry, Pear,
Cherry, Plum,
Fig, Strawberry,
Gooseberry, Quince,
Grape, Raspberry,

Beside a good stock of SHRUBBERY and SHA TREES, for beautifying homes.

Samples, comprising a few thousand trees, may be found at my Seed and Nursery Depot.

SHADE TREES,

For sale this season, consisting of—
10,000 Locust Trees,
1,000 China Trees,
Lombardy Poplar,
Mountain Ash,
Magnolia Acuminata,

Together with
Elm, Linden,
Ash, Weeping Willow,
Maple, Arbor Vitae,

And other Evergreens—all warranted.

The Locusts are certainly not equalled, by any lot in the State, for beauty and size; they are from two to three years old, straight and well grown, varying from ten to twenty feet in height.

SEEDS! SEEDS!

The extensive SEED DEPARTMENT contains a complete stock—

FOR THE GARDEN, FIELD, FOREST & NURSERY.

Raised from the best seed-growers in the country, or raised under my own supervision. Much care is taken to have Seeds free from mixture, and every package of seeds sold is, with proper care, warranted to grow and produce what is marked on the label.

Hop Vines, Rhubarb Roots, Asparagus Plants, Grape Cuttings, Dahlia Roots,

And everything appertaining to the Seed and Nursery business, for sale at greatly reduced prices from last year.

ARTICHOKES, CHUFAS—articles deserving special notice—are for sale in quantities.

Small seeds each box sent per Mail (by post) part of the country.

HOP ROOTS.

THOSE DESIRING TO ENGAGE in that lucrative business—HOP CULTURE, now exciting so much interest—can be furnished with good, vigorous roots, of the best variety, from the oldest Hop Yard in the State.

The crop from this yard has just been sold for \$1 per lb. My Hop Yard is twenty-five miles below this city, on the Sacramento river. The vines, covering one acre, were planted about four years ago. Parties wishing to engage largely in the business will be supplied on liberal terms.

Address J. R. RAY, Seed and Nursery Depot, 106 J street, Sacramento.

SEED, PLANTS, &c.

To the Seed Trade,

HAVING THE LARGEST AND MOST EXTENSIVE STOCK OF SEEDS

Now growing and harvesting in the Union, we are prepared to supply Dealers on the most favorable terms.

Our American Seeds

Are with few exceptions raised under our own immediate supervision, and we can warrant them as First-class in every respect.

Dutch Bulbous Roots,

Hyacinths, Tulips, SUCH AS, Polyanthus, Narcissus, Crocus, Crown Imperials, &c., in great variety.

TRADE CATALOGUES just published, which may be had of our Agent, MR. THOMAS DAY, 188 Montgomery street, San Francisco, Cal.

J. M. THORNBURN & CO.,

Growers and Importers of Seeds,
15 John street,
NEW YORK.

New York Seed Warehouse,

No. 11 SANSONE STREET,
SAN FRANCISCO.

C. L. KELLOGG & CO.,

IMPORTERS AND DEALERS IN
Garden, Flower, Fruit and Tree Seeds.

HAVE FOR SALE, OF LATE IMPORTATION, a large assortment of every desirable variety of Seeds, and are receiving supplies by every steamer. Our Seeds are obtained from experienced growers in the Eastern States and Europe, and can be relied on as being true to their kind.

DUTCH BULBOUS ROOTS;
ALFALFA, pure, of the latest importation;
HUNGARIAN GRASS;
MEADOW GRASS;
CLOVER;
TIMOTHY;
ORCHARD GRASS;
SHEEP'S FESCUE;
ENGLISH RYE GRASS;
And twenty other varieties.

TOBACCO.

HAVANA, pure;
VIRGINIA;
CONNETT, Seed Leaf;
FINE TURKISH.

VEGETABLE SEEDS—A most extensive variety.
Boxes of Assorted Seeds, in papers, suited to the country trade.
Liberal discount to country dealers. Catalogues on application.

GARDEN AND AGRICULTURAL SEED WAREHOUSE,

No. 108 CALIFORNIA STREET,
SAN FRANCISCO.

TO THE SEED TRADE.

We have the largest and most varied assortment of FRESH FIELD AND GARDEN SEEDS, IN THE STATE.

All of our own importation, from the best growers in the United States and Europe, which we can warrant to give full satisfaction to our patrons.

Our stock consists, in part of:

ALFALFA or Chile Clover Seed, Pure;

Seed Warehouse, 110 California street.

Boxes of Seeds containing 100 Papers for retailing, in such assortments as desired, will be furnished.

CHUFAS

OR

Earth-Almonds!

50 Pounds of CHUFAS or EARTH-ALMONDS, for sale by

S. W. MOORE,

44t Seed Warehouse, 110 California street.

James Graves, H. F. Williams,
GRAVES & WILLIAMS,

FRUIT AND GENERAL COMMISSION MERCHANTS,

No. 57, 59 and 71 Merchant street,
Opposite Washington Market. SAN FRANCISCO.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question, The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—

EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;

WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELETON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,

38 SACRAMENTO STREET,

San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

John G. Downey, Governor of California.

A. H. Myers, President Cal. State Ag. Society.

Wm. Rufus Langley, Col. Warren, Editor California Farmer.

Wm. H. Hays, A. Lamont, H. M. Houston, Ed. Davis, J. P. Melchior, Jos. Haworth, J. B. Vallia, J. Morrill, Wm. Hays, Jacob L. Lewis, Jos. Klopensine, B. R. Crocker, O. O. Jenks,

C. O. Wheeler, Cor. Sec. Cal. State Ag. Society.

W. Wadsworth, Editor California Cultivator.

Jos. S. Silver, Thomas Hays, Wilson Flint, A. Johnson, Artemus Davison, R. Gibbons, Charles J. Collins, H. O. Hurrell, Jos. H. Nevitt, John B. Rogers, K. Shattuck, H. Cronkite, J. C. Davis, J. S. Harbison, Charles Zeiler.

The California Farmer.

SAN FRANCISCO:
FRIDAY.....APRIL 20, 1860.

Direct our Letters and Exchanges.
Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us! Please also direct Letters to "COL. WARREN, California Farmer Office," as there are frequent misarrangements for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as *Colonel Warren*, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscriber has learned with deep regret, that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

Encourage Every Good Enterprise.

While our Legislators are opening the flood-gates to applicants for WATER COMPANIES, BULKHEADS, CITY RAILROADS, and giving a liberal, nay generous donation to every benevolent institution in the State, we ask them in all earnestness not to forget that there are many industrial enterprises appertaining to individual exertions that demand their most faithful notice.

We mean those enterprises that go directly to build up our State, to give it more permanency, to increase its population, and to develop its resources.

If the noble Dashways labor to redeem fallen man, whose energies of both body and mind have become destroyed or paralyzed, they deserve the gratitude of the State, and should be encouraged; for they save that which would otherwise run waste. So if men labor to recover the desolate wastes of our territory, and to redeem our tilled lands, they too deserve encouragement, and should be aided in their work. So those who labor to give a "Home" to the weather-beaten sailor, and to care for him when he comes from his "cradle on the deep," to dwell among landmen, they should be aided in making that "Home," for it is a Godly work. And shall not those who are laboring on shore to raise and manufacture those products that load with full freight the thousand ships—shall not those who raise GRAIN, WOOL and WINE have encouragement to labor in their work?

We say aye! and aye again! And we ask for that kind of legislation that shall be *comprehensive, continuous, wise, liberal and parent-like.*

We ask our Legislature to take cognizance of our agricultural, our mechanical and manufacturing interests. Examine each and all of them and look into their wants and necessities, and lend a helping hand where most needed.

We saw upon the list of committees, in the Senate and Assembly, when we visited the halls, a Committee on Agriculture, a Committee on Manufactures, a Committee on Mechanic Arts.

Now we ask: are there not vast interests in the agriculture of California that demand investigation by such a committee? Are there not important interests too in our manufactures? How wonderfully they have increased, and that too without a kind word or thought from Government. The mechanical interest; this has been like the others, left almost wholly forgotten.

Should the delegation wait for petitions on any and every interest before they look to them? It is to be supposed that it is the duty of a Legislature to take hold of such work at once, and look to every subject, because it is these interests that build up a State.

We have always believed that a legislative body are bound to look after these great interests *unasked*, and not wait until by *neglect or suffering*, evils arise that require redress, and then because the people petition, the suffering is sought to be removed. Thus it was in the days of our Revolution; had the parent Government regarded her Colonies, and made them her care, giving them protection and aid, instead of burdening them with oppressive taxes, these glorious States that now influence the world might have remained as jewels in the coronet of Queen Victoria.

Those who make laws should look with careful eye to their practical operation. If the Legislature of California, in 1854-5, had studied the great and wonderful resources and ability of this State for all the progress she has made in the cause of agriculture, mechanics and manufactures; if the legislation of early years had been such as to have encouraged them, California would have been ten years further in advance in all these interests than she now is, and there would have been millions in value added to the treasury of the State; aye, her yearly revenues would have been doubled. But we ask, what have California Legislatures done for the farmer, in either of the great branches of his wide avocation? What has been done to encourage grain-growing, the planters of orchards or vineyards? What has been done to encourage the importers of fine stock into the State or its propagation here? What encouragement has been given to wool-growing, wine-making, or any other interest that so much increases the revenues of our State?

What has our Legislature done to redeem the waste tilled lands? What to plant timber trees? What to encourage the growing of tea, coffee, sugar, cotton, rice or tobacco? What to induce the growing of hemp? What to awaken attention to the rearing of silk-worms, and the manufacturing of silk? We may say, literally nothing! nothing! True, a little thought was given last year, to stim-

ulate vine-growing, by relieving the vineyards of taxation, but for wise legislation, it should have been continuous, and embraced all great interests alike, not partial. The importer of blood stock should be exempt from such taxations for years, alike with the planter of a vineyard, and every act of legislation should be comprehensive and just, acting alike on all.

The mechanic of the State, instead of receiving aid and protection, is cramped and clogged with oppressive taxes, and those of no ordinary kind either; for in addition to the ordinary tax, he is obliged to pay a license for his genius, his trade. He cannot use his talent without paying for it; and if he pays, and shows the world what he can do and has done, let another license must be paid ere he can sell "the work of his hands!" In all branches of our mechanic arts, and in the manufactures there is the same oppression, the same wrong, unwise and unjust taxation. It is these things that have so often driven men out of business, broken down their energies, driven them to despair, and made them drunkards and criminals, scattering misery and destruction among once happy and prosperous families; and when intemperance or crime has set its seal upon men, O then of course benevolent men and women will build "Homes" and "Houses of Refuge," and the State will build prisons, and liberally endow them, so that these poor unfortunate creatures may be shut out of the world, and no one asks what made these men criminals.

Had the Legislature of our State, with an earnest zeal, with a patriotic spirit, with a noble desire to build up a State, taken hold of the work, without reference to any interest but that of increasing the revenue, by making the people contented and happy, and aiming to introduce the arts and sciences with liberal bounty, and have bestowed liberal gifts to every deserving manufacturer and mechanic for every new invention or manufacture, and at the same time have relieved such inventions from taxation, ere this year, the drain of four millions of gold a month, would have nearly ceased, and millions of acres of our waste lands have been redeemed, and forty thousand spindles would sing their music in our manufactories, and the citizen would have harped his song of joy and praise upon those legislators who labored for the country's good.

Years have passed, and nothing done. Party questions and party bills have engrossed the time of our legislators. Party questions and interests have stained the halls of legislation with blood, while the treasury has been, and will be depleted, to build and maintain prisons that have been filled with criminals that neglectful and unwise legislatures have created; for we are ready to prove that wherever great, grand and liberal laws have been made to encourage the great industrial interests of a State, there is less crime and pauperism, less poverty and suffering.

Why will not some of those men of heart and soul, of whom we hope there are not a few in our present Legislature, give this subject thought, and do what can be done, even in the few remaining days now left? it will be a monument in their praise.

The Overland Mail of the 9th and 16th.

ARMORON this mighty enterprise has always excited a lively interest among our citizens, who are rallying all over the State to its support, the stages of the 9th and the 16th created an unusual interest, as those who were passengers were those who left our State on high and important missions, connected both with the political and religious interests of California. On the 9th the stage bore away the Delegates to the great Republican Convention one of whom was D. J. Staples, Esq., of Staples' Ranch. We were present at the departure of the stage of the 9th, not as a politician, by any means, but to take by the hand a gentleman and a friend, one with whom we have labored in the cause of Agriculture, D. J. Staples, Esq., late Vice President of the State Agricultural Society, and a man whose whole course in the Society was marked by that spirit of independence and action for the Right that was not to be purchased or intimidated from what he considered the greatest good of the cause he had espoused. D. J. Staples is a true farmer, and an honor to the farming interest, and we rejoice that such men are sent as Delegates to any Convention; for while abroad they will be sure to keep in mind the true interest of Agriculture. A large number of the friends of each Delegate were present, as also others that left, and as the stage started off for its long journey lead cheers rang out for the Delegates and their mission, and D. J. Staples' name made the Plaza echo with many a loud huzza; and well it is worthy of it, for few men only who are identified with politics are so truly independent.

Aside from the question of Politics, we bid our friend god-speed. We know his lips will scatter good words for California, wherever he shall go. On the 16th the stage went full again. Among the passengers was Rev. Dr. Scott, of this city, who goes on his mission for the cause of Religion. He goes as the Representative of the Presbyterian Church of California. Many others were passengers, all as it appears, bent on great purposes.

May a pleasant trip, good health, prosperous journeys attend each and all and return those who belong here in health and safety to their several labors. The event drew a large concourse of friends to bid the travelers a happy time. Each trip of this great enterprise is becoming more and more identified with the hearts and prosperity of our own prosperous State.

SEED-STORES IN SACRAMENTO.—We learn from those who are engaged in the seed-trade at the Levee City, that sales have been uncommonly large the present year. Mr. Smith's seed-store, 41 J street, has done a big business, and is still selling largely.

W. R. Strong, at the upper part of J street, has sold nearly three times the amount of former years. Of the *Sugar-beet*, *Carrot*, and *Ruta-baga* for feed, the sales have been large. Mr. Strong will be prepared to do a large fruit trade this summer. Persons having fruit to sell should remember it.

A Pleasant Hour on Board the Powhattan.

It was our pleasure during the brief stay of the United States steamer Powhattan, to accept the invitation of a friend to visit this war-steamer, that we might pay our respects to those who represent our Government in military marine, and also to see the ambassadors of a nation that have been as it were excluded heretofore from the world. But our direct object was to pay our respects to the Rev. H. Wood, chaplain of the steamer, who formerly wielded the editorial pen with ability, and who has as an historian and recorder of events connected with this embassy, acquired a vast amount of valuable information which we hope soon will be offered to the world.

In meeting Mr. Wood we recognized a friend whom we had often met in days "long syne" at our home in "dear New England," and upon referring to the register of our former days we found his name enrolled.

Our visit on board this steamer was of more than usual interest to us, for, as we stood upon the deck of our government steamer with the ambassadors of the kingdom of Japan around us—they the guests of our Government—we could not but recall to mind the words we had written more than *two years ago*, when as we then believed fully, we wrote and published what has now actually transpired.

In the very first number of the CALIFORNIA FARMER, and the first article on the first page, we gave expression to the following words while speaking of our relations with China and Japan:

"The present position of California, her relation to and with the Chinese, and the future and almost certain connexion with the Japanese, presents a view to the reflecting mind of the most intense interest."

"This view alone opens to us a world where our influence tells upon countless millions!"

"Shall this influence be exerted, and for good?"

"Shall it be exerted now? Shall California be the mission field, and shall our nation be the first to occupy it?"

"God grant that it may be so."

This was published in January 1854, and now California has indeed been the mission ground where these ambassadors first touched our soil, and our nation has been indeed the first to open a treaty with their Government. It was under the influence of such remembrances that we stood upon the United States steamer Powhattan, and looked upon the representatives of that nation that tell in almost "countless millions," and therefore our visit was deeply interesting.

By the kind courtesy of the chaplain we visited every part of the ship, and saw ambassadors of the first rank and ambassadors of the lower rank. We saw the trophies and presents of that great kingdom, and we felt a just pride in that noble steamer and her gallant officers, for every true American can feel proud of our government ships, for no nation can produce braver, more accomplished, or more gentlemanly officers than the American navy.

The Powhattan is a 2800 tons steamer, fine form, trim and strongly built, with a very powerful engine, and of great cost, the boilers being of heavy copper; the engine and engine room being in perfect order. We saw the great gun upon the steamer's deck that is moved round upon a railroad; this gun weighs eight tons, and sends a ball five miles. The gun, carriage and trimmings weigh sixteen tons.

The number of officers and men including embassy and suite, is about four hundred souls. Of the Japanese, there are twenty high officials and fifty-two ordinary, with three doctors, making seventy-five in all. We examined the great numbers of curious and valuable articles from Japan which were in the possession of the officers, or in the steamer, or in the hands of the Japanese. Their great and powerful bows which required the very strongest men to string, and with which they can kill the largest animals, or send an arrow through a man. We saw their coins, paintings, many of them really beautiful specimens of art; their furniture and curious carving. We noticed some learning our music, some learning our letters, others drawing and painting, others cooking—all engaged—all at work.

The higher class of Japanese wear two swords, others wear only one; a Japanese with his singular dress and two swords dangling at his sides, looks most singular to an American.

The deck of the Powhattan presents the most singular features ever seen on board our national steamers; the whole form, and plan, and appearance of the vessel as these strange people move about, would be a scene worthy an artist.

The hours of our visit sped rapidly, so interested were we, and the kind and interesting facts we were gathering from the worthy chaplain, made us regret when the time came for us to leave the steamer; but we hope ere long to lay before our readers some interesting and valuable incidents from our friend the chaplain, to whom we were so much indebted, and by whom we were so much interested, and from whom we received as a gift the valuable map of the city of Jeddo, a history of which was published in our issue of March 30th, from the pen of Rev. H. Wood, who, having sailed over the world, has gained a knowledge of countries, of men, of manners and customs, and of climate and productions, such as few men have ever attained. Most truly do we wish the Powhattan a prosperous voyage, and the Embassy a glorious result; for our country is to receive the great and glorious benefit of the trade and commerce of this long lonely and pent-up nation. At the present time we do not realize the vast results of this visit; it will come ere long like a flood of light, as our State and our city was the first to welcome the Embassy.

MONOPOLY IN WOOL.—We are requested to ask if there is to be any monopoly in the wool trade the present year. Wool-growers inform us that there is a screw loose somewhere, as the offering price is far below its intrinsic value. Wool-growers too, assert, that there is no way by which they can ship their wool abroad, as those who control the vessels refuse this kind of freight unless shipped by certain parties. Should there be any movement by capitalists to do a wrong to those who raise the wool, then wool-growers themselves, can club together and charter a ship of their own.

Great Sale of Devon Cattle.

The great sale of pure Devon Cattle which had been heralded in the newspapers of this State for some time past, came off yesterday at twelve o'clock, a. m., as advertised, at the Blackhawk Stable, on Pine street. The attendance was large, about four hundred persons present, but not so many purchasers as we hoped to have seen, for the benefit of the enterprising importer. The prices ruled low—only realizing about one-half what was expected.

The animals showed well. They appeared small compared with the Durham, to those who were not acquainted with this stock. The following are the animals sold and the prices for them, with the purchaser's names:

Devon Bull Emigrant, calved June 6, 1858, purchased by J. W. Osborn, Napa.....	\$1,150 00
Bull Wyandotte, Jr., calved March 1859, same purchaser.....	1,100 00
Cow Jenny Lind, 13 years old, same purchaser.....	787 50
Cow Delicate and Calf Nelly; cow 6 years old, calf 2 mos, J. Nicholson.....	995 00
Cow Rosa, 5 years old; Calf Louisa, 2 mo purchaser, J. W. Osborn.....	880 00
Heifer Victoria 2d, 2 years old, purchaser, W. J. Whiting.....	600 00
Heifer Catherine 3d, 1 year, same buyer.....	595 00
Heifer Lady 4th, 1 year, J. W. Osborn.....	495 00
Heifer Ida 5th, 1 year, Reynolds, Santa Clara.....	500 00
Heifer Bonita, 8 mos., J. W. Osborn.....	295 00
	\$7,407 50

The animals were all pure blood and looked fine, and are an honor to our State. Napa county takes the best of them, and to this county purchasers of Devon stock must go for fine stock hereafter. For the particulars of the pedigree of this stock we refer our readers to the advertisement in our columns.

Diseased Bees.

In an article which we penned a few weeks since, we spoke strongly against the imported bees as being so badly diseased with what is called *foul brood*. This is the case with a large portion of the bees that come across the Isthmus. In some States on the Atlantic side this disease prevails to a great extent, and again in other States there is none of this disease found. We spoke of a lot of bees we had transferred. We examined one lot of five swarms, and in every one we found foul-brood and moth and worms. In one or two hives one-half of the bees were diseased, so much so as to weaken the swarms and require them to be doubled and three in one, to keep life and warmth to recuperate and regenerate them. In one lot of twelve swarms that we changed, two only required to be doubled, and in those twelve there were no signs of foul-brood, and but little of the worm. This last evil can very easily be remedied, for by the *Harbison Hives*, the moth and worm can be almost instantly removed. In the Harbison hive a complete supervision is always had over the swarm, and all the movements of that wonderful creature be daily or hourly watched.

Since writing the above we have received a letter upon diseased swarms, from an apiarist, to which we call attention.

Stock by the Golden Gate.

We were pleased to meet an old subscriber in the person of D. Davidson, Esq., who came in the "Golden Gate," bringing with him a fine lot of very choice stock which he had selected from the best herds and flocks both in the United States and Europe. Mr. Davidson is a Scotch gentleman residing on the Sacramento river, and takes a just pride in fine stock, of which he has given proof in the lot which he has now brought to this State.

First on the list stands the noble young bull-calf "Duke of Cleves," calved last July, sired by Lord Oxford, No. 3,091. *Dam* Duchess of Cambridge, she from Duke of Cambridge 5941, and bearing a full pedigree of high lineage. This young bull is one of the finest yet imported into this State. With this animal Mr. Davidson had a noble full-blood cow ready for shipment at New York, but the steamers would not receive and Mr. D. was obliged to sell her, much to his regret and loss.

Mr. D. also brought twelve full-blood South-downs, rams and ewes, selected in Canada, three Cotswolds, three Leicesters from England, and four Cheviot sheep from Scotland. Also, two fine shepherd dogs from Scotland, and a pair of game-fowls, and a pair of Guinea fowls. Thus we can say Mr. Davidson has done noble service to the State by bringing such stock into it.

Windmills.

In our columns this week will be found Hyde & Brother's new windmill, to which we call public attention. As the season has arrived when rain ceases falling from above, it is important that the waters from below be drawn up to supply their place.

We can speak in very strong terms of Hyde & Brother's windmill, and deservedly so, for the remarks we made in relation to another mill last week—the Van Pelt mill—one of the highest character, will equally apply to this mill. We are glad to give to both these mills a high reputation. They really deserve it.

As the best test of superior excellence is a trial, Messrs. Hyde & Brother challenge any trial of their mill with any other mill in the State. They claim for it to be the simplest, best and most durable of any mill that can be erected. We are really glad to herald in our columns such really valuable manufactures, and hope those who want mills will examine for themselves. We know both makers to be fair and honorable men and determined to give a fair test to their own work, and abide the judgment of a just and honorable competition.

Hyde & Brother, as will be seen, are at Benecia. It costs but a few dollars to take a trip to the factory on the Navigation Company's steamers, and then these mills can be seen.

TO READERS.—We invite our readers' attention to the several letters we have received from correspondents. Each is worthy their perusal. The letter from our correspondent at Georgetown shows the progress of mountain culture. We hope to hear often from our mountain friends.

The Pony Express.

The "Atlantic Cable," good in its conception and great in its failure, was soon succeeded by the "Butterfield Overland Mail," which has far overshadowed and eclipsed it, being in fact a mightier enterprise. To this is now added the "Pony Express," which, when we consider it in all its bearings, we can in fact claim it as the mightiest work, for, by its results we can be almost certain of a more rapid advancement in the success of the Pacific Railroad, and by that too, the fixing the *Great Central Route* for it. This great and momentous work when once under way, will revolutionize the great mercantile machinery of the world. The Overland Mail and the Pony Express are both the creations of California energy. California brought them into being. California nourished them and California will sustain them and bring them into the full maturity of successful enterprises. It was our pleasure to be in Sacramento when the news reached there of the Pony's success, and to witness the enthusiasm of the citizens. Almost instantly it was resolved to make it an event. General A. Redington, the worthy agent of the Steam Navigation Company, moved in the matter with his accustomed zeal, and was readily supported by the citizens. It was determined, that a cavalcade should go out to meet the "Pony." To this end, the "Huzzars," the new troop of horse, together with some fifty of the citizens, mounted and went forth. While this was being done, citizens were decorating their stores and dwellings along J street. Flags and streamers gaily floated to the breeze, while the citizens began to gather by hundreds and thousands. The Pony was telegraphed at Placerville at 2 o'clock p. m. Notice was given that the steamer would be delayed till 4 1/2 o'clock p. m., and thus all efforts were joined to make a good demonstration. J street looked like a gala day. Tops of stores and houses, balconies, and the sidewalks, were literally crowded with citizens, all looking up street for the coming "avant courier." Rarely have we seen a more earnest or sincere enthusiasm. It was really Californian. After patiently waiting some two or three hours, at twenty minutes past five the booming gun started the pent-up feelings of the crowd. Shout after shout followed, and ere the third gun, from the upper end of J street rose the thick column of dust, told of the coming "Pony." Rarely have citizens witnessed such wild enthusiasm. The rushing sound of horses' feet with a dense column of dust was all that could be heard or seen, for so great was the rush of a hundred horsemen that men, horses, and dust, formed one rushing mass, and ere a little though the rush was past, the pealing cannon, the ringing of bells, the wild huzzas, and the swelling strains of martial music, all proclaimed the news declaring the success of the *California Pony Express*. It was a great event, and when we remember that a distance of over eighteen hundred miles has been traveled in less than nine days, using seventy horses and men, each horseman riding about fifty miles, such an enterprise shows clearly that we live in a great and a progressive age, and that California will always be a State that will keep pace with the age in which we live.

Fine Sheep in Sacramento.

SACRAMENTO can now boast of having quite a number of fine flocks of sheep, a goodly number of pure bloods of all the choicest kinds.

Mr. McConnell has a flock of pure Spanish merinos of rare excellence. Mr. Whitney has also a very fine flock of Australian sheep of the Saxony blood; these give great promise. J. W. Haines, Esq., has a flock of Southdowns and half bloods of the best character, and many others, each of whom are rapidly changing from mixed blood to those of pure breeds. Mr. Haines informs us that his *South-downs* give great promise, having one-half blood lambs that at six months old weigh seventy and seventy-five pounds each; the full blood that at twelve months weigh one hundred and seventy pounds, giving a clip of wool that will average six and a-half pounds. From some bucks he has taken nine and a-half pounds. Within the last month there has also been added some very splendid breeding sheep. N. D. Stanwood brought with him from New York within a month, fourteen Southdown sheep, ten rams and four ewes. Nine of the bucks were the progeny of "World's Prize," and one from "Fordham's." Such breeders will be of essential service to our State.

By the Golden Gate just arrived, D. Davidson, Esq., brought with him twelve Southdown rams and ewes selected from the best flocks in Canada; also, three Cotswold, three Leicester, and four Cheviot sheep direct from Scotland—these Cheviot sheep being the first ever imported into this State.

Thus we see that from all parts of the world the very finest kinds of stock will find a home in our glorious State. Well may we be proud of it, for it is without an equal in its capabilities for stock raising.

Fruit in Sacramento.

A hurried visit to the City of the Plains only gave us time to gather a few facts, yet enough to give us assurance that Sacramento will soon have a great abundance of fruit. We saw clusters of peaches from *Smith's Garden*, the young fruit already hanging in clusters, some peaches now being four inches in circumference. The crop promises to be beyond all former years in quantity and quality.

RECEIVED.—We acknowledge the following marks of remembrance from our friends the past week, returning thanks for the same: Valuable Documents from Washington, from Hon. W. M. Gwin; Agricultural Reports, from Hon. C. L. Scott; a valuable package of flower seeds from Allen & McElwain, Springfield, Mass. These seeds came done up in beautiful style. We shall grow them and appreciate them, returning thanks for the gift. We also received some rolls of delicious butter from some kind hands, left at our office without name or word. May the generous donor be fed with the bread of life, and have it well buttered both sides.

The unprecedented number of 13,167 letters was forwarded by the Overland Mail which left on Friday last.

STATE SUMMARY.

There was seven feet of snow on the summit on the Placerville route on the 9th instant.

The recent rains raised the streams in Monterey County higher than they before were ever known by the "oldest inhabitant."

A California lion, which has been committing depredations for some time past in the vicinity of Arcata, Humboldt County, has been killed. He measured 84 feet in length.

Is a breach of promise case in Alameda County, of Lina Widman vs. Nicholas Bernal, verdict has been rendered for plaintiff in the sum of \$1500. She sued for \$20,000.

It is said that, since the 1st of March until Friday last, 9 19-100 inches of rain fell in Downsville, making 47 46-100 inches which fell in that place since December.

At La Porte, Sierra County, three feet of snow fell on the 4th instant, and on the 7th the ground was covered to the depth of five feet. The Messenger thinks that will do for an April shower!

"Society Detective Society," is the title of an association of live-stock owners, the object of which is to detect and bring to punishment horse and cattle thieves, or such thieves as steal from any member of the society.

In Calaveras, says the Independent of the 10th, the gardeners generally are of opinion that the peach crop is now so far advanced as to be safe from frost. The crop will be very abundant if it escapes injury from frost.

The Allison Ranch Quarts Lead yielded \$27,000 from three days crushing with eight stamps, lately. The Grass Valley National also says that from a hole of two cubic feet in the new lead lately found on Clark's ranch, \$2000 was taken.

SOME peaches which grew from the seed planted a year since, the Sacramento Union of the 17th instant reports having received. It says they were raised on the ranch of Rev. W. Hurlbert, twelve miles below Sacramento, and is of the opinion that these yearling peaches are hard to beat.

A lump of gold-bearing quartz, weighing over fifty-four ounces, was found near Saw-mill Flat on the 4th instant, says the Tuolumne Courier. It contained thirty ounces four pennyweights of gold. A lump of pure gold weighing over seven ounces was lately picked up near San Andreas.

The Calaveras river has never been higher within the period of ten years, at this season, than it is at present, says the Stockton Republican of the 10th. It has overflowed its banks for miles, damaging, it is feared, large quantities of grain and grass. In the vicinity of Leach's ranch, the plain, two miles in width, is covered with water.

The Visalia Delta of the 14th, reports as good news for the bachelors, that a short time since a family arrived in Tulare County, from Texas, composed of the father, mother, twenty-one daughters, and one son. During the past week, another family from the same State, arrived and took up their abode among us, among which was fourteen unmarried daughters.

VALUABLE silver mines are reported to have been discovered on Mount Diablo, on the north-east side. Specimens have been assayed, and turned out rich. The Contra Costa Gazette says it has been placed in possession of facts which go far to prove that both gold and silver exist in considerable quantities in the vicinity of Mount Diablo.

The Odd Fellows throughout the State, intend to celebrate the forty-first anniversary of the introduction of the Order to the United States, in their respective localities, on the 26th instant (next Thursday). In this city, an excursion to Mare Island in the day-time, and a ball in the evening are announced to come off. May they all have a good time.

HENRY McKAY, formerly under-sheriff of Humboldt County, absconded on the San Francisco steamer of 29th March, with some \$700 of money for which Sheriff Van Nest will be held responsible. The money stolen, says the Humboldt Times, had been collected from the effects of Jesse Wells, the defaulting Treasurer, and was to have been applied on an execution which had been issued out of the District Court, on a judgment against Wells.

JOHN C. BELL, Member of the Assembly from Eldorado County, who was murdered and stabbed by Dr. Stone on Wednesday last, in the Capitol building, Sacramento, died on Sunday morning, at two o'clock, of his injuries. His funeral took place on Monday, under direction of the Legislature and Odd Fellows, and was largely attended. A general gloom was cast over the city at the melancholy termination of the affair. The murderer is now in custody, and it is to be hoped will meet his deserts.

In San Joaquin, says the Republican of the 15th, the most capacious fault-finder certainly cannot complain of the present weather. It is the *ne plus ultra* of a spring institution. There is just enough of warmth throughout the day to give a pleasant season for the growth of fruits, flowers, and vegetables, while there is a bracing touch to the morning and evening breezes, which serves as an excellent tonic for the human system. The nights are pleasant to a degree. All things promise well in the way of crops.

The "Parsons' Bulthead Bill," which finally passed the Legislature last week and was sent to the Governor, was returned on Tuesday with the Governor's veto. The news was immediately telegraphed to this city and received with the wildest demonstrations of joy. During the afternoon one hundred and forty-eight guns were fired; one hundred and one for Governor Downey, and one for each member of the Legislature who opposed the iniquitous scheme. It is impossible to describe the feeling of exultation among all classes, at being relieved from the threatened bondage of this bulthead monster. Governor Downey has done his duty, and is entitled to the gratitude and more, of the people of the whole State. He has immortalized himself. Extensive preparations are being made here for a public celebration of the event.

Ten Hydraulic Press of the 14th instant says: Persons who have been traveling much in the wintry regions north of this place, have their right effected and their faces swollen by the peculiar reflection of light from the snow. Mr. Hughes, the telegraph operator at Forest City, who was out repairing the line for several days, returned almost blind, from this cause, we are told. How strange it seems, that while at this point the hills are green and lovely beneath the charming touch of Spring, trees are blooming and flowers are opening their gay petals to the sun, the country only ten, twelve, or fifteen miles further up is clad in one universal robe of dazzling snow. Yet the atmosphere there is now as mild as it is here, and the snow will soon melt away. Of the mines, it says: A week of delightfully clear and warm weather having succeeded the heavy storm that was raging at the date of our last issue, mining operations have been actively resumed and we are enabled to present under this head our usual resume. The storm did a considerable amount of damage to flumes, ditches, and reservoirs, caused several petty floods, and washed

some claims and sluices full of sand; but we have heard no particulars in this connection worthy of special mention.

In Solano County, says the Herald of the 10th, the weather, this week, is as lovely as the last was stormy. It is astonishing how all vegetation is coming forward. We have been shown grain nicely headed. Farmers complain of early-sown barley being too heavy to stand, and lodging badly.

In some of the elevated portions of the interior, complaint is made of injury to the fruit-crop from frosty nights succeeding the late severe storm. As several feet of snow fell in the mountains, and some even where trees were in blossom, it is not to be wondered at that cold weather injured fruit; yet the injury in such cases is apt to be over-rated, and the fruit generally turns out a good crop, all the better for having been *thinned* out by the cold, as the tendency of trees is to overbear and thus produce inferior fruit.

San Joaquin District Agricultural Society. This Society with President Dr. E. S. Holden of Stockton, at their head, and a strong corps of active officers to second all his efforts, are moving on vigorously in their plans for their Annual Fair to be held at Stockton.

San Francisco Bay Agricultural Society. This new Society are laying out their work in earnest, resolved to make this Society's coming First Annual Fair eclipse any ever yet held in the State. Their President, Samuel Brannan, Esq., although called to the Atlantic States, will be absent but a little season, and will return to aid all in his power. During his absence the Vice Presidents W. S. Green, Esq., John Center, Esq., and Pioche, banker, men of wealth and energy, are at work heart and soul in selecting ground, laying plans, preparing lists of premiums, while their efficient Secretary, F. F. Fargo, Esq., is wielding his influence to awaken a due interest in the cause. The San Francisco Bay Society will show what she can do.

State Agricultural Society. The friends of the State Agricultural Society are moving with spirit and energy, resolving that although there is a division of the household, a kind of family quarrel, what there is left of them will work, and the little family jars they mean, shall only tend to wake up the lazy ones, and after all, if a portion of the family house got married off and go to setting up house on their own account, they in turn intend to raise up a new family, so after all the cause will be the gainer. This is the right spirit, and we hope a new and better impetus will be given. Our State is large enough and rich enough for a dozen State Societies, and donations of \$10,000 to each from the State.

Agricultural Legislation. We are glad to see that the Legislature has voted to print the State Agricultural Report of 1859; for all this kind of information that can be sent before the State and abroad, the better for the State and its up-building; therefore aside from any other question, we say *print! print!* We wish they had printed 10,000 copies.

There are now several important petitions before that body asking aid in behalf of the *new district* agricultural societies.

We hope the Legislature will cheerfully grant them all. It will be money well spent; for every new society formed gives a new development to the resources of our State, and we hope each new district formation will receive \$2500 each. We hope the Agricultural Committee of the Senate and the Assembly will hold a joint meeting, and take the whole subject of the wants of the State in this respect into consideration.

Manure Your Land.

WHEREVER we go, among intelligent cultivators, we find they are now beginning to see that what we have so often urged is found to double their crops. Manure, that in former years was a tax for its removal, is now an income to the seller, and no one can experiment with manures without seeing the benefits of manuring the soil. No cultivator can crop his land year after year without a deterioration of his crops. Nature will soon demand the penalty. To expect from the soil crop after crop, year after year, without giving it food, is like asking a horse to work week after week, without food; any thinking man will see the fallacy of it. Would you have a good fertilizer? Let us call your attention to the Bone-dust, at the Sugar Refinery—a good and a cheap manure.

OUR ADVERTISEMENTS.—We ask special attention to the many new and valuable cards which appear in our journal. Every branch of business, and houses of the highest standing will be found in our columns; such as we can always confidently recommend.

The next Agricultural Fair at Sacramento, as announced by the Managers, will be held there from the 19th to the 26th September inclusive.

BAY DISTRICT AGRICULTURAL SOCIETY.—We are glad to see this Society taking active steps to forward the object of holding the Fair under its auspices, which is to take place next October, in the vicinity of San Francisco. A Committee is now at work examining the various eligible places in the neighborhood, with a view to the selection of the most suitable locality for the Fair grounds, and a deputation waits, this week, upon the Legislature, carrying up petitions from the counties of San Francisco and San Mateo, asking for the appropriation, to the various District Societies, of their proportion of the \$5000 of the public money which, unless action be taken in the premises, will be absorbed by the (quasi) State Agricultural Society, located at Sacramento. The representatives of San Francisco and San Mateo will be shown by these petitions the wishes of their constituents on this matter, and we cannot doubt, will consequently do all in their power to prevent any delay in passing the bill introduced by Mr. Redman of Santa Clara, notwithstanding various insinuations which we have heard, that the Sacramento people now, as ever, remarkable for their talents as "eminent engineers," had secured to their interest Senator Phelps, by electing him President of their so-called State Agricultural Society. We have got to see the day when this gentleman can be turned aside by any outside influence, much less by such a paltry compliment as this, and we are very confident his aim will be to forward the wishes of his constituents in this laudable object, so important to the general agricultural interest of our State.—[A. R. in Alta of 12th.

THE MERCANTILE TRADE OF SACRAMENTO CITY.—This city appears quite lively to what would be supposed at a season when the roads are so bare to the country. From all the information we can gather from the interior, country stores are nearly destitute of goods, and the roads are passable a great trade may be expected. Those old and long-established houses on J street will soon be full of trade. Messrs. Booth & Co., who do a very large trade with the interior, and who keeps a large stock of goods, informs us that California hams, bacon and all cured meats, command about twenty-five per cent above the imported quality. We like to record all facts going to show a right and good appreciation of "home products." The same house informs us that although large amounts of butter has been imported per Isthmus the present season, that trade is over now—the quantity being already too great, and the large increase of "home" butter will supersede it. Sacramento may be said to be now on the flood tide. Real estate is steadily rising. Sacramento is the fixed capital of the State, and we should not be surprised to see real estate go up 100 per cent within six months. The Sutter title will soon be finally adjudicated, and all will tend to the prosperity of Sacramento.

WHAT WE CAN DO WITH TREES IN CALIFORNIA.—We have learned the following astonishing facts from the parties interested: Col. W. H. Davis of Rio Vista, purchased a large and fine cherry tree of J. L. Sanford, last spring, and planted the same; it bore fruit. Mr. Davis planted the "pits" of the fruit same season, and grew young trees eighteen inches high. We believe there is no nurseryman in any part of the world can boast of equal success as the result of a natural process.

A nice lot of Laying Hens.—A VERY choice lot of Poultry of the Bantam Pouter and Black Spanish Fowls, can be had if applied for immediately at the Farmer Office.

PHILIPS' SELF-REGULATING WIND POWER.

WE CHALLENGE A COMPARISON WITH ALL OTHER MILLS IN THE STATE.

This power is in truth what it certifies to be, a PERFECT SELF-REGULATING WIND POWER. It has been tested and proved for the last four years in the Eastern States in driving Grist Mills, Tanneries, Turning Shays, Oil Presses, Churns, and Pumping, and it has taken the premiums at all the Agricultural and Mechanical Fairs wherever introduced, and is universally pronounced superior to anything of the kind yet invented. The durability, simplicity and cheapness of it most recommend it to every observer.

We call attention to these beautiful Wind-mills in Benicia. They are *one mile*. The regulating power is simply the force of the wind acting on a wind-sail, which adjusts the wings exactly to the force of the wind, so that the stronger the wind blows the safer and steadier the mill becomes, presenting to a sudden gust nothing but sharp edges to its force.

But its crowning excellence over all other wind power is that it not only regulates itself, but it can be set to regulate itself to any desired speed, and that by a process so simple that a child can manage it. Having the PATENT RIGHT for the States on the Pacific, we are now prepared to furnish them at prices according to the size and power required. County rights for sale—also Oregon and Washington.

The prices at the shop for those adapted to agricultural and mechanical purposes, are as follows: 8 feet diameter, with 36 feet wind surface, \$125 11 " " " 48 " " " 200 14 " " " 60 " " " 250 16 " " " Ladies' Department.

LIZZIE WILEY WARREN, M. D., EDITRESS.

A SHETLAND SHAWL.

It was made of the purest and finest wool,
As fine as silk, and as soft and cool.
It was woven in the loom of blue,
Which has a shadowy tinge of blue;
And brought by the good ship, miles and miles,
From the distant shores of the Shetland Isles.

And in it were woven, here and there,
The golden threads of a maiden's hair,
As the wondrous wind with losses and twirls
Blow in and out of her floating curls,
While her busy fingers swiftly drew
The ivory needle through and through.

The warm sun shined on the brilliant dyes
Of the purple and golden butterflies,
And the drowsy bees, with a changeful tune,
Hummed in the perfumed air of June,
As the gossamer fabric, fair to view,
Under the maiden's fingers grew.

The shadows of tender thought arise
In the tranquil depths of her dreamy eyes,
And her blushing cheek bears the first impress
Of the spirit's awakening consciousness,
Like the rose, when it bursts, in a single hour,
From the folded bud to the perfect flower.

Many a tremulous hope and care,
Many a loving wish and prayer,
With the blissful dreams of one who stood
At the golden gate of womanhood,
The little maiden's tireless hands
Wove in and out of the shining strands.

The birds that burst in an April sun
Had seen the wonderful shawl begun;
It was finished, and folded up with pride,
When the vintage purpled the mountain-side;
And smiles made light in the violet eyes,
At the thought of a lover's pleased surprise.

The spider hung from the budding thorn
His helpless web, when the shawl was worn;
And the cobwebs, silvered by the dew,
With the morning sunshine breaking through,
The maiden's toil might well recall,
In the vanished year, on the Shetland Shawl.

For the rose had died in the autumn showers,
That bloomed in the summer's golden hours;
And the shining tissue of hopes and dreams,
With misty glories and rainbow gleams,
Woven within and out, was one
Like the slender thread by the spider spun.

As fresh and as pure as the sad young face,
The shawl with its clinging grace
Seems a fitting veil for a form so fair;
But who would think what a tale of care,
Of love and grief and faith, might all
Be folded up in a Shetland Shawl? [Atlantic Month.]

The Natural Power of the Body to Cure Disease, vs. The Impertinence of Drug-giving.

"I know the glorious name of medicine; its promise so full of hope to mankind; but for that which is called the 'art of prescribing' I have no respect whatever."—[MONTAIGNE.]

Two prejudices of mankind are sacred, and he who wages war with them must bring to the encounter an inflexible spirit, and patience not easily exhausted. The man who holds to a proposition because supported by reason, is in some cases aware that the premises are not well laid, or that he may have erred in his deductions, but he who holds by prejudice has no such misgivings. Premises and deductions are, with him, of no account; fact is supplanted by fancy, and assertion is equivalent to proof. Authority with this class of men is omnipotent—precedent their polar star; the most comfortable faith supports them, and their zeal knows no faint-heartedness. Argument they condemn of course, and their purpose in action is well expressed by the slang phrase, "go it blind." Heaven forbid that I should be so mad as to engage in a tilt with such antagonists on any subject; least of all on that of pill-giving. Invested with the dignity of academic sheepskin, they are as secure in the admiration of their votaries, as the Pope of his vassals.

"The three learned professions," says that shrewd thinker, the Professor at the Breakfast-Table, have but recently emerged from a state of quasi-barbarism." This remark is amusingly sustained by the fact that few intelligent members of either of the three can be met with, who will not readily admit the substance of the truth of it, as applied to the other two, while maintaining the almost perfect maturity of his own. We may say of all of them, that they bear the mark of prejudice upon them as does the recently hatched partridge its shell, and so thick and tenacious is this foil incrustation, that the difficulty of penetrating it amounts in many cases to an impossibility. This is especially the case in our profession, when it is the subject of inquiry into the capability of the unaided animal system to resist disease or repair its damages. On this question we have no stores of experience to draw upon in our investigation, for since time began, as far as history is concerned, we can find no disease or injury of the human frame, that has not been "met," "treated," "cured," or bedeviled by some Old-woman, medicine-man, or "sad and learned doctor." Greasing the spear-point was once a cherished remedy for the wound it had inflicted.

As far as we can penetrate the arcane of diseases, there are two chief divisions of the catalogue: those which, from the first, are characterized by a malignant type, the prognosis of which is a fatal termination, and those which, after a longer or shorter duration, usually result in a partial or complete restoration to health. The latter, comprise by far the larger number of diseases, and it is to them that we would at present direct attention. Now the question is, how far such ought to be left to the recuperative efforts of nature, or to such efforts protected and sustained by such philosophic adjustment of the circumstances surrounding the patient, as will give them the best opportunity to act without being in any manner affected by the agents of the *materia medica*. To illustrate, we will take the word Fever, with the ideas it commonly represents. There is thirst. Without entering into a pathological inquiry of the cause or nature of morbid thirst, we follow the indication by administering water. There is an exalted sensibility of the organs of sight and hearing, with pain in the head. We will obey the indication here by removing the respective external causes of annoyance. There is a sensation of heat. We will, if possible, obtain a cool atmosphere. There is muscular weakness. We will relieve the voluntary muscles of the necessity of action, by placing the body in the horizontal position. In this manner we will adjust those circumstances which are visibly and positively under our control, in the best possible manner to allow the enfeebled, depressed powers of the system to regain their healthy state. Can we do more? "Yes," cries the unphilosophic gossamer, fresh from the professional hatching-nest. "Yes," exclaims senile stupidity, "Fever is my specialty," says the one, gravely consulting his list of "febrifuges." "I have been in practice forty years, and have cured hundreds of pining youth," exultingly boasts the other. I admire your youth, I venerate age; but I can not permit the crude billywag of the one, or the mill-horse stupidity of the other, to blind me to the conviction that the God-established powers of life can be in no respect made more efficient by such impertinent interference.

If all human reasoning were as loose and illogical

as that which has been used in the service of experience to prove the efficacy of medicine, we should be at this day in extreme ignorance of many of the arts and sciences, which are the boast of the nineteenth century. As it regards astronomy, the earth would be still standing on a turtle or some thing of the kind, and the sun going around it, ready to "stand still" or move backwards to accommodate the wonder-working historian of the feats of miracle-workers. The teakettle might have sent steam from its nozzle till this time, but no steamship would have brought New York and Liverpool within ten days of each other; and there would be but slight expectation of a submarine telegraph next year. By this loose logic, sequence of events is taken as proof of causation, and is thus made the foundation of medical experience. Nothing can be more illusory. To make such evidence conclusive, it should be corroborated by a closely cross-examined and uncontradicted mass of it. Is there any such proof of the ultimate value of any drug that was ever forced or coerced into that truth-loving and almost reasoning organ, the human stomach? Any one at all conversant with the subject knows that it is directly the reverse of this. Who has not at times, in professional coteries, witnessed the expression of polite and placid incredulity with which some zealous believer in his own skill is listened to while he relates the success of a particular, and as he conceives, a new remedy. Each listener has his favorite, intolerant of rivalry, and when these various findings are compared, they are often found to agree but in one particular, that is, the odor of the drug-shop. It is true that some are inert articles; but again, some are the most virulent poisons. A Minic ride in the hands of a skillful marksman, who is neither an enemy, an insane, or a careless man, is an instrument that we look at with a quiet feeling of safety, for at the same time that we know that its owner will hit whatever he aims at, we know that he will not point his gun at us. Could the same thing be said of any drug on the list of the *materia medica*, or of any drug-prescriber in Christendom? Not by any one, I dare engage, who knows the susceptibility of the human system—the complex and inappreciable sympathies which influence it—the baneful properties of the drug, and the positive ignorance of the prescriber of what will be its effect in any given instance of disease.

In the diseases we are considering, ultimate recovery by the natural process is the rule, death the exception. On the contrary, the uninformed patient considers death as the natural termination of all morbid conditions that are not cured in time. The meddling doctor takes advantage of this prejudice—exhibits his remedy "in time"—the patient recovers, grateful for the "cure," and the doctor notes it as another proof of the efficacy of medicine in general, and of his unerring skill in particular. Now, considering the discrepancy of opinions noticed above, the fair presumption is, that the so-called remedy had no effect whatever, beneficial or otherwise, but was probably enveloped and lost in the effete mass within the intestines and safely conducted out of the system; or its baneful properties were overcome by the recuperative forces of nature, to which the evil of the disease and the poison of the medicine were equally indifferent; or perhaps, in a certain way the drug was beneficial, by making an impression which aroused certain sympathies, of the existence of which, as connected with the specific prescription, the prescriber was ignorant, or utterly unable to appreciate; in fine, the result of the movement was *accidental health*, instead of *accidental death*. This view is strongly corroborated by the fact, that we seldom, if ever, meet with two medical Solomons, whether connected with schools, or standing alone as individual sages, who pursue or teach the same kind of treatment in any given disease; yet both boast their "cures," each insisting on the exclusive merit of his own method, backed by his patient's affidavit. Those who remember the treatment of the cholera of 1832, an example of mark among many, will appreciate the truth of this as far as we could ascertain by conversation with different individuals. After the subsidence of the epidemic, no physician during its continuance lost more or less than six patients; as it regarded the treatment, while some relied on unlimited quantities of brandy and opium, others saved innumerable cases by the use of ice, bleeding, and tartar emetic!

The treatment of the Typhoid Pneumonia, that first appeared as an epidemic in 1812, isolated cases of which have been occurring ever since, and of which, we presume, President Harrison died, is highly corroborative of the views expressed above. One party treated it by bleeding and purging, and the other with brandy and other stimulants. Some recovered under, and in spite of, each method, thus "heaping up" the proofs of the correctness of each. Who shall gossamer such evidence? Certainly no one in any individual case—but we take our stand on the firm ground of sound reason, so often extolled and so seldom followed, and assert that the sequence of the recovery to the prescription affords no conclusive proof of the necessary dependence of the result on the treatment, nor would it were a thousand instances of the same kind adduced in corroboration. Yet it is by such evidence that the practice of drug-prescribing is supported. This being our view of the case, we would gladly drop our cap and make our lowest obeisance to Homoeopathy for the great truth it has helped to teach us, of the utter uselessness of medicine in most cases, were it not that while it has successfully sought the truth, it has lost all title to gratitude, and rendered the truth useless, by shrouding it in falsehood. The assertion that the division or attenuation of any thing in nature will increase its specific power, whatever that may be, is so grossly false, that we do not believe that any other age of the world than our own, past or future, ever did or ever will listen to such absurd nonsense. It is pitiful to see Philosophy stoop from her high eminence to cater to Superstition and Prejudice for the sake of the contemptible fruits of fraud. In this way the great good that we might have received has been rendered worse than of no avail, by the falsehood it has taught, that recovery from disease depends upon the most persistent drug-taking. The lie is made to knock the truth over. Better ignorance a thousand times, than knowledge prostituted to such vile purposes.

It is strange that the healing powers of nature, so universally relied on in the practice of modern surgery, should have taught so little to the medical practitioner. He has before him the history of the ignorance of the ancient surgeons, contrasted with the demonstration of the existence of the sufficing efficacy of the life-forces in the modern practice, and yet derives no useful lesson from the example. He sees in a broken bone or a sword-cut, nature instantly set to work, by vital and certain processes, to repair the injury, and this she effects without the impertinent interference of external means, provided a fair field be allowed for her operations. But in the department we are considering, where the morbid and the counteracting influences are exerted, as it were, behind a screen, the physician seems to make his blindness an excuse for boldness, and thrusts his weapon in the dark, necessarily uncertain where the blow will fall, whether on enemy or friend, or the depth of the wound it will inflict. The idea of ascertaining and being governed by fixed rules in the administration of medicine, if the object is the ultimate benefit of the individual patient, is, from the nature of things, impossible. Disease is not matter, and it can not be lined and squared and made to obey those fixed rules to which we, with certainty, subject material substances. That in certain cases we can procure certain effects, is unquestionable—

but when we reflect that we may arrest an apparently morbid symptom, without knowing but it may be a link in a chain of salutary movements, which, to be beneficial, should not be disturbed, our self-complacency may be, perhaps a little troubled. That such is the case in some diseases we know. I will add Measles as one example. Now here is a disease made up of different phenomena linked together, and following each other with as much regularity as is exhibited in the planetary or other well-ascertained movements in nature, and invariably resulting in health, that is, when there is no impertinent interference, designed or accidental. Yet I have noticed that when this disease is prevailing in some of our large cities, the weekly bills of mortality frequently show the number of deaths ranging as high as three and four per cent of the whole number.

More or less of the evil attending drug-interference attaches to men of the best minds in the profession; and while saying this, we proudly challenge the world to produce from any other class, an equal number of men of the same high order of intelligence, of culture, and of moral excellence. Never yielding to the weariness of labor, their charity is exhaustless and silent. No voice reverberates through the arches of cathedral roofs in praise of their benevolence, no trumpet-blats from the market-place proclaim their good deeds, but noiselessly they "pursue the even tenor of their way," binding up wounds and solacing misery. If the strictures we have made have any just application to such men, with what unmitigated reprobation should we visit the ignorant and unprincipled, who for speculative and sinister ends have stolen into the sacred corps, and, disguised under its time-honored mantle, have gone forth to the slaughter, till, loaded with ill-gotten gains—"the price of blood"—they are at once enrolled among the Plutocracy—take unquestioned possession of the seats of honor, and from thence dictate to the world their articles of faith, and codes of ethics. For such, the prejudice of the people in favor of the mysterious efficacy of drugs is an unfailing resource. They can not overdraw their credit. The tendency of mankind to worship mystery and believe in miracle is an enigma hard to solve. Men naturally love truth, they like not to be told falsehoods; but surround a lie with mystery, and they surrender their judgment, their suspicion, and their doubts at once. Allege in support of any absurdity a supernatural agency, and their common sense is lulled to sleep, and this in face of the fact that in all the works of God there is neither mystery nor miracle.

There is, undoubtedly, much in nature that is not understood by man, but this is clearly owing to his not having travelled far enough on the free and open road of knowledge that lies before him—the road of never-varying fact, where the unfailing effect always follows the sufficient cause: the road which leads to the true knowledge of "Him with whom there is no variableness neither shadow of turning," the road "through nature, up to nature's God."

The following remarks from Montaigne (*Essays*, liv. 2, ch. 37), though two hundred years old, are in some respects so pertinent to the subject in hand that I can not resist the temptation to quote them; for, though not over-looking the many splendid improvements of modern times, we must acknowledge that man, in many respects, remains very much as he was in the time of the old philosopher.

"But physicians have this advantage" (says Montaigne), "according to the old apothegm, that the sun shines upon their success, while the earth hides their blunders;—and besides this, they have a very advantageous fashion of serving themselves with all sorts of events; for that which fortune, that which nature, or some other strange cause (of which the number is infinite), produces in us of good and salutary, it is the privilege of the physician to attribute to himself. All the happy success of the patient who is under his rule he holds the credit of—the circumstances which cure me, and which have cured a thousand others who call no physician to their aid, they usurp the credit of in their subjects; and as to the evil accidents, they disavow them altogether, attributing the fault to the patient for reasons so vain and trifling, that they have no fear of falling always to find a sufficiently large number of them. 'He has lain with his arm uncovered'—he has heard a strange noise—'they have left his window open'—his mind is troubled by anxiety.' Sometimes a word, a dream, a turn of the eye, seems sufficient excuse to discharge them from blame, or if they please they serve themselves with the worst aspect of affairs by means which can never fail them. So they comfort us, when the patient finds himself heated by their applications, with the assurance that it would be much worse without their remedies. He whom they have thrown into a quotidian chill, would have had, without their interference, a continued fever. They guard not against doing their work badly, since the evil the patient experiences redounds to their advantage."

"The combat of the drug with the disease is always at our expense, since the battle is fought within our borders, and the drug is an unreluctant ally, by its nature inimical to our health. Let us leave things a little to themselves—the order which governs fleas and moles, governs also men when equally submissive. We may add to our ills by querulous impatience, but this brings us no relief. There is an impetuous and unvarying order in nature, unaffected by the movements of our fear or despair, which serve only to retard the relief which this order would bring. Disease has its course as well as health, and attempts to break one, by the aid of the other, often result only in the disorder of both. Let us follow the plan of God—it generally leads those who will follow, and drives those who will not, both their rage and their medicine together. Procure a purgative for your head; it will be better employed than for your stomach."

Moore Hovr, M. D., Parkersburg, Va.

"There is no passion so strong, no habit so unchangeable as that of swallowing nostrums. A large portion of the human family actually believe that the drug they swallow has some specific power to direct its progress to, and its action on some special part of the body—where they fancy it may in some mysterious way, add what may be needed, or subtract what may be redundant."—[Scalpel.]

TO GRAPE PLANTERS.

As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planting will be so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them at a much increased value. May we not expect this from all planters of the vine everywhere?

Valuable Patents.—We call the attention of parties who are interested in PATENT RIGHTS to those advertised by us. Each of them will secure a very handsome sum to any person of enterprise and energy. The models and rights can be shown and explained, by calling at our office, when the price and terms will be made known.

Large Potatoes and Onions.—We are very desirous of procuring some very large Onions and Potatoes, for a special purpose; we only want a few, but will cheerfully pay a liberal price for fine samples, and be very grateful besides. We also wish a variety of curious or rare vegetables of any kind—Hot, Parsnip, or Carrot. Those who have such and will send them to our office, we will reward them for so doing.

Extra Size Lawton Blackberry Plants.

By the late steamers we have received 1500 True Lawton Blackberry Vines, of very extra size, such as will show fruit the present year. We shall sell by the hundred or dozen, as are wanted, or the entire lot. Inquire at FRANK'S Office.

EDUCATIONAL.

THE COLLEGIATE INSTITUTE,
AT BENICIA.

THE Next Semi-Annual Session will commence
Jan. 10th, 1880. Parents are requested to send their
sons so that they may be present, if possible, at the opening
of the session.
For full particulars in regard to prices, teachers, &c., ad-
dress the Principal for a circular.

C. J. FLATT, Principal.

The Bascom Institute, San Jose.—The Sum-
mer Session of the Bascom Female Institute, will commence
on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

ACADEMY OF NOTRE DAME,
SAN JOSE.

THE NINTH ANNUAL SESSION of this Institution will
commence on THURSDAY, August 12th.

The course of instruction embraces all the branches of a
polite and useful education. Its aim is to form young ladies to
virtue, accuracy, to early habits of order, and economy,
and to cultivate in them those qualities which render virtue
both amiable and attractive.

TERMS:
Entrance, to be paid but once.....\$ 15
Board and Tuition, per session.....\$ 25
Washing and mending of articles washed, per ses-
sion.....\$ 60
Physician's fees per session (unless it be preferred to pay
the bill in case of sickness).....\$ 10
Piano, Vocal Music, Drawing and Painting form extra
charges, but there is none for the French, Spanish or German
Languages, nor for Plain Sewing and Fancy Needlework.
Payments are to be made half a session in advance, and no
deduction will be made for half a session commenced, except in
case of sickness.
Pupils will find it much to their advantage to be present
at the opening of the session.

DAY SCHOOL.
There is a Day School attached to the Academy for the con-
venience of those parents in the neighborhood who may prefer
that their children should return home every day.

TERMS:
Tuition, including the branches specified.....\$ 5
Senior Class, per month.....\$ 1
Junior Class, per month.....\$ 1
Primary Class, per month.....\$ 1
Letters may be addressed to the

SUPERIORESS,
Academy of Notre Dame, San Jose.

SANTA CLARA COLLEGE.

THE NINTH ANNUAL SESSION of THIS IN-
stitution will commence on MONDAY, August 22d.

The plan of instruction embraces two regular Courses—the
Classical and the Commercial, besides a Preparatory
Department.

TERMS:
Entrance, to be paid but once.....\$ 15
Board and Tuition per session.....\$ 35
Washing and mending of articles washed, per ses-
sion.....\$ 45
Stationery, per session.....\$ 10
Medical attendance and medicines, (unless it be
preferred to pay the bill in case of sickness), per
session.....\$ 10
Vacations, if spent at the College.....\$ 35
N. B.—When there are more than two brothers, each
one over two pays only half price.

Use of Instruments in Chemistry and Natural Philo-
sophy, Vocal Music, Piano, Violin, and Drawing, form
extra charges. School Books are furnished at store
prices. No extra charge for any of the languages.
Payments to be made half a session in advance.

For further information apply to the President of
Santa Clara College, Santa Clara, Cal., or to Rev. A.
Barnes, S. J., St. Ignace's Church, Market street, be-
tween Fourth and Fifth, San Francisco.

FIRST PREMIUM AGAIN!

BEING THE
SEVENTH TIME RECEIVED
Against All Competitors.

R. H. VANCE,

Corner of Montgomery and Sacramento Sts.,
SAN FRANCISCO.

Having again received the FIRST PREMIUM
awarded at the State Fair for the BEST AMBROTYPES
and PHOTOGRAPHS, it is guaranteed that all who
favor me with a call are sure to obtain better work
than can be produced at any other rooms in the State. I
would say to my patrons that I am now producing better
work than ever, at much REDUCED PRICES, to com-
form to the times.

Having reduced my prices more than 30 per cent, so
one need hereafter go to second-rate establishments for
account of price.

Instructions given in the art, and stock furnished
Having over \$20,000 worth of Cameras, Glass, Plates,
Cases, and Chemicals, on hand and on the way, I shall
hereafter dispose of them at about New York prices.

10-3m

SAN FRANCISCO BAY DISTRICT
AGRICULTURAL SOCIETY.

THE BOARD OF MANAGERS of the above named Society
have opened an office at Room No. 7, Armory Hall build-
ing, corner Montgomery and Sacramento streets, in San Fran-
cisco, where all communications to the Board will be directed,
addressed to the Secretary, and where application can be
made for certificates of Membership, or for any information
connected with the interests of the Society.

FRANK F. FAIRGO, Secretary.

Literary Shrubbery.

THE MILKY WAY.—The milky way forms the grandest feature of the firmament. It completely encircles the whole fabric of the skies, and sends its light down upon us, according to the best observations, from no less than 18,000,000 of suns. These are planted at various distances, too remote to be more than understood; but their light, the medium of measurement, requires for its transit to our earth, periods ranging from ten to a thousand years. Such is the sum of the great truths revealed to us by the two Herschels, who, with a zeal which no obstacle could daunt, have explored every part of the prodigious circle. Sir William Herschel, after accomplishing his famous section, believed that he had gauged the milky way to its lowest depth, affirming that he could follow a cluster of stars with his telescope, constructed expressly for the investigation, as far back as would require 330,000 years for the transmission of its light. But, presumptuous as it may seem, we must be permitted to doubt this assertion, as the same telescope, in the same master-hand, was not sufficiently powerful to resolve even the nebulae in Orion. Nor must we forget that light, our only clue to those unsearchable regions, expands and decomposes in its progress, and coming from a point so remote, its radiant waves would be dispersed in space. Thus the reflection is forced upon us, that new clusters and systems, whose beaming light will never reach our earth, still throng beyond; and that, though it is permitted to man to behold the immensity, he shall never see the bounds of creation.—[Marvels of Science.]

THE CHAMOIS HUNTER AND THE FLOWER.—A Chamois hunter's life is regarded as the most enviable that can fall to the lot of man; and the daring climber, the skillful stalker, and the sure shot, receives due appreciation on all sides. Among the most daring deeds of his life is the obtaining of the "Beldreis" (*Gnaphalium Leontopodium*), a flower met with only on the highest mountains in certain parts of Tyrol and Bavaria. It is much valued for the snowy purity of its color, as well as on account of the difficulty of getting it. The very name, "noble purity," has a charm about it, and, strangely enough, it always grows in a spot to be reached only with the utmost peril. You will see a tuft of its beautifully white flowers overhanging a precipice, or waving on a perpendicular wall of rock, to be approached but by a ledge, where a chamois could hardly stand. But it is this very difficulty of acquisition which gives the flower so peculiar a value, and impels many a jager to brave the danger, that he may get a posy of edelweiss for the hat or breast of his lady love, and often has such a full fall over the rocks just as he had reached it, and been found dead, with the flower of such fatal beauty still held firmly grasped.—[Instructive Picture Book.]

NOT ALONE WHEN ALONE.—Alone! say not I am alone! Do you not see that little sunbeam dancing so gracefully? It peeps ever and anon over my shoulder, and now shrinks back as if blushing to see itself the subject of eulogium. Welcome, sunbeam! for thou hast come from a world far brighter than this; 'tis thou who gildest the angel's crown, and throwest a halo of light where'er thou dwellest. The ocean welcomes thee, and ceases for a while its heaving; for to its bosom a sacred guest is clasped. The sea-nymphs who thy gaze; the untold wealth of the sea thou beholdest, while man cannot give one glance at the mysteries and beauties concealed beneath its profound depths. Thou hast come to bring good tidings to the weary, and thou whisperest, "There is rest in Heaven." And thou hast visited the lonely cell, too, where the criminal is incarcerated in chains; thou art kind, indeed, to think of him; to wander from so bright a home to cheer the unfortunate.—[Leisure Moments.]

THE HARMATTAN WIND.—During the prevalence of these winds, I have frequently seen the furniture split, and articles which were venerated considerably damaged; the veneering in some cases being curled up like dried sheets of paper. Books left closed on the table at night would be found on the following morning completely opened, and each leaf standing up as if it had been highly stiffened with gum. At such times glass tumblers would break, apparently of their own accord; and I have known one slight tap given to a tumbler made of brown-glass, not only break it, but, as if by sympathy, others remotely placed in different parts of the room.—[Travels in Eastern Africa.]

WANTED, TO LEASE, ETC.

TO SHEEP FARMERS.

THE UNDERSIGNED, having had many years' experience as a PRACTICAL SHEEP FARMER (in Australia and California), offers his services to CURE Diseased Sheep affected with scab, Footrot, &c.; or would take a situation to Superintend a Sheep Ranch. Having cured some badly diseased sheep in California, he can give satisfactory references. Address, by express, W. H. T. KIRBY, Taylor and Greenwich streets, San Francisco.

Reference—L. Haskell, Jr., California and Front streets; C. L. Warren, Cal. Farmer; Edw. Boquet, No. 33 Merchant street.

This is to certify that Mr. W. H. Kirby has effectually cured my flock of Merino Sheep of the worst possible form of Scab, after I had considered them past all cure, and had despaired of raising a single head. It is now two years since he gave them up to me, and the disease has not made the slightest appearance in even one. I can hereby recommend him as being a person deserving the entire confidence of any person who may require his services, and as being the only person whom I can name that makes successful cures of the scab in sheep. ALBERT E. FIELD.

MISSION SAN JOSE, Feb. 15, 1880.

WANTED.

BY AN AMERICAN FARMER, WHO UNDERSTANDS Stock-raising and dairy business, a SITUATION to take charge of a large Ranch; or would be willing to take a better dairy on shares, in a locality suitable for honey-bees. Please address "M. D." CALIFORNIA FARMER OFFICE, San Francisco. References given and required.

Who Wants a Farm Cared For?

A PERSON fully qualified to take charge of a large Farm, Orchard, or Vineyard, with a reasonable amount of stock to work it, would like to secure a chance to take such a place on shares. The advertiser has it in his power to make many valuable improvements, if the contract is made for three or four years. Any person who may have such a place, can hear of a responsible party by addressing a note to W. B. and leaving it at the FARMER OFFICE.

Fine Vineyard and Orchard

TO LEASE.

WANTED, to lease for a term of years, A MOUNTAIN FARM, upon which is now a small Vineyard and Orchard of choice Trees. The terms will be such as to be an inducement to a good Horticulturist; none other need apply. For particulars inquire at this office, or at the Golden Gate Ranch, near Mokelumne Hill, Calaveras county. C. M.

WANTED TO BE KNOWN

As a Mill-Wright.

THE UNDERSIGNED would respectfully submit for the consideration of merchants and farmers, that being lately from the States, with the experience he has had in Mill building, he can construct a more effective Mill for flouring wheat, with much less expense than is usually incurred.

The improvements he can be exhibited cannot fail to secure approbation. Owners of mills, merchants, or farmers will be favored with an interview, or a response to any communication, exhibiting all particulars.

Letters addressed W. W. and left at this office will be promptly attended to.

The advertiser is permitted to refer to Col. Warren, Editor of the FARMER.

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with SPRING AND CURLED-HAIR MATTRESSES AND LINENS than any other House in the State. It is one of the largest Hotels in California; a fire-proof building, and provided with the latest Water throughout the House. It has a frontage on Jackson street of 57 1/2 feet, by 175 feet deep. There are no dark rooms in this house, all having free and open frontage, with pure air, which is of great advantage to a California climate, there being no large buildings adjacent thereto. The undersigned invites the attention of the Traveling Public, and strangers in particular, to the merits of this House. It was established under its present Management, on the 1st of January, 1887, as a

First-Class Hotel,

IN EVERY PARTICULAR.

The Lessee and Manager, with a delicacy not wishing to encroach upon the merits of other Houses, cannot recall the marked favor with which his enterprise has been received by a discriminating public, in a constantly increasing patronage of the FIRST RESPECTABLE HOTEL, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most popular Places of Amusement, the Principal Thoroughfares, the Fashionable Promenades and Steamboat Landings; thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR

FAMILIES AND SINGLE GENTLEMEN.

During their sojourn in this city.

For a year past we have studied how we can maintain a FIRST-CLASS HOTEL, and at the same time effect some reduction of price below three dollars per day to our friends. We are happy to announce to you that we have succeeded in our efforts.

We have obtained a reduction of our heavy rental; and we have now under cultivation, in the suburbs, a Rancho, which produces our Vegetables fresh from the ground; with a Dairy that secures us the purest Milk and Cream; and a stock of Fowls that supplies Eggs and Poultry always fresh; with many other economical advantages. By this means we can promise our friends that we shall even improve upon the proverbial excellence of our Table; and the same matelotelle Body, and solicitous attention to the comforts of our Guests, will continue to be the pride of the Hotel International.

We have Elegant Suite of Family Rooms, together with highly furnished single apartments for Families or Single Gentlemen, which, together with the smiling energy of the Proprietor, makes this House one of the most popular Hotels in the United States. For comfort and luxury this house is not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the landing of the steamers, to carry passengers to the Hotel. [15]

W. H. MOORE,

San Francisco Brass and Bell Foundry,

Interesting Letter from Eldorado.

GEORGETOWN, April 8, 1890.
 EDITOR FARMER: Your favor of the 3d was duly received and contents noted. We are in the midst of the hardest "spell of weather" we have had at this season, up here in the mountains, during the last four years. The amount of snow and rain which has fallen, within ten days, has been very great, at least six inches, and probably much more. Look out for a "flood in the Sacramento." The weight of six inches of water is thirty-one pounds to the square foot, 8,432 pounds to the square rod, 674 tons (and a fraction) to the square acre, and 431,380 tons to the square mile. Extend these figures over the area of Eldorado county, say 2,000 square miles, and we find that about eight hundred and sixty million tons of water have fallen upon this district within the last ten days. When we reflect that this immense weight is carried up from the ocean to a height of two to four thousand feet, and evenly distributed over the land, by an agency which is not capable of holding up a mustard-seed, we cannot but be filled with the most profound astonishment. Again, a large share of this water is deposited along the high ridges of the mountains in huge banks of snow, and is there held by the low temperature, until the rays of the summer sun send it down in genial, life-giving currents, to the parched and thirsty valleys, precisely at the season when it is most wanted—when they must "drink or die."

Here in latitude 39°, and at an elevation of 2500 feet above tide-water, we have a climate remarkably adapted to the growth of all the fruits and vegetables which properly belong to a high latitude. The winter apples of the Middle and Northern States, mature more perfectly, and keep much longer than "at home." The small fruits, such as strawberries, raspberries, blackberries and currants, are more perfect than in Northern New York, Vermont and New Hampshire. We have cultivated strawberries and raspberries during the last three seasons, with the most flattering success, and expect this season to have the Lawton blackberry, the king of all berries, in abundance. It is certainly very singular, in a climate so perfectly adapted to northern fruits, that the peach and the grape should attain such great perfection. The most delicate vines of Italy and Spain are not only hardy here, but their fruit attains that rich saccharine quality which warrants the belief that we can grow the best of raisins. The peach, as to size and flavor, is better than I ever saw it elsewhere, but it will occasionally suffer by the frosts of spring. The night of the 7th was, I think, generally fatal to the peach buds of this region. We had about eight inches of snow, and about the hardest frost of the whole winter. The sun rose clear, and the rays striking upon the glittering snow, thawed out the buds so suddenly as to cook them up at once. Had the morning been cloudy they would probably have escaped. There is nothing but the peaches, and perhaps a few sorts of early blooming pears, which are so far advanced as to be injured by frost.

It seems to me that the belt of country along the western slope of the Nevada, at the elevation of two to three thousand feet, is the appropriate district, instead of Oregon, for supplying the great valley with winter apples. I know that the cultivators in the valley flatter themselves that they can grow their own winter fruit; but I think they are mistaken. There are a few sorts from the Southern States which will keep a long time, but if my impressions are correct, their qualities are such that they never can compete in the market with the best varieties of northern apples. I will not however go into this subject now. Should like to hear from some of your fruit-growing correspondents in the valley, in regard to the keeping qualities of good winter apples.

Yours truly, E. HARKNESS.

Clear the Clover-Bar from Wool.

We are glad to notice by the Mercantile Gazette and Shipping Register, that this subject is beginning to attract proper attention. In our issue of March 30th we urged early shearing as the only way to avoid this evil. Wool loses a large percentage of its value by reason of this bar. The loss in some cases has been as high as 33 per cent. No machinery has yet been found able to eradicate it.

St. George Hotel, Sacramento.—This hotel may well be said to be one of the very best hotels in the State. It is now in the glory of success, being as the saying is, literally jammed full with the legislature, with customers, with balls and numerous public gatherings. This hotel receives a bounteous share of patronage, and it deserves it. The host is truly a general in his calling, and he disciplines his forces so well that in each and every department all goes like clock-work. The parlors, suits of rooms, and chambers are all in the best order. No table could be better supplied with the substantial, nor be better attended. In fact, Gen. Hutchings does indeed understand and put into practical effect the art of pleasing and making his guests comfortable and happy. The "St. George Hotel" of the Levee City will always be a pleasant and happy home for all travelers.

Cassell's Illustrated Family Bible.—This splendid work is now being issued in numbers by Messrs. Cassell, Potter & Galpin, Park Buildings, Park Row, New York. The work is sent forth in numbers, quarto size, two each month, each containing about thirty illustrations of the Sacred Scriptures. It commences with the Creation, and beautifully illustrates all the principal events recorded in the Bible. The style of the work and its typography is all in most chaste and elegant taste. The entire series cost but \$3 per year of 24 numbers—the richest, best and cheapest illustrated biblical work yet offered.

The same house are also publishing a popular Natural History in same style and at same price. Both works for \$6 per year.

A medicine scientifically compounded, efficient in action, radical in its cures, containing nothing noxious, but everything harmless, mercurial and will receive the support of the public. Witness the Oxygenated Bitters, that remarkable specific for Dyspepsia, Indigestion, and General Debility.

By the Pony Express.

By the first Pony Express, which came across the continent in nine days, we learn that the Overland Telegraph Bill had passed the Senate, and was expected to soon pass the House.

The President has sent to the House a solemn protest against the resolution of inquiry into the official conduct of himself and cabinet. He treats it as an insult to the sovereignty of the people, whose representative he is, and insists that the House can only proceed against him in the manner pointed out to Congress by impeachment.

The State election in Connecticut was a very closely contested and exciting one. Mr. Buckingham, the Republican candidate for Governor, is elected by a majority of about 1100. The Republicans will have a majority in both branches of the Legislature.

The annexation of Savoy and Nice to France, has been definitely determined upon. The principal opposition was from the English press. Central Italy, by popular vote, was almost unanimously determined upon annexation to Sardinia.

Commodore Jarvis, who captured the two steamers of Miran at Vera Cruz, has been addressed by the commanders of the French and Spanish squadrons, inquiring by what law of nations he had captured the two Mexican steamers. Commodore Jarvis had declined to answer their question, and referred them to his Government.

THE GORHERS DROWNED OUT.—The late rains have not only been beneficial to farmers in multiplying the quantity of cereals and grasses, but in diminishing the number of those greatest of pests, gophers and squirrels. The drenching rains have penetrated to the innermost recesses of their underground habitations, and thus destroying them by thousands. In some sections in San Joaquin county, says the Republican, it is believed that these troublesome creatures have been entirely eradicated.

HOTEL INTERNATIONAL.—We have often spoken,

in terms of praise, of this large and well-arranged Hotel, and we know we shall be sustained in all we say of it, by those who patronize it. The order, neatness and quiet that pervades every department proves the system that governs. Well ventilated rooms, clean bed-linen, prompt attendance, with a table that cannot be surpassed in the State for excellence, have given that notoriety and patronage which now makes it the A. No. 1 of our city.

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, APRIL 27, 1860.

NUMBER 10.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$4 a year in advance.
Advertisements and Subscriptions must be paid for in advance.

The Honey-Bee Business Again.

SACRAMENTO, April 20, 1860.

EDITOR FARMER: I notice in your issue of the 20th inst., a communication over the signature of L. Kennedy, which seems to have been intended to reflect on or call in question certain statements made by you, in the columns of the FARMER, and by myself, in an article which appeared in the Cultivator for April. Your remarks are well-timed and cover the main points at issue.

I will add, however, that Mr. K. gives his testimony to prove the inference to be drawn from my article, that there are States and districts where foul-brood is unknown. It seems that Mr. Kennedy imported his bees for his own use, and, like a sensible man, procured them from a district where the disease above alluded to is probably unknown. It was for the benefit of persons having healthy bees that the articles referred to were written; and hence if Mr. K. has only such, he of course is not included among the shippers of diseased bees.

Mr. Kennedy appears entirely skeptical as to the existence of foul-brood in this State. I have seen many such within the last few months, but don't know a single man of them that would now hazard his reputation by saying it does not exist.

I now wish to call Mr. Kennedy's attention to the article which he refers to in the Cultivator. I regret, however, that an inadvertent omission of two words was made in the copy furnished for publication. The sixth line from the first should read as follows: "It was brought into the State and in connection with several apiaries, previous to and in the fall of 1859."

No one place is mentioned as having foul-brood, either in this or any other State; I merely gave the facts, and allowed every man to judge himself, whether innocent or guilty of spreading the disease.

The only mis-quoting that has occurred, to my knowledge, is that by Mr. Kennedy himself, as the following comparison will show:

FARMER. "And even charges the principal bee-keepers in the Eastern States with having," etc.	CULTIVATOR. "It would seem that some of the principal bee-keepers in the Eastern States have," etc.
---	--

There are many persons who have imported or bought and sold bees having that disease, who were not aware of the fact. Such persons are not to blame; most of them will, however, deeply regret their connection with it. But are there not persons, both in the Atlantic and Pacific States, who have sold bees that they knew had the disease? Have they committed a crime? If so they will sooner or later suffer the penalty.

"The great apianian of California" (as Mr. Kennedy facetiously calls me) begs leave to join him in the hope which he expresses, and to add that this article may accompany it.

In conclusion, I will state that no one more than myself can regret the necessity that called forth the articles in question. But few persons, perhaps, within the United States have a larger interest invested in bee-raising than myself; hence no one is more likely to be either the gainer or loser by the truth being told.

I am confident, however, that if due care is taken to stay the further spread of the disease, that it can in time be eradicated, and the business of bee-raising placed on a permanent basis. My time and money will still be spent to further that object, whether the blunderbus is fired again or not.

Yours truly,

J. S. HARRISON.

The Teasel.

This product of California, that grows wild and in great abundance in many parts of our State, can now be made available and brought into requisition—even made very profitable—and we think it will be found superior to the imported teasel. We have now a woolen manufactory in full operation, and we have seen the California and imported teasel both operating, and the favor was on the side of our own native State; so that we would suggest to all persons that have the teasel growing upon their land, to remember that nature tells them they can grow this article profitably. The following is a description of the plant:

Teasel, or Teasle (*Dipsacus*, supposed to be derived from *dipso*, to thirst; in consequence of the leaves holding water). It is a curious genus of plants: some of the species are pretty flowering plants, especially the small teasel. They grow well in any common soil, and are readily increased by seeds. There are in England three native species, all biennial.

1. The manured or fuller's teasel (*D. fullorum*), although growing about hedges, can scarcely be considered wild. This species is extensively cultivated in the west of England, the dried heads of

which furnish the teasel used by fullers in dressing cloth. The root is fleshy, branched, and tapering. Stem five to six feet high, erect, strongly furrowed, prickly, leafy, branched at the top. The leaves sessile, combined, serrated, with prickly ribs. Flowers whitish, with pale purple anthers, very numerous, in a close, obtuse, conical head, the intermediate scales bristly at the edges; rigid and hooked at the points, by which they are rendered serviceable for teasing woolen cloth, being fixed in several rows in wooden frames with handles adapted for that purpose. The scales are just strong enough to raise the wool, giving way before they can injure the cloth. Many mechanical inventions have been attempted to set aside the teasel, but without success, all of them having proved inefficient or injurious. The dressing of a piece of cloth consumes from 1500 to 2000 teasels. They are repeatedly used in different parts of the process. Some esteem this but a luxurious variety of the following, as it requires a very richly manured soil to preserve its characters and useful properties.

2. Wild teasel (*D. sylvestris*). In England a very common species about moist hedges and by roadsides, less robust than the foregoing; about four feet high. Leaves opposite, serrated. Scales of the receptacle straight. Common calyx inflexed, longer than the head.

3. Small teasel, or shepherd's staff (*D. pilosus*). This species grows in moist, shady places, on a chalky or limestone soil. This is a useless weed, but not troublesome to the farmer.

Rape Plant and Rape-Seed Oil.

One of the most important articles among the late importations from Japan (a country but just now opened to our commerce) appears to be rape-seed oil. As the use of this oil is new in this country, various articles have been published to make known its merits, and to prove that it is a valuable acquisition. But if this oil is desirable to be brought into use, why cannot the plant be raised by our California farmers, and the oil produced here? and truly may this not be a valuable crop for our farmers? We find in an encyclopedia the following account of the rape plant, its cultivation, and uses, which we copy for the benefit of our readers:

The Rape is a plant of the cole kind, greatly cultivated in Flanders for the sake of the seed, but extremely valuable also as green food for cattle and sheep in winter and spring. "The plants," says Mr. Low, "usually cultivated under the name of rape, are the fusiform varieties of the following species of brassica. Cole or rape (*B. napus*), colza (*B. campestris*), fusiform common turnip (*B. rapa*), and early cole (*B. praecox*). There are different modes of treating this plant, according to the uses for which it is designed. The whole plant is of great service in feeding cattle; and after the seed is thrashed, the straw and chaff, on being burnt, afford ashes equally valuable as the best potashes. Wheat yields an excellent crop after rape, and the plant is grown with great advantage on bog plant, where paring and burning has been practiced. Rape is very hardy, and with fair treatment it never fails on any soil. Cattle are so successfully fattened with it, that many farmers prefer it to turnips.

For garden culture, rape is propagated by seed, and, like mustard, and other small saladings, may be sown at any period of the year, when in request; being allowed a separate bed. For the production of seed, some plants of a sowing which has been made about the middle of July, must be thinned to about 18 inches apart; they will survive the winter in England, and flower in May and June of the next year. The seed, which is produced in great abundance, ripens in July and August, and must then be cut and laid upon cloths to dry, as it is very apt to shed.

In England, rape (*Brassica napus sylvestris*) is frequently called *colza*, and in France *navette*. In both countries it is highly prized, not only for the value of the oil expressed from the seed, but for the cake left after pressure, which is extensively used for feeding cattle, its qualities for this purpose resembling those of the oil-cake left after pressure of flaxseed in making linseed oil. Rape belongs to the cabbage or turnip family, but it neither heads, like the former, and its roots are of little value compared with the latter. Of the two kinds most commonly cultivated, one is biennial, sown one summer and harvested the next, whilst the other is a spring or summer crop.

Rape, though but little known in the United States, has been found in various parts, and found to stand the winters even in New York and New England. Whenever, therefore, a demand shall be made for this valuable production of the soil, or its near kindred of the cabbage family, *colza*, the United States can yield them abundantly, in almost every part.

According to London, the place which rape occupies in a rotation, is between two culmiferous or grain crops. On rich soils it may be succeeded to the greatest advantage by wheat, as it is found to be an excellent preparation for that sort of grain; and by its being taken off early, there is sufficient time allowed for getting the land in order for sowing wheat.

In *Notes on the Agriculture of Germany*, by Mr. Carr, an English gentleman, he says the after course is as follows: 1st year fallow, well dunged; 2d year rape; 3d year wheat; 4th year barley; 5th year peas, light dunging; 6th year rye; 7th year oats, with rye, or timothy grass-seeds, and red clover.

The clover and peas plastered in May. The clover is mown twice for hay, and left two years for pasture, when it is heavily manured, fallowed, and again sown with rape. "The rape seed is sown broadcast, in the last of July or first of August. This crop is greatly benefited the following spring by dusting gypsum over it, about 100 pounds to the acre. In July the seed is ripe, and as the weather is generally fine, is trodden out by horses very expeditiously on large canvas sheets in the field. The oil of this seed pressed out, when purified, is without smell, gives a brilliant clear-burning flame, and is universally used all over Germany in the saloon of the rich, and the cottage of the poor. The value of the crop is somewhat precarious, because it is subject to so many contingencies; the turnip-fly and caterpillar

prey upon it when young, and when in flower, a small beetle (*Halitica nemorum*) often eats away the blossom-bud, or lays its minute larva in the petals, ultimately furnishing every seed-pod with a maggot which either eats the seeds away, or forcing the pod open when nearly ripe, causes it to fall out. When spared these calamities, it is, however, a very remunerating crop, worth from 10l. to 20l. an acre, especially if there is a foreign demand. The straw is generally burned, and the ashes scattered over the field; it is sometimes sold to the soap-makers, who prize it highly. Two furrows are now given for wheat sown broadcast in September."

Mr. Blackie, in his *Essay on the Improvement of Small Farms*, says, that the produce of rape, when well manured, is beyond anything almost that can be imagined, if let stand until it gets into blossom. Manure, he adds, makes the stalk tender and juicy, which would otherwise be hard and dry, so that if cut into small pieces for the purpose of feeding green to cattle, not a bit will be lost, and it grows to a height of six feet. I am, he says, almost afraid to say, that I believe, with the addition of some straw, an acre will keep thirty head of cattle in full milk for a month.

Tule Lands.

As information in regard to the tule-lands is now much sought, we are pleased to find a valuable communication on the subject in the Suisun Herald, which we copy, as follows:

As many of our farmers are ignorant of the great value of tule-land, and of the fact that it can be brought under cultivation, it may not be amiss for one who has tilled some of it to express his opinions through your valuable paper. I have heard of several men of some repute for good sense, making the broad assertion that it is impossible to get the tule land dry enough for cultivation, that, despite every exertion to prevent it, the water will ooze through your levees. Now, Mr. Editor, just show me the man of this opinion, and I will show that his judgment is based entirely on the word of some one who knew nothing about the matter, or upon the mere child's work of some indolent, good-for-nothing farmer, who never did more than half do anything in his life.

Let me take this visionary man to the work of the latter "small potato" man, from whence his opinion has sprung, and I will prove to him, and every man of sense, that his data, on which to ground an opinion, are insufficient; that this child's work is no more likely to succeed, than the effort of a man to stem the tide of the Sacramento with his hat. It cannot reasonably be expected that a common levee, six feet in width, made of loose, porous earth, will wholly exclude water until it has had time to settle, to become sufficiently compact to be water-proof.

I will then take him up and down the river near Rio Vista, and show him *practical* demonstration of the fact that even the low basins in the tule land have been made arable at a trifling expense, with proper levees and draining ditches, and covered with grain and vegetables, land, a few years since filled with the rankest tule, but now without a vestige of live tule root.

One of my neighbors has been to the expense of first stripping the bed for his levees to the clay foundation, which proved very effectual from the outset. But it is not necessary to incur this extra labor.

With a good levee, six feet in width, made of the dirt taken from one ditch on the inside of your land, if running parallel with the river, or from the outside if at right angles with it; with your draining ditches on a level with the low tides, to take the water from the lowest of the land, and the necessary flood-gates, you can have your land so dry that the tule will not survive in it. By running draining-ditches down the river at acute angles therewith, full enough can be obtained to drain the lowest portions.

Reclaimed tule-land is so valuable that the little labor required is quite insignificant. The land is inexhaustible. It is worth fifteen or twenty dollars an acre without draining. One of my neighbors sowed his tule land thick with "red-top," some four years since, which has taken complete possession of the land, and from which he has cut three full crops of hay, annually for two years. He has neither a levee nor a ditch on it.

A portion of the tule-land back of Suisun, which has been reclaimed, was sowed with Chile clover, or lucerne, last November a year ago, which yielded three heavy crops of clover last season, the first year from the seed, and this year in all probability, four crops will be the yield from the old roots. Horses, neat-cattle and hogs seem to prefer it to all other grasses.

I have tried almost all kinds of grain and vegetables on it, in a small way, and have succeeded admirably. I am convinced that no land is better suited to raising rice. The nights, perhaps, are too cool here for raising Carolina rice, for the first season, but if protected one year from the cold winds, it will become acclimated. I had a little patch, so protected, which was from three to five feet in height, bore a very large head, an abundance of them, and well-developed grain. I tried some in too dry a soil, and not protected from the winds, and it yielded nothing. It should be planted in very damp soil, or where it can be irrigated at pleasure.

Other kinds might do well on drier land. I tried some 600 pounds of China rice last year, but it did not come up. This year I am trying all kinds of rice, sea-island cotton, sugar-cane, and other profitable productions.

RIO VISTA.

The writer of the above communication is possessed of the right spirit, and we hope to hear more from him.

Vegetable Physiology.

The science that defines the nature and structure of the tree or plant, has much to do with skill in cultivation. By making ourselves familiar with the elements necessary to the vigor and development of the various parts, we are enabled to judge of our means to develop or promote the vigor and health of the whole. The production of fruit is the desired result; the tree must be kept in a healthy vigorous state; each series of organs must be efficient to produce the ultimate object; climate, soil, nutritive matters in the soil, due regulation of the wood and fruit systems, the checking

of the undue development of wood buds to the neglect of fruit buds, and the tendency on the other hand to the production of fruit spurs to the reduction of the leaf system; the proportionate amount of roots to branches; the promotion of the general healthy growth of leaves, as well as all other indispensable auxiliaries to the health of the tree, must be carefully preserved and promoted.

We must see to the propagation of healthy trees, and these secured, preserve them in that healthy condition.

The growths of roots, branches, and leaves, are so closely related that we need only state, in passing, that these depend on skill in propagation either by seeds, cuttings, layers, buds or grafts.

The normal mode of propagation is by seeds. This is the favorite plan of nature, so far as we may judge by natural indications. Like all her unerring laws, this appears to have been made immutable, that like should produce like; that the herb and fruit tree should bear seed, in which is secured the elements of reproduction. Man was not limited to this means of multiplying individuals; the gemma or bud possessed, he discovered, all the rudiments of the tree under certain conditions, and from the eye or bud we now multiply fruit trees with unerring precision, each individual a counterpart of its parent. The seed is still the chief reproductive agent in our food-producing grains, or cereals, and in many of the more minute forms of vegetable life. When we observe that each fruit of the apple incloses in its well protected core or ovary, from five to ten seeds, and that a single full-grown tree will produce fifty bushels, each bushel containing about two hundred fruits, the unlimited means of propagation become apparent. We have only cited the subject of physiology to press its importance on the cultivator. Without a competent knowledge of its laws, he will attempt in vain to become an intelligent fruit grower.

Charcoal as a Blanch for Celery.

A writer in the Philadelphia Gardener's Monthly says: Permit me to coin a noun expressive of a new use to which I have lately put this useful substance.

As a *mulch*, its value is universally recognized. As a *blanch*, I find it superior to any material I have ever tried, including earth, dry sand, sawdust, tan-bark, leaves, hay, litter, etc. Its advantages are manifold; no slug or insect will harbor in it; it drains perfectly, retains the solar warmth without over-heating the plant, absorbs all the ammoniacal gases arising from the application of liquid or other fertilizers, will not rust the stalk, is easily washed out of the celery when dug, and can be used many times over with little loss. By proper management, also, two rows of celery may be grown where one is by the old method.

Dig trenches two feet apart, about eight inches wide, and six deep, and fill up to the level of the ground, with a rich compost of loam, well decomposed manure, and tanners' hair refuse (the latter being the best possible food for celery, and obtainable at the same price as stable offal) and set out the plants about eight inches apart in single rows. On either side of the rows, about six inches distant, commencing at one end, drive two stakes, say three feet long, and one to one-and-a-half inches square, one inch apart, to allow a board to slip in between them, and repeat the stakes at intervals of five feet, or thereabouts, the entire length of your rows of plants; then between the stakes put boards twelve to fourteen inches wide, and a piece of board at each end of the trench, connecting their ends.

The young plants will need shading for a few days after transplanting, if the trenches run north and south, if east and west they will not require it. Draw the earth slightly away from the base of the boards, to form a *feeling trough*, into which pour liquid manure frequently during the growing season. When the leaf of the central stalk or heart of the plant shows itself above the board, fill in the whole space with coarsely pulverized charcoal (cinders from the smoke-stack of locomotives, or the braise of old charcoal hearths), holding the stalks snugly together in the left hand while filling in with the right.

After a few days, place a second set of boards, which may be connected by cross-pieces nailed on at intervals on the top of the first, and repeat the blanching as before. I have found two blanchings to be sufficient.

For winter celery the trenches should be dug four feet apart, one-and-a-half feet wide, and the plants in two rows nine inches asunder.

They may be banked up in the usual way, first throwing a little litter on the top. Celery thus treated will keep perfectly; the loose texture of the charcoal preventing its becoming solid by the action of frost.

It may be objected that the above plan is more expensive than the traditional method, but it will be productive of so much higher quality, longer blanching stocks, greater crispness and whiteness, and certain exemption from rust and decay, as fully to warrant the apparent increased outlay. If the boards are well coated with gas-tar or good boiled linseed-oil they will last many years, and the charcoal is worth, for general garden purposes, more than its cost, if not required again for blanching.

From Half-Moon Bay, we received the following, dated March 25th:

Crops of every description in this neighborhood look remarkably fine. A great deal more wheat has been sown this year than last; also, of barley and oats. As for onions, the present high prices have caused nearly every farmer to plant more or less; I believe double the quantity of last year has been planted. From what I can learn, about the same quantity of potatoes will be planted. I shall endeavor to send you a communication occasionally hereafter.

In haste, yours, etc.,

C. F. SPRINGER.

A Large Apricot—And Beautiful Roses.

There is a happy emulation among our farming population in their productions—a spirit we are pleased to observe, and we are ready, on all occasions, to foster it in view of its beneficial results. During a late trip to Stockton, we noticed in the Republican a description of some tall specimens in the Apricot line; but, accidentally meeting a larger and finer sample of the same description, together with an extraordinary specimen of the Yellow Banksii Rose, we forwarded a note of the same to the Editor of that paper, which we republish as interesting to our readers:

WEBER HOUSE, Sunday, April 22.

EDITOR REPUBLICAN: You know very well that we are always glad to learn of the success attending fruit-growing, and glad to see evidences of that success. We noticed with pleasure the statements made in your journal, of the large apricots grown in this neighborhood—one measuring I think, four inches. While making a friendly visit at the residence of our friend, Dr. Reid, to-day, to welcome him and his lady from their European trip, and to enjoy a few hours of social life in their beautiful home, as we walked among the trees and plants, we took from an apricot-tree the specimen-fruit we send you, measuring four and three-eighths inches in circumference, which we believe out-measures those you have named; and yet this was taken from a tree that, with others, had been sadly neglected during the Doctor's absence.

In this connection, we take the liberty to mention that there is now in bloom at Dr. Reid's, the most splendid specimen of a climbing rose we have ever beheld. It is a Yellow Banksii Rose, a bright golden yellow cluster-rose, covering the entire end of the mansion, which is thirty-three feet wide and of equal height, the rose reaching to the roof, from which we gathered the rich cluster sent you.

During the many years in which we were engaged in the study and practical duties connected with horticulture and floriculture, and during which time we have visited the best gardens of Europe and America, we have never witnessed so wonderful a bloom upon one vine, nor do we believe there has ever been so great a bloom upon the Yellow Banksii Rose before, anywhere. The number of blooms at the present time cannot be less than one hundred thousand (were we to double that number we should come nearer the fact), but whatever be the number, and it is incredible, their beauty and magnificence should induce the citizens of Stockton to go now and see this rose in all its glory.

The branch I send you contains fifty-three roses and buds, and is only about one foot long; therefore, estimate the building thus covered with a solid mass of golden roses, in clusters projecting from the building, and conceive, if the reader can, the rare beauty of such a sight.

The Yellow Banksii Rose will, ere long, be esteemed as it ought, and as it is esteemed in England—one of the finest climbing roses in the world. Yours, truly,

COL. WARREN, Editor Farmer.

P. S. Duly appreciating your kind notice in your last number, of our desires relative to the tule lands, we shall be glad to receive any and all information and cooperation in the work in which we are engaged, during the few days we remain in Stockton.

Improved Milkpan.

We have lately examined a new style of tin milkpan, which appears to be a great improvement on the old, and as we know it is for the advantage of our dairymen to be possessed of the best implements, we wish to make it known to them, or to such as have not yet seen them. It is known that around the bottom of the old milkpan is a sharp, square edge which easily wears out, or is injured so as to cause the pan to leak; while, on the inside this sharp edge or "corner" is very hard to clean, and therefore is apt to become foul, causing the milk to sour, and being at least disagreeable. The new pan is intended to obviate all this; it has what is called a stamped bottom, that is, the bottom is sunk below the seam, or rounded up at the edge, which is equivalent to raising the lower seam a little above the bottom of the pan, and give a rounded edge inside and out. The advantages of this are obvious. The seam is not liable to injury or the pan to leak, and it will thus last much longer, while it can be cleaned readily and perfectly, and everything kept sweet. These advantages appear to be sufficient to induce a general adoption of the new pan, and the additional price will be no hindrance, as it is but fifty cents a dozen over the old—a mere trifle. These pans can be found at the Pacific Tin Works of B. C. Austin, Clay street, below Battery.

CHEAP SALT FOR MANURE.—Mr. V. W. Smith Superintendent of the Onondaga Salt Works, Syracuse, N. Y., announces, for the benefit of those farmers that are disposed to make use of salt as a fertilizer, that it can be had in any quantity at Syracuse for seventy-five cents per barrel; or at a price not exceeding eleven cents per bushel, shipped loose on the canal boats at that place. Mr. Smith says it would afford him great pleasure to attend to any orders for the salt, gratuitously, so far as his personal services are concerned. Those who wish to sow salt on their wheat this fall, can now obtain it at a very cheap rate. A barrel per acre, sown broadcast, is the usual quantity.

MILKING IN SILENCE.—At a meeting of the Farmer's Club at West Cornwall, Conn., one of the members observed that no talking should be tolerated in the yard or among the cows, while milking was going on. Another said he had discharged a man because he would talk and interrupt the milking in his dairy, and that in three days afterward the increase in the yield of milk was equal in value to the amount he would have had to pay the man in wages.

Que es dara el padre en San Antonio?	Queci lo cimeich la padre loma San Antonio.

The Indian name of the Salinas river (head waters) between San Miguel and Santa Margarita in San Luis Obispo county, was known as Sago lin. In San Antonio Mission is still preserved the catechism of the Indians of San Antonio and

Mexico and Central America, increased and multiplied, until they filled those regions with the immense structures of stone which strike the mind of the traveler with wonder and mysterious awe, at the arts and cunning of the architects, and the complete obliteration from men's chronicles of who were the builders of these temples, pyramids and cities. The tribes, which may have wandered off to the California coast, or northward, never seem to have arrived at any degree of tribal or national cohesion—not the faintest degree of social civilization, so far as may be gathered from anything they left behind them. Not a single durable structure of any kind has ever been found within the present boundaries of the State traceable to the Indians, though the climate is highly favorable to the preservation of any such structures. In some of the works on California, we have seen it noted that the Shoshones speak a very similar language to those of the Mission of San Juan Capistrano, in Los Angeles county. We think it was the suggestion of the late Albert Gallatin, in the transactions of the American Ethnological Society. But the other outposts of the presumed Shoshones nation seem to have arrived at a degree of tribal cohesion, if we assume that the Moquis, Pimas, Pueblo Indians, etc., of New Mexico and Arizona, were affiliations of the old Empire existing in the center of the continent of North America; or, it may have had its focus in the uplands of Mexico, or Central America, and then spread in the remote antiquity north, south, east and west. It is a deep mystery which seems utterly unfathomable to human inquiry, and only open to wearisome speculation.

This direct self-murder is an everyday item in the newspapers of this State, the causes of which are not investigated; the facts merely stated and that is the terminus of the hideous act, till another case occur. We give our readers, and particularly those who contemplate self-murder, a scientific Exposé of Suicide, from the Scalpel, by Dr. W. Byrd Powell.

Suicide; is there any organic law favoring it?
A remarkable instance.

Twenty years ago I met with so many suicidal organizations of the same church ancestry, that I began to feel much interest in the fact, and for the purpose of determining the fact for my own satisfaction, I opened a register and made a record of the church ancestry of all the suicidal organizations I met with; and the result in five years was that ninety per cent of the suicidal organizations I had met with, had descended through the same Protestant Christian sect or denomination, and my observations and reflections in the last fifteen years, have brought me to the conclusion that the doctrines and observances of this sect really promote the result in suicidal organizations.

But the circumstance of death by suicide, is not that which I think to be the most deplorable in the premises, but rather that mental misery which must be endured for years before suicide gives relief. Some fifteen years since, in one of our Southern cities, I examined the head publicly of a gentleman, and in the course of my remarks I expressed considerable surprise at finding a gentleman living at the age of three-score years with a mental organization so strongly indicative of a suicidal tendency of mind, and gave it as being my opinion that he had suffered much from suicidal reflections. But he denied ever having had any such reflections; in all other respects it was admitted by his friends that I had very accurately described him. In two weeks from this date he committed suicide, and then his family and a few

As the nature of the transaction opened upon his mind, tears overpowered his eye-lids and rolled down his cheeks. When I concluded the history, his grief appeared to become exceedingly painful. After a pause of a minute or more, he said: "Well, Doctor, if you were not almost the only exception to your profession can produce, I would now have been in sterility." I assured him that I had not

The salt springs at Grand Rapids, Michigan, which have been recently discovered, have been ascertained, by experiment, to yield twenty-five per cent of pure salt; that is, one barrel of water will yield one bushel of salt.

THE WIFE THAT MEETS ONE AT THE DOOR.

I never leave my home a day,
How'er with others it may be;
But what I get when I come back,
Welcoming smile and hearty smack,
That make me love, still more and more,
The wife that meets me at the door.

Her dress is always neat and clean;
A pretty wife, and yet not vain;
And when she sings my favorite song,
How sure am I the man is wrong
Who would not, be he rich or poor—
A wife to meet him at the door.

The little chickens run to meet,
And pick the crumbs up at her feet;
Old Towser licks her proffered hand,
And frolics round her in the sand.
There's nothing like, I've said before,
A wife that meets one at the door.

In social ball her smiling face
In every heart was quick a place;
The eyes that that walks the green
Will up his hat when she is seen,
And hopes to meet, when terms are o'er,
Just such a wife at his own door.

THE CONTENTED MAN.

Why need I strive or sigh for wealth?
It is enough for me
That heaven hath sent me strength and health,
A spirit glad and free.
Grateful these blessings to receive,
I sing my hymn at morn and eve.

On some, what floods of riches flow!
Houses, lands, and gold have they;
Yet life's best joys they never know,
But fret their hours away.
The more they have, they seek increase;
Complaints and cravings never cease.

How Tom Corwin Rid his Sister of an Obnoxious Lover.

EVERY one has heard of the eloquent, pathetic and humorous stump-orator of Ohio. He was pronounced by Mr. Clay (a most competent authority) to be the finest stump-speaker he had ever heard; and in this opinion I most heartily coincide, after having heard Clay, Crittenden, Jones of Tennessee, Polk, Benjamin, Soule, Randall, Hunt, Tom Marshall, General Lamar, Bates, Douglas, and a host of others.

Well, this great orator carried his love of fun into every department of life. In the private circle, where he knew every person and unobscured himself fully, he was the most delightful and genial conversationalist I ever listened to. I do not know that he now, as age and infirmity are creeping on, indulges in this proclivity to humor so much as he used to do; but some twenty years ago he used to tell, with great gusto, the following story:

"In early life—so early that I cannot remember the removal—my father 'pulled up stakes,' and carrying with him the household goods, went from Bourbon county, Kentucky, where I was born, to Ohio. Notwithstanding a rough-and-tumble struggle with the world, he had a hard time to get on, owing to a numerous and rapidly increasing family. Well, family matters had not much improved when my thirteenth or fourteenth year came round.

At this time there lived in the neighborhood a young man named Pickering. He had inherited a well-stocked farm, was good-looking, and made strong profession of religion. This latter qualification caused him to find peculiar favor in the eyes of my father, who always was blinded by professions of extra piety.

This fellow had a strong hankering after one of my sisters, who was a very pretty girl. To her he was peculiarly distasteful. She seemed always excessively annoyed at his presence. Yet he was ever at her side. She dared not dismiss him entirely, for fear of the paternal anger. Things went on in this way for a year or two, and as I partook largely of my sister's hatred of him, I resolved to get rid of him in some way. I cast about for a plan for some time, but nothing occurred that gave me the slightest hope of success.

At last, returning home late one summer night from the mill, I found the family at their nightly devotions. Passing by the window of the room in which they were assembled, I saw that Pickering was there, and pretty soon I discovered that he was nodding, and finally his head dropped. Now was my opportunity. I stole slyly into the hall, and reaching the hall door, which was slightly ajar, and close by which Pickering was, on bended knee, I reached in and quickly pulling his chair from under him, he rolled heavily, as a sound sleeper would, upon the floor. The noise alarmed all. The old gentleman stopped in the midst of his almost interminable prayer, and saw the position of Pickering. All the family laughed outright, even my mother smiled.

Pickering endeavored to pick himself up as rapidly as possible, but he had touched the old man upon his tenderest point. It was evident from his rubbing his eyes, that he had slept under the old gentleman's ministrations; and had not my father a reputation far and wide for the ferocity and strength of his ministrations, and was not Pickering's professing brother? It was too much. Slowly yet most dignifiedly did my father approach him. "Begone, hypocrite!" he cried, in thunder tones, "never enter my house again."

Pickering was thunderstruck. He felt that he could make no apology which would not add to the insult. He had no suspicion of the exterior force which had aided him in his fall. He at once found his hat, took up his line of march, and completely crestfallen, passed by me as I stood grinning in the shadow of the porch.

At a suitable time I entered, got my supper, was told by a brother in hurried whispers what had happened, and then I stole off to bed, affecting ignorance and laughing most heartily, as I encountered myself in the sheets, at the complete success of my plan.

Next day I cautiously imparted my secret to my interested sister. She was in her own room at the time, and she threw herself upon the bed and rolled in agonies and convulsions of laughter. She had been emancipated forever from the attentions of an obnoxious lover. The old gentleman did not hear the real state of the facts for full twenty years afterwards; but when he did he laughed heartily.

NURSERY BUSINESS, &c.

J. R. RAY,
SEED AND NURSERY DEPOT,No. 106 J STREET,
SACRAMENTO,HAS IN HIS NURSERY, SUBJECT TO THE
order of good cash customers, the most extensive assortment of

TREES, SHRUBBERY, AND VINES.

To be found in the State, consisting of every variety of

Almond,	Mulberry,
Apple,	Nectarine,
Apricot,	Peach,
Blackberry,	Pear,

From the Baltimore American.
Baltimore-Made Agricultural Implements,
VERSUS EASTERN.

WE notice that Messrs R. Sinclair Jr. & Co., of this city,
received FIRST PREMIUMS for their deservedly
famed Agricultural Implements at the recent Agricultural Ex-
hibitions and Fairs held in Maryland, Virginia, North Caro-
lina, and the South-western States, namely:

By the Maryland State Agricultural Society,
FOURTEEN PREMIUMS.By the Virginia and North Carolina Agricultural
Society,
NINE PREMIUMS.By the Sea-board Agricultural Society, held at
Norfolk,
TWELVE PREMIUMS.

Also, awarded to Sinclair & Co., by the KENTUCKY
and TENNESSEE STATE AND COUNTY FAIRS, FOUR
(first) PREMIUMS on Sinclair's Patent Mangle, for
mangle and cutting corn-stalks, straw, etc., making in all
THIRTY-NINE First Premiums

In favor of Sinclair & Co's Wares,
and showing a decided preference by the Judges in favor of
Baltimore-Made Implements.

Included in the above premiums were Briston's Patent
Reaping and Mowing Machine, Sinclair's Patent Straw and
Fodder Cutters, Sinclair's Patent Spiral Threshing Machine,
Wheat Drill with Gauge Attachment, Serrated Clod Roller,
Grazing Stakes, Corn Drills, etc.

In the above estimate of premiums the following were not
included in the different contests, all having received their
share of premiums at Fairs previously held, viz:
Horse-Powers, Spur and Wheel Guards, Corn-Mills,
Barr and Iron, Panning-Mills, Rolling-Screens,
Agricultural Furnaces, Chain-Pumps, Lime-
Spreader, Garden-Tools, etc., etc.
The Agricultural Implements and Machinery man-
ufactured by us are constructed in the most substantial and
durable manner, great capacity, and particularly adapted for
southern use and usage. Planters and Merchants wanting
supplies will be furnished with Price Lists on application.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM
and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his
most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his
Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will
offer for sale for 1880:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for
measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined
Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made
at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in
October last.

Your attention is also called to a notice given it, below, by numerous members of the State
Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County
Fair.

With the experience of the past season, this machine is so improved as to be, without question,
The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCormick's, Hussey's, Burrill's, Seymour & Morgan's,
Palmer & Williams', and Manny's (with Wood's Improvement) REAPERS. Also—

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM
at the State Fair, and which is the very best bee-hive in use, for sale; and, also, persons
wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,

33 SACRAMENTO STREET,

San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the
newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW,
of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of
the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to
the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers
and Mowers now in use, as it contains many decided and valuable improvements.

SAN FRANCISCO.
FRIDAY, APRIL 27, 1880.

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us. Please also direct letters to "COL. WARREN, California Farmer Office," as there are frequent misarrangements for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as Colonel Warren, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as many very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscriber has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. L. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

Tule Lands of Stockton.

The important movement in tule lands, their gradual recovery, and the vast improvement of which they are capable, with important facts relative to their uses and value, will appear next week, and in future numbers. We have very important facts touching their value.

Success in Shipping Grain.

We invite Grain-growers to the present prospect of the coming crop of Grain. We ask them to reflect upon the stock now on hand, and then ask themselves, how the case would have stood, if those who had large stocks on hand in August, September and October last, had taken our advice and shipped them out of the State?

We gave counsel advisedly. By our means of information from the East and Europe, by the amount on hand, by the price in New York and in Australia, and the price here, it was a self-evident fact, that it would have been better for every holder, to get the excess of Grain out of the State. Some have heeded that advice, and have done well, ay, very well indeed in some cases, while others "held on," and have their Grain yet; they hold now at \$1 75 to \$1 85, while, had they sent forward in September and October, they could have, ere this, realized, in New York, two cents, and in some cases even more, while Australian rates would have yielded three to five cents; and if the shipment had been large, as it might and should have been, the rates now would have been two to two and a half cents, here to-day.

The stock on hand at the incoming harvest will exceed one hundred thousand barrels, while the crop of 1880 will give a three years' supply; nearly. These estimates may seem large to those interested; but wait, and see how the account stands by and by.

The Market can still be relieved of a portion of this surplus, and it ought to be relieved; if it shall be, then as much as now goes abroad, will be so much less on hand when the new crop comes in. Those who regret they have not shipped the present year may be wiser at the harvest of 1880; at least, we hope so: for the Grain must go forward, or the consequences will be—it will remain unharvested.

The Honey-Bee in Stockton.

The quiet city of Stockton is bound to have her portion of the sweet things of life, as well as other portions of the State. While on a trip to view the progressive movements of this growing section of our State, we called on Mr. C. O. Warner, the apiarian, and agent of J. S. Harrison, and found much to please and gratify. Mr. Warner has about fifty swarms, many of them very full and heavy, with an abundance of brood-comb, and honey, and making honey fast. We had an opportunity to examine the swarms thoroughly, and found all we opened healthy, with their queens busy at work.

We also saw this entire new feature to the apiarian, the Blue Pollen; it was of a brilliant Nazarene blue. We had never seen it before, and we shall be glad to hear from our apiarists, to know which of them have notice this kind of pollen in their hives. Mr. Warner, by his management, gives evidence of skill and success; his apiary is at the Cottage Gardens of Dr. McLean, at Mormon Slough, a pleasant and desirable place for the bee. The business of the apiary will be advantageous to the citizens of Stockton; each family should have a swarm of bees. We see no reason why Mr. Warner should not have complete success in his enterprise, which we most sincerely wish him.

THE GRAIN CROP OF 1880.—With a prospective crop, breadstuffs equal to three years' supply, we ask our farmers if it would not have been much better if they had taken our urgent counsel and sent their grain abroad last year? All shippers did well.

A State Agricultural Society has been organized in Oregon. W. H. Reeter has been elected President of the Society. The time for the opening of the first Fair was fixed for the second Tuesday in October, and the place, the grounds of the Linn county Society.

TO STOCK MEN.—To any person who wish to enter into the Stock Business, where there is a good chance for a permanent business, and a profitable one, and where all kinds of Good Stock would find ready sale, we call their attention to the Card which appears in our special columns, this week. It is, indeed, a rare chance. We know the parties and the location, and it is a chance rarely offered. We can give the needed particulars.

The Italian Bees Expected to Arrive.

Our esteemed friend Dr. Tegarden, of Marysville, has been active all his life in the advancement of the interest of his fellow-men. In early life, he was much engaged in railroad enterprises, having at one time been one of an Association of nine men who built fifty miles of railroad extending from Sandusky city to Mansfield, Ohio, the place of his residence. This road was of very great advantage to that section of country; not only was it of advantage to the towns of Sandusky city and Mansfield; but the agricultural part of the community was greatly benefited. Previous to the opening of this road, Wheat (one of the staple products of that country) sold for the pitiful sum of from thirty-one to thirty-seven cents a bushel. After the road was into operation, wheat brought from seventy-five cents to one dollar, and other things in proportion. It opened a direct outlet to the Eastern market, by way of Lake Erie, New York canal and Hudson river. After this road had been in operation for a few years, a jealousy grew up between the two great cities, Philadelphia and New York, the former conceiving that the latter was getting the advantage of them, by reaching into the now great State of Ohio, then almost a wilderness in many parts. It was then that the Philadelphia capitalists conceived the idea of constructing a railroad over great Alleghenies to Pittsburg. This being in anticipation, the people of Pittsburg, Mansfield, and intermediate points, determined to extend this great main trunk through to Mansfield; and eventually to reach still further, connecting the East with the great West, at Chicago and St. Louis. The Doctor was one of the first projectors of this road, and one of the Board of Directors, up to the time that he left for California. Mr. Robinson, of Pittsburg, was chosen President, under whose sagacious management the enterprise was put under way and built, and now is one of the best-paying roads in the United States. No one, who visits the old States, but travels on this road; if not from Philadelphia to Chicago and St. Louis, over some of the intermediate points. Most of the travel going west from New York, takes the railroad to Philadelphia and then to Pittsburg; and on west over this road to Chicago or St. Louis.

The Doctor is now benefiting the community in another way: he has undertaken another great enterprise. Having last fall visited and traveled over almost the entire length of both these railroads, in visiting his numerous friends, he has returned with the largest and finest lot of Honey-Bees that has been imported by any one, and has one of the finest Apiaries in the State.

Dr. Tegarden is expecting by the middle of May several hives of the Italian Bees. This will be the first importation of the kind ever made to the United States. These Bees come from Lombardy, near Lake Como, in Italy, where they have been known as a superior kind of Bees for two thousand years.

The Government of the United States have been making efforts to procure these Bees, for many years, without success; but would, in all probability, have succeeded before now, had not the relation between that country and others been disturbed. It has been reported several times within the last three or four months, that they had arrived; but turned out to be all fabulous reports, as they had not arrived up to 10th of March. The agent sent word that he was about to ship them, but the Department never gave any notice of their arrival.

These Bees, according to the writings of Huber, and other eminent Apianists, are greatly superior to the common Honey-Bee, in many particulars. Wagner states of them, that the points definitely established by his observations, are the following: 1st, the queen, if healthy, retains her proper fertility at least three or four years; 2d, the Italian Bee is more industrious and prolific than the common Bee, because in a most unfavorable season, when other colonies produce few swarms and little honey, his Italian Bees produced three swarms which filled their hives with comb, and, together with the parent-stock, laid up ample stores for winter; the latter yielding besides, a box well filled with honey. The three colonies were the best in his apiary. Spinola speaks of the more peaceable disposition of this Bee; and Columella, eighteen hundred years ago, had noticed the same peculiarity, describing it as "melior moribus;" both its superior industry and peaceableness have been noticed from the earliest ages.

The success of having introduced these Bees into California first, will be a great achievement; so great is the excitement, or rather anxiety, to have them, that several persons have left this State and gone to Washington, expecting to procure them as soon as they arrive. But, in this, we fear they are doomed to be disappointed, as we understand that, should the Government succeed in getting them, they will keep them for a year or two, at least, to propagate them.

Should these Bees arrive, as the Doctor confidently expects they will, having ordered them by his particular friend Mr. Travis, a merchant of Marysville, who has gone home to his native country on a visit and to lay in his stock of goods (Mr. Travis, also, expects to visit Italy, and letters received lately state that he will be here early in May), the Doctor can, by skillful management, convert his entire stock of common Bees into Italians in one year.

The Italian Bee surpasses the common Bee in almost every respect. A chief difficulty in a more general attention to Bee-culture, arises from the almost universal dread of the sting of this insect; many fear even the momentary pain which it inflicts, though no other unpleasant consequences follow. This, especially, deters ladies from engaging in the pursuit. All this can be avoided by getting the Italian Bees, which are by no means an irascible insect. It will sting only when it happens to be injured, when intentionally annoyed or when attacked by robbers.

We wish our friend, the Doctor, success in this great enterprise, and hope he will find ready sale for all he has to spare, at remunerating prices. The Doctor's place of residence is in the city of Marysville.

The Sabbath-Day in Stockton.

We spent the last Sabbath-day in Stockton. The remarkable quiet of that city on this day, reminded us of a "Sabbath-day in New England." The contrast between the calm and quiet order of Stockton, and the life, bustle, and busy scene of San Francisco is very great. In Stockton we could see but very few places of business open. This is as it should be. There should be "a day of rest." Man and beast both require it. God ordained it. Man needs it, and everything connected therewith thrives the better, the better it is observed.

We attended church in the new edifice recently erected by the Presbyterian Society, of which Rev. Mr. Anderson is pastor. This church is built in the Gothic style. The church is small, yet chaste and beautiful, the walls inside hard-finished, color light-drab, with ornamental archings and frescos, the wood-work imitation oak, and varnished, the seats crescent form nearly, and easy, rich crimson cushions, the aisles carpeted. The pastor's desk or pulpit, instead of being in the old form, is upon a new, simple, and much more beautiful plan, the whole platform of the pastor being an open space. In the centre a chaste but unique native marble table or more properly speaking, "tablette," being a table with heavy top, pedestal, and base, of blue and white-veined marble. On the right and left were two very rich pure white marble vases of the Italian style. These, with the rich carpets and handsome couch, were all in keeping, all in excellent taste. There was one feature more that attracted our vision. It was the rich collection of very choice fresh flowers that were arranged in the marble vases. There was not one inferior flower in the collection. They appeared to be selected for their holy office, emblems of God's house, for "flowers are like open bibles; they scatter by their beauty and fragrance, great truths, and become text-books for thinking minds." The arrangement of these bright flowers was so exquisitely done, so truly chaste, that none but an artist's hand divinely bent, could so well have perfected the work. Why should not these beautiful emblems be placed within our churches, and made objects of thought and themes of pulpit eloquence, as they were by the Savior, instead of sectarian or theological subjects, that are so unsavory and so hard to be understood. From whence came the parables of Jesus Christ? From the thrilling lessons which nature gives; and yet "without a parable spake he never a word." We ask in all sincerity, why the preachers of the gospel in California, so very seldom make the occupations and callings of California life, *texts for their sermons*? And is not the natural scenery of our wonderful land rich and fertile with texts for a sermon. California is a text-book for a world of preachers. But we did not intend to preach. We were interested in the general appearance of this church, and what we saw and heard; and if a deep and earnest attention to a speaker is an evidence of interest, then the pastor may be satisfied his people were interested. We learn this little society is now in quite a prosperous condition. A little while ago they were without a church, embarrassed, but by a united effort, with warm hearts and true christian zeal they commenced, and without parties, factions, or any undue means, they have by hard work, built and paid for their present church and furniture at a cost of about sixteen thousand dollars. The number of pews is eighty-four. The attendance, we noticed was excellent, and all the evidence before us was of a united and prosperous society. So should it ever be. Such labors always carry their reward with them.

JONES & HEWLETT'S AGRICULTURAL WAREHOUSE—STOCKTON.—This long-established Agricultural Store offers to the Farmers of San Joaquin section of country their advertisement of Reapers, Mowers and Harvesters' Implements, generally. Their supply is very large, as will be seen by their Card. The principal machines were made to their own order, having been manufactured with reference to our climate and our crops—made strong and durable, and of higher and better finish, so as to stand our dry seasons.

Messrs. Jones & Hewlett have an immense stock of General Merchandise, to which they call the special attention of their friends throughout this section of country. This House is so well known, and the liberal manner in which they do business, generally secure to them a very large share of the public patronage. Every purchaser of a Harvesting Implement should examine well and understand the kind of Grain he is to harvest in quantity, and secure to himself the very best Machine. Messrs. Jones & Hewlett have the most important Harvesting Implements imported, either at wholesale or at retail; they can sell them deliverable at San Francisco, and in that section, or in this county, as may be wanted.

THE WEBER HOUSE—STOCKTON.—The early-established Hotel so long known as the first large Hotel built in San Joaquin county, has recently passed into the hands of Messrs. Gorham & Sperry, gentlemen every way qualified to conduct a Public House with satisfaction and the approbation of a traveling public. The Weber House, named after Capt. Weber of Stockton, and built by him, is a very large and spacious Hotel. It has been recently entirely refitted and refurnished in modern style, and it is now most truly worthy of public patronage. By the interior arrangements of the House, there has been a careful attention given to the wants of its patrons, and their comfort and convenience particularly attended to. The traveling public will be highly pleased, whenever they stop at the Weber House; and to those who wish a quiet Happy Home, for a season, no better place can be found. The charges are now very moderate such as will be satisfactory to all.

THE NEW STOVE.—D. S. Lord & Co., on Battery street, are offering a new stove of more than ordinary value. It is a portable machine, can be placed on a table or box, has no funnel, needs no wood or coal, yet will bake bread in ten minutes, cook a breakfast in five minutes, and do a families' cooking at a cost of half dime an hour by means of a spirit-lamp. Go and see it, everybody, and you will buy one.

An Hour or Two among the Flowers.

A few weeks since we paid a visit to the Mission Dolores (we would rather call it the Mission d'Flores which would be more appropriate), and although our stay was brief, it was long enough to satisfy us that our citizens do not give themselves time enough to enjoy life among the healthful and beautiful things which surround us.

We visited Sonntag's Rose Gardens; and as we have always said, we have ample reasons to reiterate, Mr. Sonntag has no superior as a Cultivator of Roses. His collections are always excellent, over rare, and invariably in good health. Mr. Sonntag is now sending his Roses to various places for sale. We saw him among a group of three hundred Roses, at Sacramento, last week, as they were "going, going—gone." His three hundred Roses in a group in the morning, were scattered all over Sacramento before sun-set, giving texts, like open Bibles, of beauty and truth to those who appreciated the "lovely in Nature," while the energetic Grower was homeward bound, after a busy day's work.

The Garden of Messrs. Reimer & O'Hare was also a pleasant place to us, with thousands handsomely-grown Plants, both in their conservatories and in open ground. Every lover of choice plants can be suited. Reimer and O'Hare deserve the kind remembrance of our citizens; they are newly established, their grounds being newly designed, and by their good taste and industry handsomely laid out.

Our citizens can ride to their Garden for a trifle, purchase a handsome collection of Plants for a small sum, and thus encourage deserving men. We hope their place will be remembered by all purchasers.

The Golden Gate Nursery, W. C. Walker, Esq., so long and so well known, has now the finest lot of Evergreen-trees and Plants, large Ornamental Trees, and superb Roses, that can be found.

Persons desirous of richly embellishing their gardens should remember that, although the season for planting has far advanced, yet it is not too late, by any means, to make a garden; for Plants and Evergreen-trees, of all kinds, are kept growing in tubs and pots, so as to be readily and safely transplanted at any time. We earnestly advise every one, who can really appreciate the Confere of our State, to go to Walker's Garden. Our native Pines and other Evergreen-trees, also, the rare and beautiful Australian and Cape of Good Hope Plant, and, above all, the MAGNOLIA, that gorgeous plant that will so readily bloom with us—but why say more—of all these, we say, if our citizens would not regret, when too late, they should improve the present opportunity, and plant rare and beautiful Evergreens—types of Eternity and Truth.

"Oh, there are a thousand beautiful things,
In this fair world of ours;
But, oh, there's naught that can compare
With flowers—sweet flowers."

THE GLOBE FOUNDRY, STOCKTON.—This Foundry may truly be called one of the best and most complete Foundries in our State. We do not compare it with the immense foundries of San Francisco, (and there are excellent foundries in Sacramento, Marysville and San José, too); but we do say, it is one of the most complete.

Messrs. Keep & Briggs have taken pains to procure the most perfect machinery for their workmen, of which they have many, and also most excellent operatives in the casting-department; the molding-sand is of the best kind, as their smooth and perfect castings testify; their pattern-shop is large, and their patterns the most finished kind; their castings are, from the most minute, to the heavy piece of near 2000 pounds. At the present time, we noticed a great number of contracts for quartz-crushing (very fine work), a large quantity for Fremont's mills, and many other mills, castings in brass as well as iron done to order, a very long and powerful lathe for turning iron-work, for heavy shafting, also for boring iron work. At this Foundry are also made beautiful steam-engines; one we saw was running so smooth that its motion could scarcely be heard.

A model of a miniature engine, of delicate yet perfect construction, was set in motion; it only covered a space of about one foot, yet perfect in all its parts, and when in motion, made 600 to 800 revolutions in a minute; this was the work of a lad of fourteen years of age. It was made in Iowa and brought to this country two or three years ago, by the ingenious artist, Mr. Edward Cadle who is now a very skillful engineer and workman in this Foundry, yet quite a young man. Messrs. Keep & Briggs have from fifteen to twenty-five men employed at the different seasons of the year, and are turning out finished work. Messrs. K. & B. have a new motive-power, or rather a horse-power of new construction, working level on the ground; the horse attached and moving in a circle, while a double-action pump attached raises water at the rate of 7000 gallons an hour, or near 20,000 gallons a day.

At the Workshop connected with the Foundry, all kinds of work and repairing of machinery can be done. Every species of castings can be made to supply any piece wanted, so that Farmers, or Miners, need not be at the expense of going or sending to the Bay—they can have their work done at "Home."

FAMOUS DRAUGHT HORSES.—Those very large and famous draught stallions "Old Clyde" and "Young Clyde," which were imported into California by Mr. Bailey, and which attracted so much notice the last summer, especially "Old Clyde," when he arrived and was shown in San Francisco, are now standing in Stockton at the stables of Mr. Wolfe, just above the City Hall. Old Clyde is fourteen years old, but is now only in his prime, and is esteemed one of the best heavy draught stallions in the State. Young Clyde is five years old, and a perfect type of his sire. All who want remarkably heavy stock, should see these horses.

A lady said to her friend, who was about going into a store of a very excellent merchant who had paid all his notes: "Don't go into that store to buy anything; they haven't failed yet."

Singular Features in the Soil.

AS FOUND IN PROCESS OF WELL-BORING AT SUISON BAY. The first well named is only about a quarter of a mile from the second; and yet the various soils are quite different, as will be seen. We would like to ask naturalists what the little mouse was doing so deep "down below." We should have been pleased if Mr. Baxter had been certain as to the species of the mouse. It was probably a mole. We shall always be glad to receive such records.

WELLS BORED BY GEORGE M. BAXTER, ARTESIAN WELL-BORER, OF STOCKTON.

On Beale & Wheeler's Ranch, Suisun Bay: 9 feet soil, 30 feet quicksand, 1 foot gravel, quartz rock, limestone and sandstone, 2 feet yellow clay, 10 feet of tough blue clay, 4 feet black muck, 8 feet blue clay in flakes, 2 feet yellow clay, 14 feet blue clay. At the depth of 40 feet bored through the limb of a tree 4 inches in thickness. At the depth of 74 feet, took out the skeleton of a mouse and a large tooth of some animal not known. Depth of 80 feet.

R. S. Bates' well: 3 feet soil, 26 feet black muck, 23 feet soil, 23 feet soft blue clay, 1 foot hard yellow clay, 20 feet stiff blue clay, 14 feet stiff yellow clay. At the depth of 49 feet found burnt tules; at 59 feet a bed of tules 6 inches in thickness; at the depth of 104 feet found wood; tules from the top to the depth of 68 feet. Well 110 feet. Plenty of water.

The Esterly Reaper and Mower with Raker.

We saw this Reaper and Mower at Stockton surrounded by a group of farmers who were carefully examining it, and we were of course attracted to it. That it is entirely new and will work well, is admitted, for it has many friends. The agent gave us the following certificate for publication, which carries strong proof in its favor. The card of Mr. Stretch will be found in our columns, and the following contains names of prominent farmers and grain-growers in the great Petaluma District that will speak for itself:

PETALUMA, January 6, 1880.

MR. D. N. SHERBURNE—Dear Sir:—Your letter was received some time since, but we have delayed answering until now, that we might see the parties to whom we sold the Reapers. Every party to whom we sold one recommends them in the highest terms. We send you the following names which you are at liberty to use in any way you choose, in recommending Esterly's Reapers and Mowers. The parties have all used them and speak much in their praise, of the ease with which they are managed, the lightness of draft, etc.

IRVIN ROBERTSON, SAMSON WRIGHT,
ISAAC HASTINGS, REED & BAKER,
C. C. WHITE, JOSEPH WRIGHT,
JOHN POGGE, JAMES CLARK,
WM. H. WHITE, WINFIELD WRIGHT,
JOSEPH MILLS, MARTIN HUDSON,
JAS. S. F. WHITE, W. H. COOK,
THOS. BROWN, SILAS M. MARTIN.
You may use our names in recommending them if you wish.
D. N. SHERBURNE, Agent for California.

DAIRY STOCK FOR SALE.—Any person who is desirous of commencing the "dairy business," in earnest, and who may wish to procure good stock and a prosperous business at once, in a good location, with every reasonable assurance of a permanent increase of the same, and at the same time secure a good "home," in a good location, should look to the card in our journal relating to the same. We know the ranch well, have seen the stock, and know it is a good chance for an energetic and industrious man. The amount of hay that could be sold, beyond the wants of 150 head of stock, would pay the rent of the ranch and the expense of making it. This opportunity is a rare one, and those in want should look to it.

CALIFORNIA BLANKETS.—The San Francisco Woolen Factory is now sending out "home-made blankets" heavier, better and cheaper, than any class of such goods can be imported, and they are *woolen blankets*. It is a well-known fact that a large portion of the blankets of other States are part cotton. California raises her own wool and makes her own blankets, and every well-wisher to our State should patronize "home manufactures." Messrs. Heyneman & Pick, California street, are now selling them by the bale at low figures. Everybody should buy.

A PLEASANT RIDE IN THE SADDLE.—Now is the season for a pleasant ride in the saddle before your breakfast. Go to Main & Winchester's on Battery street, and buy one of their splendid "home-made" saddles, and then ride to the gardens at the Mission, purchase a fine collection of flowers [they will be sent home for you] and then ride home, and you will renovate your health and enjoy your breakfast, and will also recommend all your friends to go and buy Main & Winchester's saddles which carry one so easily.

THE second Overland Pony Express arrived in Carson City on Sunday morning last, and in this city on Monday, at 10 A. M. The time from St. Joseph, Mo., to Carson City was less than nine days, and to San Francisco, ten days one hour, and coming overland also from Sacramento, via Benicia and Martinez, to Oakland. The Express which left here last Friday carried a largely increased number of letters, and the one to leave to-day will doubtless take a still larger number. The Pony is becoming a great feature.

THE INDIANOLOGY OF CALIFORNIA.—A series of articles under this head, written by Mr. Alex. S. Taylor, of Monterey, is to course of publication in the CALIFORNIA FARMER, from which paper we shall make extracts next week of those portions which relate to the Indians of Santa Cruz county. The articles indicate the outlay of much labor in their preparation, and entitle Mr. Taylor to the gratitude of the people, which probably is about all the remuneration he will ever receive, it being unusual for California newspapers to pay any considerable sum for such contributions.—[Santa Cruz News.]

WHITEWASH of a superior quality is made by mixing one bushel of lime (slacked in hot water), one quart of salt, four pounds of sugar, two ounces tanglegrass, and two ounces saltpetre. Each ingredient dissolved in hot water, and the whole mixed while hot. This whitewash will neither wash nor rub off, and will last for years.

AN artist proposes to build a "Bachelor's Hall," which will differ from most houses in having no Eve.

STATE SUMMARY.

The overland coach on Monday last, from this city, took five through passengers and 5,587 letters.

A trout measuring twenty-four inches in length, is said to have been caught recently near Santa Cruz.

The Fair of the San Joaquin Agricultural Society is to commence the 25th day of August, 1880, and continue four days.

About a thousand head of beef cattle passed through San Jose, on Thursday, on the way from Los Angeles to San Francisco, so says the Reporter.

Large letters from New York announce that Colonel Wilson has shipped the remainder of the iron and rolling stock for the completion of the California Central Railroad, from Folsom to Marysville. The work on the line is advancing rapidly.

This past two weeks, says the Mariposa Gazette, Mr. D. W. Jones has averaged \$15 per day to the land, out of his claim on the head of Carson's Creek. This is the first season since '49 that water has been sufficiently abundant for mining purposes in that locality.

Capt. P. E. Connor, of Stockton, has been selected by the Committee of the Wagon-Road Meeting, to open the Big Tree Route to Washoe. He was to start his expedition on the 23d, and is confident of opening the route in one week, so that parties can go through on a comfortable trail.

Dr. W. H. Stone, who had been indicted by the Grand Jury of Sacramento, for the murder of Assemblyman Bell, was taken on habeas corpus before Judge Baldwin, of the Supreme Court, and admitted to bail in the sum of \$20,000. If this is not plainly a violation of law, the law has been wrongly interpreted heretofore.

The fruit crop in Tuolumne county, the Democratic Age has every reason to believe will be far more than sufficient to supply the wants of the people. So far the season has been propitious. The apricots, which in previous seasons were destroyed by early frosts, are thriving finely, being already as large as cherries.

In San Bernardino county crops look uncommonly promising. It is said that about eight thousand acres have been sown in barley, and nearly four thousand acres to wheat. About five hundred acres of vineyard have also been planted the present spring. The large peach orchards in San Bernardino bid fair to bear an abundant crop the present season.

The schedule of rates between San Francisco and New York, by the Pony Express, is, for ten words, \$6.00, as follows: San Francisco to Carson Valley, \$2; Pony Express to St. Joseph, \$2.40; St. Joseph to New York, \$2.50. For each additional five words from San Francisco to Carson Valley, 50c; for ten words, \$1; from St. Joseph to New York, each additional word, 14c.

The Marysville Democrat learns that during the late heavy rains which were so abundant in this section, the country along the east side of the Coast Range and west of the Sacramento River was scarcely sprinkled. It lies in Yolo and Colusa counties, and comprises nearly all the land lying between a line five miles distant from the Sacramento River and the Coast Range. And this has been the case for the past five or six years, so that the farmers there have been forced from their lands in search of others more favorably located.

Up in Sierra county, winter seems to linger. The La Porte Messenger of 21st inst. says: We had, evidently by way of variety, a "fair proportioned" snow storm on Thursday. The storm was introduced by rain, on Wednesday, and this kind of weather assumption becoming monotonous, the affair assumed a snowy shape, and down came the rascally snow, to the depth of about three inches. It has ceased, however; the weather is fine, and with only about two feet of snow on the ground, a clear sky and other bright indications, we may safely conclude that the season of storms is over now.

The following description of the Norwegian snow-shoe, which is the kind used in California, is given by the Sierra Citizen: The conveniences are made of light wood, four inches wide, very thin and about ten feet long; the foot is strapped in the middle, and the shoes are slid along without lifting the feet. The traveler carries a balance-pole, and when descending a hill, gets astride the pole and lets himself slide; if going too fast, he pulls back on the front end of the pole, which makes the other end dip into the snow. McFarland and company came six miles down Eureka Hill in 45 minutes—part of the way at a frightful rate.

The San Andreas Independent of the 21st inst. says: In this section of the State there will be, this year, a third more ground cultivated in the cereals than last year; and it is perhaps safe to estimate a third greater yield per acre. The increase in the yield, per acre, is attributable to the fact that cultivators are beginning better to understand the soil and climate with which they have to deal. They know better when to sow their grain; how to plow; and they have discovered the value and importance of manure. The grape and fruit crop will show a still larger increase than the cereals—at least in localities of no greater altitude than this place, Mokelumne Hill, or Angels. There is an increase over last year, of 100 per cent in bearing trees and vines, and the trees will be fuller of fruit. Peaches, plums, apricots, nectarines and cherries are now secure from any frosts which may reasonably be expected. Prices of fruit will be much lower than last year, but just as the prices decline the consumption will increase and the market for fruit enlarge.

A CHANGE.—A bill has just passed the Legislature, says the Sacramento Bee, amendatory of the present Homestead Law, which defines when the homestead shall be considered abandoned, and it also declares that in case of the death of husband or wife, the survivor shall inherit the property. It deprives the Supreme Court of the arbitrary power of ruling one way to-day and another way to-morrow, in these homestead cases, when the facts are exactly similar, as it has so often done at its caprice. The property set apart as such homestead shall be described and recorded, but the rights of present parties shall not be interfered with for one year, during which time they may come forward and have the homestead set apart under this law. It does not cut down the value of the property so exempt, but leaves it at \$5,000, as before. The object of the entire bill seems to be to make the homestead property more secure, and protect it from the whims of our Supreme Court. The law was well enough before, but our courts had so entangled it, as to make such action on the part of the Legislature necessary, in order to defend the people from a reckless Judiciary.

Los Angeles.—The Star of the 21st says: The business of sheep-shearing is now in full operation at Santa Catalina. Messrs. McDonald & Wilson have large droves, which are herding on the island—an excellent place for sheep, as it is free from all noxious animals. Mr. Howland and others are similarly engaged; the pasture is good, and the sheep are in fine condition. There are great numbers of wild goats on the island, but they are difficult to shoot. The movement in gold dust is becoming quite active. During the week about \$2,000 worth of it was purchased at one office, besides various amounts taken in trade, and is expected to increase. It is important, as being contributed by sections not heretofore considered as gold-producing. Quite a lively business is now doing in the fishery line, at the Island of Santa Catalina, in the way of catching sharks, which

at this season are found to visit the bays of the island in great numbers. They are not very small either, measuring from six to eight feet long. They are caught for the liver, which is tried out and the oil sent to San Francisco. It is supposed the fish comes there to deposit her eggs in the sand, as all are found to contain a large number, about the size of hen's eggs.

The large iron pipe of the Eureka Lake Ditch Company, at North San Juan, was completed last week, says the Hydraulic Press, and water introduced through the same to the diggings on San Juan Hill. Only an experimental head of about 150 inches was let on, but the full stream of 1,500 inches will soon be flowing, to the great joy of the miners and a dependent community. This amount of water in addition to the still larger quantity afforded by the Middle Yuba Canal, will cause many claims to be worked that are now lying idle, and insure more regular operations in all others. The pipe is 1,700 feet long, and 36 inches in diameter at the receiving end, tapering to 24 inches. It receives the water from a flume on the hillside south of town, is laid along the surface of said hill to a reservoir at its base, crosses the reservoir on trestles and boxes in, thence passes underground through the town on to the hill north of it, where the diggings are situated. The company had to pay pretty roundly for the right of way through gardens and building lots, and give permission besides for attachment of cocks to the pipe and free use of water for irrigating and domestic purposes. The pipe was manufactured in this town, by Francis Smith and J. B. Low. The cost of it we do not know, but it is probably about \$10,000 or \$12,000, which is said to be considerably less than a flume would have cost.

ANOTHER HEN STORY.—The San José Reporter alludes to the article we first published a few weeks ago, entitled "Curious fancy of a Hen," and rather "lays over" us, as follows:

A Cuck Hen.—An anecdote of a hen making her nest in the forks of a tree, and the watchful care that was taken of her, has been going around lately. We have a fowl case that knocks it into a cocked hat. Two years ago, we had a hen that took it into her head to prospect a crow's nest, away up in a live-oak tree, at least forty feet from the ground; liking the prospect, she squatted there and in due time commenced her incubation. Not exactly approving her mode of proceeding, we tried to eject her from possession of her nest, but it was of no use, she had got too much ahead of us, and we had to wait the result, of course expecting a terrible chickenstrophe. It came; but not in the manner we expected. On returning home one day, we found our aspiring hen clucking around the yard with seven fine healthy chickens about her. How she got them down is a mystery, but there they were, without the slightest sign of damage occasioned by their frightful descent. Whether there were any eggs that she did not hatch, or any dead chickens in the nest, we never discovered. These chickens were quite a curiosity, and we thought much of them; but of course, as is usual in such cases, an accident happened to them. One was smashed by the clumsy hoof of a horse, and one fine morning five others were devoured by a gluttonous and highly-flavored skunk. The remaining chick that survived, thrived and grew into a fine pullet, and is now a respectable and matronly member of the poultry community of this valley.

The bill to prevent the adulteration of liquors having passed both branches of the Legislature and received the Governor's signature, is now a law of the State.

A Desirable Opportunity for a Stock-Man.—Any good and experienced FARMER and STOCK-RAISER, who has a cash capital of \$500 to \$10,000, and wishes to venture with a person who is already established upon a good farm and well stocked, may hear of a chance where such a party can be found, whose object it is to enlarge the business by adding still more stock, and of the best blood. No person need apply who has not the requisite CASH CAPITAL and can produce the best references, as the parties already engaged are of the most respectable character and standing, and wish no connection with parties who have not the best qualifications. Inquire of the Editor of the FARMER; or address W. H., at the FARMER Office. 10-3m

A FINE CHANCE FOR A DAIRYMAN.

THE ADVERTISER WOULD LIKE TO SELL ONE HUNDRED FINE DAIRY COWS, with a good Milk Business. Also, would sell

A Ranch of 500 Acres of Good Land.

situated two miles from an interior city. The Ranch will keep 150 head of stock and cut 500 tons of Hay, at any ordinary season. The Ranch is well fenced. Good HOUSE, CORRALS, MILKING UTENSILS, MILK WAGONS, HORSES, etc. Will sell the Cows and Milk Business and lease the Ranch, or will sell all together, on reasonable terms. Address G. W. P., California Farmer Office. 10-3m

HERALD THE FOURTH.

THIS CELEBRATED BULL, IMPORTED by JOHN D. PATTERSON, Esq., will stand for the season, at the Farm of the undersigned, Vallejo. The best of Pasture provided without charge. Herald is undoubtedly the finest Bull in the State, and second to none in the Union. For pedigree, see Stock Book. Cows may be sent per steamer Guadalupe, and will be received by the herdsmen at the farm in Vallejo. Terms, \$50 the season. For further particulars, apply to B. F. FISH, Blackhawk Stables, San Francisco; or the undersigned, at Vallejo. 10 JOHN B. FRISBIE.

GLOBE FOUNDRY AND MACHINE-SHOP, STOCKTON, CALIFORNIA.

THE UNDERSIGNED, PROPRIETOR, WOULD MOST respectfully call the attention of all parties who are in want of MACHINERY, IRON OR BRASS CASTINGS of any description, to the above works, as we are now prepared to fill orders for all kinds of Machinery at short notice.

Steam-Engines; Quartz, Saw and Grist-Mill Irons; Building Castings; Iron Fencing; Balcony Railing; Horse-Powers; Mining Pumps; Cast-Iron Wagon-Hubs, &c., manufactured from the most improved Patterns. CAR WHEELS, DERRICK-IRONS, FORGE-BACKS, PIPE AND CAST BOXES. Also, a complete assortment of AGRICULTURAL CASTINGS, which is warranted equal in quality to any imported or manufactured in the State. HIDE-POWERS, with DOUBLE-ACROSS FORGE-PISTONS ATTACHED, suitable for irrigating and mining purposes, to which we invite SPECIAL ATTENTION.

Jobbing Executed with Neatness and Dispatch. We invite patronage and will guarantee satisfaction. SAN FRANCISCO OFFICE. 10

KEEP & DRIGGS, Purchased at the Highest Market Rates. ...BY... GEORGE HOWES & CO., 135 Sansome street.

WOOL!

...BY... GEORGE HOWES & CO., 135 Sansome street.

WEBER HOUSE,

STOCKTON, CALIFORNIA.

THE UNDERSIGNED HAVE LEASED THE ABOVE well-known House, and beg leave to inform the public that they intend to make it in every respect a

FIRST-CLASS HOTEL.

The house has been thoroughly renovated and newly furnished—the Sleeping Rooms having the new Spring and Hair Mattresses. Special care will always be given to have the

SLEEPING ROOMS AND BEDS

in the most perfect and healthy order. The Table will be supplied with all the luxuries of the season. The Reading Room and Saloon will be supplied with the Newspapers of the day and all the needed comforts.

The prices at this Hotel will always meet the exigencies of the times.

The central location of the WEBER HOUSE, and the earnest endeavors of the proprietors to make it a First-Class Hotel, it is hoped will secure a liberal share of public patronage.

GORHAM & SPERRY, Proprietors.

HALL'S THRASHERS,

8 & 10-Horse Power—with Trucks;

MADE EXPRESSLY FOR THIS MARKET, TO OUR order—much stronger and of a greater capacity for cleaning than any other Machine, in proportion to its size, in this State.

For sale by JONES & HEWLETT, STOCKTON.

Deliverable in San Francisco, or shipped to any point required.

COMBINED MOWER & REAPER

Made by WARDER & CHILD, of Springfield, Ohio.

—ALSO—MANNY'S, McCORMICK'S, HUSSEY'S, SEYMOUR and MORGAN'S Patents of 1855, 1857 and 1859; together with complete sets of Extra Castings for all kinds of Reapers and Thrashers. With a large and full assortment of

Agricultural Tools, Hardware,

and every article suitable to the wants of the Farmer; all of which are of our own importation, direct from Boston and New York.

For sale at the lowest market rates.

JONES & HEWLETT.

I'VE SEEN THEM!

THE FARMERS APPROVE THEM!

ESTERLY'S PATENT COMBINED

SELF-RAKING REAPER AND MOWER,

IMPROVED FOR 1880,

AND FOR SALE IN STOCKTON.

THE PROPRIETOR TAKES PLEASURE IN OFFER-

ing a Combined Self-Raking Reaper and Mower to the public, which he is confident will give entire satisfaction to all who use it, all the usual objections being entirely obviated, which are:

1. Too heavy draught.
2. Trouble and expense of having two separate silos—one for reaping and one for mowing.
3. The unsteadiness—that is to say, they cannot be raised and lowered while in operation.
4. The Rake and Platform being stationary fixtures, the relative position cannot be changed.
5. They can only be used as Self-Rakers. In case of accident much time is lost.

All these Objections are Obviated in my Machine.

1. The draught is lighter than any Hand-Raker.
2. Only one Sicke-Sill is used for reaping and mowing.
3. It is perfectly adjustable, as will be seen by reference to the cut; any boy can raise and lower it while in motion.
4. The Rake and Platform are not stationary fixtures, but can be adjusted to suit the height you wish to cut, which is very important.
5. Instead of being only a Self-Raker, it can be changed, in case of accident of any kind, to five mowers, and make a much better Hand-Raker than it was before the Self-Raking Attachment was put on.

PRICES WILL BE LOW, TO SUIT THE TIMES.

The Machines are set up in the lot opposite the Weber House, Stockton. For sale by 10-3m J. N. STRETEL, Agent for San Joaquin County.

PHILIPS' SELF-REGULATING WIND POWER.

WE CHALLENGE A COMPARISON WITH ALL OTHER MILLS IN THE STATE.

This power is in truth what it certifies to be, a PERFECT SELF-REGULATING WIND POWER. It has been tested and proved for the last four years in the Eastern States in driving Grist Mills, Tanneries, Turning Shops, Circular Saws, Churning and Pumping, and it has taken the premiums at all the Agricultural and Mechanical Fairs wherever introduced, and is universally pronounced superior to anything of the kind yet invented. The durability, simplicity and cheapness of it must recommend it to every observer. We call attention to these beautiful Wind-mills in Benicia. They are true mills. The regulating power is simply the force of the wind acting on a wind-lever, which adjusts the wings exactly to the force of the wind, so that the stronger the wind blows the safer and steadier the mill becomes, presenting to a sudden gust nothing but sharp edges to its force. But its crowning excellence over all other wind power is, that it not only regulates itself, but it can be set to regulate itself to any desired speed, and that by a person so simple that a child can manage it. Having the FARTHER NORTH for the States on the Pacific, we are now prepared to furnish them at prices according to the size and power required. County rights for sale—also Oregon and Washington.

The prices at the shop for those adapted to agricultural and mechanical purposes, are as follows: 3 feet diameter, with 35 feet wind surface, \$125 11 " " " 48 " " " 200 14 " " " 50 " " " 250 We are also prepared to Manufacture and Repair all kinds of Agricultural or other Machinery, near Steamboat Wharf, Benicia.

HYDE & BROTHER.

A nice lot of Laying Hens—A very choice lot of Poultry of the Bantam, Pouter and Black Spanish Fowls, can be had if applied for immediately at the Farmer Office. 9d

J. D. ARTHUR & SON,

NOW OFFER

THE VERY BEST ASSORTMENT OF

Agricultural Implements

IN THIS CITY.

200 of the Celebrated

REAPERS

AND

COMBINED MACHINES,

Made by WARDER & CHILD, of Springfield, Ohio, expressly for this market, with all the improvements for 1880. The space to rake the grain is adapted to the largest growth, which most of the Reapers in use are not. The Platform is level, while the raker stands upright, thereby working with ease. The Machine is light and strong; no breakage from any source reported last season. Out of Four Hundred in use, not twenty dollars' worth of extras of any kind were called for. Without exception the above Reapers are the best machines on this coast.

PITT'S THRASHERS,

Made with extra care, with Improvements, expressly to our order, by Nourse, Mason & Co., Massachusetts.

HILL'S THRASHERS,

Got up to suit the wants of this market as to strength and durability; also, four and six-horse Thrashers, all of the best make.

Horse-Powers, Extra Castings for Thrashers,

With a large and full assortment of

ALL KINDS OF AGRICULTURAL IMPLEMENTS,

FOR SALE

As LOW as can be Purchased in this City.

Ladies' Department.

LIZZIE WILEY WARREN, M. D., EDITRESS.

Thoughts from "The Powers and Duties of Woman," by Horace Mann.

ANYTHING we may write, or have written, or any contributor, cannot have so good or great an influence as what has emanated from the pen of this late writer, who has gone to his reward, such as few will inherit, according to the law of our Saviour: "for great is his reward in heaven." As an educator, he is not excelled in the United States. His great labors, his herculean efforts to advance the cause of education during the years he officiated as Secretary of the Board of Education of Massachusetts, gave him a name and fame that will ever be bright in the annals of Education. So great was his influence in the cause of progressive education, that he was called from his field of labor in Massachusetts, to use his noble talents in the halls of Congress. Few men have won so pure a fame in so brief a time as did Horace Mann as a legislator. His next great work and duty was the Presidency of Antioch College. As a man, as an educator, and as President of Antioch College, he avowed himself a "woman's rights man," in the noblest sense of the word. He was such a friend and advocate as every true woman might well be proud of. It was his great aim to educate, and thereby elevate woman. This great man, with an eye of prescience saw suffering humanity, and sought the causes that he might relieve it. As a scientific physiologist he believed that woman rightly educated, fitted and qualified for all the noble duties of wife and mother, or for any calling for which she is capacitated, would be the surest way to relieve suffering humanity. Horace Mann inspired his pupils with the power of thought. Words, as they fell from his lips, seemed like inspiration, and were remembered. They were engraven on the hearts of his pupils. It was under the teachings of this great and good man that the light and beauty and truth of the science of physiology burst upon our own soul. Oh, well do we remember when that light came! We had been detained from "chapel exercises" by reason of illness. On Monday morning called to offer our excuse to the President. He said: "We can excuse your absence from chapel, but we cannot excuse your being sick. THAT IS A SIN WE CANNOT FORGIVE! YOU MUST SUFFER THE PENALTY OF EVERY VIOLATION OF THE LAWS OF HEALTH! We shall ever remember the explanation of that emphatic sentence thus pronounced against us. It was in such lessons as this, in the expression of the great thoughts of Horace Mann to his pupils, in his bland and social way, that made him so successful and celebrated as a teacher, and so affectionately remembered by all who came within his influence.

In a letter received from a fellow-pupil at the College, we find the following account of his death, and the latter which shone around him when the lamp of this life was extinguished:

"Antioch College has lost its President, the great Horace Mann. At the closing of his year's labors his strength suddenly gave way, and after a sickness of some two weeks (his disease assuming the form of putrid typhoid) he died! This was in vacation; and to such of the students as were here, and who gathered round his bed-side, he gave a splendid dying oration, exhorting all to live for good and noble purposes. Never was he more earnest or more eloquent; and his dying words were the best possible commentary on his life. He lived for the truth, and he died for it!"

We can pay no greater tribute to his memory than to repeat the invaluable truths as published in that world-renowned lecture on the Powers and Duties of Woman, from which we take the following extracts:

"That injustice in woman's lot which demands the strictest reform that ingenuity can devise, or energy execute, pertains to her education. The female has every natural right to a full and complete mental development which belongs to the other sex. As compared with man, I believe she would reward all labors and expenditures for her thorough education with quite as ample returns of beauty, utility and power. Yet mark the amazing contrast, as to the provision made for the education of the two sexes, in establishments, outlay, apparatus and all the means of culture. I speak of this republican country; for, in many of the best parts of Europe, the education of the daughters of the common people, beyond the mere rudiments, is yet an undiscovered idea. In the early history of Massachusetts, and long after provision for public free schools had been made, it was a common thing for boys only to attend them. In many towns, the first improvement in this respect consisted in smuggling in the girls, perhaps for an hour a day, after the boys had recited their lessons and gone home. Even then, all attainments, beyond mere reading and writing, were deemed a kind of contraband article for girls. In what is now one of the principal cities of Massachusetts, when some adventurous Columbus of a schoolmaster proposed to carry a class of girls through the streets, the fathers of the town, in the shape of a school-committee, gravely denied that the female mind was capable of understanding them! I cite these instances from Massachusetts history, because, however far below the true standard public sentiment may have been among us, it has always been far lower everywhere else. Our late improvements in education, opening an avenue for both sexes to the higher branches of mathematics and philosophy, have demonstrated that the female mind has a quickness, a subtlety, an intuition in regard to many abstract studies, which is not surpassed by the other sex.

"Even now, in the public schools of our Atlantic cities, the girls' circle of studies is far more limited than the boys'. In Boston, a four years' course in a Latin or High School is open to the boys, while the only opportunity conferred upon the girls, as an equivalent, is the privilege of remaining an additional year in the grammar schools. The city of New York has established a most admirable institution, called the Free Academy, whose course of study is almost that of a first-class college in extent, and far superior to many of our colleges in useful adaptation to the business of life; but the girls of the city have no free school, nor an equivalent for it. The same unjustifiable difference prevails in the city of Philadelphia.

"Passing from public schools to academies, everybody knows that girls or young men compose the great majority of their pupils; and when both sexes are found in the same seminary, the general course of studies pursued by the male is far more extended than that pursued by the female sex.

"Rising from academies to colleges, with two or three very modern exceptions, we lose sight of the female portion of the race altogether. From an examination of their catalogues, or a visit to their halls, we should infer that woman had been expatriated from creation, or had never belonged to it. Neither as student nor as teacher does she appear on academic rolls, or in academic chairs. In those clusters of costly edifices, in those libraries where the wisdom of the world has been garnered, in those cabinets which mimic the great kingdoms of nature, in that beautiful apparatus, and in those laboratories where the stupendous operations of the physical laws are imitated and explained, woman has no part nor lot. For her superior education, she often has no resource but the circulating library of novels, which will reach the highest dignity and utility of which it is capable when it stops circulating. Yet among all the deeds of men, and the wonderful works of God, there are but few things which the mind of woman is not as capable of exploring and explaining as that of man; and to balance an exceptional inferiority, there are other things in which she is his superior. See Mrs. Somerville mastering science by science, and comprehending world after world, until her own mind becomes, as it were, a transcript of the universe; and then writing out with a lucidity which can be borrowed only from nature's light, the glorious harmonies and adaptations of the Creator's works, until in perusing her pages, we seem to hear, even with the natural ear, those halcyon voices of praise to His name with which all nature is vocal; while, at the same time she attends to all her domestic concerns, and makes her own house for order, simplicity and neatness, like the grand machinery of nature she so loves to contemplate! There is a lady now living in the vicinity of Boston, who, amid the cares and duties of her own household, has fitted many a young man for the colleges which neither she nor any of her own sex was ever allowed to enter; and for more than twenty years Harvard University was accustomed to rusticate its offending students to her roof, that they might improve their learning and mend their manners; and she, while kneading her bread or playing her needle, and without taking a book in her hand, could instruct them in the dark passages of Grecian and Roman classics, and make their sojourn with her so redolent of a delightful home, that the offenders were fain to bless the offense which had brought upon them such grateful punishment."

"Everybody knows that what are called the three learned professions, Law, Physic, and Divinity, monopolize a vast proportion of all the honors and emoluments of society. These professions severally represent the property and the civil and personal rights of mankind, their health, and their moral and religious well-being. And what costly institutions are founded and endowed to prepare young men for a career of eminence in these highest fields of dignity, beneficence and renown! What Andovers, Windsors, Newtons, and Mendons, sparkle over the land, to attract and instruct the young theologian! What Pittsfields, Philadelphias, and Louisvilles, for the medical student; while Litchfield and Cambridge are known wherever the common law bears rule! Here are other edifices, other libraries, cabinets and museums; other faculties and professorships, for whose honorable duties the talent and learning of the world are sifted, and their choicest specimens culled. And yet, with two inconsiderable exceptions in the medical department, and those of recent origin, what trace of fellowship or partnership has woman in them all? Talent, genius, learning, skill, and the holiest desires to bless the world by their use, if enshrined in a woman's form, can speak no "Open Sesame" that will unbar these professional doors. The Gog and Magog of monopoly, in the form of custom and prejudice, stand at their portals to guard and repel. And what equivalent fields of honorable and lucrative occupation shall she enter? What coordinate or collateral spheres are open to her, where, as the reward of lofty powers and noble exertions, she may win the prizes of utility, independence and renown? Not one! Nor one! The whole domain of civil and social vocations, which are at once elevated and meritorious, which presuppose great mental powers and brilliant attainments, and give invitation and career for their display, has been seized upon by men and parceled out among themselves, by themselves, like a conquered country among the conquerors, or spoils among robbers.

"Is it not still more extraordinary that, while we continually hear of cases where wealthy women make donations in their life-time, or leave legacies at their death, for the education of young men, we may challenge all the records of American munificence for half-a-dozen cases where women have made any gift or any bequest worth naming, for the education of their own sex?"

"Let the lord of creation look upon this inequitable that, is, this iniquitous inequality, in the means provided for the education of the sexes, from the common school to the university and the professional school, and let blushes of shame be his only 'blushing honors,' and words of repentance his only eloquence, and reform his only action, until reparation be made! Why should the sister be debarred from the generous education of the brother? he exploring the glorious fields of science, while she is mewed up to French verbs and Italian canzonettes! Is the wife to be not the lady, but the lackey of the husband, her mind shut out by ignorance from communion with his mind, and her heart left to rely wholly upon impulse, instead of knowledge, for its interpretations of duty! For what grander or holier purpose under heaven does a human being need knowledge than for the training of childhood. Why should the mother be less replenished with knowledge than the father, or less disciplined in her faculties for the investigation of truth? Does the preparation of soils for the production of crops require more science than the change of those crops into such forms of food and raiment as will best promote health, strength, beauty and longevity; or do the 'young' of the stable and the sheepfold need a more intelligent nurture than the immortal plants of the nursery; and, of all our instincts, what instinct can profit more by a wise culture than the maternal? If mathematical studies clip the wings of a too adventurous fancy, and make imagination sober, who needs their corrective influence so much as those who are charged with possessing a too adventurous fancy, and a less temperate imagination? If classical studies discipline the mind, as their advocates so confidently assert, why should half the human race be debarred from the benefits of this discipline? The ability to judge of evidence, to balance probabilities, and to foresee future results from present facts, comes, and only can come, from a generous cultivation of all the faculties; and does woman any less than man need this ability for her safe-

"In saying that woman has been debarred from these institutions which hold a monopoly of the higher walks of literature and science, I gratefully make the admitted exception. At Oberlin, in Ohio, and at McGrawville and Lima, in New York, are colleges whose curriculum of studies equals those of most of the New England or European colleges, where young ladies are carried through the whole course. And at Yellow Springs, Green County, Ohio, an institution called 'Antioch College' is about to be opened, where equal opportunities of education are to be afforded to both sexes, and where ladies have been appointed as one of the Professors. In contrast with this, it may be mentioned that during the winter of 1852-3, some young ladies belonging to one of the Massachusetts Normal Schools, teachers and those preparing themselves to become teachers, made application to the authorities of Harvard University for permission to attend the lectures by a gentleman of their own party, to attend the lectures of one of the Professors in the College, their object being to qualify themselves to teach a science they could not elsewhere acquire, and were refused.

conduct through all exposures and perils of life? The rulers of our country need knowledge (God only knows how much they need it!), but mothers need it more; for they determine, to a great extent, the very capacity of the rulers' minds to acquire knowledge and to apply it. The untold wealth which nature yet hides in her dark crypts and secret recesses, or waits to be revealed by the inspirations of that genius whose infant wings it is the mother's office to plume. The nearer approach of the race to God, through religious affections and an obedient life,—the consentaneousness of our spirits with His spirit, and therefore the resemblance of earth to heaven, can never come to pass, until intelligent pious mothers shall teach love to God and love to man as the cradle song of every household.

"My friends, let the truth be told, and let its rebuke be heeded, that human reason seeks in vain for a reason why there should be this difference of patrician and plebeian—that is, of education and non-education, between the sexes. Hasten to cease from this wrong, so long inflicted, and then hasten to repair it. Do for the female child what the queenly daughter of Pharaoh did for Moses, pluck her from ruin, from the evils of ignorance and the temptations of a life-long dependence, more dreadful than monsters of the Nile; and, for opportunities to know her duty, and for incitements and knowledge to perform it, place her in kings' houses, or what is better in republican schoolhouses!

"I hold it as an axiom, that the first step which a community, desiring most rapidly and certainly to improve itself, is bound to take, is to improve the physical, mental and moral condition of its daughters. It is the fault of man that woman has yet done so little for the advancement of the race. Man has made great inventions and discoveries, but his crowning achievement will consist in enlisting the divinely-adapted energies of woman in the work of regenerating the world. He will thus give to the forces of civilization a power superior to his own. Nay, more; he will add a power which is the necessary complement of his own, one without which his own is comparatively barren of good fruits; and the cooperation of the two will have ten-fold more efficiency than the efforts of either while heretofore its natural coworker. When human iniquity had ruined the Old World, when not one spot was left where civil and religious liberty was allowed to exist, or where the faculties of man could grow up into manhood, or of woman into womanhood, then, in the Providence of God, Columbus discovered a New World, where the fortunes of the race could be commenced anew, and where the fires of civil and sacerdotal despotism, which had been kindled for the destruction of human rights, should thenceforth blaze only as beacon-lights for their safety. No less an epoch and a salvation will it be in the history of the race, if, at this critical and emergent hour, when our people and our institutions are rapidly filling up the waste places of this great continent, we can enlist the beneficent energies of woman in the mighty work of amelioration and of progress which now impends.

"To foretell the different walks of usefulness which will fall to the several lot of the sexes when woman takes her proper rank in the labors of the world, to predict the changes in municipal law which will assuredly accompany her education and advancement, or to portray the beauties of the new earth when her more equitable refinement and taste shall adorn it; these things it is not given to human prescience to reveal. They are like discoveries of great natural laws, which cannot be foretold; for foretelling is discovering, and the prophet is lost in the marvel-worker. Still, there are some points, lying in immediate proximity to us, which we can now discover and decide; and apparent obstacles in the distance will vanish as we approach them. As it oftentimes happens, in descending our mighty western rivers, a terrific wall of mountains appears to be stretched across our course and to frown denial to our progress; yet, when we seem about to be dashed against these barriers, the beautiful meanderings of the stream unbar gate after gate for our own passage, until the broad ocean at last opens upon our view; so to the traveler in the heavenly pathway, or to the seeker after human good, the mountains of obstruction bow down before him, or stand aside from his path, bidding him pass on to his celestial goal, and only rearing their lofty heads behind him to prove how far he has left them in the distance, in his victorious career."

MRS. LIZZIE WILEY WARREN, M. D., ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of doctoring the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate diseases are more deleterious to the human organization than the diseases themselves; therefore she dispenses with the use of drugs, relying on the curative power within the living organism, and the application of a certain law, which recognizes hitherto unexplored and self-perpetuating elements which are the functions of life, electricity are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and self-perpetuating element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and safe, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

Mrs. Warren makes use of the New and Highly Improved BOSTON ELECTRO-MAGNETIC BATTERY, one of the MOST PERFECT Electrical Machines on this Coast.

MRS. ANNIE L. AVERY, HOMEOPATHIC PHYSICIAN, Residence, 249 Pacific Street (two doors from Stockton Street), SAN FRANCISCO.

Special attention paid to diseases of women and children.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale. Apply at her residence, corner of Mason and Pacific streets.

TO GRAPE PLANTERS.

As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planting, will so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them at a much increased value. May we not expect this from all planters of the vine every where?

Valuable Patents.—We call the attention of parties who are interested in PATENT RIGHTS to those advertised by us. Each of them will secure a very handsome sum to any person of enterprise and energy. The models and rights can be shown and explained, by calling at our office, when the price and terms will be made known.

EDUCATIONAL.

The Bascom Institute, San Jose.—The Sum-
mer session of the Bascom Female Institute, will commence
on Wednesday, 27th July.

MRS. R. C. HAMMOND, Principal.

ACADEMY OF NOTRE DAME,
SAN JOSE.

THE NINTH ANNUAL SESSION of this Institution will
commence on THURSDAY, August 18th.

The course of instruction embraces all the branches of a
polite and useful education. Its aim is to form young ladies to
virtue, accustom them to early habits of order and economy,
and to cultivate in them those qualities which render virtue
both amiable and attractive.

TERMS:
Entrance, to be paid but once.....\$15
Board and Tuition, per session.....35
Washing.....25
Physician's fees per session (unless it be preferred to pay
the bill in case of sickness).....10
Piano, Vocal Music, Drawing and Painting form extra
charges, but there is none for the French, Spanish or German
Languages, nor for Plain Sewing and Fancy Needlework.
Payments are to be made half a session in advance, and no
deduction will be made for half a session commenced, except
in case of sickness.

Pupils will find it much to their advantage to be present
at the opening of the session.

There is a Day School attached to the Academy for the con-
venience of those parents in the neighborhood who may prefer
that their children should return home every day.

TERMS:
Tuition, including the branches specified.....\$4
Senior Class, per month.....6
Junior Class, per month.....6
Letters may be addressed to the

SUPERIORESS,
Academy of Notre Dame, San Jose.

SANTA CLARA COLLEGE.

THE NINTH ANNUAL SESSION OF THIS IN-
stitution will commence on MONDAY, August 22d.

The plan of instruction embraces two regular Courses—
the Classical and the Commercial, besides a Preparatory
Department.

TERMS:
Entrance, to be paid but once.....\$15
Board and Tuition, per session.....35
Washing and mending of articles washed, per ses-
sion.....45
Stationery, per session.....10
Medical attendance and medicines, (unless it be
preferred to pay the bill in case of sickness) per
session.....10
Vacations, if spent at the College.....25
N. B.—When there are more than two brothers, each
one over two pays only half price.

Use of Instruments in Chemistry and Natural Philoso-
phy, Vocal Music, Piano, Violin, and Drawing, form
extra charges. School Books are furnished at store
prices. No extra charge for any of the languages.
Payments to be made half a session in advance.

For further information apply to the President of
Santa Clara College, Santa Clara, Cal., or to Rev. A.
Marshall, S. J., St. Ignace Church, Market street, be-
tween Fourth and Fifth, San Francisco.

THE COLLEGIATE INSTITUTE,
AT BENICIA.

THE Next Semi-annual Session will commence
Jan. 10th, 1860. Parents are requested to send their
sons to that they may be present, if possible, at the opening
of the session.

For full particulars in regard to prices, teachers, &c., ad-
dress the Principal for a circular.

C. J. FLATT, Principal.

FIRST PREMIUM AGAIN!

BEING THE

SEVENTH TIME RECEIVED

Against All Competitors.

R. H. VANCE,

Corner of Montgomery and Sacramento Sts.,
SAN FRANCISCO.

Having again received the FIRST PREMIUM
awarded at the State Fair for the BEST AMBROTYPES
and PHOTOGRAPHS, it is guaranteed that all who
favor me with a call are sure to obtain better work than
can be produced at any other rooms in the State. I
would say to my patrons that I am now producing better
work than ever, at much REDUCED PRICES, to com-
form to the times.

Having reduced my prices more than 30 per cent, so
one need hereafter go to second-rate establishments on
account of price.

Instructions given in the art, and stock furnished.
Having over \$20,000 worth of Cameras, Glass, Plates,
Cases, and Chemicals, on hand and on the way, I shall
hereafter dispose of them at about New York prices.

JOURNAL OF USEFUL SCIENCES

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MAY 4, 1880.

NUMBER 11.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 139 Washington street (opposite), San Francisco.

Terms—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12½ cents a number, or \$5 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

Letter from Clear Lake.

EDITOR FARMER: Thinking a few words from this part of the country would interest some of your readers I embrace this opportunity. We have had bountiful rains and the future looks favorable. It commenced raining the 27th of March, and rained nearly two weeks, and the ground was soaked and resaturated. The weather cleared up with a frost, but did not injure the fruit, as there are to my knowledge, no orchards that have been planted and taken care of long enough to be in bearing. The people begin to see that something besides corn-feed will grow here, and several small orchards of good varieties have been planted this spring, and the prospect is good for many more next spring. We have good titles to our land, as we purchase from government, and need not fear to improve our farms as fast as circumstances and means will admit. It has been settled here but a short time, and but little has been done except stock-raising and making butter and cheese. More grain has been sown this season than usual, and bids fair for a good crop. Considerable land has been fenced for hay, as stock-men see that it is better to have good stock than no hay and poor cattle.

The people about Clear Lake labor under several disadvantages. There is no mill suitable for making good flour in the country, and most of the flour comes from Sacramento and Napa, sixty to one hundred miles distant, and over a mountain road at that. All the mill we have for grinding grain is a small run of stones, without a smut-machine, and runs only at intervals. Clear Lake country produces good wheat and corn, which would be raised in considerable quantities if there were a mill to grind it. A good share of the grain that has been raised here has been harvested by cattle and hogs, instead of being made into flour and meal, as it should have been. Cache Creek, the outlet of Clear Lake, affords some good mill-sites, and good clear water enough to keep the mill going the year round, if need be. A good flour-mill would build up the country very much, and I think would be remunerative to the owner. There is no saw-mill sufficient to produce what lumber we need. Pine and fir timber in abundance may be found on the hills near Lower Lake, and could be made into lumber at a good profit. I think good strong portable steam-mills would be less expensive and more profitable to owners, as it would require but little hauling of logs. If this should meet the eye of any who wish to engage in manufacturing lumber or building a flour-mill, they might do well to come and see for themselves. One thing is certain; a good flour-mill would be a great advantage to the whole Clear Lake country, for it is much better to grow our grain and have our flour made at home than to haul it from a distance over a rough road.

Clear Lake is a very healthy place, and on some accounts desirable to live in. It is some distance from market, but time and improvements will make that all right. There are a great many fish in the lake, and all the streams emptying into it are swarming with them. The Digger Indian gets fat, and the white man catches all the fish he wants, with very little trouble. Feed is good and stock doing well, but some of it had a hard time during the winter. A little pinching sometimes makes people a little more economical, and they will provide better for themselves, and look out for the comfort of their stock.

Respectfully, O. N. CADWELL.
Lower Lake, Napa Co., April 30, 1880.

Another Gun for the Bee Business—More Italian Bees.

MARYSVILLE, May 1, 1880.

EDITOR FARMER: I have received your paper of the 27th inst., containing Mr. Harrison's letter. I have read his article in the Cultivator, and now notice his correction of the "sixth line," but I find nothing to prove the position he has assumed. I have admitted the bad condition of a large proportion of the stocks imported into the State; but I think that the blackened comb, and those "rotten bees" are the result, not of a contagious disease, but of long confinement and want of ventilation while passing through a hot climate. These causes are quite sufficient to produce all the effects which have as yet been proved to exist.

Mr. Harrison has assumed a high position among the bee-keepers of this state. I suppose he is, emphatically, the great one, and I am glad to learn that he is still to devote his "time and money" to the cause of bee-culture. But I think it is due from him to give us the evidence of the existence of "foul-brood" as a contagion. Many of us know

what it was in the Eastern States, twenty years ago, when one apiarist lost over one hundred stocks in one season; but, as the same individual now succeeds in making the business profitable, it is fair to presume that the disease is very much modified, and is not a cause of very great alarm. I am not willing to take the say-so even of the great apiarist of California, but shall be glad to be referred to places and apiarists where the disease exists.

I am certainly gratified to know that the firing of my blunderbuss occasionally is not to deprive us of the thunderings of the cannon. I had a reason, Mr. Editor, for making use of a blunderbuss in the present case. Such pieces were common when I was a boy, and I know an individual who always made use of such a gun in shooting pigeons. It seemed of very little consequence which way the piece was aimed. It was sure to take effect, and I always noticed that the wounded birds fluttered.

I noticed what you say of a worthy fellow-citizen of Marysville, and that he is expecting soon to receive a supply of the Italian Bees; and it may not be out of place to say that L. Kennedy & Son are expecting the same thing. One of the firm, now in the States, writes that he shall return in a few weeks, with a supply of the genuine article.

I remain your obedient servant, L. KENNEDY.

Improved Flouring-mills for Farmers.

A short time since we referred to valuable improvements in Flouring-mills, and to which attention is called in our advertising columns by "W. W." as "wishing to be known as a millwright." We have been furnished with drawings, representing the improved mill in all its parts; also specifications of the mechanical arrangements, and descriptions of the advantages over mills commonly in use. These can be examined at our office by those who desire, and we believe it will be to the advantage of farmers and others to see them. We now commend to their attention the following communication in relation to this new mill:

EDITOR FARMER: In a more extended discussion with Millwrights and Millers of the mechanical manner, and the philosophical reasons at present relied on for manufacturing flour, the more confirmed am I in the superiority of the innovations and improvements I wish to get before the public, especially farmers, who, by understanding regarding these things, might do themselves a great benefit, and at the same time submit in market a commodity number one in quality, more directly for the interest of the consumer, and entirely aversive of the relentless spirit of speculation. Much might be said on this view as inducement to the grower, to be also his own manufacturer, as by pursuing a course of this character, he could proffer his productions at a cheaper rate, being more liberally rewarded every way, in saving and retaining at home what he now loses abroad, with his labor accompanying. Take an instance: A few weeks since, in February, a farmer across the Bay, in Clinton, took his wheat to the Clinton Mills, sold it for \$1.40 the 100 pounds, and bought in return bran at \$1.50 the 100 pounds, equal to \$30 a ton; whereas, if he had a Portable Mill of the best character, driven by any power at command (as steam, water, horse, or wind), with a suitable bolt attached, all at an expense of \$500 to \$700, he could in his barn or other outhouse, turn his \$1.40 wheat into flour as good as the best of city mills are now doing, and in the ultimate, receive \$2.80 to \$3 for his wheat, the mill ever paying for manufacturing. Such a course as this would be parallel with what now the farmer pursues, namely, manufacturing the milk from his cows, rather than selling it in the market in its native state, and then purchasing at an advanced rate his butter and cheese, with an entire loss of its offal which he now saves to himself.

If the Aristocracy now too much prevalent were but to extend, as it would if it could, its monopolizing influence, and compel the agriculturist to a course of this kind, he then would more fully realize the propriety of home manufacture, and in proportion as this course obtained, we should be saved from such a fluctuating state of things as too often results from the schemes of capitalists, ever oppressive on the poorer and lower classes, and enriching, at their expense, the less laborious and more affluent portion of community.

Interests like these demand the attention of the Press, and the more so, as we are professedly living under the banners of republican institutions, and nothing but a total or even partial disregard of legitimate principles of action, will ever disfranchise our descendants of what we now proudly enjoy, liberty and equality, and which we would gladly and magnanimously bequeath as the richest legacy that could be inherited. But, sir, much could be said on these points for the welfare of all interested, and not wishing for the display of self, other than in the mechanical sphere of action, I cheerfully leave the elucidation and enforcement of these things for abler and more efficient hands.

Respectfully, yours, W. W.

The discussion of the "Bee Business" should receive due attention. To all our correspondents we return thanks for their favors, and ask a continuance.

What Kind of Knowledge is of the Most Value?

We find the following article in an Eastern paper of last year. As to "what kind of knowledge is of most value," it says:

The reply to this question is one of the deepest importance. Thousands spend their time in learning many things that are not necessary to be learned, nor at all useful, and in some cases what they learn is positively injurious.

We notice an ably written, well reasoned article on this subject, in the Westminister Review. If, says the writer, any one doubts the importance of an acquaintance with the fundamental principles of physiology as a means to complete living, let him look around and see how many men and women he can find in middle or later life who are thoroughly well. Occasionally only do we meet with an example of vigorous health continued to old age; hourly do we meet with examples of acute disorder, chronic ailment, general debility, premature decrepitude. Scarcely is there one to whom you put the question, who has not, in the course of his life, brought upon himself illness which a little knowledge would have saved him from. Here is a case of heart disease consequent on a rheumatic fever that followed reckless exposure. There is a case of eyes spoiled for life by over-study. Yesterday the account was of one whose long-enduring lameness was brought on by continuing, spite of the pain, to use a knee after it had been slightly injured. And to-day we are told of another who has had to lie by for years, because he did not know that the palpitation he suffered from resulted from an over-taxed brain. Now we hear of an irreparable injury that followed some silly feat of strength; and, again, of a constitution that has never recovered from the effects of excessive work needlessly undertaken. While on all sides we see the perpetual minor ailments which accompany feebleness. Not to dwell on the actual pain, the weariness, the gloom, the waste of time and money thus entailed, only consider how greatly ill health hinders the discharge of all duties, makes business often impossible, and always more difficult; produces an irritability fatal to the right management of children; puts the functions of citizenship out of the question, and makes amusement a bore. Is it not clear that the physical mind—partly our forefathers' and partly our own— which produce this ill-health, deduct more from complete living than anything else? and to a great extent make life a failure and a burden, instead of a beneficence and a pleasure?

To all of which, and the fact that life, besides being thus immensely deteriorated, is also cut short. It is not true, as we commonly suppose, that a disorder or disease from which we have recovered leaves us as before. No disturbance of the normal course of the functions can pass away and leave things exactly as they were. In all cases a permanent damage is done—not immediately appreciable, it may be, but still there, and along with other such items which nature in her strict account keeping never drops, will tell against us to the inevitable shortening of our days. Through the accumulation of small injuries it is that constitutions are commonly undermined and break down long before their time. And if we call to mind how far the average duration of life falls below the possible duration, we see how immense is the loss. When, to the numerous partial deductions which bad health entails, we add this great final deduction, it results that ordinarily more than one-half of life is thrown away.

Hence, knowledge which subverts direct self-preservation, by preventing this loss of health, is of primary importance. We do not contend that possession of such knowledge would by any means wholly remedy the evil. For it is clear that in our present phase of civilization man's necessities compel him to transgress. And it is further clear that, even in the absence of such compulsion, their inclinations would frequently lead them, spite of their knowledge, to sacrifice future good to present gratification. But we do contend that the right knowledge impressed in the right way would effect much; and we further contend that as the laws of health must be recognized before they can be fully conformed to, the imparting of such knowledge must precede a more rational living, come when that may. We infer that as vigorous health and its accompanying high spirits are larger elements of happiness than any other things whatever, the teaching how to maintain them is a teaching that yields in moment to no other whatever; and therefore we assert that such a course of physiology as is needful for the comprehension of its general truths, and their bearings on daily conduct, is an all-essential part of a rational education.

There is serious truth in the quotation. It is strange that that any one should have doubt on the subject, or that these truths need any defending in this so-called intelligent age of the world. A person who assumes to be intelligent, well-read and of reflecting powers of mind, will blush if you accuse him of ignorance in matters of history. If you doubt that he can recount to you all of the fabulous sayings and doings of an ancient fabled demigod, he feels insulted or ashamed, yet he feels not the least concern about confessing his ignorance if he cannot tell you how his lungs are inflated, by what philosophical process the blood in his body is prepared from the food he eats, and in what condition his stomach should be that healthy digestion should take place. There are thousands and tens of thousands of people, who call themselves highly educated, who do not know as much of their physical organization as common prize-fighters, who perhaps can't read or write their own names, who are as unlettered as slaughterers of fat bullocks. The prize-fighter has studied the situation of the vital organs, is something of a hygienist, he knows at least what part of the body to plant his blows to weaken his antagonist, and has a good idea of the location of the heart, liver and stomach.

The wealthy classes are very desirous that their sons should be well acquainted with the superstitious of two thousand years ago, but never seem to think that it is important for them to know much of their own organization, or of the structure or functions of the various organs of their own bodies. It is well enough to learn the height of the mountains of the moon, as astronomy is a sublime study; but it is as useful to know how to preserve your own health. We study hard to learn how to gain the means of living; but what is life worth without physical health?

The writer in the Review from which we have

quoted continues thus: We come to another important division of our subject—the science of rearing children. If, by some strange chance, not a vestige of us descended to the remote future, save a pile of our school-books or some college examination papers, we may imagine how puzzled an antiquary of the period would be on finding in them no indication that the learners were ever likely to be parents.

Seriously, is it not an astonishing fact, that though on the treatment of offspring depend their lives or deaths, and their moral welfare or ruin; yet not one word of instruction on the treatment of offspring is ever given to those who will hereafter be parents? Is it not monstrous that the fate of new generation should be left to the chances of unreasoning custom, impulse, fancy—joined with the suggestions of ignorant nurses and the prejudiced counsel of grandmothers? If a merchant commenced business without any knowledge of arithmetic and book-keeping, we should exclaim at his folly and look for disastrous consequences; or, if, before studying anatomy, a man set up as a surgical operator, we should wonder at his audacity and pity his patients. But that parents should begin the difficult task of rearing children without ever having given a thought to the principles—physical, moral, or intellectual—which ought to guide them, excites neither surprise at the actors nor pity for their victims.

To tens of thousands that are killed, and hundreds of thousands that survive with feeble constitutions and millions that grow up with constitutions not so strong as they should be, and you will have some idea of the curse inflicted on their offspring by parents ignorant of the laws of life. Do but consider for a moment that the regimen to which children are subject is hourly telling upon them, to their life-long injury or benefit; and that there are twenty ways of going wrong to one way of going right, and you will get some idea of the enormous mischief that is almost everywhere inflicted by the thoughtless, hap-hazard system in common use. Is it decided that a boy shall be clothed in some flimsy short dress and be allowed to go playing about with limbs redened by cold? The decision will tell on his whole future existence—either in illness, or in stunted growth, or in deficient energy, or in a maturity less vigorous than it ought to have been, and consequent hindrances to success and happiness. Are children doomed to a monotonous dietary, or a dietary that is deficient in nutritiveness? Their ultimate physical power and their efficiency as men and women will inevitably be more or less diminished by it. Are they forbidden vociferous play, or (being too ill-clothed to bear exposure) are they kept in doors in cold weather? They are certain to fall below that measure of health and strength to which they would else have attained. When sons and daughters grow up sickly and feeble, parents commonly regard the event as a misfortune—as a visitation of Providence. Thinking after the prevalent chaotic fashion, they assume that these evils come without causes, or that the causes are supernatural. Nothing of the kind. In some cases, the causes are doubtless inherited; but in most cases foolish regulations are the causes. Very generally, parents themselves are responsible for all this pain, this debility, this depression, this misery. They have undertaken to control the lives of their offspring from hour to hour; with cruel carelessness they have neglected to learn anything about these vital processes which they are unceasingly affecting by their commands and prohibitions; in utter ignorance of the simplest physiological laws, they have been year by year undermining the constitutions of their children, and have so inflicted disease and premature death, not only on them but on their descendants.

Pass now to Physics, joined with Mathematics. What have these sciences given us? They have given us the steam-engine, which does the work of millions of laborers. That section of physics which deals with the laws of heat has taught us how to economize fuel in our various industries; how to increase the produce of our smelting furnaces, by substituting the hot for the cold blast; how to ventilate our mines; how to prevent explosions by using the safety-lamp; and, through the thermometer, how to regulate innumerable processes. That division which has the phenomena of light for its subject gives eyes to the old. Researches in electricity and magnetism have saved incalculable life and property by the compass; have subverted sundry arts by the electrolyte, and now, in the telegraph, have supplied us with the agency by which, for the future, all mercantile transactions will be regulated, political intercourse carried on, and perhaps national quarrels often avoided. While in the details of indoor life, from the improved kitchen-range up to the stereoscope on the drawing-room table, the applications of advanced physics underlie our comforts and gratifications.

Still more numerous are the bearings of chemistry on those activities by which men obtain the means of living. The bleacher, the dyer, the calico printer, are severally occupied in processes that are well or ill done, according as they do or do not conform to chemical laws. The economical reduction from their ores of copper, tin, zinc, lead, silver and iron are in a great measure questions of chemistry. Sugar-refining, gas-making, soap-boiling, gunpowder manufacture, are operations all partly chemical; as are also those by which are produced glass and porcelain. Whether the distiller's work stops at the alcoholic fermentation or passes into the acetous, is a chemical question on which hangs his profit or loss; and the brewer, if his business is sufficiently large, finds it pay to keep a chemist on his premises. And then, lastly, we come to the fact that in these times, agriculture, to be profitably carried on, must have like guidance. The analyses of manures and soil, their adaptations to each other, the use of gypsum or other substance for fixing ammonia, the utilization of coprolites, the production of artificial manures—all these are boons of chemistry, which it behooves the farmer to acquaint himself with. Be it in the lucifer match, or in disinfected sewerage, or in photographs; in bread made without fermentation, or perfumes extracted from refuse, we may perceive that chemistry affects all our industries, and that by consequence, knowledge of it concerns every one who is directly or indirectly connected with our industries.

And then the science of life—biology; does not this, too, bear fundamentally upon these processes of indirect self-preservation? With what we ordinarily call manufactures, it has indeed little connection; but with the all-essential manufacture

—that of food—it is inseparably connected. As agriculture must conform its methods to the phenomena of vegetable and animal life, it follows necessarily that the science of these phenomena is the rational basis of agriculture. Various biological truths have indeed been emphatically established and acted upon by farmers while yet there has been no conception of them as science; such as that particular manures are suited to particular plants; that crops of certain kinds unfit the soil for other crops; that horses cannot do good work on poor food; that such and such diseases of cattle and sheep are caused by such and such conditions. These, and the everyday knowledge which the agriculturist gains by experience, respecting the right management of plants and animals, constitute his stock of biological facts, on the largeness of which greatly depends his success; and as these biological facts, scanty, indefinite, rudimentary though they are, aid him so essentially, judge what must be the value to him of such facts when they become positive, definite and exhaustive. Indeed, even now we may see the benefits that rational biology is conferring on him. The truth that the production of animal heat implies waste of substance, and that therefore preventing loss of heat prevents the need for extra food—a purely theoretical conclusion—now guides the fattening of cattle; it is found that by keeping cattle warm, fodder is saved. Similarly with respect to variety of food. The experiments of physiologists have shown that not only is change of diet beneficial, but that digestion is facilitated by a mixture of ingredients in each meal; both which truths are now influencing cattle-feeding.

We now come to the question with which we started: "What knowledge is of the most value?" We answer, Science. The all-important knowledge is science. This is the uniform reply, whether it is for our self-preservation, the maintenance of life and health, gaining an honest livelihood, physical and mental enjoyments of life, the proper discharge of parental duties. Yet this is the kind of knowledge in our day of boasted education that has the least attention paid to it by the masses. In the whole family of knowledge, science is the household drudge, which permits us to indulge in a thousand gratifications one could not otherwise indulge in. We proclaim, then, that science is the first, and among the things of the most worth and beauty.

New Horse-Power and Force-Pump.

We made mention in our last issue, of a new horse-power invented by Messrs. Keep & Briggs, of the Globe Foundry, of Stockton. Since the first mention of this power we have had a good opportunity to examine it in operation, together with the force-pump cast at the same foundry, which is a double-action pump with large air-chambers, after the style of the hydraulic ram. This power is worked with one horse easily, in the rotary fashion, with the addition of a large fly-wheel, which makes 65 to 75 revolutions a minute, giving a steady action to the entire power, so that in pumping, the jerk which is usually found in most pumps, and which materially affects the wear of the pump as well as the quantity of water raised, is entirely obviated, and the pump works easy, smooth, and free, throwing up a continuous stream through a three-inch diameter pipe. This power has another important and valuable feature. It is very compact and simple, having also an extra shaft so that when the power is not used for pumping, the extra shaft can be put on in a cross direction, to which a wheel and band are applied, and this can be used for grinding wheat, cracking grain of all kinds for feed, for a churn, washing-machine, grindstone, turning-lathe, etc. And yet this whole power can be handled entire, lifted and carried by six men. Dr. E. S. Holden, Dr. Bateman, and West Brothers, of Stockton, have each purchased one, and from what we learn, they must prove of great utility and value.

We would correct an error in our last issue as to the quantity of water that this pump would raise in twenty-four hours. We said about 20,000 gallons. It should have read 200,000 gallons. We advise those in that section of country who want a good power to raise water, to visit the Globe Foundry and examine for themselves. This power will work when wind-power fails.

Tree and Vine Planting Around Marysville.

A correspondent, writing from Marysville, gives us the following items, which speak well for the progress of Yuba county:

"G. G. Briggs, Esq., has planted about 20,000 grape-vines, the past winter, mostly Los Angeles vines. Chas. Covilland, Esq., has planted about 100,000 vines. Other neighbors have planted largely. Not less than half a million vines have been planted, within five miles of Marysville, the past winter. The prospect is fine for a great crop of fruit this season. Some varieties of the peach are badly curled, but the prospect is they will retain their fruit. The curl is worse on very wet ground, or very dry ground."

Insects in our Orchards.

We have been watching this subject with intense interest, for some time, and have delayed speaking of it, that we might give some well prepared elucidation of this new feature in orcharding, by an analysis of the insects. We find there are several species; and we now ask of all who notice the appearance of these insects among their trees, or in or on them, to send us the insects (alive if possible) in bottles having perforated corks, some leaf inside, also, and we will have a careful examination by a skillful entomologist, and make report of same, for public good. Send us, also, all facts noticed of the operations and habits of the insect, and we will give immediate attention.

CALIFORNIA NOTES.

BY ALEX. S. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
(CONTINUED.)

No. 7. Santa Ynez and the Santa Barbara County Indians.

Vocabulary of the Indians living near Santa Ynez Mission in Santa Barbara County, taken by the Author, in April 1856, from an Indian man, thirty-five years old, born near the Mission.

The rancheria of the Mission was known as Cascan or Casell. Other rancherias were Mekewe, Sapelek, Seyuktoon, Kolok, Shalawa, Shopeshno, Nipoma and Shukku. A rancheria close by the Mission of La Purisima was called Lipook. Near Santa Barbara were two rancherias called Oiyuk-tun and Masewak.

An Indian about twenty-seven years old says, that the San Buenaventura, Santa Barbara, Santa Ynez and La Purisima Indians, spoke nearly the same language. The rancherias near the Mission of San Buenaventura were Cayuguis, at La Punta Alamo; Mahow at Jose Carrillo's Rancho; Immahal, not far from Mahow; Sapagouon, at Jimeno's rancho, Casanulmo, at Rafael Gonzalez' rancho; Casnahamo, at Santa Clara's rancho; Topotopow on Hernandez Tico's rancho; Spokow, north of Mission on Beach; Tallapoolina, at the rancho Viejo, up the Santa Clara river from the Mission. The Indian-informant was about twenty-seven years old, with a black thick beard, iris of the eyes light chocolate-brown, nose small and round, lips not thick, face long and angular. The rancheria of the Mission of San Buenaventura was called Eshbulup. These Indians used formerly canoes made of wooden planks, and all lived in the vicinity of the ocean.

The Indians of Santa Barbara county were generally among the best-looking and most ingenious of all the Missions. It will be remembered that in 1542 Cabrillo, the discoverer of California, was well received by these Indians, and mentions their having canoes of wood and trading with his ships for fish. About the year 1823 occurred a revolt of the Indians of Santa Ynez Mission, which occasioned the California government some trouble to put down.

In July of the present year (1856) the Rev. Padre Rubio of Santa Ynez Mission College, stated to me that last year, while on a visit to the Tejon Reservation and the Tulare country, at least one-half of the numerous Indians he saw there, were old neophytes or were Mission-born Indians; and they told him many more were living on the Sierra further eastward. This seems to be the case also with the Indians of San Diego and San Bernardino counties.

No. 8. The Island of Santa Cruz Indians, near Santa Barbara.

Vocabulary of the Indians formerly living at the Island of Santa Cruz in Santa Barbara county, taken by Rev. Antonio Tamen, on 4th November, 1856, from a Christian Indian, named Joseph Camuyayast, aged eighty years, who was baptized by Rev. Padre Antonio Ripoll, in the Mission of Santa Barbara.

Concerning the Islands of San Miguel, San Nicolas and Santa Rosa, not a native of these Islands is now to be found in or near this Mission, nor one who could give any information of them.

Among the Indians of Santa Barbara exist some traditions that do not extend to more than one century, which is not to be surprised at on account of being in their uncivilized state of gentility before, and consequently, no care taken to give them to posterity. Those received from their fathers, and grandfathers, they know; but of their great-grandfathers and ancestors, they can scarcely know anything. About the passing of ships, they know nothing more than from time to time seeing one pass at a great distance.

When the Franciscan Missionary Fathers arrived in California, they found tribes of Indians scattered along the Coast, from San Diego to the bay of San Francisco, and varying in number to about two thousand, in each of the larger tribes. They enlightened them with the light of the Gospel, and founded for them the Missions to be seen at the present day. They were of a generous, and generally docile nature, copper-colored, and highly favored by the Omnipotent Arm in strength and other corporeal qualities.

The boats they then used were canoes cut out of trees, or made of timber joined with chords, and these tarred (with asphalt?) and not capable of carrying more than four persons. Their houses were not made of stone, but of timber and reeds, in a bee-hive shape.

Along the coast and islands each tribe generally spoke a different language, but understood sufficient of their neighboring idioms for the purpose of commerce. With regard to grammatical construction in their language, it is superfluous to say they knew it not. The foregoing vocabulary of Santa Cruz has been taken from one of its natives.

Take notice that it has to be pronounced like English, as it has been so written, and accurately, as the guttural sound of the language would permit.

The Indian name of the island of Santa Cruz was Limooch or Limooch. For the island of Santa Rosa the name was Huralm, that of San Miguel was Two-na-can, that of San Nicolas was Ghalashat.

For the foregoing vocabulary and notes the compiler is indebted to the kindness of the Rt. Rev. Teodoro Amat, Catholic Bishop of the Diocese of Monterey.

The Indian, who gave the information, did not know the names of elk, wolf, beaver, squirrel, hare, duck, pigeon, tufted quail, nor the term for one thousand.

An old American resident of Santa Barbara informs me that the Santa Barbara islands were pretty thickly populated in the early part of this century prior to 1816. They had such bloody wars among themselves, for the fishing-grounds of each island, or each rancheria, that the priests had them all brought over to the main land and placed in the Missions of Santa Barbara, San Luis Obispo, San Buenaventura, Santa Ynez and La Purisima; but that very few, if any, are now left in these vicinities.

The islands off the coast of Santa Barbara, San Diego and Los Angeles countries, are San Miguel, Santa Cruz, Santa Rosa, San Nicolas, Santa Barbara, Santa Catalina and San Clemente, and they are mentioned by Cabrillo in 1542, as being inhabited, and by Viscaio in 1602, as (some of them) being very populous. On Santa Catalina, Viscaio's vessels stopped several days, and were treated by the Indians with great hospitality. The historian of the expedition mentions the existence of a rude temple and worship of the sun by the natives, and of an immense black crow (probably the Condor), which was an object of great veneration among them, and on the shooting of which by a Spanish soldier, the Indians set up an awful howling of tremor and fear. This veneration of the Great Bird of Northwest America seems to have been universal among the California Indians; a reference will be found made to this subject in Dr. Herman's Ornithological Notes in the tenth volume of Railroad Reports.

Great havoc was committed on these island-tribes by the Indians of the main land, and those from the Northwest. We believe these Northwest Indians were Kodiaks and others, in the employ of the Russians of Bodega and Sitka, in search of sea-otters, fur-seals, and avellones, who used to make raids on their own account. In Hugo Reid's account of the Indians of Los Angeles county, published in the Los Angeles Star, in 1852, it is stated that the Missionaries gathered the enemies from caves on the islands of many of the San Clemente Indians, between 1825 and 1833, and had them decently buried, and what was singular every one of the skulls were found with a double row of teeth, both on the lower and upper jaw. How true this statement is can only be ascertained by dissecting the bodies, which, it seems, were buried either at San Gabriel, San Diego, or Juan Capistrano Missions.

In one of the raids of these Kodiak Indians they are said to have killed every Indian on the island of San Nicolas except two or three women; and only a short time ago appeared an account in the California journals of one of these females (or the last inhabitant of the island) having, with great difficulty, been taken off by the old California hunter, George Niderer, and carried to Santa Barbara in a semi-demented state.

An American otter hunter, who has been engaged among the Santa Barbara Islands for the last six years, and who has visited every one of the California islands, from Cedros island to the Farallones, informs me that the remains of the Indians in the Channel islands, from Santa Catalina up, indicate a very numerous population of Indians. There are supposed to be no Island Indians left now, neither on the main land, or elsewhere, certainly none at their former homes. On all these islands, he says, the remains of their huts, and signs of rancherias, from sea-shells, are very abundant. He says, in coming down from the North, in winter, the island of San Miguel, alias San Lucas, alias Juan Rodriguez, alias Isle Possession, alias San Bernardo, where Cabrillo, the discoverer of California, in 1543, is said to have died, would be, without doubt, the first one reached by such vessels as the old navigators used.

(TO BE CONTINUED.)

Cultivating "Adobe" Soil.

We find the following in the Santa Cruz Sentinel, and copy for what it is worth:

Mr. A. A. Hecox, of our town, has made a discovery in relation to the best mode of cultivating what is generally known as "adobe soil," which cannot but be of vast advantage to a large number of our citizens, whose lands are of a similar quality. The grand objection to these lands is, that being perfectly level, there is no chance for the water to run off, and causes the ground to bake so hard as to render it impervious to the plow. Not only this, but the water causes the land to sour and keeps it cold, thereby preventing the absorption of the proper nourishment requisite to its healthy growth, and in many cases the trees die. Mr. Hecox adopted the plan of under-sluicing, and finds that it works to a charm. He has dug a ditch two feet deep, and put in a wooden trough, bottom side up, covering it with straw. This drains the water from the soil, leaving it dry and mellow, easily worked with a plow or spade, and entirely free from the gummy mud, which before obstructed the plow. Farmers having land of this quality would do well to adopt this method.

ZADOCK PRATT performed the journey from San Francisco to St. Louis without stopping at any one time for more than half an hour, the whole occupying nineteen days, with one hundred and fifty relays of four, five, and six horses or mules to the feat for a man nearly seventy years of age. There was a conductor and a driver, both armed to the teeth. In some places they carried water sixteen miles, and then drove forty miles without water.

CURRENTS.—Mr. Everhard, of Ravenswood, L. I., one of the most extensive propagators of the cherry advance for all he can raise this year, has orders in said he could have sold 50,000 this spring. The Versailles current is in the same situation—none to be had either in this country or France, where it originated.

Discussions at a New York Annual Meeting.

POTATOES, WHEAT, AGRICULTURAL STATISTICS.
At a meeting of the State Agricultural Society of New York, for discussion, a short time since, Mr. J. Stanton Gould proposed to introduce the subject of potato culture, and invited, through the Chairman, Hon. A. B. Dickinson of Steuben county to give an account of the method he pursued in the cultivation of this root. Mr. Dickinson, on complying with the request of his friend, said he felt under great obligation to impart any information in his power, as he had gained a great deal from the society, both by means of its publications and from the annual discussions. He had learned enough from Dr. Fitch about the weevil, to enable him to save in his wheat-crop, annually, many times the amount of that gentleman's salary.

He had learned all he knew about the culture of the potato from observation. He habituated himself to make observations, minute and careful; and the farmer who did not gather information from every source, was not fit for his profession. There are more important and really valuable facts to be gathered from little minute points in the management of our farms, than we are aware of.

Farming requires the exercise of more skill, observation, and acuteness, than any other profession; all others have their well-defined principles of action and established rules; farming was to be learned, in a great degree, otherwise. For his own part, though he valued information derived from any source, he learned three times more from observation than in any other way.

His soil was clayey. He made his rows in such a direction that the water, when it came, should run off easily. The potato-blight appeared wherever water stood in the ground. He plowed his land thoroughly; made his rows three feet apart, and planted the potatoes nearly level, fifteen inches apart, and covered them with the plow, turning two big furrows over them, and rolled them, the roller running over three rows at once, lightly, and without any injury to the potatoes. After they came up, he turned the soil away from the rows slightly, and never allowed any weeds to grow among the plants. He then ran a sub-soil plow between the rows, using three horses abreast, the middle one might walk in front of the plow, and the others in the adjoining furrows—otherwise they could not be so readily driven straight. In this way he was enabled to loosen the earth between, and somewhat under the potatoes, to a depth of twelve or fifteen inches, which served to drain off the superfluous water and aid the growth of the potato.

The heaviest potato is surest to withstand the blight. He tested his potatoes by putting them into strong brine, and those that were found heaviest were best to grow, though many of the lightest were of the best flavor. He cut his potatoes for seed into pieces containing two eyes each; if planted whole and large, they were liable to rot.

He had not sown or planted anything for ten years without a coating of tar; and in planting his potatoes, he dissolved one pint of tar in three pails of boiling water, and added four pails of water afterwards. This solution he poured over his seed and mixed it with them, and covered with plaster. He used to have no difficulty in raising five hundred bushels of potatoes per acre, but of late could not raise such crops; he had, however, several times raised three hundred bushels, and once since then, had raised four hundred and twenty-five. He used the Bermuda potato; had been accustomed to buy his seed for fear of blight, but found the quality of the potato much improved after growing three, four, or five years on his ground. Fresh manure has a tendency to rot potatoes.

Mr. Dickinson was asked to give his experience in the cultivation of wheat. He said the best wheat soil is such as produces the white-oak naturally. The soil for grain should be prepared by thorough cultivation under previous crops. Though his soil was clayey, he discarded the clod-crusher altogether; it only made it worse. He learned from his mother how to loosen his soil, when he used to see her shoving down a cake of maple-sugar for pies, and noticed that it lay light upon the dish, while the hired servant used to chuck it up and then roll it fine, and it would lay together hard and compact. No land should be plowed more than once for a crop, but it should be plowed thoroughly and deeply. It was very important to plow perfectly; learn to plow straight. Boys should learn by a line. The plow was by far the most important implement on the farm. Following for weeds was unnecessary. They could all be destroyed by covering with a Michigan

Audubon and Astor.

People are often cruel without being aware of it. The rich often incommode the needy in small things, in a way that is oppressive in the extreme; yet to them the sum seems so small and of so little importance that they put aside the creditor, and thus inflict a deep wrong. Many a poor seamstress has been toiling night and day to get a piece of work done, and with an empty stomach and an empty purse hurries off with the work, anxiously expecting the pay with which to buy a late breakfast for herself and several hungry children. Madam, however, does not happen to have the change, or can not trouble herself to go up stairs for the money, and bids her anxious creditor to "call again." In like manner men treat their tailors, their shoemakers, or their washerwomen.

We need not say that such conduct is utterly heartless. Although a few shillings to rich persons seems of small consequence, they should remember, however, that to the poor it is their all. They may be hungry, and anxious little faces may be looking out for the return of the poor mother with a loaf of bread.

The subjoined incident illustrates how rich men, from habit perhaps, stare off those who have just claims upon them, when the real facts reveal the hollowness of their excuses.

The following amusing story is told of John Jacob Astor, in the double character of a patron of literature and parsimonious money-holder, which appears to be characteristic:

Among the subscribers to Audubon's magnificent work on ornithology, the subscription price of which was \$1,000 a copy, appeared the name of John Jacob Astor. During the progress of the work, the prosecution of which was exceedingly expensive, Mr. Audubon of course called upon several of his subscribers for payments. It so happened that Mr. Astor (probably that he might not be troubled about small matters) was not applied to before the delivery of all the letter-press and plates. Then, however, Audubon asked for his thousand dollars; but he was put off with one excuse or another. "Ah, Mr. Audubon," would the owner of a million say, "you come at a bad time; money is very scarce; I have no money in bank; I have invested all my funds."

At length the sixth time Audubon called upon Astor for his thousand dollars. As he was ushered into his presence he found Wm. B. Astor, the son, conversing with the father. No sooner did the rich man see the man of art, than he began, "Ah, Mr. Audubon, so you have come again for your money. Hard times, Mr. Audubon, money very scarce." But just then catching an inquiring look from his son, he changed his tone: "However, Mr. Audubon, I suppose we must contrive to let you have some of your money, if possible. William," he added, calling to his son, who had walked into an adjoining parlor, "have we any money at all in the bank?" "Yes, father," replied the son, supposing he was asked an earnest question pertinent to what they had been talking about when the ornithologist came in, "we have \$22,000 in the Bank of New York, \$70,000 in the City Bank, \$90,000 in the Merchants', \$83,000—"

"That'll do," exclaimed John Jacob, interrupting him. "It seems that William can give you a check for your money."—[Commercial Bulletin.]

Is it Cheaper?

Is it cheaper to build jails than it is to educate our children in good morals, and thus prevent their becoming inmates of our prisons?

What sort of men will those boys make who are allowed to frequent rum-holes, to smoke, swear, and play cards? Do parents suppose they can hold the reins of government over their sons while they permit them to spend their evenings away from home, subjected to all the bad influences which are always concentrated in a village?

Is it cheaper for a father to pay for the mischief which his sons do, than it is to buy them a library of good books? If parents would keep their sons contented at home, let them take half a dozen newspapers, so as to furnish them, daily, with mental and moral food!

"Half a dozen papers!" says one, "I cannot afford it. Half a dozen papers would cost twelve dollars a year! I cannot afford it!"

We will suppose this father has two sons, between the ages of twelve and sixteen. They have learned to smoke cigars; he allows them two cigars apiece, daily, at a cost of three cents each. He thinks this quite a moderate allowance of tobacco. Perhaps he smokes two cigars a day himself. Only six cigars daily for a father and two sons! This is a very moderate allowance, as every smoker is willing to admit; but these six cigars, at three cents apiece, will in one year amount to the snug little sum of sixty-five dollars and seventy cents! Enough to take thirty weekly newspapers!

We have only taken into account the expense of the tobacco, making no deduction for time wasted, health injured, and the mind blunted and enervated. The last are often a heavy draft upon the family income.

Now we ask, in all soberness, if it is not cheaper to furnish good books, good newspapers, and a plenty of them for our children, than it is to let them go without, and run the risk of their contracting a taste for immorality, tobacco and strong drink.

The daughters, too, should not be neglected. Take papers and magazines for them; give them something to think about, and then they will not grow up silly, weak-minded women, who take no interest in anything but fashions, dress and flirtations.

Is it cheaper?

The Mayor Wants to See Thee.

A young man, a nephew, had been to sea, and on his return he was narrating to his uncle an adventure which he had met on board a ship.

"I was one night leaning over the taffrail, looking down into the mighty ocean," said the nephew, whom we will call William, "when my gold watch fell from my fob and immediately out of sight. The vessel was going ten knots an hour; but nothing daunted, I sprang over the rail, down, down, and after a long search, found it, came up close under the stern, and climbed back to the deck, without any one knowing I had been absent."

"William," said his uncle, slightly elevating his broad-brim, and opening his eyes to their widest capacity, "how fast did thee say the vessel was going?"

"Ten knots, uncle."

"And thee dove down into the sea, and came up with the watch, and climbed up by the rudder-chains?"

"Yes, uncle."

"And thee expects me to believe thy story?"

"Of course! You wouldn't call me a liar, would you, uncle?"

"William," replied his uncle, gravely, "thee knowest I never call anybody names; but, William, if the mayor of the city were to come to me, and say, 'Joachim, I want thee to find the biggest liar in Philadelphia,' I would come straight to thee and put my hand on thy shoulder, and say to thee, 'William, the mayor wants to see thee!'"

Potatoes grow wild in the mountains of Virginia and Tennessee. They are inferior in quality, but improve by cultivation.

Nature is Consistent.

The laws of nature are the unerring guide-posts along the pathway of existence, pointing the traveler to the direction he must take, if he would arrive at his journey's end in safety. In every department of nature, throughout her varied manifestations, there can be discovered no clashing, no jarring of interests, but everywhere she will be found in harmony with herself, and all seeming inconsistencies will, with advanced knowledge, resolve themselves into beautiful harmonies. Like the dissolving views of the artist, you gaze upon some hideous picture, and while you gaze it melts away into some lovely vision, something of beauty, which you feel will be a joy forever.

And so it is in the realm of mind. To the casual observer, to the superficial thinker, this realm is one of monstrous incongruities, of startling inconsistencies; yet if we look in upon this world through the light of positive science, we shall find that even here

"All discord's harmony not understood,
All partial evil, universal good."

and that each soul from its own stand-point, through a law inherent in its own being, is working out its own salvation; and all this up-heaving of wrong, all these tempestuous billows of vice and crime, are so many escape-valves, in order that the soul may tread more securely the path of its upward progress.

We know that to some minds this may seem a startling doctrine, and viewed in isolated cases, it may be; but when you look upon it in its length and breadth, its height and depth, you will find that humanity, individually and collectively, is striving to develop its higher nature, and however grotesque the shapes it may assume, however strange the weapons it may employ in the conflict, the end to be accomplished is one and the same. It is only of comparatively recent date that science has begun to analyze matter, to dive down into its deepest recesses and bring forth to the gaze of the world the beauty of its proportions, and the perfection of its forms. And when the arcana of mind shall have been analyzed to the same extent, when its hidden depths have been explored, there will be found the same law of harmony, the same nice adaptations of means to ends, and where you now see a criminal, you will then see a brother or sister, striving through the fog and mist that surround them, striving, it may be, through perverted feelings and sensual indulgences, but still striving to come out to the light, and instead of condemning them to the prison, or the gallows, you will say to them, "by virtue of better surroundings, my brother or my sister, I stand a step above you on the plane of being; not from any inherent good in myself; had I been where you are I should have been as you are; here, take my hand, and let me assist you to get where I am, and then you can reach down and help some one else, and so will you fulfill your mission each to the other."

What though in the physical world the mountain sends forth its belching torrent of fire and smoke? Is it not true to the law of its being? Is not its volcanic action necessary to its own preservation? So too, when from this great human crater we see issuing the flames of passion, lust, and avarice, we feel that when the smoke and dust shall have cleared away, there shall spring from its ashes a truer development of manhood, and from the rent and shattered fragments of broken humanity shall come forth a diviner structure, a temple fit for the living God.

SOMETHING TO FEEL GLAD ABOUT.—Sitting in our sanctum, says the editor of the Leavenworth Times, now some years past, one cold and blustering autumn day, we were attracted by the entrance of a bright-eyed, thoughtful little boy, but thinly clad, who told the old city story of "no father—family sick—out of employment," etc. We were at first disposed to express a mock sympathy, and say we could do nothing; but the boy's large eyes were so swimming with tears, and he so trembled from head to foot, while his conduct and demeanor bore such an impress of truthfulness and sincerity, that we could not find it in our heart to speak harshly, and finally dismissed him with quite a handsome little sum, contributed in the main by our printers, who, by the way, are proverbial the world over for their generosity. The next evening we were somewhat surprised to find the little fellow once again hanging about our office-door. This time, however, his eyes were bright with happiness, and a sweet smile played over and lit up his handsome features. We asked him to come in, but he merely stepped forward timidly, so as to catch our ear, earnestly though stammeringly whispered, "Mama prayed for you!"

From the Baltimore American.
Baltimore-Made Agricultural Implements,
VERSUS EASTERN.

We notice that Messrs R. Sinclair Jr. & Co., of this city, received FIRST PREMIUMS for their deservedly famed Agricultural Implements at the recent Agricultural Exhibitions and Fairs held in Maryland, Virginia, North Carolina, and the South-western States, namely:

By the Maryland State Agricultural Society,
FOURTEEN PREMIUMS.

By the Virginia and North Carolina Agricultural Society,
NINE PREMIUMS.

By the Sea-board Agricultural Society, held at Norfolk,
TWELVE PREMIUMS.

Also, awarded to Sinclair & Co., by the KENTUCKY and TENNESSEE STATE AND COUNTY FAIRS, FOUR (4) PREMIUMS on Sinclair's Patent Masticator, for mowing and cutting corn-stalks, straw, etc., making in all

Thirty-Nine First Premiums

In favor of Sinclair & Co's Wares,

and showing a decided preference by the judges in favor of Baltimore-Made Implements.

Included in the above premiums were Sinclair's Patent Reaping and Mowing Machine, Sinclair's Patent Straw and Fodder Cutters, Sinclair's Patent Spiral Threshing Machine, Wheat Drill with Gears, Attachment, Serrated Clod Roller, Corn Shellers, Corn Drills, etc.

In the above estimate of premiums the following were not included in the different contests, all having received their quota of premiums at Fairs previously held, viz: Horse-Powers, Spur and Bevel Gears, Corn-Mills, Burr and Iron, Fanning-Mills, Holling-Berries, Agricultural Furnace, Chain-Pumps, Lime-Spreaders, Garden-Tools, etc., etc.

The Agricultural Implements and Machinery manufactured by us are constructed in the most substantial and durable manner, great capacity, and particularly adapted for Southern use and usage. Planters and Merchants wanting supplies will be furnished with Price Lists on application.

**TO THE AGRICULTURAL PUBLIC:**

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question, **The Very Best Harvester in Use.**

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANNY'S (with Wood's Improvement) REAPERS. Also—EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;
WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELTON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, for sale; and, also, persons wishing to manufacture these Hives can purchase the right of use.

THOS. OGG SHAW,

83 SACRAMENTO STREET,
San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

The California Farmer.

SAN FRANCISCO:
FRIDAY.....MAY 4, 1860.

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us? Please also direct Letters to "Col. Warren, California Farmer Office," as there are frequent miscarriages for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

OURSELVES—A SPECIAL NOTICE.

THE undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as Colonel Warren, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscriber has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. L. E. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

The Grain Market—Shipment of Grain.

THE very best and most hopeful feature of our grain market, at the present time, to which we would call attention, is the movement of wheat out of the State, to foreign markets. Let every well-wisher to our State aid it all they can, and let wheat-growers and wheat-holders be sure to give it a "god-speed."

Could we send abroad, for the next three months, at the rate of ten thousand bags per day, it can well be spared, and it would be a blessing to our State and a double blessing to our farmers. Grain must go out of the State; we can well spare it—spare it by the cargo—for we have enough of it; and we repeat, the brightest feature of this subject is the movement of wheat abroad—a measure that we have all along most earnestly advocated and urged our farmers to give heed to, for the last six months. It is much better for every holder of wheat—if he is a grower of it, and has a new crop to come in—it is better for him to sell his wheat at \$1.50, to go out of the State, than get \$1.60, to remain here. The offset upon his new crop would make him the gainer. We mean this as for a general thing; not for a single case.

Within a few days past, two ships (the Denmark and the Hindostan) have left for Melbourne, taking some 25,000 sacks of wheat and about 4,500 quarter-sacks of flour.

One ship (the Lookout) sailed for New York, taking 12,500 sacks of wheat; and the Sierra Nevada is now loading, and will take a large quantity of wheat. Another ship will immediately be put up, and in this we hope large quantities will go forward. It will be so, if FARMERS will be wise and let it go, by meeting the market, so that purchasers may take it readily.

WE ADVISE FARMERS TO DO THIS NOW; they will regret it if they do not, for the coming crop will be enormous. Ship now, or sell now, that it may go out of the State, and you will sing a song of joy, instead of mourning over lost opportunities and disappointed hopes.

We have no interest to serve but a general one; we go for the "greatest good to the greatest possible number," and that of course means the Farmers of California. Our opinions are based upon a careful examination of the subject; our advice is given in sincerity; our counsel offered without fee. It will cost nothing to those who heed it; but those who do not heed it, we, Yankee-like, "guess" will wish they had taken it, before the year is out.

The Effect of the Late Rains Upon the Crops.

THE very favorable season which has prevailed, from the first springing up of the grain, has given it a strong set, and made it very heavy; consequently the present long rains must necessarily cause a large amount of grain, upon lowlands and the plains, to lodge; and where high winds have attended or immediately followed the rains, the grain has been swept down. We learn that in Yolo, Napa, Sonoma, Petaluma, in Santa Clara and Alameda counties, some considerable grain has thus been laid down. But we do not think there is cause for alarm. If the weather should continue tolerably cool and a light and gentle breeze move the grain, it will rise again. If, however, warm weather or a series of hot days follow, the grain-growers must watch for another evil, i. e., the rust. We shall be very grateful if our friends in all parts of the State will keep us advised of the condition of crops and the effects of the rain upon the crops. Every farmer should keep a record of all such things, and everything that affects his own business.

New Churns and Butter-Pails.

WE are glad to see home manufactures prosper in spite of the disastrous trials which always attend new enterprises. Like the Phoenix from the ashes, so the Tub and Pail Factory of Messrs. Metcalf & Co., which was recently destroyed by fire, instead of slackening work, have put on new energy and are sending out new models of their work. At their warehouse on the corner of Clay and Battery streets, we noticed some handsome churns made of a new wood, hard and of fine finish. Also, butter-pails with covers, both of value to our dairymen; as they are of home-make, we hope the dairymen of our State will not forget to call on Mr. Walhans, who is the agent of this manufactory, where can also be seen the handsome lot of tubs and pails that were ever made.

THE MEDICAL PRESS.—We received the last number of this well-gotten-up periodical. It is a great credit to our young State, and it will bear a most critical examination, and be found equal to many of the old journals of other States.

Agricola and the Alta California.

WE publish the following Letter from our highly esteemed and long-valued correspondent "Agricola." It will be seen it is addressed to the Editors of the Alta, and we presume, was refused publication, as we find a portion of the same letter used by them, in an article headed "Right of property in a newspaper signature;" and, in order that our readers and the public generally may fully understand the whole subject, we have published from the Alta the whole editorial of their "Agricultural Editor."

We feel it to be a duty we owe the cause of Agriculture, and a duty we owe the readers of the FARMER, who have always and for years been much interested in the writings of "Agricola," to enter earnestly into the subject. We feel it also a high duty we owe to "Agricola" himself, to be ready to defend the position he assumes: the right to the nom de plume of "Agricola."

And, however able he may be to defend himself there are facts we feel bound to state, and a position we feel bound to assume, in his defense—not only for him, but for all writers so well-known and so honorably identified with the interest of the Agricultural world, as is this same "Agricola."

We herewith present the letter of "Agricola," which will place him before our readers; he will speak for himself. The "Agricultural Editor" of the Alta California follows in reply; after which we shall simply claim the floor to offer to the Judge and the Jury (the readers of the CALIFORNIA FARMER everywhere), a few simple facts, with the full confidence that our neighbors of the Alta California and the "Agricultural Editor" will find they have come to Court without a single witness to support their case, and only prepared to learn that they have been most terribly non-suited by the very evidence they supposed were on their side. "Agricola" writes:

EDITOR FARMER: Allow me to submit to your notice the following communication sent by me to the Daily Alta California:

"For the Daily Alta California.

"ANOTHER RICHARD IN THE FIELD."

"A rose by any other name would smell as sweet.—SHAKSPEARE."
"Editors Alta: Do not suppose that I have any pretension to being either a rose or a beauty. I am merely an agricultural and literary writer; or rather, I wish you to consider me in that light for the present. As such, I have attained, it may be, some little notoriety, from the number of articles which I have written in the CALIFORNIA FARMER, in Hutchings's Magazine, and in some of our local papers, over the signature of 'Agricola.' In my agricultural articles, if I except my Premium Essays, sent to the State Agricultural Society, and which I feel proud in saying have taken the first premiums on every subject on which I have written, and a few other papers, which were signed by the name 'given me by my godfathers and godmothers at my baptism' (conjoined with the family name of my honest forefathers, time out of date), I have only used the name of 'Agricola.'"

"Of course, the assumed name of 'Agricola' may be as free to any other as to me; but when it is taken into account, that I have used it under more than two hundred articles, many of which I have been informed and truly believe, have been quoted with approbation in the older States, I think a proper modesty ought to dictate to your contributors and to you, that I have a better moral right to use it than any other—that, for another to do so, is little else than a forgery—in fact, is a sort of literary felony."

"Another reason which I have against your correspondent assuming the name which I have used in the CALIFORNIA FARMER for some five years: For the Editor of that paper, from my long connection with it as a correspondent, I have much respect; and I have every reason to suppose he has an equal respect for me. But what could he, or the Editor of the Cultivator, think, on reading the communication in your paper of the 17th instant, but that I was praising your paper at the expense of theirs?"

"Let the new 'Agricola' take some other name. I am neither dead, nor shipped away to the country from which I came—a country, however, which cannot be called 'slow'; nor do I consider that it stands in need of sympathetic pity!"

"Scotland, my aid respect mither! Thy sons have no occasion to feel ashamed of thee; nor, for aught which I have ever heard, hast thou any occasion to feel ashamed of them!"

"Respectfully, WM. THOMPSON (AGRICOLA).
MILLERTON, April 25th, 1860."

We now give the Agricultural Editorial of the Alta:

"RIGHT OF PROPERTY IN A NEWSPAPER SIGNATURE.—Wm. Thompson writes to us from Millerton, in the San Joaquin Valley, claiming a right to the exclusive use of the signature 'Agricola,' which signature he has long been in the habit of using over agricultural articles published in various papers. He complains that somebody else has used that signature in the columns of the Alta, without his consent. We deny that he has any right to complain. 'Agricola' is a signature too old and too common for anybody to arrogate to himself the exclusive right to use it. Certainly, no man can arrogate to himself the exclusive right to use any nom de plume or fancy signature, no matter how uncommon or new, until it is known he has used it, and made it his own. Now, we venture to assert that few of the agricultural readers of the State knew, a week ago, that Mr. Thompson was in the habit of writing over the signature of 'Agricola'; we are confident that our correspondent did not know that fact. We confess that we (the agricultural editor of the Alta) were entirely ignorant of it. There are a number of persons in this State, not directly connected with the press, known to write occasionally on agricultural subjects, and to write well, and among these the most prominent are, perhaps, J. W. Osborn, A. A. Cohen, J. C. Cummings, A. Harshbarger, Wilson Flint, L. D. Morley, A. H. Myers, and J. L. Sanford; and, until his late departure from the State, J. S. Silver belonged to the same category. We remember to have heard the name of Mr. Thompson, but not as equal in prominence to any of those named above, nor so prominent as to enable us to have the slightest recollection of his signature. We say this with no unkind feeling towards Mr. Thompson, but as a simple and complete justification of ourselves against the grave charge made in the following paragraph of his letter, which is too long for us to publish entire:

"Of course, the assumed name of 'Agricola' may be as free to any other as to me; but when it is taken into account, that I have used it under more than two hundred articles, many of which, I have been informed and truly believe, have been quoted with approbation in agricultural newspapers in the older States, I think a proper modesty ought to dictate to your contributors and to you, that I have a better moral right to use it than any other—that, for another to do so, is little else than a forgery—in fact, is a sort of literary felony."

"We now caution our correspondent that Mr. Thompson has squatted on the signature 'Agricola,' and claims it as the exclusive property of him and his heirs forever; but if any body should send to us an interesting communication over that signature, we should probably print, and let the two Agricolae fight out their quarrel between themselves. We shall do nothing merely to vex Mr. T., but we shall not sacrifice our interests or our contributors, to gratify claims which have no foundation in justice, or sanction in newspaper customs. If Mr. Thompson had a little experience in a newspaper office as an editor, he could readily see that he is in the wrong this time. Hereafter we shall pay attention to his writing, and when we find anything in it of merit, make a note of it for the benefit of our agricultural readers."—(Alta, May 3,

WM. THOMPSON, Esq., the "Agricola" of Agricultural Essays and Subjects Agricultural, commenced writing for this Journal in the year 1854, and has contributed, regularly, for the FARMER, from that time to the present, with but few intervals; portions of the time in every number of the FARMER. And we shall be supported in our statement by the facts, when we say that "Agricola" has sent forth more substantial, scientific, and readable, Essays and Letters than any other agricultural correspondent for any journal on this coast, and we do not hesitate to say, more than any three other writers that can be named, not excepting the very gentlemen who are named by the Alta as distinguished agricultural writers, several of whom have written largely for the CALIFORNIA FARMER, and whose writings we have ever esteemed and published with pleasurable interest; and, in order that we may do full justice to "Agricola" and sustain his claim to that nom de plume, we will state that of the eight gentlemen named, they have all been subscribers of the FARMER, and readers of "Agricola's" valuable writings; and of the eight gentlemen named, four have been subscribers from its origin, and all but two are now with us, and we believe every one of the gentlemen named will readily accord to "Agricola" not only his title to that name, but will most readily and with true manliness, pronounce him one of the best scientific and practical agricultural writers of the present day; that he is so, we have these facts: "Agricola" has obtained the First Prize for every Essay he has presented to the State Agricultural Society of California, and these Essays have been more or less copied in the Atlantic States and in Europe. Over the same and other signatures, the same writer won deserved honor and many prizes both in Scotland (his native country) and in England; and we know that "Agricola" has many readers, many that honor him as a writer in this State, although the Alta editorial says: "We venture to assert that few of the agricultural readers of this State knew, a week ago, that Mr. Thompson was in the habit of writing over the signature of 'Agricola.' We confess that we, the Agricultural Editor of the Alta, were entirely ignorant of it." Now, if the Agricultural Editor of the Alta means to say that few of the Agricultural readers of our State knew who "Agricola" was, or knew him personally; or that the Agricultural Editor of Alta did not know him personally—that may be so; but to "venture to assert" that the Agricultural readers of the State did not know there was an "Agricola" whose writings had won distinguished favor! that is not so, what the Alta may say to the contrary notwithstanding; and if the Editor of the Alta (the Agricultural Editor) means to say, he did not know such a writer existed—all we can say is, he pays a mighty poor compliment to himself, as an Agricultural (!) Editor. His confession of ignorance of agricultural matters is some excuse however. All over this State, and in every section of it, the writings of "Agricola" have been read and remembered; his teachings put into practical use; while his writings are in many of the Farmers' text-books, for reference on many important topics; and although the Agricultural Editor does remember to have heard the name of Mr. Thompson, but not as equal in prominence to any of those named above (eight gentlemen), nor so prominent as to enable him "to have the slightest recollection of his signature," yet with such a confession the Editor says: "We say this not with any unkind feelings towards Mr. Thompson, but as a simple and complete justification of ourselves against the grave charge made in the following paragraph of his letter, which is too long for us to publish."

The letter we publish; its length can be seen; its tone and spirit will be admitted true; and its demands fully acknowledged by the mass of intelligent editors the world over.

The caution of the Agricultural Editor of the Alta is wholly unnecessary; for we are satisfied that every intelligent and high-minded agricultural writer in our State is already familiar with "Agricola's" writings, and ready to admit the justice he claims; nor would they wish to rob him of his just reward. We do not think any other journal in our State will adopt the peculiar customs of the Alta in this respect. As to "Agricola's" needing experience as an Editor, we think "Agricola" could teach the Agricultural Editor of the Alta some lessons that would help him as an Agricultural Editor, at least. And if we had time and space, there are some agricultural matters of which we should be pleased to discuss with our neighbor; but we leave the subject now for our friend "Agricola" to respond—which we pledge our readers and the "Agricultural Editor" of the Alta he will do.

Shipping Goods Back to New York.

WE notice with pleasure the sending goods back to New York; and we wish everybody would notice it too; and we ask them to notice, in addition, how rapidly we are increasing in the exports of our own productions.

On the ship Lookout, for New York, just sailed, was sent:

239 bales Hops;

12 cases Saws;

with many small lots of sundries, which would not take here.

Hop-growers should remember that California Hops will command more than double the price of imported hops. Those who have planted hop-yards may look hope(fully) to the future.

In addition to the shipment of these return goods, and in addition to the large quantity of wheat and flour that has gone, we can record nearly

400 bales of Wool;

12,000 Hides;

quantities of Fur-skins, Pelts, &c.

These, with other articles, swell the value of exports in the first-named three vessels to about \$200,000. This is cheering news; for we can also look to the rapidly diminishing amount of gold exported, which will continue to diminish, until the figures shall all be ciphers. Let the real friends of our State watch these figures; they tell the story of our prosperity.

The Tule-Lands near Stockton.

DRAINS our stay in Stockton and its vicinity, we gave due consideration to the subject of "tule-lands," as we believe they will yet form an important feature in the agriculture of California. The "tule-lands" of California, although now of comparatively little value, by reason of the peculiar provisions of the law, and the great cost in redeeming them, and the long time before returns come in, yet with all these drawbacks the tule-lands are now being redeemed. We believe some of them will be actually worth \$100 an acre within five or six years, for within that time their value will be known, because their capabilities will have been tested, and it will have been found that rice, tobacco, sugar-cane, and many root-crops, besides new kinds of grasses, will be grown with very great success.

We met several parties who are largely interested in tule-lands, and gathered much valuable information which we shall make available in future numbers of our journal. It should be borne in mind that there is quite a difference between the settler upon the tule-land, and the settler upon our forest lands. The settler upon timbered lands are at once enabled to sell firewood, and thus immediately secure an income with which they can build fences and buildings, and till the ground until the crops come in the first year. They have something to live on, while the settler on the tule-lands has no income, and all outgo for a long time except feed for stock. They have to purchase costly tools and implements for ditching and draining. Also, the cost of a place to live in for workmen; then the cost of preparing the soil for one, two, or three years before a return harvest rewards the persevering redeemer of our tule-lands. These things should be remembered, and this is why we have so often urged the subject of needed encouragement by our Legislature to this matter.

We are under obligations to G. B. Douglas, Esq., for much valuable and interesting information on this subject. The "Middle River Ranch," called the Brannan claim, is occupied and now being managed by Mr. Douglas in company with Mr. Brannan. The claim covers from three to four thousand acres, one of the largest claims now occupied and being improved. On this claim there are 2½ miles diked in by hand, and principally used for feeding cattle. Mr. Douglas informed us that when the land is reclaimed by diking and the water kept off, the clover comes up spontaneously and grows luxuriantly. Some garden-spots have been made upon this claim, on which peas, beans, onions, cabbages and radishes thrive well. Alfalfa grows grandly. Mr. D. intended to have planted rice the present year, and will do so next year to some extent. Experiments will be made with cotton and tobacco this year. Mr. Douglas has experimented with wheat, barley and oats, which now promise well; he has also planted corn and various seeds of fruit and ornamental trees, with promising success. The final results of the year we shall know.

Captain Connor, of whom considerable has been said, as having used the new tule-plow, has diked in about one mile with the machine, and has also inclosed by hand-work about ten acres. The reclaimed land is not yet planted, and this work is stopped for the present, as Captain Connor has engaged in the great work of opening the new road to Washoe from Stockton via the Big-Trees, a work of great moment to Stocktonians, and will be of great value to the public if successfully accomplished. If any man can do it, Captain Connor is the man, for he has uncommon perseverance and indubitable energy. Captain Connor called for forty volunteers to join him in the enterprise, and could have had two hundred had he required them. He left in good spirits and with high hope.

John Pettie, has a claim of two to three thousand acres, portions of it diked in, and has stock upon it. The tule-land as soon as it is being redeemed by diking and draining, produces fine grass for stock, and it remains the year round just as productive, as the land changes by draining, so the tule dies out and the new grasses appear. Tule-lands have great capacity for rich feed for stock.

Colonel Kinzer has a claim of about three hundred acres; a portion of this is only overflowed by what is called a freshet. A part of this claim is low tule; this is being redeemed and well-improved. Colonel K. is planting a large field of the true French Sugar-Beet, which must do well, and yield largely.

Colonel K. is also experimenting with various crops.

Mr. Patrick, one of the editors of the San Joaquin Republican, is largely interested in tule-land.

Colonel Lanins, postmaster, is also interested, and many of the citizens of Stockton have portions of their estates bordering upon the tule.

Mr. Urie has had tule-land under cultivation six or seven years, and has now an orchard and garden in a high state of cultivation, from redeemed tule-land.

The Rough and Ready Ranch, which is about three miles below Stockton on the slough, will be remembered by all who have traveled in the steamer to or from Stockton. The little garden-banks are washed by the waving-water as the steamer passes by. From this profitable garden the proprietor sends annually the best early tomatoes that are carried to the San Francisco market, and besides this vegetable or rather fruit, for it is a fruit, large quantities of early vegetables are raised with great success. We were informed that something like \$3000 is received at this garden annually for tomatoes alone.

In this connection [the redemption and cultivation of tule-lands] we desire to say, having witnessed the operation of the great ditcher or tule-plow, we have this objection to its working, and it will be found to result badly. It does not lay the sod back inland enough, but merely heaves it over and on the very edge of the ditch, where it soon falls or washes back into the ditch again, whereas it should be so planned as to throw it on or inland six or twelve fathoms, thus giving it a rest, and then it would not crumble or wash back into the ditch. If this can be done, we say let it be done, and when well done, the plow would be

complete; otherwise hand-work will be the machine. We have become much interested in this question, and we ask those interested to cooperate with us and furnish us facts, and we will labor cheerfully to do what good we can. In our next we shall have something considerable to say on the law which relates to tule-lands, which now operates badly and prevents their occupation and redemption, and hinders those improvements which would add millions to the wealth of our State, and the vast tracts of this land adjacent to Stockton would make that city and her citizens eminently rich and prosperous.

We must, in closing, express our thanks to all who aided us in our efforts to gather information during our visit to Stockton, and for many courtesies and tokens of approval of our journal, and their cooperation with it.

Farmers Ought Not to Speculate in Crops.

WE hold to the maxim that those who raise grain and other products of the soil should never become speculators in those products. If the cultivator of the soil will take the current rates of the principal crops he has grown for the past seven or eight years in California, he will find that the best average price has always been about the time of harvest. We ask farmers to go back even to this last harvest when wheat sold from \$1.75 to \$2.00 the hundred pounds; had the producers sold at that time, and acquitted themselves of obligations, and have improved their farms, planted orchards, purchased stock, added to the comforts of the homestead inside as well as outside, enriched the treasury of the wife who has labored hard during the planting and harvest season, and then invested any balance carefully at fair interest, how much better off would have been those farmers now, who either have their crops stored, or are now owing storage and interest. We know many who refused to sell six months since at \$1.75, \$1.85, or even \$2.00 a hundred, that cannot now realize within twenty-five cents of that price, while the interest and storage for the six months have eaten up as much more, and it is easy to show that \$1.50 a hundred pounds at harvest-time would have been much better for them than \$1.80 now. If the grain-grower would sit down and carefully reckon up all the loss and waste by keeping his grain, the leakage, rat-age, storage, interest, and risk of fire, and all casualties, not one man in five would ever think of taking the chances of holding on to his grain. We have seen a sample of handsome wheat the present week, now in store, that the owner refused \$2 a hundred pounds for. Afterwards wishing to sell, the best offer was \$1.85. He held at \$1.90. Again, with effort to sell, the best offer was \$1.82½; he held at \$1.85, and the present week the best bid was \$1.75, and still he held 2½ cents above the market, and we should not be at all surprised if this very owner should not finally get more than \$1.50 the hundred pounds. Now what is the real loss in such a case when eight months since he could have received 2 cents a pound for his two thousand sacks. Here is a clear loss of \$1000 at least, and this is not an isolated case. There are hundreds of not thousands, and it arises from the great mistake of the grower in a desire to hold on, or rather to become a speculator in his crop. We sincerely trust the experience of the past year will be a wholesome lesson to our farmers, and that they will unite and find a market or make one for their crops at the time of harvest.

The City of Stockton and its Business Aspect.

HAVING carefully observed the business appearance of this city, Sacramento, and Stockton, within the past three weeks—having visited Sacramento twice, Stockton once, and spent one-third of the time in this city,—we confess that we were much surprised at the very great activity we found in all departments of trade in Stockton—a city that people are so apt to call a dull place. From the fact of hearing such remarks of Stockton, so often repeated, we took particular pains to examine for ourselves, during the past three weeks, and we aver that we found Stockton the most active city of all. By this we mean that in all the various departments that constitute business—among the forwarding merchants (for a large business is done in this branch in Stockton, the forwarding goods to the interior), among the grocers, dry goods dealers, clothes, boot and shoe dealers, furniture dealers, stove dealers, etc., even the apothecaries and druggists (we found Dr. Holden full of business); and when we went among the mechanics, not an instance did we find that they were not full of work. The blacksmiths and wagon-makers, for which Stockton is celebrated, were all busy; and also, the teamsters, although the roads are bad. Teams were loading up in all parts of the city, and the quantity of goods waiting to be sent away is incredible. At all the farmers' trading posts, where baying tools were found, and where butter, cheese and eggs were to be exchanged for other family good things, we saw great activity, and we pleased to find it so. The scenes of such activity really surprised us, at this season of the year. We learned enough during our roamings to satisfy us that Stockton is a good solid city, and spreading out as she does, over a large tract of country, with her thousand and more of neat and beautiful cottages, and well-designed and luxuriant gardens, fragrant with roses, we saw enough and learned enough to satisfy us that the citizens were owners of their homes, places of business, stores and workshops, and were not laboring under a load of borrowed capital, but were quietly and steadily marching on in the road to high prosperity. We saw much to admire—much to gratify us. We have not time or space to tell half that pleased us.

A. B. SOUTHWORTH.—We invite public attention to the advertisement of this house, for their general stock of goods, and particularly for their large invoice of Reapers and Mowers now selling by them. Mr. Southworth has been engaged many years as importer of agricultural implements, and his house has always given satisfaction to the farmers of California, he having sold more of the article of *Plows* than any house on this coast. Their sales of Reapers have always been large, and their stock this year is one of the best.

Ladies' Department.

LIZZIE WILEY WARREN, M. D., EDITRESS.

MY SPIRIT BABE.

[We find the following gem wandering as an estray, without its author's signature. We know the author well, and heard this poem read by her when she was telling us of her beautiful child that was taken to the "spirit world," and it is nothing more than due that in republishing the poetry, we should give her name.]

Unopened Bud of Life, oh, can it be
This lovely form is all there is of thee?
Lingered on Sister Essence in the air,
To light and glorify a shrine so fair?
Ah! was the soul crushed in that dim embrace,
When Birth and Death were gathered face to face?

A Spirit hovered near thee, to invest
The spotless chamber of thy little breast,
And lingered till the shrouded Angel came
To smother, ere it burned, the young life's flame.
Then gathered up its pinions, soft and free,
For the fresh dawn of its Eternity!

Oh, then, I am not childless: thou hast gone
Where Angel Nurses bear thee; thy first morn
Broke fair in Heaven. This yearning heart shall find
Thee.

And to itself only the closer bind thee
For such brief separation. Go, my child,
From this bleak earth, where thou hast never smiled.

The sweet maternal office still is mine—
The human all engrossed in the divine—
By the clear words of Truth my hand shall lead thee,
And from the fount of Living Goodness feed thee.
Through all the Courts of Heaven my ear shall greet
The bounding music of thy little feet!

These mute lips ne'er shall utter baby moans;
But purest gladness breathed in dulcet tones,
Shall first awake their sweetness. Love shall teach
To thee the music of an angel's speech,
When from this curving mouth sweet words shall part,
With a deep blessing for thy mother's heart.

Then shall I seek through all those grottoes fair,
Rich "Gems of Life" to crown the flaxen hair:
And all the beauty of those soft blue eyes,
That woke not here, shall brighten Paradise;
And oh, what rapture, in their light, to find
Unfolding all the eloquence of mind.

I give to thee a name I love the best,
Before they lay thee in thy place of rest;
For thou to me an actual Being art.
Dear undeveloped Blossom of my Heart!
Where Angels breathe in Heaven's mild atmosphere,
The beauties shall expand that withered here.

Once more in these bereaved arms I hold thee—
Once more to this lone bosom I enfold thee;
By First-born and my Precious, for I know
The time has come when even this must go;
Yet tell me not my clinging hope is vain!
Dear little Mary, we shall meet again.

I am denied one living, warm caress;
Yet these cold limbs have power to bless,
When lit with such sweet hope, such joy divine,
To think that wert, thou art, forever mine!
But for a season I release thy hand—
I will not keep thee from the Spirit-Land.

Where still for us new paths of life shall open,
Fair daughter of my promise and my hope;
No barriers to our progress shall be found
Scattered abroad throughout that heavenly ground;
But buds of joy shall crown the chastening rod,
With life, as infinite, as God. FANNY GREEN.

Female Literature.

We take from our Scrap Book the following article, and commend it to our readers. It was originally published in the New York Sunday Dispatch, an excellent paper which has a wide circulation.

It has been said, "There is no sex in literature;" and a poetess once said, "I never wrote any female poetry." We should think, however, that from the quantity of trash in "Ladies' Magazines" and "Ladies' Departments" of newspapers generally, that there is a difference of some kind in literature. It is probably a difference of education, instead of a difference of sex.

It is a very great mistake on the part of idealists to suppose the sufferings of individual or collective humanity are untraceable to any one great wrong. The names of the causes of sin and suffering is Legion. We do not think specialities, or hobbies, are such ridiculous things, after all—provided they are good ones. Truth, as a hobby, will bear an incalculable amount of riding, and comes out all the better for it; while if a hobby is based on falsehood it will soon yield up the ghost. And, again, a great many people have no capacity of thinking of more than one thing, and if that be good in its tendencies, even though they make a hobby of it, they had much better think and talk of that than to spend their time in idleness. But here is the article:

"We have received a number of papers recently, conducted wholly or in part by women of acknowledged ability, and have something to say on this subject and newspaper literature generally. The first distinct impression is, of their one-ideal character. Nearly all are reformatory; one is devoted to dress reform, another to dietetic reform, a third to radical reform, and so on throughout a long list. Each paper contains a series of rambling, rambling articles, reiterating the same thought, with perhaps a few selected paragraphs from some spicy male journal. Now we would not be understood to say that women cannot edit a successful and interesting newspaper, but that they mistake the object of these institutions, when they confine them to the illustration of one idea. And no matter how ably this may be done, it will in a short time lose all interest for the general reader. The mass of people take but one, or at most, two papers; in these they naturally and rightly expect to find a general synopsis of what is going on in the world around them, and when this object is made secondary, or neglected altogether, and so important a medium of communication devoted simply to advocating some favorite notion of one mind, it is like confining the operations of the electric telegraph to one kind of communication. It has, moreover, an injurious effect upon those who receive and are influenced by it: it narrows down and confines the circle of their thoughts within a boundary; they imagine there is no world beyond the wall which has been built up for them. With women this is especially the case; having little to do with the world at large, their ideas of it are almost all obtained from books and periodicals, and were they confined to that species of literature which is more mentally weak and insipid than they now are. "Riding a hobby is always injurious to intellectual strength and retards mental development. One foundation of all physical evil; another, that women short dresses and trousers, and are allowed an equal chance at the Presidential elections. A and if people would only cut Graham bread, and eschew hot biscuits, the Millennium would be here in less than no time. A fourth thinks water applied externally, will cure all earthly ills, and the

great want of the world, a sufficient number of bath tubs; whilst a fifth is sure that the same beverage taken internally would drown care and fill a canal between us and sorrow, which that individual could never get over. Now each one of these notions is true to a certain extent, and we are not sure but they will all be received as Gospel before the Millennium does arrive; but there is also much beside to learn, and one of the worst things for women is the business of life as it is, of which few know a great deal. Look for one moment at the magazines which are devoted to women, filled exclusively with trashy, sickening love-stories, whose stupidity has passed into a proverb; of how Mrs. A—ruined her husband by her extravagance and constantly aping Mrs. B. This and 'Fashions,' which consist of absurd imitations of French figures reduced to the last degree, and decked out in a manner which would make one think women served no other purpose than to be used as advertisements of millinery and dry goods. In fact, the whole idea of exclusive literature for women is wrong—wrong as it is to have exclusive schools and seminaries, and to shut them out from the higher institutions of learning. It is a great mistake to suppose that reading the same book, studying in the same class with the other sex, would make women less feminine or unfit her for any of the duties of life. The influence of the sexes, rightly managed, is always good upon each other—they act as a moral police force, restraining, though at times inspiring to greater effort. Were colleges freely opened to women, we should no longer hear of the wild roystering which disgraces their walls; and were boys admitted to ordinary girls' schools, there would be less need of vigilance over their morals and manners than there is at the present time. With such training, women would be fitted for something better than the one idea of dress and cooking, which is never lost sight of where she is concerned. 'Ladies' Magazines,' and the parts of newspapers devoted to them, would either be unknown, or filled with something more substantial than milk and water dissertations on the last new books or the revival of some stitch in crochet-work.

"Women themselves, especially the rising generation, are not at all satisfied with the kind of existence to which education and habit dooms them, and there are some whose genius lifts them at once into a position above the obstacles thrown in the way of their less gifted sisters. The less fortunate ones sometimes make a few desperate attempts at a kind of sentimental notoriety, write dimly of blighted hopes, etc., which, though they seem very real and terrible to the party interested, excite no more pity than the toothache, and generally leave about as lasting an impression. Others write vulgar personalities about themselves or their acquaintance, which certainly cannot interest more than twenty-five people, and the larger part of these are disgusted; while others discourse prettily of the sweets of domestic life, in order to obtain money to cut a figure at the fashionable bachelors. We sincerely hope Ladies' Newspapers and Ladies' Departments will be abolished, unless catered for by a more sensible and healthy taste."

Swimming-School for Women.

A writer in the London Once a Week, gives the following interesting and useful particulars of the method in which women are taught how to swim at Paris. What is said of the advantages of this kind of instruction, applies quite as forcibly in this country as it does in England. Very few of our women learn how to swim, though all of them are fond enough of traveling:

As many parents are wishing to know how girls can be taught the use of their limbs in the water, it may be interesting to them to hear how the art is taught at Paris.

The water is that of the Seine. This is the least agreeable circumstance in the case, as the water of the Seine is quite as unfragrant in the summer months as that of the Thames. Whether it is purified on entering the bath, I do not know. Let us hope it is. The bath is moored in the river, and the space occupied by water is 120 feet in length; a course long enough to afford room enough for all the exercises connected with swimming. A wooden platform three or four feet under water, reaches to about the middle of the width of the bath; and this is for the use of children and mere bathers who do not swim. The other half is of considerable depth, in the middle, admitting of practice in genuine diving.

The dress is excellent for this purpose. It is made of light woolen fabric which does not absorb much water. The trousers are loose, and fastened at the ankles. The upper dress, also loose, extends to the knee, and is belted around the waist, and closed at the neck. It is just as decent a dress as English ladies used to wear when Bath was called "The Bath," and when wigged gentlemen and powdered ladies used to wade about in full trim, and chat in the water. The first step in the process of teaching is to make the pupil understand how to keep on the surface and how to sink to the bottom. Most people know that to spread out the limbs is to float, and to double one's self up is to sink; but it is not everybody who knows that the quickest way of going to the bottom is to raise the arms above the head. This is precisely what women do when they fall out of a boat, or find themselves overboard in a ship-wreck. Up go the arms in their terror, and down they go to the bottom like a shot. This is the action used by divers, who want to reach their point by the shortest way.

From the ceiling of the Paris bath hangs a rope which travels along on a sort of crane. Where this rope touches the water a broad belt is attached to it. This belt is fastened easily about the pupil's waist, supporting her in the water, and leaving her at liberty to learn the action of the limbs in swimming. She is made perfect in these, and must then try her powers without support. To render her safe, and preclude fear, the instructor, who is a master and not a mistress, walks along the edge, just before her, holding a pole within her reach, which she can grasp in an instant if fatigued or alarmed. It does not follow that we must have swimming-masters in England. The art is taught all along the rivers of Germany, and invariably by women, in women's baths. In that case the dress is less elaborate, and there is much more freedom and simplicity in the practice. It is a remarkable sight when the master is followed by ten or twenty pupils, his pole reminding them of the magnet which brings swans or fishes to the bread in a basin of water, in the old-fashioned way which astonishes children. The second pupil had a hand on the shoulder of the first, and swims with the other three limbs; the third on the shoulder of the second; and so on, looking like a school of mermaids. When so thoroughly at ease as to amuse themselves for a long time in the water, the ladies sometimes grow hungry; and then is seen another remarkable sight, not quite so pretty. They rush from the bath to a confectioner's shop which opens upon it, and may be seen presently swimming with one hand, and with the other eating their lunch, completely at ease.

After learning the art in fresh, it is mighty easy to swim in the sea, from the density of the water, and scarcely possible to sink. A woman who knows how to float is safe for many hours in the sea, as far as keeping on the surface is concerned. Among breakers, or sharks, or in extreme cold, the peril is not of drowning simply. The simple peril of drowning might be reduced to something very small indeed if everybody knew how to swim. These particulars of the Paris school may afford

some guidance as to how to set about getting women and children taught what they all ought to know; and in the hope that something may arise out of them, I offer them to the readers of Once a Week.

What is Due to Woman.

EDITRESS FARMER: I take the liberty of sending you the enclosed beautiful extract from the writings of an old and valued friend, who has perhaps forgotten my existence, but whose excellent discourses nourished the early germs of virtue in my heart and excited an earnest desire to reach the high standard which he has assigned to woman.

E. M. W.

Let man learn to be grateful to woman for this unbounded achievement of her sex, that she, far more than he, and too often in despite of him, has kept Christendom from lapsing back into barbarism; kept mercy and truth from being utterly overborne by those two greedy monsters—money and war. Let him be grateful for this, that almost every great soul that has led forward or lifted up the race, has been furnished for each noble deed and inspired with each patriotic and holy aspiration by the retiring fortitude of some Spartan, or more than Spartan—some Christian mother. Moses, the deliverer of his people, drawn out of the Nile by the King's daughter, some one has hinted, is only a symbol of the way that woman's better instincts always outwit the tyrannical diplomacy of man. Let him cheerfully remember, that though the sneaky sly achieves enterprise on public theaters, it is the nerve and sensibility of the other that arm the mind and inflame the soul in secret. "A man discovered America, but a woman equipped the voyage." So everywhere; man executes the performance, but woman trains the man. Every effectual person, leaving his mark on the world, is but another Columbus, for whose furnishing some Isabella, in the form of his mother, lays down her jewelry, her vanities, and her comfort.

Above all, let not man practice upon woman the perpetual and shameless falsehood of pretending admiration and acting contempt. Let not men exhaust their kindness in adorning her person, and ask in return the humiliation of her soul. Let them not assent to her every high opinion, as if she were not strong enough to maintain it against opposition; nor yet manufacture opinion for her, and force it on her lips by dictation. Let them not crush her individuality, nor insult her independence, nor play off mean jests upon her honor in convivial companies, nor bandy unclean doubts of her, as a wretched substitute for wit; nor whisper vulgar suspicions of her purity, which, as compared with their own, is like the immaculate whiteness of angels. Let them multiply her social advantages, enhance her dignity, minister to her intelligence, and by manly gentleness, be the patrons of her genius, the friends of her fortunes, and the equals, if they can, of her heart.—[Rev. F. D. Huntington.]

MRS. LIZZIE WILEY WARREN, M. D., ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of decorating the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves, she therefore dispenses with the use of drugs, relying on the curative power which the living organism and the supplying such conditions as the natural remedies afford. The natural remedies: Air, Diet, Exercise, Water and Electricity. The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, and approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and safe, and may be relied upon whenever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. WARREN makes use of the New and Highly Improved BOSTON ELECTRO-MAGNETIC BATTERY, one of the MOST PERFECT Electrical Machines on the Coast.

MRS. ANNIE L. AVERY, HOMEOPATHIC PHYSICIAN, Residence, 249 Pacific Street (two doors from Stockton Street), SAN FRANCISCO.

Special attention paid to diseases of women and children.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishes the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale. Apply at her residence, corner of Mason and Pacific streets.

TO GRAPE PLANTERS.

As we are very desirous of making a correct record of all the vines planted this season in California, we will esteem it a great favor if those persons who are planting will be so kind as to send us a list of the varieties, and quantity of each planted by them. A little trouble on the part of each planter would furnish us with facts which we could give back to them all with much increased value. May we not expect this from all planters of the vine everywhere?

Valuable Patents.—We call the attention of parties who are interested in PATENT RIGHTS to those advertised by us. Each of them will secure a very handsome sum to any person of enterprise and energy. The models and rights can be shown and explained, by calling at our office, when the price and terms will be made known.

WILL YOU NOT SEND THE CALIFORNIA FARMER ABROAD?

How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the CALIFORNIA FARMER. It would give them a knowledge of the resources of our State which they could acquire from no other source. Reader, do you wish to give this pleasure to your kindred and friends? If so, enclose \$5 to us, and we will mail a copy of the FARMER, as you shall direct, for one year, and we will pay the postage. Begin now, with the New Volume.

ALEXANDER H. TODD, Produce and General Commission Agent, No. 45 CLAY STREET, NEAR DAVIS, SAN FRANCISCO.

ALEXANDER H. TODD has been engaged in selling Grain and Produce for five years past in this market, was the Pioneer Expressman of California in 1849, has an extensive acquaintance, and possesses advantages unsurpassed for Buying or Selling. Has permission to refer to many of our most substantial merchants in the city, and also to a large number of farmers throughout the country.

N.B.—My terms for buying and selling produce are: For amounts under \$5,000, 24 per cent; for \$5,000 and upwards, 2 per cent.

ACADEMY OF NOTRE DAME,

SAN JOSE.

THE NINTH ANNUAL SESSION of this Institution will

commence on THURSDAY, August 18th.

The course of instruction embraces all the branches of a

liberal and useful education. Its aim is to form young ladies to

polite, accurate, and useful habits of order and economy,

and to cultivate in them those qualities which render virtue

both amiable and attractive.

TERMS: Entrance, to be paid but once.....\$ 15

Board and Tuition, per session.....275

Washing and mending of articles washed, per session.....50

Physician's fees per session (unless it be preferred to pay

the bill in case of sickness).....10

Piano, Vocal Music, Drawing and Painting form extra

charges, but there is none for the French, Spanish or German

Languages, nor for Plain Sewing and Fancy Needlework.

Payments are to be made half a session in advance, and no

deduction will be made for half a session commenced, except

in case of sickness.

Pupils will find it much to their advantage to be present

at the opening of the session.

DAY SCHOOL.

There is a Day School attached to the Academy for the con-

venience of those parents in the neighborhood who may prefer

that their children should return home every day.

TERMS: Tuition, including the branches specified.....\$5

Senior Class, per month.....4

A Californian in New York.

From a private letter, written by the Hon. S. B. Bell, dated New York city, March 30, we make the following extracts:

This city has not as yet recovered from the financial crash of '57. The old North-Western States of the Mississippi are suffering extremely from monetary difficulties. Railroads overdone, and new cities started on their lines, and speculation, rather than productive industry, all overdone, have ruined everything.

I notice in my native county (Orange, State of New York), with pain, scarce a particle of improvement in agriculture. In pomology they are behind even themselves. The old orchards are dead, and no new ones in their place. That portion of California in which I reside is really ahead of this two-hundred-years-cultivated country, in thrifty, scientific agriculture, horticulture and pomology.

The productions of the country look very diminutive, after having the eye filled with California growths.

The successful men of New York city are, however, introducing a new era, within a radius of one hundred miles of the city. They are filling this area with the most beautiful country residences. Some of them are really palaces; some like Baroque castles. I have one in my mind now, on the Hudson, that has cost \$200,000, and is not yet finished; it is a Dukal palace.

Most devotedly yours, S. B. BELL.

Received.

We have the following to acknowledge: *The Orchard House*, or the culture of fruit trees in pots, under glass; with plans of fruit houses and estimates of their cost; by Thomas Rivers, Sawbridgeworth, England; with additional directions for the growing of trees and vines, by Wm. Saunders, of Germantown, Pa., with many illustrations. This is a valuable work, containing a fund of important information; published by Saxton, of New York.

The Honey-Bee and moveable-comb hive, showing the new system of bee-keeping; by Wooster A. Flanders, Cleveland, Ohio—a small work, with brief hints.

Oration of Hon. Thos. S. Batecock of Virginia, on the inauguration of Mills' Statute of Washington, received from Hon. Senator Gwin, with other Congressional documents.

List of Premiums of the Alameda County Agricultural Society for the Second Annual Fair, in June, in a neat pamphlet form, from the Secretary. We shall report in another column.

The Tea Plant—Three young plants came by mail, in perfect order, from the Patent Office, together with a circular regarding them. We shall take good care of them and endeavor to make a valuable beginning for a tea plantation. We are proud of them, and hope to give a good account of them.

A New Flowering Grass (the Spigula Pilifera)—This curious species of very fine grass will become a favorite, from the character given to it. It bears a fine and delicate white flower and grows very thick. Sent as by C. L. Kellogg & Co., seedsmen, Sansome street, who are now opening many new seeds.

Received from Hon. Isaac Stephens, "Report of the Oregon and Washington Delegation in regard to the war claims of Oregon and Washington Territory."

Splendid Durham Bull.

We call the attention of stock-raisers to the advertisement of John B. Frisbie, Esq., at Vallejo, of the famous Durham Bull, "Harold Fourth." This is the finest bull on this coast, and we have taken the liberty to correct the name. It appears erroneously in some papers, and it is necessary to have our stock truly named. This noble animal was introduced into this State by J. D. Patterson, Esq., and sold to J. B. Frisbie, Esq., for the handsome sum of \$4,000. We give below the pedigree, which is one of the best in the State:

HAROLD FOURTH 2254
Light roan; calved May 15th, 1854.
Sire, imported Harold 1st, 1854. 1628
Dam, Daphne, by Meteor. 104
gr. dam, Dolly, by Archer. 10 (6828)
gr. dam, Delight, by imported Devonshire. 51 (956)
gr. gr. dam, Daisy, by imported Admiral. 10 (682)
gr. gr. gr. dam, Yellow Rose, by imp. Young Devon. (95)
gr. gr. gr. gr. dam, Arabella, by North Star. (46)
gr. gr. gr. gr. gr. dam, Aurora, by Comet. (155)
gr. gr. gr. gr. gr. gr. dam, by Henry. (301)
gr. gr. gr. gr. gr. gr. gr. dam, by Danby. (199)
Harold 4th is recorded in the American Herd Book, vol. 4, page 120.

THE PHILADELPHIA INQUIRER—We are pleased to receive, among our exchanges, this valuable journal. It now comes to us much enlarged and improved. It is now in the form and size of the N. Y. Times, Herald and Tribune, containing eight pages, and forty-eight columns of matter. The topographical appearance is most excellent, the editorial and selected matter of a high character—such as to make it a valuable family paper. We are pleased to notice these improvements—indications of prosperity which we sincerely wish it may long enjoy.

COURTESIES RECEIVED—We acknowledge kind courtesies received from our brethren of the editorial corps—from the San Joaquin Republican and Stockton Argus. We truly appreciate such courtesies. May they ever prosper. Of this, however, we have assurance, for we were pleased to see both offices were full of the evidences of prosperity. Of this we shall again speak.

San Francisco Cattle Market.

Reported for the CALIFORNIA FARMER, by W. J. WHITNEY, corner of Butler and Sansome streets (Stock Corral).

We have no change to note in the Cattle Market this week; prices remain the same as our last quotations, there being no sales, except for actual consumption.

ATTENTION!

THE WHOLE STATE!!

THOROUGH-BRED STALLIONS!

ABDALLAH,

The only TROTTER HORSE that ever took a Premium in this State as a THOROUGH-BRED,

WHICH HE IS, AND NO MISTAKE.

ABDALLAH was raised by Charles Hult, of Orange county, N. Y.; sold and went to New Jersey, where he took the first premium as a yearling, and as a two-year-old at two successive Fairs in that State, over all competitors from that and other States. ABDALLAH stands sixteen hands and a-half high, mahogany bay, black mane and tail, clean head well set on, beautiful neck, and sloping shoulders, well ribbed up and very heavily quartered, tremendous stifle and gaskin, short cannon bone and sound feet; in short a perfect picture of magnificent horse flesh. A good one to look at and a good one to go, has a remarkable turn of speed, with a very level and square gait, gentle and kind in saddle and harness of any kind, and high courage; as fast, if not faster, than any horse in the country at trotting, and can out-walk them all. ABDALLAH has never been trained, but trots his mile in 2:50 to harness. Is a sure foal-getter.

PEDIGREE.

ABDALLAH was six years old on the 29th of March, 1859; was sired by Hambletonian, he by Abdallah, he by old Membrino, he by Imported Messenger. Hambletonian's dam was the Charles Kent mare by Imported Bellfounder, grand dam old One Eye, by old Hambletonian, he by Imported Messenger, his dam also by Imported Messenger, and the dam of old One Eye by Imported Messenger. The dam of Bryant's Abdallah was sired by Imported Rockwell, his grand dam by Sir Henry, the celebrated race horse that ran with Eclipse. The pedigree of all Abdallah's ancestry is pure; he is of a racing stock, and no chance horse.

William H. Ryndick, of the town of Chester, Orange county, State of New York, being first duly sworn, says that the above pedigree is true to the best of his knowledge and belief.

Sworn to this 4th day of February, 1859, before me,

E. A. OLMSTEAD, Justice of the Peace.

\$50 Per Season. Terms Cash.

E. D. L. BRYANT, Proprietor.

YOUNG GILBERT!

AGE AND DESCRIPTION.

YOUNG GILBERT is six years old, of a deep chestnut sorrel, stands full sixteen hands high, and possesses a combination of Beauty, Bone and Muscle not surpassed by any horse in the State. Inspection will satisfy any judge of horse-flesh of the great superiority of YOUNG GILBERT. To all others it is enough to say that

He took the First Premium at the last State Fair,

over all competitors, as a general work horse.

Those who desire to combine usefulness and beauty in their foals, and be certain of a pure get, will not apply elsewhere after seeing YOUNG GILBERT.

PEDIGREE.

YOUNG GILBERT was sired by Porter's Gilbert, and he by Bagge's imported Gilbert, without dispute the best horse of his kind in England at the time of his export. The dam of YOUNG GILBERT is a Morgan Black Hawk mare, one of the best bred mares now in the State of California.

\$25 FOR THE SEASON.

TERMS CASH.

BRYANT & WEINMANN, Proprietors,

Benicia, Solano County.

PERSONS INTERESTED IN RAISING STOCK OF

Good Blood,

Size,

Style,

and Speed,

Are invited to call and examine for themselves at

STONE'S RANCH,

Two Miles East of Benicia,

ON THE SUISON ROAD,

WHERE

ABDALLAH

AND

YOUNG GILBERT

WILL STAND FOR THE SEASON,

Commencing 1st of March, and ending

1st of August.

Particular attention paid to Brood Mares Good

Stables, 100 acres Good Pasture, Feed, &c., at small

expense.

All accidents, thefts, and escapes, at the risk of

the owners.

FARM STOCK, &c.

FINE STOCK!

FOR SALE.

BY THE STEAMERS WHICH SAILED FROM NEW York on the 25th of January, 1859, I have made another shipment of

THOROUGH-BRED STOCK

to the Pacific Coast, consisting of

SHORT-HORN DURHAM CATTLE,

Pure FRENCH MERINO, SOUTHDOWN and COTSWOLD

SHEEP,

Including the celebrated Southdown Buck "JONAS WEBB," believed to be equal, if not superior, to any buck of this breed in America—

ESSEX, BERRSHIRE, LIOESTER and SUFFOLK

SWINE.

All of these animals are of Pure Breed, and of the BEST QUALITY, having been imported from the most celebrated herds and flocks in England and France, or bred directly from such imported stock.

The Bull "PRINCE GEORGE OF CAMBRIDGE," No. 8634, in the American Herd Book was got by "Third Duke of Cambridge," bred by the late Thomas Bates, of Kirklington, England, and his dam was got by "Yorkshireman," also bred by Mr. Bates.

The Bull "HAROLD 4th," No. 2354 American Herd Book, was got by "Harold 2d," bred by Robert Golding, Hanton, Kent, England, and his dam was by "Meteor," got by "Duke of Wellington," also bred by Mr. Bates.

The FRENCH EWES were either bred in France, or have been raised by myself from stock imported from there, and they have been served by the best Ram I have ever imported from France.

The SOUTHDOWN EWES have been bred from stock imported from the flocks of Jonas Webb, Lord Walsingham, Mr. Elman, and the Duke of Richmond, who are known to have the best flocks of Southdowns in England. The most of them have been served by a Ram bred by Jonas Webb, of Braham, England, and the others by Mr. Samuel Thorpe's Celebrated Prize Ram, bred by him from his Webb stock.

My brother, JAMES M. PATTERSON, goes out with the stock, and is authorized to make sales, and any information can be obtained by addressing him at SAN FRANCISCO, California. He will also send to all applicants Catalogues and Circulars describing the animals.

JOHN D. PATTERSON.

WESTFIELD, Chautauque Co., N. Y., January, 1859.

This Stock referred to above have arrived, in fine health and condition.

THE BULLS and SWINE can be seen at the BLACK-HAWK STABLE, on Pine street, or by calling on me, at the TREMONT HOUSE.

I have imported, and have for sale,

50 HIVES OF BEES,

which I will sell on favorable terms.

J. M. PATTERSON.

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MAY 11, 1860.

NUMBER 12.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 138 Washington street (up stairs), San Francisco.
Terms—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

JOB-WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Soil Science!

EDITOR FARMER: Experience, observation, and reflection, are the means of acquiring knowledge. These directed to the treatment of soils bring individual experimenters, observers, and reflectors, and the aggregated social opinion of a community thus engaged, to certain conclusions, which, as one position after another is settled and determined upon, take the form of Principles or established axioms; for, respecting all culture and treatment of soil, as respecting everything else of nature, which the conscious, the experimenting, observing, and reflecting, the scientific part, the man or human part of nature, there are Principles, the aggregated view of which, the same human, intelligent part, denominates the Science of Soil-culture.

Up to a very recent period, that there is science touching this matter, has rather been admitted and recognized than acted upon to any great extent; but the time has arrived for the recording of principles discovered and confirmed by experience already had. Soil-science is therefore inaugurated; and by all subsequent experience, observation, and reflection, the Principles composing its prospective growth must be elaborated and established.

I am going to propound some things for the consideration of you, your readers, and all soil-students and soil-workers. I will designate them Principles, because I think them so; and scientific, because I regard them as based upon and arrived at by experiment, observation, and reflection. They are principles that California is doing more to develop, perhaps, than all other parts of the world together; for they are principles which have application more general and more forcible here than anywhere else.

In all cultivated parts of the globe there is no liability to which the soil-culturist is exposed, so destructive to, and by which his hopes are so often and so greatly blasted, a disappointment in which society at large everywhere and in all its ramifications participates, as that arising from drought. Drought is the certainty of its annual occurrence on this western slope, it, and some mode by which with equal certainty the evils attending it can be obviated, become considerations of the greatest importance; not alone to soil-culturists, but to the whole community; for all have sustenance and support directly or indirectly almost entirely from the soil and its products.

Irrigation has, in some cases and situations with eminent success, been resorted to, and thus this is established as a scientific principle on this subject; but it is not capable of universal application, and where it is, it is one to be applied with great care and watchfulness. Even in the most favorable circumstances, although by it is produced an abundant vegetable growth, it is a question whether or not the health of a community in the immediate vicinity of it is not in all cases deteriorated by its adoption.

Mulching is also a principle resorted to with marked advantage, with the same objects in view, viz: a husbanding of the moisture and vegetable nutriment of the soil; but the materials for this are not attainable at all times and in every situation. The mulching principle is one with scientific foundation, and in connection with deep and thorough cultivation of which I am going to speak, will be found of incalculable utility.

I will now suggest what I regard as a principle capable of universal application wherever there is sufficient depth of soil or of any kind of earth not too gravely above the underlying bed-rock, a principle capable in its application of resisting and preventing all destruction and prevention of crops by drought, however protracted it may be.

A depth of six inches of well-cultivated, mellow earth will resist a given amount of desiccative influences for a certain length of time before vegetation suffers. Well, if a depth of six inches will endure and resist an intensity and continuance of such influences equal to six, and sustain healthy, vigorous vegetation, a depth of twelve inches equally well pulverized, will endure and resist an equal degree and continuance for very much more than double or in arithmetical proportion. I suspect that the rule will be found to be governed by a regular geometrical proportion, viz: that a depth of twelve inches, other things being equal, will have an enduring and resisting capacity as compared with that of six inches, equal to the

squares of each, or as 144 is to 36, or four times, and so on, until a point is arrived at in this direction at which its enduring and resisting capacity would be entirely beyond the reach of all drought that does occur. The reason of this geometrical instead of arithmetical increase of such capacity, and also that at some depth not great, no atmospheric influences can overcome it, is owing to these two facts: first, that the desiccation, the abstraction of moisture, necessarily takes place wholly from one side of the body or mass under consideration; and second, that from the other side there is a constant repletion counteracting of the depletion from the first. By reason of this, it will be manifest to all, that at a very small depth of porous mellow earth capable of holding moisture, an equilibrium or balance of influences would be reached. In aid of this, the fact that a greater distance from the surface, a greater supply of moisture is found, while the withdrawal is so much slower from the surface, is evident. In view of this, it is evident that the increased capacity must be greater even than geometrical, and the equilibrium reached at less depth. If I am correct about this, a cultivated depth of eighteen inches will endure and resist in proportion to those of six and twelve as before instanced, equal to its square or three hundred and twenty-four. Twenty inches deep equal to four hundred. Twenty-five inches deep, equal to six hundred and twenty-five. Thirty inches deep, equal to nine hundred. Forty inches deep, equal to sixteen hundred.

Now look at this; a cultivation of three feet deep, which is but six times greater than that of six inches, will endure and resist drought thirty-six times greater than it. If six inches well filled, will endure one month, as we know it will in most arable situations, then by natural inference that equally well filled, three feet or thirty-six inches deep, will endure thirty-six months or three years. A depth of eighteen inches, a very practicable depth to cultivate, will endure equally well nine months.

Now then, in view of this, I lay down the principle that a sufficiently deep and thorough system of culture, will enable the soil to resist any drought whatever, and enable the cultivator and the community to realize good crops under any circumstances of drought that ever has, or that in the providence of nature ever does occur. Moreover, I suspect that a thorough system, such as the above, say a cultivation of the earth to the depth of three feet, would in most situations and in ordinary circumstances, answer all the ends of under-draining, from which so great benefit has been and is being derived. Respecting this last object, however, there is nothing so efficient and reliable as a thorough system of under-draining; for in almost any climate there is a liability to an excess of rain, and in many situations exposure to overflow, in either of which cases the soil is deluged, and without under-draining, is puddled and rendered compact by an entire exclusion of air from it. After being thus subjected, and subsequently exposed to drought, it dries hard, almost like a brick, and the objects of the previous deep cultivation being defeated, the whole must again be repeated.

I will now make some suggestions touching the most practicable means of attaining the ends above had in view. At present, and in most situations, the principle of plowing as deeply as it can be done, or as deep as the depth of the soil will admit of this principle of upturning and overturning, and then in the bottom of each furrow as it is opened, an application of the subsoil-plow as deep as possible, on which the next furrow slice is turned by the ordinary plow; by this mode, it can in most situations of soil favorable to it, be done to a pretty good depth; but to be thorough the process must be repeated to the same depth in a direction crosswise to the first operation, for there will be between each of the passages of the subsoil-plow, a core left unbroken up. If the operation is thus repeated, and in both cases thoroughly performed, and to the depth of eighteen inches, and when the ground is in proper condition to work, I believe it will endure the most protracted droughts that ever occur even in California and in the most arid sections of it, and without a particle of irrigation. I believe that even fruit-trees, berry-bushes, or any other species of vegetation, may be trusted upon soil thus prepared with perfect impunity.

At present, and in most situations, I have said, the plow and the subsoil-plow, are the practicable and only attainable mode of securing the objects contemplated by this article. I have also admitted that done in a certain way, it may be very well and very effectively done; but the time is coming and now at hand, when the steam-engine, or some other scientific pressing into service of the natural elements and their powers, will be applied to soil-culture, as they have so long and successfully been in other branches and fields of human industry and for the gratification of human desires.

In view of the deep and thorough culture of which I have been speaking, the difficulties in the application of such powers and appliances depreciate materially, for the reason that a much greater power is requisite for any given space or area of land than that for ordinary land-culture.

This so, the power of a respectable steam, caloric, or other engine, can be applied and expended on a more limited territory. Less of locomotion has therefore to be provided for, and of course less carrying of fuel, and less inconvenience experienced respecting fuel.

To soil-culture, a great force of animal power cannot conveniently be applied; and when the time comes for such as I am now contemplating, the powers above spoken of will not only be available, but more economical than that of animals.

By way of hints to inventors and practical mechanicians, I will suggest that for deep cultivation by chemical and mechanical means, the digging principle, will, I think, be found to be more simple and more practicable, as well as more attainable and of greater utility and adaptability to the wants of the soil, than the plowing or over-turning principle.

I can myself see, almost clearly see, just what is wanted: a set of steel plungers or diggers, straight, not wide, nor more thick than is found necessary, smooth and unruled, to be forced down (perhaps by a cam-shaft in inverse order to that of lifting in a quartz or other mill). They, the diggers and the cam-shaft, might extend across the course of the engine, cultivating a width of a few feet more or less in its passage. They might be forced down to the requisite depth, behind the engine, which would stand and move forward on the hard and uncultivated ground. To guard against injury from rocks or other substances impenetrable in the soil, each might be provided with a spring or provision rendering its insertion not absolutely positive, but yielding when it, the digger, meets with aught so positive. When the whole row across are inserted, which insertion might be somewhat inclining back from perpendicular, as a spade is inserted in the operation of digging, to facilitate both the raising up loose of the soil and the more easy extraction of them, the whole together, engine and machine, or the latter detached from the former, might then jog forward sufficiently for the next insertion, which forward jog might involve and effect on the lever-principle, a slight throwing back with the loosening and breaking-up of the soil being dug, as the whole row of diggers are extracted. The diggers might revolve or not, and be two on and at extreme ends of one spear or shaft or not, as found most practicable; but when extracted as above, revolve or come forward into their place of a few inches advance, ready to be again acted upon by the cam-shaft, now again brought to bear upon them successively, commencing at one end. The whole process might be executed quickly and repeated rapidly.

Will not Mr. T. Ogg Shaw and other mechanicians of this State, give this subject their attention, so that California, which is so admirable a field for its application, may also have the credit of its invention and introduction. By steam or other scientific mode of cultivation on the dig-principle, soil that is clear or been cleared of rocks, roots, stumps, etc., can be cultivated to any desirable depth. When thus cultivated deeply and thoroughly, the pressure of an animal upon its surface for the purpose of more complete pulverization and weed-eradication between rows of trees or vegetables, will not affect it so as to compress it deleteriously below the surface or beyond the correction of the cultivator drawn by him.

Yours, etc., SAM'L. SELLERS.
BEAR VALLEY, Mariposa County, Cal.

Honey-Bees.—Where does the Shoe Fit?

SACRAMENTO, May 11th, 1860.

EDITOR FARMER: The stupidity and ignorance exhibited over the signature of L. Kennedy, in the Farmer of the 20th April and 4th of May, is only equaled by his presumption in intruding a notice of his own private operations before the public in the manner which he has done.

It was unnecessary for him to come out in a second article and acknowledge that he knows all about the disease, and tacitly admit that his bees had it, he having previously put on the fitting shoe.

Mr. K. is evidently one of a class of men who are laboring to have the facts suppressed, so as to enable them to sell their bees, and thus divide their loss with the public. Honorable, is it not?

And now a word to the public in regard to the Italian honey-bee. It has been stated by different writers that it is difficult to find the pure breed even in their native country; is it then to be supposed that they can be kept so here? To do so would require an amount of skill and perseverance that but few persons are capable or willing to devote to it, particularly if they can palm off mixed for pure blood. One of the merits claimed for this bee is superior industry; that it will rob the common neighboring bees. If this be true, it will be a very undesirable acquisition till they can be simultaneously introduced into all our apiaries, and at the same time throwing out all our common bees. The propensity to rob would expose them to dangers of the disease more frequently than the common bee; they being equally subject to it.

It yet remains to be proven; whether the Italian bee does possess all the merits claimed for it. Granted that it does. Speculation in them must

necessarily be brief, when it is known that from three to five hundred queens can be raised from a single hive and its increase in one year, and each of these to increase in the same proportion in the following years. This increase of course would be made in connection and partly with the aid of the common bee.

Yours truly,
J. S. HARRISON.

Irish Dairy Cows.

Irish dairy cows are supposed to have originally consisted of two distinct breeds, viz, the "Long-horned" and the "Short-horned." The former occupied the rich low-lying pastures of the best grazing counties; and the latter, commonly called "Kerries," from being more numerous in the county Kerry than elsewhere, occupied the more mountainous districts of the country. The "Kerries" are, however, still to be found in the greatest numbers, and in most perfection and purity, in the county whose name they bear. In addition to these distinct breeds there seems to be a middle breed of cows between them, partaking somewhat of the properties of both and occupying a medium class of soils both as regards fertility and elevation. The question in regard to the original breed of Irish cows has long been a subject of dispute; but latterly several facts have come to light, which go to prove that the original cattle of the country were all of the short-horn breed. This belief has been occasioned by the recent researches of Mr. Wilde of Dublin, an eminent naturalist, who discovered large quantities of short ox-horns, of great antiquity, in a cave near Dunshaglin, in Meath, one of the richest counties in Ireland. The inference drawn from this discovery as to the short-horns having been the breed of the country, was still further confirmed, in 1846, by fresh discoveries made at Loughgarr, near the Shannon, in the county of Limerick, by Messrs. Nolan, Glanville, and Carroll of Dublin. In a cave near Loughgarr, these gentlemen found immense quantities of the heads and horns of short-horned cattle, various bones of the Irish elk, and also of the supposed original breed of the Irish swine. Still further evidence was brought to bear upon the subject by Mr. Carroll, who, in 1850, discovered, on a small island in the harbor of Wexford, the bones of a short-horned ox or cow, three feet below the surface, in a bed of marl. The horns were about four inches long from the root to the tip, beautifully curved, and about four and a-half inches in circumference at the root. The antiquity of these remains is undoubted, and, in absence of proofs as to the origin of the long-horned breed, would lead to the conclusion that the short-horns are of far greater antiquity, and more entitled to the appellation of the native breed of Ireland; more especially when we find an authority such as Mr. Youatt undecided in opinion, whether the Irish long-horns are indigenous to Ireland, or were originally sent to that country from Lancashire.

Kerry Dairy Cows.—The Kerry breed is classed, by Mr. Youatt, among the middle-horns, and properly so, as it seems to have many points of resemblance to this class, especially the "Ayrshires" of Scotland, and the Alderney of the Channel Islands. The Kerry cow is a valuable animal to the hill farmer in Ireland; for she is hardy, easily kept, and gives a large quantity of milk of a rich quality, when compared with the food consumed. These properties, which are characteristic of the Kerry cow even under very incalculable circumstances, are greatly enhanced when she is removed to a richer pasture and better climate. Under these circumstances, she will compete, in profit to the dairyman, with other and larger breeds; and when out of milk, she is easily fattened. Mr. Crosby of Ardirt Abbey, near Tralee, has a large dairy of cows of the Kerry breed; and as a correct account of the produce is kept from year to year, we are enabled, by the kindness of Mr. James Grant, land-steward at Ardirt Abbey, to present our readers with a statement of the annual quantity of milk, yielded during the seven years which ended at 1851:

Years.	No. of cows.	Gross annual gal.	Each cow—gal.
1845.....	25.....	13,410.....	479
1846.....	26.....	13,552.....	522
1847.....	30.....	14,277.....	475
1848.....	34.....	15,210.....	447
1849.....	47.....	21,980.....	467
1850.....	59.....	30,090.....	510
1851.....	80.....	32,921.....	411

34193

The average quantity annually per cow, during the whole seven years, is 488 gallons, which, although small for large cows of fine land, is yet large for small Kerry cows, fed on land of so poor a quality as to be quite unfit for sustaining the larger breeds of dairy cows. Again, the milk of the small Kerry cow is extremely rich in butter, every two gallons of milk yielding one pound of butter, according to Mr. Grant's statements; but to do this, the cows must be kept in good condition, and milked twice a day. Some Kerry farmers feed their cows in winter, when dry, with hay and sheep oats, and when they calve, they are put out to good grass in May; and with this treatment, these farmers will sell their firkins of butter (seventy pounds each) annually, making the entire produce 280 pounds a year, and about 500 gallons of butter-milk. Taking the butter at 6d. a pound, and the sour-milk at 1 1/2d. a pound, the gross money value of each cow, exclusive of the calf, will be £10, 10s. for butter, and £3, 2s. 8d. for butter-milk; or, in all, £13, 12s. 8d. The cases where this sum is realized from a Kerry cow are exceptional; but they show how very valuable an animal she is to the small farmer when well attended to. In Mr. Grant's dairy, averaging from twenty-eight to thirty cows during the seven years

over which his statement extends, the average quantity of milk yielded by each cow is 488 gallons; which gives 244 pounds of butter, and 440 gallons of butter-milk. Calculating these as before—the butter at 6d. a pound, and the milk at 1 1/2d. a gallon—the result is £9, 3s. for the one, and £2 15s. for the other; or in all, £11 18s. a year, exclusive of the calf. Mr. Crosby's pack of dairy cows, is not, however, exclusively composed of "Kerries," there being several of the short-horn, Ayrshire, and Irish breeds amongst them; neither are his cows kept solely for the manufacture of dairy produce. His system is a general one, consisting in rearing all the healthy calves, keeping them for two or three years, and selling them off fat. The old dairy cows are all sold fat also; and, in consequence of never being allowed to get into low condition, they are easily fattened, and turn out well in the shambles. The following dimensions are those of a very pure and well-shaped Kerry cow, belonging to Mr. Crosby:

	ft. in.
Length from top of shoulder to plumb of buttocks.....	4 6
Girth behind shoulder.....	5 10
Height from ground to top of shoulder.....	3 6
Breadth between haunch-bones.....	1 8
Length from shoulder-top to root of horn (neck).....	1 10
From horn to eye.....	0 6
From eye to end of muzzle.....	1 0

The color of the hair of this cow is black, with the exception of the udder, which is white; and the texture is soft and woolly; skin supple, and soft to the touch. The general aspect of the cow is pleasing; her nose, from the eye downwards, is long, and the muzzle fine; neck long and small; carcass round and lengthy; legs short; udder set well up between the thighs, well forward also; teats wide, set with a forward inclination. This cow gives fifteen quarts of milk daily, for the first three months after going to grass; twelve quarts daily next two months; and, during the remaining five months, she will gradually fall from that till quite dry; the annual quantity being nearly as follows:

1st three days, 91 days, at 15 quarts =	1365 quarts.
2d two months, 62 " at 12 " =	744 "
3d five months, 154 " at 4 " =	616 "

Total.....2725 quarts.

When fat, she will weigh four cwt. in the shambles, and thus retain her value to the end. A cow of this kind is an invaluable acquisition to a dairy farmer, as she is easily and cheaply fed, and yields a large quantity of rich milk, which, in whatever way it may be disposed of, will, in ordinary circumstances, realize from 4d. to 6d. a gallon. Taking the quantity of milk above stated, which is 681 gallons, at 5d., the annual value is £14, 3s. 9d. The cost of keep will not exceed £8 annually; so that, in this case, allowing the dung to go for litter, and the calf for attendance, the profit will be about £6 a year. Of course, this is an extreme case; but it shows the great desirableness of procuring good animals for the dairy; for, when such are obtained, the profit is sure and abundant, whereas, in the case of bad milkers, "they will eat their head off every year." In the above table of quantities of milk yielded by Mr. Crosby's cows, there are considerable differences in comparing one year with another. The highest annual average per cow is 542 gallons in 1846, and the lowest is 412 in 1851; but, in the latter year, twelve of the cows were under three years old, which may, to a certain extent, account for the difference.

Mr. Grant states, as his experience, that cows which give a large quantity will not yield one pound of butter to every two gallons of milk; but those that are well fed, in good condition, and only milked twice a day, will yield this proportion. Much, however, depends upon the quality of the pasture, and the age of the cows; for, when old, the bones become dry, and the constitution enfeebled, and, as a natural consequence, the quantity of milk, although large, is poor in quality, especially in butter; and, consequently, where this forms the principal article of sale, old cows are extremely unprofitable, rendered still more so from the large quantity of food which such animals consume, when compared with younger and more vigorous ones. The cows at Ardirt Abbey are milked twice a day, both in summer and winter. They feed in the fields; and are not housed, even at night, from 1st May to 1st December. They are milked until about ten weeks before calving time; and the average yield of butter, during the whole period, is one pound from every two gallons of milk. Mr. Grant considers that, by feeding with clover and vetches, the Ardirt Abbey cows would give a greater quantity of milk; but they would not be sure for feeding, in consequence of the tendency of soft succulent food, and severe milking, to impair the constitution.

With regard to M. Guesnon's test of the milking properties of cows, Mr. Grant remarks: "I have never yet had a cow that milked up to M. Guesnon's largest quantity (1st order, No. 1), which, he says, give twenty-four quarts of milk daily for eight months; but I have not any cows kept solely for the production of milk. I have, however, had different cows that gave twenty quarts daily for two or three months after calving. Our cows calve in March; and they begin to reduce in quantity of milk early in July, by which time they are again in calf. With regard to M. Guesnon's system of knowing the quantity of milk a cow will give by certain external marks, or what he calls the development of the teats, I think, as a general rule, it is well-founded, and deserving of attention by practical men. I can testify that out of our dairy of eighty cows, our best milkers have the best developed teats; and further, that those which have the hair growing downwards on the hips behind, are bad milkers."—[Dairy Cows and Dairy Farming.]

THE POTATO CROP.—How will the present price of potatoes compare with that of three or four months ago; and what do these growers of potatoes think of our constant remarks relative to selling these products at the time of harvest?

We can point to men who have thousands of sacks of potatoes in store, even now, with an abundant new crop coming in, that are holding on for "better prices," that could have sold months and months ago for 1 1/2c. and 1 1/2c., when the ruling price is 75 to 90c. the 100 lbs., and almost certain assurance that this is high price at this time of year for "old crop." "Comment is unnecessary."

their tobacco-pipes were made of reeds the rainy season was called yamowacore the spring-time was called yamore-takap-comock-urker the summer-time was called yamokino-urker the fall-time was called yamogushok-qui-yet it is raining was called yamarawokak none of the Indians of California seems to have a name for buffalo the site of the Mission was called Tovicanga, and near by was a large rancharia the site of Los Angeles town was called Yang-ha the beach or plaza of San Pedro was called Sow-wing-ha.

The vocabulary of San Gabriel was taken down from an old Christian-Indian about sixty years old, and his appearance and features similar to our other Indians. He says, San Gabriel was first built by Padre Miguel Cruzado, and he was born near the Mission.

The Indians of San Fernando spoke nearly the same language as those of San Gabriel. The site of San Fernando was a rancharia called Pasheckna, and was more populous than any other rancharia of the Fernandinos. Other clans were Okowin-jha, Kowanga and Saway Yanga. The Ahapchingas were a clan or rancharia between Los Angeles and San Juan Capistrano, and enemies of the Gabrielenos or those of San Gabriel. The clans and septs of San Juan Capistrano, San Gabriel, San Luis Rey, and San Fernando, had not exactly the same language, but were considered one nation. They spoke dialects which made it somewhat difficult to converse with each other. All these clans used the temeschal or steam-bath. This word Temeschal is not Californian but Mexican, as most of the Indians of California used it the same as those of California. The use of temeschal seems to be universal among all the Indians of Pacific-Mexico, as well as of the Californians and up to the British territories, or beyond 49°.

In 1775, Father Francisco Garces came by land from Tucson to San Gabriel, over, I suppose, very nearly the same road now (1859) traveled by the Overland Stages—the distance he makes about one hundred and sixty-five leagues. He says, that on the Gila there were of Papago Indians 4000 souls, Pimas 2500, and Cocopas 2500, making 9000 in all. On the Rio Colorado (between the Gila and the head of the Gulf) he mentions the Cocopas 3000, the Talligumays 2000, the Carjunches 3000, the Yumas 3000, the Talchedones 2500, and the Tamasabes 3000, making 16,500 souls of the Colorado, and with those of the Gila foregoing amounting to 25,500 souls.

Father Pedro Font came from Tucson to Monterey with Capt. Juan Bantista Anzar's cavalry company in 1772, and left a manuscript-account of his journey in the Government archives of Monterey, and which was there until 1850. Mr. Bartlett mentions this paper in his work on the Mexican Boundary Commission, published in 1854. Fathers Dominguez and Escalante started from Santa Fe, in 1776, to come to Monterey via San Gabriel, and as is supposed by what was known until lately,

the old Santa Fe trail; but from the many difficulties in the way, they had to turn back. They traveled as far up north as the forty-first degree of latitude, and are said to have discovered the Great Salt Lake; they got in a direct line west from Santa Fe, for the distance of thirteen leagues, or 408 miles. These facts are gathered from Forbes, Humboldt and other authorities.

No. 10. San Luis Rey Indians.

Vocabulary of the Indians living near the Mission of San Luis Rey, in San Diego county, taken by the Author, in April, 1856.

ENGLISH.	INDIAN.	ENGLISH.	INDIAN.
water	h-ha	breast	h-he-chik

food	hechusow	eight	azel chipiyam
hand, fingers	and arm	ezel	yam
nails	he-zel-bow	eight	azel chipiyam
salt	e-seil		

Could give no name for nine or more figures.

This vocabulary was taken from an Indian about forty years old, who spoke remarkably good Spanish and had a very intelligent countenance, but much given to drinking. He remembered the old Father Antonio Peyri, when he went off to Mexico with Gen. Victoria, about fifteen years ago (1831). The following are the names of the rancharias, or clans, living in the vicinity of San Luis Rey Mission: Ene kelkawa was the name of one near the Mission-site, Mokaskel, Cenyow-preskel, Itukemuk, Hatawa, Hamachuwa, Itawiy, Milkwanen, Ebutewa, Mootayuhew, and Hepow-wo, were the names of others. At the Aquas Calientes was a very populous rancharia, called Hakoopin. None of the Indian tribes of California, as far as I am aware of, have a name for the Bison or Buffalo; but some clans are said to have traditions of such an animal.

This Indian and the informant from San Miguel, of Lower California, say that the clans of San Luis Rey, San Diego, and San Juan Capistrano, could all converse together, as there were many words in their language which were the same, and that was no material difference in their different dialects. In some work we remember to have read it is assumed that the Indians of San Juan Capistrano are Affiliates of the Great Shoshone nation of the Rocky Mountains; if so, it is a very remarkable and interesting fact, having important bearings on the ethnographical history of our California tribes of Indians. It is one which would bear deep probing and worthy the mind of the most learned American ethnologists.

In a conversation I had with the Rev. Padre Gonzalez, of Santa Barbara, in May 1856, that clergyman informed me that he came to California from the Ferdinand College, in Mexico, in March 1833, and was some time stationed at the Mission of San Jose of the Bay. He found among the neophytes of that Mission, Indians from not less than thirty rancharias, or clans, many of them from the Cosumnes, Mokelumne and other branches of the San Joaquin, and also those near the mouth of the River west.

The indigenous Indians of San Jose Mission and vicinity had a very soft language. The Indians from Soledad to San Francisco Dolores, including Santa Cruz, he says, had a general language, but the dialects were different, making communications hard and difficult to understand. He also says that only two languages were spoken among the Indians, between San Luis Obispo and San Diego, but their dialects were numerous and puzzling. In 1833, the small-pox committed great ravages among the Indians of the San Joaquin river and those of Sonoma, and also carried off many of the Mission-Indians. In 1843 there was another great mortality among the California Indians.

(TO BE CONTINUED.)

Prosperity on the right Basis

THE SAN ANDREAS Independent records the following evidence of improvement in the right direction, among the mining districts:

Notwithstanding the uncertainty of the ranchman's possessions in the mineral districts of this State, there is no interest more steadily enlarging. In a short excursion the other day through the small valleys that lie along Murray Creek, from the source to the intersection of the Mokelumne Hill road, we noticed a number of new inclosures, that have all been made within a year past. They have each from an acre to a dozen acres of good

bottom alluvial land, which can be irrigated without much labor or expense; and on this they are planting their gardens, orchards and small vineyards. The surrounding hill-lands furnish their fire-wood and grazing room for cattle, sheep and horses. Rugged as these little homes at first sight appear, they are nevertheless rapidly assuming, under the steady strokes of labor, a neat, inviting aspect, and in many instances, all the cheerful, comfortable phases of pleasant, permanent homes. Their tenants are by no means as poor as the stranger might suspect them, from the apparent sterility of their surroundings. They raise, with the little labor, all the necessities and many of the luxuries of life, and always have a surplus for the market. We do not think these small farms will ever be less valuable than they now are; their resources, in fire-wood, timber, grazing, and vine-products, will be enhanced in value, or quantity every year; and the day is not remote when such property will be sought after with as much earnestness as "good diggings" have been in times past. Meanwhile they are a source of independence to their possessors.

The American Farmer.

Nor all men who cultivate the earth are farmers; not all farmers are American farmers. The American farmer brings to that avocation the highest advantages of science and skill, of virtue and industry, owning the soil which he cultivates, and honoring his labors by the spirit of an American citizen. There is a tendency to undervalue this sphere of life. The pride which professional and commercial prosperity generates, hesitates to acknowledge the farmer as a social equal; and even farmer's sons have caught the infection, and joined in the clamor of depreciation. Men are ready enough to be lawyers or physicians—these are honorable professions; ready enough to sell tape by the yard, or pins by the dozen—even that is honorable. But to breathe the air of newly turned earth, to feel its touch, to hear the rustling of growing crops, to drive loaded wains to market, to exchange heavy golden grains for grains of heavy gold, to live amid scenes of natural beauty, amid conditions of physical health, God's trust noblest freemen—this is *dishonor*. Let us see.

Of lawyers, few rise to eminence, or even liberal success. Physicians succeed a little better; while mercantile pursuits are well nigh a lottery. The best symbol of successful merchants is found in the adage of angel's visits. How different from the precarious prospects of these are the prospects of an intelligent, skillful, industrious, and virtuous American farmer! Such a man, cultivating his own soil, and engaging in no outside speculation, never fails. He never fears that poverty will come upon him so long as God blesses the earth with the dew, the rain and the sunshine. To him, success is as universal and as certain as the fulfillment of the Divine promise which assures the seed time and the harvest. The pursuits of such a man lie in conscious proximity to Providence; and he stands, because he leans directly upon God. Compare, then, his free and healthful life with the constrained and unnatural conditions under which professional men and merchants live. These you find, it may be, shut up by day in great piles of brick, or treading their way through narrow streets, where the sun pours down his rays, unmitigated by a single refreshing breeze; and by night shut up again in similar walls, changing the place but keeping the pain, waked in the morning to the eternal discord of rumbling carts, or milkmen's bells, or cries of chimney-sweeps, and barking of uncounted dogs. Is this life? Do men live amid such scenes, or do they only abide, constrained by some necessity of fate, or punished for their sins? Even the birds shun the city as they would a prison. All the powers of man are enervated and hurried to decay. With such a scene, contrast the quiet of woodlands, pastures, and meadows, delighting the eye with their beauty, the balmy airs which send vigor through every fiber of man's structure, and make him strong to serve God and his fellow-men. With toils and anxiety forgotten, with windows broad open, making his chamber as wide as the universe, the farmer sleeps soundly and sweetly as an infant, waking in the morning to the music of birds, and bounding to his task with a physical regeneration. This is life! How true it is that "God made the country, man made the town." Such comparisons might be indefinitely pursued, and with similar results. It is enough to say that no man's condition is more favorable to culture than the farmer's, and that his opportunities of social influence are sufficient to satisfy a true ambition. Science brings its aid to his labors, and so perpetually beckons him to inquiries in her departments. To him every evening is free, and during the winter he may devote himself almost exclusively to intellectual pursuits. Men of genius have often found their inspiration in cultivated fields. The scenes which surround him are the very homes of studies in botany and geology. Nor are these scenes less favorable to aesthetic culture.

The charms of country-life are of almost infinite variety. Fruits more delicious than ever grew in the garden of Pomoas; flowers that would grace a Paradise; herds of cattle such as Jupiter never saw in a hecatomb; horses as noble as ever contested in the Olympic hippodromes—all these and much more strengthen and develop the best qualities of his mind and heart. To stimulate the agricultural zeal of his neighbors by illustrations of his own; to promote intelligence by the liberal support of schools; to contribute by his example and influence to the improvement of roads, bridges, and public buildings; to nourish and sustain the institutions of religion; to aid the progress of public morals; to instruct and elevate his dependents; to add in this way to the qualities of a good farmer the higher and more comprehensive qualities of a Christian man: this constitutes a life which has in it far more of the elements of a true nobility than are often found amid the embellishment of rank and the splendid ceremonies of courts. Such is the true life of the American farmer. If there be demanded an example which will forever command the veneration of the world, we turn to one who formed amid the peaceful scenes of husbandry, the great character which drew to him a nation's confidence, which made him the repository of a nation's destiny, and who, when he had fulfilled that mission, returned to those scenes again, uncorrupted by ambition, and desirous only to renew the cares and duties of a farmer, in the seclusion and happiness of his own Mount Vernon.—[Genesee Farm.

The Philosophy of a Fallow.

Under this heading we find the following article, by Wm. Simpson, in the San Joaquin Republican: "Upon the facility with which a plant obtains its food, upon the abundance of nutritive matter within reach of its organs, mostly depends its size, the rapidity of its growth, its health, and its perfection. As plants, like animals, have certain periods of existence allotted to them, all the efforts of agriculture must be directed to a single object: the speediest increase of substance, the largest size at maturity. One of the most interesting facts to be considered in vegetable life is, that there is no limit to the size of a plant. Each new leaf or twig is an organ for the nutrition of a successor. Plants will grow and mature, even when their food is scantily obtained; but experience has long since proved that the profits of cultivation depend upon an abundance of plant-food in proximity to their organs. A given amount of food, which will afford to two plants but a sickly and dwarfish existence, would, if applied to one alone, produce a luxuriant growth, not liable to disease. If, then, a certain amount of nutritive matter will not grow two healthy plants, a single one only should be produced from it. This is one of the axioms of agriculture, and upon which the usefulness and necessity of the naked fallow system is predicated. The renewed fertility produced by a fallow, as practiced by our farmers, is explained by well known laws. To understand the changes going on in a soil during a period of repose, it is necessary that we should bear in mind its component parts. These are the earth's vegetable remains and the soluble salts. It is most important to know that while the salts are the most eagerly consumed by vegetation, they are also the most unstable matters of the soil. They are continually being set free by the action of the atmosphere upon the earth and vegetable remains, and as constantly taken up by the organs of growing plants. As these soluble matters are washed below the surface by every shower, and return again in solution by evaporation, our long dry-season, during which the evaporating process is uninterrupted, is particularly favorable to their accumulation upon the surface, more especially upon the loose and naked soil of a fallow.

"For the perfection of a plant, all of its articles of food must be within its reach. If any one of them is deficient or wanting, the plant will not thrive, however abundant the others may be. Certain matters, on account of their volatile or soluble natures, are continually disposed to get beyond the reach of vegetation. These the farmer is most frequently called upon to supply, and it is to the collection of one of these, more than all others, that the surpassing fertility of a fallow is produced. Ammonia, through which plants derive their nitrogen, is one of the most important elements of their nutrition. It is a constant, yet exceedingly subtle ingredient of the atmosphere, and in its gaseous form, is conveyed to plants, only in solution of rain and dew. Coming in contact, however, with the sulphates of the soil, it unites to form a fixed salt. "Two conditions of the soil are necessary for its natural accumulation: the absence of a consuming vegetation, and a free access to the sulphates. These are furnished by the naked fallow. Guano owes its highly fertilizing effects mainly to a salt of ammonia. The dark luxuriance of vegetation is a sure indication of its abundance. This volatile substance, so important to plants, is the product of animal decomposition. Insect decay in the soil contributes to its supply. The most productive soils are teeming with insect life. With such inhabitants, a field could scarcely remain barren.

"Although the accumulation of salts and the collection of ammonia are two of the most important chemical results of our fallow system, other changes are induced by it, which, in some localities more than others, are to be observed. Conditions of the soil fitted for a good growth of natural herbage, are not always suited for a cultivated crop. The magnesia, iron, and other matters in some new soils, without a further oxidation, are poisonous to cultivated crops. The process of exposure by a fallow is absolutely indispensable before seeding. The economy of time, the advantage of early seeding, and other conveniences of a system of fallowing, so remarkably adapted to our climate, are well known and admitted."

Hungarian Grass.

We copy from The Mountaineer, published in Utah Territory, the following article giving the result of an experiment with the Hungarian Grass in that Territory:

Perceiving that you reserve a corner of your valuable paper for communications upon Agriculture, I offer the result of my experiments in the growth of the Hungarian Grass, for the consideration of the farmers of Utah, especially that portion located at a distance from the lowlands or natural meadows; and, indeed, even those possessing that valuable adjunct to a good farm, a piece of choice grass land.

In the spring of 1857, I received from Bishop John Rowberry about a tablespoonful of Hungarian Grass-seed, which I sowed in drills in my garden. I gathered about half a peck of seed in the fall; I sowed a small portion of this increase in the spring of 1858, fearing to trust the whole in the ground, lest I might need it in some far-off place of refuge; for this sowing I gathered about a peck of seed. I carefully measured the ground and weighed the bundles of grass, and found it yielded at the rate of three and a half tons to the acre. In the spring of 1859, I sowed the increase of the two previous years on three acres of land, seeding very lightly, so as to get the greatest amount of seed. I sowed the seed between the 1st and 10th of June; the weather continuing very dry, but a small portion came up, but it tillered out and prevented the growth of weeds. I have near five tons of hay, from which I thrashed sixty-three bushels of good clean seed, and three bushels of inferior seed. The good seed weighs forty-four and a half pounds to the bushel (of 32 quarts).

The straw I consider superior to most of our native hay, notwithstanding it was entirely denuded of its leaves in thrashing, as I thrashed with a machine.

The land upon which I raised this crop had been in cultivation for seven years previous, never was manured, and in its palmist days never yielded over twenty bushels of wheat an acre; on a portion of the piece, more moist than the rest, the seed came up well; the grass measured near four feet in height, and yielded, as estimated by our best judges in such matters, at the rate of four tons an acre.

The seed is rich in oil, yielding an oily mucus when boiled, evidently possessing fattening properties in an eminent degree. The best time for sowing is from the 15th of April to the 1st of May. The best time to cut is when the seed is in the dough. By watering just before cutting, and irrigating every twelve or fourteen days thereafter, a second crop will spring from the lower joints, and produce an excellent fall pasturage; or, if cut for hay, will produce over a ton to the acre; it requires less water than wheat.

I had some conversation with a gentleman who emigrated from Iowa to this territory last fall; he said he had raised it in Iowa, and had fed it to stock

of all kinds, and proved to his satisfaction that ponies, mules, and oxen, would work constantly and keep in good condition when fed upon it alone; that milk cows would do as well and give more milk when fed with it than when fed with corn-fodder, with the corn it, and that he had known horses badly foundered with it, when judiciously fed at first, all of which I fully believe, from my own experience and observation, to be correct.

From the oily nature of the seed I infer that the hay, when properly cured, will furnish a provender rich in emollient properties, well calculated to counteract the injurious effects of alkali.

I have long since been convinced of the necessity of our obtaining a species of provender much more nutritive than the best of our native grasses, and free from the alkaline substances with which they are universally impregnated. Hungarian Grass, in my opinion, will fill the bill, and until something better can be obtained, I will cultivate it, rather than to haul a coarse inferior kind of hay twelve miles up hill, as I have hitherto done.

R. S. TORREY'S MAINE STATE
BEE-HIVE!
PATENTED JUNE 7TH, 1859.

THIS BEE-HIVE, WHICH HAS BEEN IN USE FOR several years, has attracted the attention of Apiculturists wherever it has been introduced, who have unanimously given it the HIGHEST APPROBATION, and testified to its decided superiority over all others in use.

THE MAINE STATE BEE-HIVE has taken the first premium at all State and County Fairs wherever it has been exhibited; also, the first premium at the Mechanics' Fair, Portland, 1859. Its principal advantages are as follows:

1. Its form and size are just right, neither too high nor too low, and very economical.
2. The surplus honey can be taken away without disturbing the bees.
3. The condition of the bees can be seen at any time, in front, in rear, and at the top of the hive.
4. The most scientific, perfect, common-sense method of ventilation.
5. Size of boxes suited to the market.
6. The platform, which is quite essential to the health of the bees.
7. No difficulty in changing the combs.
8. The feed-troughs protected from other bees.
9. Bees domesticated in one week.
10. Fighting among bees prevented.
11. Bees transferred in thirty minutes.
12. Bees can get to the store honey-boxes with less travel than in other hives now in use.
13. Bees and swarming prevented, in most cases, when deemed desirable.
14. Moisture is taken from the hive by a condenser, constructed for that purpose.
15. The facility it affords for feeding the bees through tubes with a funnel, without disturbing the hive, which is a sure guard against stinging.
16. The bees indicate to the apiculturist when they are in need of food.
17. A moth-trap, which prevents the ravages of moths.
18. No fifth and dead bees accumulate between the comb in winter.

The undersigned will sell Individual, Town and County Rights for California. Individuals desirous of purchasing Single, Town or County Rights, can ascertain terms by addressing

113m S. H. CASE, Petaluma.

The California
BEE-HIVE!

The BEST, and hence the CHEAPEST
Hive ever offered to Bee-keepers.

The above hive was awarded the FIRST PREMIUM at the State Fair held at Marysville in 1858, and also by the Mechanics' Institute of San Francisco, held the same year. And again at the State Fair, 1859, the FIRST PREMIUM; also a SPECIAL PREMIUM was awarded by a Committee named by the parties exhibiting the Langstroth hives.

There were SIX DIFFERENT HIVES in competition at the latter Fair. Bee-keepers wishing to purchase HIVES, or RIGHTS to MAKE and USE, will please address the undersigned or either of the following Agents:

L. WARNER, Sacramento (General Agent).
THOMAS GOG SHAW, San Francisco.
SAMUEL MORRISON, Santa Clara.
CHAS. C. WARNER, Stockton.
E. A. SHERMAN, Los Angeles.
JACOB V.

MANUELA—A BALLAD OF CALIFORNIA.

BY HAYARD TAYLOR.

From the doorway, Manuela, in the sunny April morn,
Southward looks along the valley over leagues of gleaming corn;
Where the mountain's misty rampart like the walls of Eden
towers,
And the hills of oak are sleeping on a painted sea of flowers.

All the air is full of music, for the winter rains are o'er,
And the noisy magpies chatter from the budding sycamore;
Blithely frisk unnumbered squirrels, over all the grassy slope;
Where the shy sunbirds brighten, nimbly keep the katydid's
note.

Gentle eyes of Manuela! tell me wherefore do you rest
On the oak's enchanted island and the flowery ocean's breast?
Tell me wherefore down the valley ye have trod the high-
way's mark?
Far beyond the hills of timber, to the mountain shadows dark!

Ah! the fragrant hay may blossom, and the sprouting verdure
shine
With the tears of amber, dropping from the tassels of the pine,
And the morning's breath of balsam lightly brush her sunny
cheek—
Little reeketh Manuela of the tales of Spring they speak.

When the Summer's barling solstice on the mountain har-
vest gleamed,
She had watched a gallant horseman riding down the valley
road;
Many times she saw him turning, looking back with parting
thrill,
Till amid her tears she lost him, in the shadow of the hills.

Ever the cloudless moons were over, he had passed the desert's
sand,
Crossed the rushing Colorado, and the dark Apache Land,
And his laden mules were driven, when the time of rains began,
With the traders of Chihuahua, to the Fair of San Juan.

Therefore watcheth Manuela—therefore lightly doth she start,
When the sound of distant footsteps seems the beating of her
heart;
Not a wind the green oak rustles or the redwood branches stir,
But she hears the silver jingle of his ringing bit and spur.

Often, out the bare distance, come the horsemen day by day,
But they come not as Bernardo, who can see it far away;
Will she know the airy gallop of his mottled steed,
Light as any antelope upon the hills of Gavilan.

She would know him mid a thousand, by his free and gallant air;
By the deftly knit serape, such as wealthy traders wear;
By his broad-brimmed cañonero, and his saddle, gaily spread,
With its canter rimmed with silver, and its horn a lion's head.

None like him the light rider, on the maddened bull can throw;
None amid the mountain cholla, track like him the stealthy doe;
And at all the mission fiestas, few, indeed, the revelers are
Who can dance with him the jota, touch with him the gay guitar.

He has said to Manuela—and the echoes linger still
In the clusters of her bosom, with a secret, tender thrill—
When the bay again has blossomed under the valley's standards in corn,
Shall the bells of Santa Clara usher in the wedding morn.

He has pictured the procession, all in holiday attire,
And the laugh and look of gladness, when they see the distant
spire;
Then their love shall kindle newly, and the world be doubly fair,
In the cool delicious crystal of the summer morning air.

Tender eyes of Manuela! what has dimmed your lustrous beam?
'Tis a tear that falls to glitter on the cheek of her dream.
Ah, the eyes of Love must brighten, if its watchers would be true,
For the star is falsely mirrored in the rose's drop of dew!

But her eager eyes rekindle, and her breathless bosom stills,
As she sees a gallant horseman moving in the shadow of the hills;
Now in love and fond thanksgiving may they lose their pearly
rings—
'Tis the steed that gallops, 'tis Bernardo's self that rides!

In California, horses are named according to their color.
An alazan is a sorrel—a color generally preferred as denoting
speed and mettle.

The serape is a knit blanket of many gay colors, worn over
the shoulders by an opening in the center, through which the
head is thrust.

Cañoneros are trappers, generally made of blue cloth or
wheat, richly embroidered, and worn over an under pair of
white linen. They are slung up the outside of each leg, for
greater convenience in riding, and studded with rows of silver
buttons.

The larri, or larra, as it is indifferently called in California
and Mexico, is precisely the same as the larra of South America.

[The above ballad was written by Mr. Taylor at the time of,
or soon after, his first visit to California, in 1849. It was then
copied extensively by the papers, and has been occasionally
reproduced since, which is some evidence of its merit. We
regard it as at least a pleasing and faithful ballad. Soon after
the first appearance of the above, a clever parody was pro-
duced, called "Martha Hopkins—A Ballad of Indiana," which
we copy below, as somewhat amusing, though not detracting
from the merits of the original, as it is said the latest produc-
tions are most successfully parodied.]

MARTHA HOPKINS—A BALLAD OF INDIANA.

BY HENRY CARY.

From the kitchen, Martha Hopkins, as she stood there making
pies,
Southward looks along the turnpike, with her hand above her
eyes.
Where along the distant hillside, her yearling heifer feeds,
And a little grass is growing in a mighty sight of weeds.

All the air is full of noises, for there isn't any school,
And boys, with trousers and pantaloons, are wading in the pool.
Blithely frisk unnumbered chickens, cackling, for they cannot
laugh;
Where the shy sunbirds brighten, nimbly leaps the little calf.

Gentle eyes of Martha Hopkins! tell me wherefore do you gaze
On the ground that's being furrowed for the planting of the
maize?
Tell me wherefore, down the valley, ye have traced the tur-
npike's way
Far beyond the cattle-pasture, and the brick-yard with its clay!

Ah! the dogwood tree may blossom, and the dooryard grass
may shine,
With the tears of amber, dropping from the washing on the line,
And the morning's breath of balsam lightly brush her freckled
cheek—
Little reeketh Martha Hopkins of the tales of Spring they speak.

When the Summer's barling solstice on the scanty harvest
gleamed,
She had watched a man on horseback riding down the tur-
npike road;
Many times she saw him turning, looking backward quiver
forth,
Till amid her tears she lost him, in the shadow of the barn.

Ever the upper time was over, he had passed the hills of brick,
Crossed the rushing Yellow River, and had fished quail a creek,
And his flatboat load was taken, at the time for pork and beans,
With the traders of the Wabash, to the wharf at New Orleans.

Therefore watcheth Martha Hopkins—holding in her hand the
pie,
When the sound of distant footsteps seems exactly like a man's;
Not a wind the store-pipe rattles, not a door behind her jars,
But she seems to hear the rattling of his riding down the bars.

Often sees she men on horseback, coming down the turnpike
road,
But they come not as John Jackson, who can see it well enough;
Well she knows the sober trotting of the sorrel horse he keeps,
As he jogs along at leisure, with his head down like a sheep's.

She would know him mid a thousand, by his home-made coat
and vest,
By his socks, which were blue woolen, such as farmers wear
out West;
By the color of his trousers, and his saddle, which was spread,
By a blanket which was taken for that purpose from the bed.

None like him the yoke of hickory on the unbroken ox can throw;
None amid his father's cornfields use like him the spade and hoe;
And at all the apple-orchards, low, indeed, the men are seen,
That can dance with him the polka, touch with him the violin.

He has said to Martha Hopkins, and she thinks she hears him now,
For she knows as well as can be that he meant to keep his vow;
When the buckeye tree has blossomed, and your uncle plays his
fiddle,
Shall the bells of Indiana usher in the wedding morn.

He has pictured his wedding, in his Sunday hat and gown,
And he thinks he'll get a carriage, and they'll spend a day in
town;
That their love will newly kindle, and what comfort it will give,
To sit down to the first breakfast in the cabin where they'll live.

Tender eyes of Martha Hopkins! what has got you in such
scraps,
Ah! the eyes of Love may brighten, to be certain what it sees,
One man looks much like another, when half-hidden by the trees.

But her eager eyes rekindle, she forgets the pie and bread,
As she sees a man on horseback, round the corner of the shed.
Now on his saddle apron, get the comb and smooth your hair,
'Tis the sorrel horse that gallops, 'tis John Jackson's self that's
there!

"I do wish I could be cured of lying in bed so
late in the morning," said a lazy husband loung-
ing upon his pillow. "Well, I will try the water
cure," said his wife, pouring a bucketful on him.

A young lady said to her gallant, "Please clasp
my cloak." "Certainly," said he, putting his arms
around her, "and the contents also."

THE
AMERICAN PUMP!

Patented April 5, 1859.

Without Suction, Without Packing!

This is a DOUBLE ACTING FORCE PUMP, with but one
bore and one piston, worked by a tee piece, having as much
leverage and less friction in its working than any other pump
heretofore invented. The object of the whole invention was
strength, simplicity, economy, durability, and to lessen the
power to raise water from great depths, all of which have
been attained to a perfection heretofore unknown in force
pumps.

The working parts all stand under the water, as does the
air-chamber, beyond the reach of careless or malicious inter-
ference or frost; there is no loss of water and no loss of
labor in any depth; a constant flow of water is kept up. The
different sizes (five in all) work in diameters of from fourteen
to twenty-four inches, and cost \$15, \$20, \$25, \$40, and \$60
each, and are worked by hand, horse, water, wind, or steam;
adapted to cisterns, wells, tanks, machinery, engines, mines,
railroads, docks, forcing water under or above ground to
great heights and distances; discharges at various points;
throws by hose and pipe, thirty to forty feet; is extremely
useful and convenient in watering gardens, lawns, vineyards,
washing windows, and, in sudden emergencies, for checking
fires in their earlier stages, and no pump equals it in economy
or success for purposes of irrigation. The fixtures for power
cost \$12, \$15, and \$18 each, according to size. It has now
been in successful operation for eight months, in every depth
from 8 to 100 feet, and for nearly every conceivable purpose.
In twenty-four States of the Union, commencing at Maine
and extending to the Rio Grande, and in New Brunswick and
Cuba. The pumps have been sent everywhere on trial, and the
failures to give entire satisfaction have averaged two to the
hundred. I append a few notices, certificates and extracts
of letters to justify my position.

"The pump needs no priming to obtain water. The ar-
rangement and operation are very simple, and easily under-
stood."—[Illustrated, N. Y.]

"This is a new Pump which is offered for public favor.
Construction is greatly simplified, and appears to be designed
for durability and efficiency. Those who have used it speak
highly of it."—[N. Y. Observer.]

"The piston discharges at both ends into the air-chamber,
causing a regular flow of water at the discharge pipe at top.
It is preferred, every part can be realized, friction, the action
which keeps itself clean, and is proof against rust."—[N. Y.
Evangelist.]

"This is a new invention, a working model of which has
been shown us, which presents several novel and valuable
features, being exceedingly simple in construction, ap-
parently very strong and durable, rendering the labor of
working it, on account of the very small amount of friction
in its working parts, very trifling in comparison to other
pumps of a similar nature."—[N. Y. Christian Advocate and
Journal.]

"As a specimen of the ease and efficiency with which this
pump works, we can state that one man, working regularly,
forced water from this pump, a distance of 340 feet, being 97
feet perpendicular height, which is good work, as every one
who is in the habit of raising water knows."—[Scientific
American, N. Y.]

"There are no suction valves nor complicated fittings;
neither chains, pulleys, nor cast iron rods. It is easily arranged
for any motive power, and lifts water to any desirable height
without any waste of force. A woman or boy can work it
with ease to raise water fifty feet, and a man can raise it 100
feet all day. The simplicity of its construction, and the small
amount of friction, which is good work, as every one who
is in the habit of raising water knows."—[Scientific
American, N. Y.]

"The construction is simple; and it works with an ease
that will surprise those acquainted only with the old fashioned
order in this line. One of these pumps now in use in this
vicinity, enables us to state that full confidence can be placed
in the statement contained in the advertisement."—[Freder-
ick Banner and Advertiser, Pittsburgh, Pa.]

"It is calculated to work in the most efficient manner, and the great
ease with which the highest columns of water are raised is
far beyond anything we have yet seen or could have imagined.
The pump was personally tested, and connected with a pipe
sixty-five feet high, and it required but a very slight exertion
with one hand to deliver a stream of water, at this height,
at the rate of eight or ten gallons per minute. A small boy
could have done it with ease."—[The American Mining
Chronicle, N. Y.]

"We got one of them which we have put into operation on
our farm, and like it so far very much. It brings up a con-
tinuous stream of water, with little or no labor to the person
working it. It must meet with a ready sale, and speedily
grow very popular."—[The Southern Planter, Richmond, Va.]

"Having had considerable practical experience in the use of
machinery of this character, after testing this with our own
hands, we have no hesitation in according to it our unqualified
praise. In truth, it surpasses everything for the purpose we
have before examined."—[U. S. Journal.]

"One of our newest and most useful inventions of the day is
a Double Acting Force Pump, owned by Mr. James M. Ed-
ney. It is without packing and without suction. It is ex-
ceedingly simple in its construction, and at the same time, pos-
sesses all the requirements of a good pump, and can be used
either as a well, a cistern, or a ship's pump."—[N. Y. Ex-
press.]

"A boy of ten years of age can work it at fifty feet, and a
man at a hundred feet. We have seen one in operation, and
consequently speak from personal knowledge. This high at
the rate of eight or ten gallons per minute. They are
adapted to almost every purpose where a pump is required."
—[N. Y. Day Book.]

"Having seen one of your pumps in operation, we consider
it the best we have ever seen for general use; it is simple and
can be operated with less power than any pump we have ever
known of the same capacity."—[Galveston News, Texas.]

"At the late State Fair in this city, 'The American Pump'
took the premium, and met the approbation of all who ex-
amined it."—[Herald (W. C.) Register.]

"We speak from personal knowledge, and say that of all
the pumps we ever saw, we never saw one at all comparable
to this. A man can scarce fail to be pleased with them. If
you want a good pump get one of these."—[St. Louis (Mo.)
Ch. Advertiser.]

A Working Model and Pumps always to be seen on
application at the office. Complete drawings, price, and par-
ticulars in detail, sent free of postage. Address,
JAMES M. EDNEY,

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM
and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his
most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his
Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will
offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for
measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined
Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made
at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in
October last.

Your attention is also called to a notice given it, below, by numerous members of the State
Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County
Fair.

With the experience of the past season, this machine is so improved as to be, without question,
The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S,
PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—

EXTRA CASTINGS and BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;
WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse
power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SOYTHES and SNATHS, notched heels; the very best pat-
terns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELTON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE-PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM
at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons
wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,

The California Farmer.

SAN FRANCISCO:
FRIDAY.....MAY 11, 1880.

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us? Please also direct Letters to "GEO. WARREN, California Farmer Office," as there are frequent misarrangements for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

SEND THE FARMER ABOARD.—How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the California Farmer. Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

THE "LADIES' DEPARTMENT," of this journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as *Geo. Warren*, and seldom by his initial letters, he had adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels misdirected, and as the subscriber has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES D. L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

TO OUR CORRESPONDENTS AND READERS.—We are happy to acknowledge the reception of a valuable array of Letters and Communications from our friends in various sections of the State.

We have "Leaves from the Pine Forest," by Alice; the "The Estray" or Earnest Thoughts of Edith Montessor; Letters from N. B. H., all came duly to hand; our "Hope Hill" correspondent "Rosa" is also with us, and, like the copious rains that have blessed the Farmers this season, "it never rains, but it pours;" so with our many friends—and they are so natural too; with these refreshing showers of their favors come a little "Electricity," infusing life. To each and all, we return thanks. Each shall have due response. Such as are for publication, shall have place; such as for reply, shall be answered. To many Letters of Inquiry, they shall receive early attention separately, or through the FARMER.

The Editor was absent last week on an excursion among the beautiful flowers: this is our apology for not acknowledging the above communications. We have also Communications and Letters from "F. A. C.," from "Mary," and several new friends—all of which shall have due attention. It will be our aim to present in "Our Department" such matters as we trust will tend to the moral, intellectual, and physical, well-being of our readers; and if all communications do not appear at once, it is not because we reject them altogether, but rather that we may either take time to communicate with the writers, or from the mass we receive, and present them in their relative places.

Our readers will find in the communication of "F. A. C.," food worthy partaking. The "Stray Leaf" speaks for filial affection nobly. Other themes, in our brief space, we hope will meet their approval. We shall communicate freely with all, and ask all to write as freely.

We have Letters and Sketches from our Correspondent "Katrina" which we are pleased to receive. [The above notice was accidentally omitted in the Editorial Columns of the Editor's Department.]

Splendid Samples of Wool.

We have received from Albert E. Field, Esq., at Mission San José, several very handsome samples of Wool of the different kinds of sheep raised by him; they were as follows:

Samples of full-blood merino, from eighteen-months sheep; cross between merino and Leicester, fifteen-months sheep; cross Merino and South-down, twelve-months sheep; Leicester ten months.

All these samples were very superior, and from them we have faith to believe some great good will result from similar crossing of breeds. When we were at the Mission San José, we saw the several flocks of sheep of Mr. Field; their select character, the care bestowed upon them, every eye and buck being choice animals, was proof to us that Mr. Field understands the fact that what is worth doing at all, is worth doing well. We noticed the different bucks, and was pleased to see the care and attention that was given to the most important points in the sheep-breeding avocation; feeding, shelter, cleanliness, are great prerequisites to success in breeding.

Alameda Fair.

All hands should be at work for the coming Fair, on the 5th of June. Let it be a grand affair. We shall publish the full List of Premiums next week—to which we refer the friends of the enterprise.

Bay State Agricultural Fair.

Wake up! friends of this enterprise! We shall soon give you the particulars. We hope every society will give us their List of Premiums to publish.

THE VERMONT REAPER.—We learn that Messrs. Knapp, Burrell & Co. have found a ready and quick sale for all the Reapers arrived, and more orders on hand. This speaks well for California and the Reaper.

Shipment of Wheat.

We have for months urged upon grain-raisers the great and important good that would revert to them in the shipment of wheat and have kept the subject constantly before them. There are hundreds of our farmers now with more or less wheat on hand that if they had been wise and sold last autumn would be much richer now.

We would now appeal to them to make use of the favorable opening which is now given them to get rid of the great surplus stock on hand, before the new crop comes in. The late news from Europe is favorable for shipment from New York, and this helps to draw grain from California. This is a "God-send" to us here, and we would appeal to grain-holders, do not; do not hold back, but send it forward freely. Far better is it to sell it ten or fifteen cents a bushel under its value than to hold on, for if the amount should be very large that goes forward, even to leaving our markets entirely bare at the opening of the harvest, the increased value of the new crop would more than make up the difference to the raiser of grain. Send in your grain freely farmers, and you will never regret it. Now is your time. A market is opening gradually in China. Let us supply it from California. Let us be wise and secure every market for our grain and other produce that it is in the nature of circumstances to accomplish, and let the quality of these products and our ability to offer them at low rates, secure to us the best markets of the world. Let the grain-grower remember that the wise and prospering merchant and trader will always spread the knowledge that he is selling the best goods at low prices, and fulfilling these promises he secures the greatest amount of trade, and becomes the successful and rich merchant. So the grain-growers of California; they have the best soil and the best climate, and they can if they will, raise the largest crops, the best crops, more to the acre, and of heavier weight to the bushel, than in any other part of the world. And we boldly assert that when the grain-growers of California shall adopt all the best plans in their business, when they shall till the right kind of soil in the right manner, when they plant the right kind of seed at the right season, when they shall use the right kind of implements, and adopt the right kind of policy in raising grain and in selling it, then, and not till then, will they as an entire class become prosperous; for when this is done, when the right means are adopted as a whole, then in California we shall behold that grand and noble sight, we shall see sixty acres of rich land plowed, harrowed, and sowed with grain in one day, and we shall see sixty acres of grain that in the morning waves its golden-heads to the light of our vision harvested in the best manner, reaped, thrashed, cleaned, bagged, and all in one day. Great as this may seem to some minds, it will be accomplished. Progress demands it. Progress will accomplish it, and this sixty acres will give at least forty bushels to the acre (the amount that can easily be raised with the right system). Twenty-four hundred bushels of grain for one day's planting, one day's reaping, when these things are accomplished, as they will be. Who says California cannot compete with Chicago for the European market, and who says that California will not be the grain-market of the world?

Steamer-Day.

Why all this fuss and trouble about steamer-day? Why should all business and payments concentrate upon one given day? The long continued drain of gold has clearly proved that the amount of coin in circulation is not equal to the legitimate demands of trade. Hence the desire of some parties for banks and paper issues to supply by loans on the credit system by discounts of time paper, the deficiency. We claim no peculiar credit for a plan to relieve this apparent want of money. We believe that there is no actual want to any extent. All business men have debts and credits, and if bills could be collected, bills would be paid. But it is utterly impossible to do it all at one time, and as the fashion is to concentrate all on steamer-day, there is not an amount of coin in circulation sufficient to meet all demands, and therefore every dollar by passing from hand to hand, from office to office, pays five and sometimes ten times that amount of obligations, the brief ten hours of a day not being time enough to accomplish all the rounds carries with it many very severe derangements; and besides a considerable amount is not come-at-able by reason of absence of some parties, and an absent \$500 will cause a vacuum that causes great disappointment and often-times creates disturbance.

We believe a better plan can be devised among merchants and business men, than the present steamer-day system. If credit is to be given, let it be for so many days without reference to steamer-day, and then business will move on smoothly as in other cities. Now, all is hurry and bustle on a given day, and a lull and quiet on all other days, while at the banks all the business of two weeks is crowded into one day.

We believe if there should be a consultation among business men and bankers, the evils of steamer-day and the extra labor and extra cost of time and interest to meet this extra demand would be avoided. We feel confident bankers and business men would find a natural gain by such a change and a great relief would be rendered to the entire State.

The present Overland Mail and Pony Express have done a great good in relieving a vast amount of letter-writing on steamer-day; now carry out the plan of changing payments, and another great relief would be given to all.

COMPLIMENTARY.—We received a season ticket from the Mercantile Library Association for their lectures for the present season. We acknowledge the courtesy. A complimentary card we also acknowledge from the Committee of Arrangements to the Second Military and Civic Ball of the Light Guard of this city, which takes place on the 15th instant. Their first Ball was most creditable to them, and the preparation for the present one far exceed the former, and give promise of great eclat.

Washoe and Ruin.

In some of the farming districts we hear complaints from the want of "Harvest Hands." This arises in part from the fact that men who have been out of employment, for some time, have gone to Washoe, hoping to get into some business, and not, as some might infer, that the Real Farmers were at all infected with the Washoe fever.

We do not believe that there is one in a hundred of Washoe-men that have gone from the legitimate business of Farming; this is the last class that will be affected with this speculating fever—this spring disease of the brains—a fever that begins with an influenza, increases to an inflammatory speculation, producing a gold mania, brings on by reason of bitter disappointment, despair, and ends in suicide, spreading a ruinous malaria far and wide that is most deplorable.

Could the rail be lifted, and the catalogue of deep-laid plans to create claims, to "sell" them, to enhance their value, and to win a notice for them and bring them into favor; could all the machinations of this bubble be laid open, how quickly would Washoe be laid up on the shelf, with the wild and reckless bubbles that have ruined so many thousands.

We have never yet had any sympathy with these visionary speculations, and have never spoken a word in their favor. Such places may do for men out of employ, or adventurers; they may strike a lead: it is better to go and try than stay and do nothing, loafing about. But, for men in a good business, with a good trade, or any legitimate calling: for all such, it is far better to remain at their regular trade and vocation.

When the full history of Washoe shall be written, then will be found many a merchant of our city who has been bankrupted, when asked the cause of his troubles (though they may not be fully written till 1885, will date back to scenes of years of disaster, and record the wreck of a valuable and prosperous business and a splendid fortune), will say: "Washoe is the cause of the ruin of our House."

How many men of high standing now, who are counting their gains by the tens of thousands prospective in a few months, will mourn over the loss of thousands, lost in reality. O Washoe! thy silver and thy gold are terrible snares to lure men into the desire "To Get Rich Hastily."

What Will Become of the Doctors?

New Discovery—Certain Cure for Dyspepsia, Indigestion, Melancholy, Ennui, and all similar Maladies.

For nearly a century, the medical world has been in deep, earnest and studious research, to discover the cause of man's degeneracy, and the chief cause of all "the ills that flesh is heir to." The result of this long and anxious research has been the discovery that INDIGESTION is the chief cause of all the maladies heretofore mentioned. To promote digestion, then, is to remove the disease. To this end the wisdom of the most learned in human sciences has been directed; and, although many thousand celebrated medicines have been paraded before the world, some of which have for a brief time checked the terrible malady, never until recently has there ever been found a sure remedy; and now all eyes will turn with eagerness to catch the glorious news and herald to the world and to undying fame the illustrious name of so great a benefactor of the human race. This GREAT REMEDY will be found in a work called "The Annual Report of the State Registrar, for the year 1859;" the author, Edwin R. Campbell, Esq. Whoever may be afflicted with those fatal maladies named, and shall read this Report faithfully, will find immediate relief. If a second reading does not effect a perfect cure, we will pay the doctor's bill—if we are permitted to appoint the physician.

N. B. As mirth, wit and good-humor are promoters of digestion, we venture the assertion that no public document ever emanated from a State officer of California so rich and full of these ingredients for health as the document named.

I FOUND HIM AMONG THE FLOWERS.—When we were at Stockton a little time since, we called several times at the place of business of one of our subscribers, but was not fortunate enough to find him in. We knew he loved flowers, and we knew too, he loved to cultivate them. So not finding him at his office, we started for his quiet domicile, and there, sure enough, we found him out in the garden almost buried up among groups of superb roses and fruit-trees bending beneath their loaded branches; and as we looked upon our industrious friend W. L. Sanderson in his neat and prosperous garden we could not but admire his taste. Mr. Sanderson has redeemed by raising his land some two feet, and he has now a valuable lot. We received an armful of very choice roses, as rich and fragrant as we ever saw, and wish our friend much success, hoping at our next visit to find him in his "new cottage home," with his family arrived. Then his "home" will be a home indeed.

THE IMMACULATE BULLETIN, which boasts of its great outlay in procuring telegraph news, and is very forward in accusing other papers of stealing from its columns, can yet it seems be guilty of what it charges on others. An article published a day or two ago in its commercial columns as original, is taken bodily from the FARMER without a word of credit, though it is attempted to be disguised with some trifling alterations. And this is not much worse than its publishing a short time since an article as a leading editorial on the Indians of California, but which was taken almost verbatim from the articles of Mr. Taylor in the FARMER. "Comment is unnecessary."

NEW LIGHT BREAKING.—It is a most happy omen for the future, when by public ordination, by a law in the administration of our schools, the physical well-being of pupils is beginning to be properly cared for. By a recent decision in the Board of Education, it has been ordered that study out of school-hours shall be prohibited, the physicians having declared it to be a cause of great evil, especially to female pupils. We are most happy to record so wise a decision; and hope ere long to record many more evidences of progress in education.

Rev. Thomas Starr King's Lecture.

BEFORE THE MERCANTILE LIBRARY ASSOCIATION.

The first of the series of five lectures to be delivered before the Mercantile Library Association, by the Rev. Thomas Starr King, was given at Rev. Mr. Lacy's Church, on Dupont street, last evening, to a very crowded audience. Every seat, below and above, together with the aisles, was occupied, and by as select and appreciative an audience as could be found in any city of the Union.

The lecturer was introduced to the audience by Mr. Stevens, the President of the Association; and as Mr. King stood up before the audience, "in the full stature of a man," he sent forth from his own spirit a charm that made the material upon which he was to work "like clay in the hands of the potter."

The subject of the lecture was "Substance and Show." The deep attention, the full satisfaction which seemed expressed upon every countenance, gave assurance that this great intellectual repast was a kind of food that many hungry souls in California had long been wanting.

Like deep and full streams of music, came the clear yet melodious voice of the orator (for it was an oration), and the brilliant ideas which he presented were the real substance upon which the listener hung with delight. As these ideas were given forth, they fell upon the listening ears of the audience as fall the tones and semitones of music's sweetest tones.

We rejoice, with thousands of our citizens, that the Mercantile Library Association strive so well to elevate the public taste and increase a desire for high intellectual food, by establishing courses of lectures of the highest order; and, coming as did "Starr King," unfolded in fame as a public speaker, it was wise in them to meet the evident desire to hear him. Well can it be said of him: He is a "Starr of the first magnitude;" a King among men.

The theme of the orator was well chosen; it was most appropriate for California; for California is the substance of things "hoped for"—the evidence of things "not seen."

The easy and graceful delivery of those glowing ideas, clothed in the beautiful imagery of this finished scholar, was enchanting. The well-rounded periods were like balls of electricity, and kindred minds received charge after charge, until the very batteries of their souls were filled with new life.

We are no critic; we will not attempt to describe this oration, other than as we have thus briefly done; we might as well attempt to catch the brilliant lightnings as they convey thoughts upon their metallic chord, or to grasp the aroma that the breezes of June send from the honeyed petals of fragrant flowers. We only know that we, with others, felt those lightnings and inhaled that fragrance, which were to our senses indeed perfumed with mighty truths. The allusions to the power and majesty of mind of those illustrious men of the early days of our Republic was most beautiful; those other gleamings and allusions to worthy men were most felicitous. When "Starr King" shall learn the early history of California, and meet the pioneers of our Golden State, he will find among that host many men who may not weigh more than one hundred and forty or one hundred and fifty pounds, yet among them will be many that weigh a ton.

As a son of Massachusetts, a citizen of Boston, we must acknowledge that we felt most deeply and truly the just compliment paid to good old Massachusetts; God bless her! But we need say no more.

On Thursday evening next, at the same place, Mr. King will again meet those who desire to listen, and will speak of the "Life and Genius of Socrates," and although the ashes of Socrates mingled with our mother earth, long, long years ago, we expect to see Socrates himself standing before us, uttering those sublime truths which have been to the world of literature what the sun and the dew have been to the earth.

THE CULTURIST—A CHANGE AGAIN.—Our neighbors of the Culturist make another change of proprietors and we think for the better. We have all along believed we could fire it up a little, and we are near to it we think, for it has run upon—upon—a Flint; i. e. our neighbor William Flint, formerly of Alameda, and more recently a nurseryman at Sacramento, has purchased one-half interest in it, and from the next number will appear as co-worker in part with the former proprietor; we say in part, for there must be a decided reform in the Culturist, else the new editor and the old one will strike fire; for the new editor is sound on the top-root question, and also on the artesian question, and we look forward with satisfaction to the time when the Culturist will be ready, if in error on any so important questions as those named to the great agricultural community, to back square down, instead of persisting in the wrong. We think upon reflection the old editor has a little reform on some subjects. We think neighbor Flint and ourselves can trot along very harmoniously.

MORE RAIN.—Another shower came to lay the dust and refresh the earth, on Wednesday evening and Thursday morning. How far it extended from this city we have not heard yet. These rains do much good, but a little reflection by all will satisfy them that this is no unmixed good. So while this rain is doing good to the many, some few may suffer loss in their hay-crops or in some way, but it is best to bear with a good grace what appears an evil, when the apparent evil is beyond their personal remedy, and when upon mature reflection they will see that it is only "a blessing in disguise."

THE AMERICAN EXCHANGE.—The "Sargent" has left the American and a new Captain has now hung out his banner on the outward walls. Seymour, Esq., so long and favorably known as the book-keeper of this popular hotel, has now assumed the proprietorship, and offers his name as a guarantee that the American Exchange shall always stand A. No. 1 before the public. Those who know Mr. Seymour personally, are satisfied of this; and those who do not, have only to try this hotel and they will find it so.

Baggage-Masters on Mail Steamers.

We learn, with much regret, that the Baggage-Masters on the Pacific and Atlantic steamers have been dispensed with, as an economical measure. This is the most short-sighted policy we ever knew to be adopted by any transportation company in the world. This is "straining at a gnat and swallowing a camel." It is putting in at the spigot and pouring out at the bung-hole. In the whole history of the steamers—amid all the various contests that have been carried on, and the complaints that have been made—we do not remember to have heard of any against the Baggage-Masters. They have always received the approbation of the traveling public, and much praise has been accorded them for their attention. Their assistance rendered at the "time of need," not only in facilitating the transportation of the real baggage of trunks and handboxes, but the more precious (not baggage) freight: the women and children that are passed to and fro, from the Atlantic to the Pacific shores.

We have often heard the Baggage-Master spoken of with respect and esteem, and those who were about to cross and recross, have always said, "I shall feel safe, for myself and trunks, if I can only see the Baggage-Master; he was so kind and attentive on the last trip."

We repeat, the removal of the Baggage-Masters from the Pacific and Atlantic steamers is an unwise, short-sighted policy; a measure that will cost each company ten dollars outgo for one saved in wages of that officer. There will not only be a loss of baggage, three times the amount of such wages, but a general dissatisfaction; for it is taking away from passengers that attention and care for themselves and their baggage which they have a right to demand, especially at the existing increased rate of fare. It is causing complaints against both companies, of a want of attention to the traveling public, and also making extra care and business for the agents at both ends of the lines, in reporting losses and trying to do justice to their passengers and to their principals, and we know, from the universal testimony of all, that no agents can be more faithful, more just and courteous than the agents here, Messrs. Forbes & Babcock, who have ever, by their upright and manly course, received the full approbation of the traveling public.

We have conversed with hundreds that travel; all speak well of the Baggage-Masters, and the need of such aids, and we know, by letters from passengers, of recent date, since this unwise plan has been adopted, that the companies will, nay, must, loose heavily, unless they shall restore these faithful guardians, whom they must have discharged under a very mistaken notion.

Asparagus, Pie-Plant, Greens.

How much better would our vegetables eat at the family dinner, if the grower would learn how to prepare them for market. Asparagus, to be tender should be gathered young, only the green part. Then it will boil tenderly and eat well. The blanched part cannot be eaten. The Pie-plant, the large full stalks only should be brought to market. They are worth double the small sticks. For greens, although spinach is the principal green in the market, yet mustard-top is one of the best articles that can be offered, we wonder that it has not been grown or brought to our market. It can be found in the country by the cart-load. We suppose because it grows spontaneously it is not valued.

First Cherries, Strawberries, Etc.

Cherries appeared in our market yesterday for the first time. To-day we saw a splendid dish at "Rumrills, No. 47, in Washington market. Price only \$3 a pound.

Strawberries, about the middle of the week, sold at twenty-five cents a pound; to-day thirty-seven, and not so plenty. Cool weather and rains retard their ripening. Next week they will be plenty.

Blackberries. This fruit comes in slowly; selling at seventy-five cents a pound. In a few weeks the market will be full of as fine fruit as the world can show.

TWENTY-TWO SOULS IN PRISON.—When in Sacramento last week, we saw at the table of the "St. George Hotel" the "Marsh Troupe" of young girls. They were all seated at one table, their deportment was most exemplary, their neat dresses, modest and lady-like appearance was such as to command admiration; and yet as we looked upon their features we could plainly see a marked sadness and a pallor upon the features that spoke volumes to us. We looked in vain for that cheerful, happy, healthy look that tells of the freedom of the soul. We could not but feel they were "imprisoned spirits," and when we thought of their future, thus trained up, when we asked ourselves what will they be ten years hence, we turned away from the picture as from a scene too sorrowful to meditate upon, and could only exclaim: twenty-two souls imprisoned to a machine, that like a quartz-mill, must crush the material upon which it falls, in order to extract the gold. So these twenty-two souls are a machine that is set at work only to extract gold.

CHANGE AT THE EMPIRE AND KEYSTONE IRON-WORKS.—It will be seen by a change of the advertisement, in another column, that Wm. McKibbin, of No. 98 Pine street, has bought of Mr. Van Pelt the entire stock of the Empire and Keystone Iron-Works. We are glad that Mr. Van Pelt has sold to a gentleman in every way so well qualified to sustain the excellent reputation which has hitherto distinguished this establishment. Mr. McKibbin will continue the manufacture of all kinds of iron-work for buildings, vaults, safes, balcony and cemetery railings, iron stairs, and also the Patent Self-Regulating and Self-Protecting Windmill, heretofore made by Mr. Van Pelt. This mill, as we have before said to our readers, is one of the best, as it is made of iron, and will last a lifetime, or longer. All that is necessary to insure success in the purchase of a windmill, is to purchase at No. 98 Pine street—to avoid confounding this mill with others, also made of iron, but which have not the properties of the former, and are little better than ordinary or stationary mills.

STATE SUMMARY.

The editor of the Yreka Journal heard a man say the other day, that there were ten thousand crickets in Shasta Valley to every square inch.

The Los Angeles Star reports a large sale of cattle, lately, belonging to the Yorba estate, to the amount of \$20,000. Prices ranged from \$14 to \$20 per head.

The Home-More Combination Printing Telegraph is now in operation on the State Line between this city and Sacramento. Dispatches are printed on a long strip of stiff white paper, in large type, and easily read.

The Knight's Landing News complains of great scarcity of work-hands in that part of the State. The harvest there is unusually heavy this year, and it will require more labor to properly secure it than can be obtained.

The Convention of the "Bee-Raisers" met again, in Sacramento, on Saturday. Some thirty or forty gentlemen were present. Several details were given of experiments which were in process of trial. A Committee was appointed to make arrangements for a permanent organization and report a constitution.

At Red Bluff, the Beacon says, they were visited last week with an unusual amount of rain for this season. On Saturday a very great quantity of hail fell, doing considerable damage to the crops, particularly to the volunteer. One farmer thinks the storm of Saturday injured him to the amount of \$500.

The citizens of Visalia have resolved to construct a wagon-road and pack trail from that town to the Mono Lake Mines. A meeting of citizens was held on the evening of the 2d inst., and took the necessary steps to open the road. The distance to Mono Lake from Visalia, by the direct route, is only one hundred and twenty-five miles.

The Los Angeles Star of the 28th ultimo, says their market abounds with cucumbers; that it is supplied the year round with new potatoes; that strawberries are raised every month in the year; that green peas are in constant supply, and that tomatoes may be had every month—one garden having some vines three years old, which are constantly bearing.

Col. Fremont will not employ or allow a man either in his mines or mills to carry weapons. The influence of this rule is already felt in Bear Valley, and may it extend till society in this region approximates at least to that from which nineteen-twentieths of our population came.

The Oak Flat and Chinese Camp (Calaveras county) stage was stopped on Monday morning, after leaving the former place, by three men, armed with double-barreled shot-guns and revolvers. Two of the robbers covered the driver and passengers with their shot-guns, while the third proceeded to break open the express boxes. The amount of money taken from Wells, Fargo & Co's box is supposed to be \$650.

The Columbia Times of the 10th says: We plucked several leaves from a small apple-tree in Mr. Hassel's orchard, which measured five inches in length by four and one-half in breadth. In the same garden, we saw a small fig-tree, about five feet high, on which were nearly 200 figs, almost as large as hen's eggs. The healthy and thriving condition of the fig-tree is somewhat strange, considering the long spell of cold frosty weather we have had during the present spring.

The Visalia Delta says: It is feared that the Mono excitement will take so many persons away from the county that there will be difficulty in obtaining hands to gather the bountiful harvest that is now growing. There is no doubt but that enough will come back; but whether they will be back in time is the question. We saw, on Thursday last, a large team loaded with wool, bound for San Francisco, the product of the ranch of E. P. Hart, Esq., of this county.

The election for city officers of Stockton, on Monday, resulted in the Citizens' Ticket prevailing by an average majority of 250 out of 722 votes. Dr. E. S. Holden was re-elected Mayor; B. Sanborn, Marshal; W. R. Jefferson, Assessor; V. M. Peyton, Collector. The Aldermen elected were: George Gray, J. B. Houshe, G. Starbuck, T. S. Strout, J. P. D. Wilkins, M. Serrery, T. J. Keyes, George Ladd, A. B. Bayner, and C. H. Huffman. The Argus says the victory was caused by disgust of the citizens at the convention system.

In Alameda county, the Herald says, the heavy storm of last week has done less damage than was at first supposed. Much of the early grain was prostrated by the rain and wind, but most of it has risen up again, and no damage will be sustained from this cause, except in a few fields and portions of fields. The benefit to the grazing districts and root crops will more than compensate for the damage to the grain crop. There is a better prospect for grass this year than has been known for several years.

At Sacramento, the Union says, the rain of last week, which commenced about midnight on Tuesday, dripped on Wednesday, poured on Thursday, and culminated about half an hour past meridian in a deluge, accompanied with hail and scattering flakes of snow, contributed 14.81 inches to the supply of this season, which amounts in the aggregate to 20.700 inches. The fall last season to this date was only 15.959 inches—showing 4.741 inches in favor of the present season. The rain this season is in excess of that of any since the winter of 1852-53.

The Times of the 5th says more cattle are to be sent from Humboldt, for the San Francisco market. The Cortes would take thirty head of fat beef cattle on board on her way down, last Monday. They are a splendid lot of cattle, and will command high figures in San Francisco. The same paper also says: The success which attended the cargo of beef cattle taken down by the bark Hartford has settled the matter as to the advantages of shipping over driving, and has laid the foundation for an extensive trade, and one which we hope will make money a little more plenty in our country than it has been for a year past. The Hartford is on her way to this Bay, for another load of cattle, and may be looked for daily till her arrival.

Some parties in Sacramento have invented a machine with which they expect to manufacture diamonds from carbon. The machinery is all ready for operation, and in a few days the novel experiment will be commenced. The Bee says: "If we are not mistaken, the gentlemen managing this experiment have already been successful in reducing carbon to a fluid, and it has also been compressed by them in a leaden ball, in this city, sufficient to create a stone so hard that no jeweler could cut it, and which has been sent to Paris for inspection. The additional power given by the machinery above mentioned, it is hoped by the owners, will afford compression to crystallize the fluid, and a diamond worth half a million may be the result. The power from the galvanic battery is to be applied by means of a copper wire connected to the cavity in the center of the ball. Whether the proprietors reap a princely reward or not, the operation will be a great benefit to science."

At Los Angeles, the Agricultural prospects of the season are thus reported by the Star of the 5th: "The season, so far, has been one of the most favorable with which we have been visited for many years, and our farmers have taken full advantage of it, for the sowing of large crops of cereals. The early rains permitted seasonable plowing and the grain being sown

early, had the full benefit of the copious showers which have since fallen. This is a marked improvement on the practice of former years; for it has frequently happened that plowing has been postponed, even after the first rains, till December or January, instead of September or October; the consequence of which was the loss of the benefit to the seed of the early rains. Last Fall, however, the crops were planted early, and as a natural consequence, they will mature early. From present appearances, the grain will be gathered early in June, and an abundant harvest is expected. The present is the most critical time for the wheat crop. It has escaped the blight from frost, the fog which have unfortunately prevailed have not proved injurious so far, and it is the general opinion that this crop will be full and abundant. Barley is in fine condition, and is heading out; a great breadth of it has been sown. A good deal has been done, also, this year, in oats. This grain is coming greatly into favor, and is found to answer the expectation of the farmers, the straw being long and the grain plentiful. Rye, too, is in great favor, and deservedly so. Some persons prefer this crop to barley, as it will grow well on lands not fit for the latter. We have heard of an experiment made between the two grains, and the result is altogether in favor of the rye. It is in fine condition, and fully headed out. It seems to adapt itself to our dry soil and climate, and our informant adds, looks as well as and as vigorous as any in the New England States. The hay crop is, of course, from the copious rains during the season, abundant. A few tons can be raked together almost anywhere on the plains or hills. The fruit crop is as plentiful as the promise of grain is abundant. There never before have been such indications of plenty. The vineyards are also in a forward and healthy condition. The bug which was so destructive last year on the opening buds of the vines, has not been noticed this season, and is not now to be dreaded, as the time for its operations is pretty well gone by. The intense heat, some time ago, had the effect, we have been informed, of hastening the insect out of its caterpillar state, in which alone it preys upon the budding vines. Since the foregoing was written, we have been visited with heavy showers of rain, causing a good deal of solicitude for the growing crops. Hay-making has, of course, been suspended; and it is hoped that the wheat crop, the most sensitive, has not been sufficiently advanced to be injured by the moisture."

Great Trial of Esterly's Reaper.

The following account of a trial of Reapers is taken from the Whitewater Register of Sept. 16th, 1857:

Knowing that many incredulous people doubted the truth of our statement last week, in reference to Mr. Esterly's Reaping Machine cutting sixteen acres of wheat in one afternoon, with one pair of horses, we have taken the trouble to obtain the following certificates from men of undoubted integrity, which will show not only that the feat was actually performed, as stated, but that we underestimated the amount cut.

"The undersigned do hereby state that we witnessed the cutting of the grain above specified, on the afternoon of Aug. 25th, on said Esterly's farm, and that the grain was heavy, and badly crinkled down, and the ground not rolled. The team, a good fair size—not what would be called a large team. The work was done in the very best manner, and the team was not worried; the off horse, at sunset, had not sweat any; the night one, working inside, next to the standing grain, sweat a little under the harness. We should not have known from the appearance of the horses that they had worked an hour; they might have been driven much faster, and not hurt them. The machine was managed by two boys.—[Signed:] James H. Case, E. L. Caswell, Sextus Case, G. A. Caswell, Samuel Case, Charles Hegner, L. C. Cook, L. A. Winchester, Joseph Lewis, N. Salisbury, Elias Walt, F. B. Rury, V. McCracken, Andrew B. Lee, F. L. Kiser, L. H. Rann, Elisha W. Pratt, J. P. Cutler, S. B. Osterlander."

"We, the undersigned, do hereby certify that we measured the ground cut over during the afternoon of Aug. 25th, 1857, by one of George Esterly's Two-Horse Reapers and Mowers combined, on said Esterly's farm, and there was, by actual measurement by the chain, full sixteen and one-half acres—there being a sward cut round on only three sides.—[Horace Adams, C. C. Lewis.]

"I do hereby certify that the Reaper which cut the above specified grain, is five feet two inches on the cut, and that the average cutting, according to the measurement above stated, from the time the team was hitched on the Reaper, until the piece was completed, including all stoppages, was two acres and fifteen rods per hour.—[F. L. Kiser.]

WALWORTH COUNTY, } The above subscribers Town of Whitewater, } personally appeared before me and made solemn oath that the statements subscribed to by them were true.

D. W. C. BARROW, Justice of the Peace.

DAMAGE TO FRUIT TREES IN NAPA.—The late heavy rains have done much damage to fruit trees planted upon level soil in this vicinity. The drainage being inadequate, the water stood stagnant long enough to injure the roots materially. Many trees, especially peach trees, appear to be entirely ruined. A gentleman residing in town, who has three or four hundred trees, informs us that he expects to lose them all. A few trees in our own garden seem to be on the point of dying from the same cause.—[Napa Reporter.]

Here we have a natural illustration of too much irrigation—the result is the death of the tree. We presume if an examination was had, these dead and dying trees were planted in round holes or wells, where the water could collect, the ground around and beyond the trees having little or no cultivation whatever.

Had the soil where these trees were planted been cultivated two feet or more deep, the water would have passed off below the roots without injury to the trees. The same result will occur where excessive irrigation is practiced upon soil lightly cultivated. It will be found that many orchards now apparently good, that have been sustained by irrigation, will soon begin to decay; overgrown sappy wood, too tender to resist the changes of our climate, the sudden cold winds following hot blasts of air, their growth has been unnatural, premature and an early death will be the result.

The complaint of worms, borers, scale-insects of various kinds, that are now found on the foliage of trees or under the bark, or on the body or limbs of the tree are an indication of the approaching death; the crows gather where the carion is found; maggots are seen as putridity approaches, and so with various insects and the larvae upon trees and plants. They are indicators of uncleanness, disease and approaching dissolution, and if our orchardists will only examine into these things they will find it so.

THE GARDENS AROUND STOCKTON.—There is no city that we have visited wherein there is greater evidence of advancement in Horticulture and Floriculture than Stockton. Weber's Garden, that of Col. Huggins, Dr. Reid's, Insane Asylum, and a score of others, were those we visited, and shall describe, and are highly creditable to each proprietor. Let every city follow the example of Stockton.

We call attention to the Indianapolis of A. S. Taylor, Esq. His valuable history should be preserved. All who desire it, should subscribe for the FARMER, to secure it. We can only furnish copies to permanent subscribers, for the year. It is the only history of the kind extant.

SOUTHDOWN BUCKS.

 **SPLENDID SOUTHDOWN BUCKS.** OF very superior character, will arrive on the next steamer. They will be the finest that have been brought to this country. Purchasers in want of very superior animals of this class, can see them and learn particulars, upon the arrival of the Steamer, by applying to the Editor of the Farmer, or to KNAPP, BURRELL & CO., Washington street, San Francisco.

ALAMEDA COUNTY FAIR.

The Second Annual Fair and Cattle-Show

—OF—
The Alameda County Agricultural Society

Will be opened in
THE CITY OF OAKLAND,
On Tuesday, June 5th, 1860,

AND CONTINUE FIVE DAYS, at which about \$2,000 in Cash Premiums, 400 Diplomas, and several Gold Medals will be awarded. Competition in any and all of the departments open to the citizens of any county in the State. For a copy of the Schedule of Premiums and Rules and Regulations, apply to the Secretary, at Oakland. As it is expected that this Fair will present the grandest FLORAL DISPLAY ever made in California, the Board of Managers (in addition to the premiums enumerated in the first edition of the published List) will award to the best FLORAL EXHIBIT, consisting of Cut Flowers, Bouquets, Designs, and Wreaths, a Cash Premium of \$50.

By order of the Board. P. F. FARGO, Secretary.

An Excellent Ranch to Lease!

THE OWNER OF AN EXCELLENT RANCH, containing 125 acres, with good feed for Dairy Stock, wishes to find a good man and his wife, to whom he can lease the same, for a term of years.

At a Very Reasonable Rate.

There are at present on the Ranch, TEN COWS, giving milk, and there will be five more come in, within two months. The feed on the Ranch will sustain the stock liberally. Swine and Domestic Fowls can also be kept, with profit, as there is always a market for the Butter, Cheese, Poultry and Eggs, or any produce that shall be raised.

The Ranch is only three miles from the town of Santa Cruz. There is a good

DWELLING-HOUSE, BARN AND OUTHOUSES, and everything to help a good, industrious Farmer and his wife to make a good business and secure a good Home. To a person having a little money, an additional chance for profit can be given. Apply at the California Farmer Office for all particulars. 12-3m

W. J. TUSTEN'S SELF-REGULATING WINDMILL!

A CERTAIN ADVERTISEMENT, SIGNED HYDE & Brother, dated 9th inst., contains, among other matters, the assertion that "the stronger the wind blows, the safer and steeper the mill becomes." If to become steady to stop, to secure such a result, it is necessary that the mill should be so constructed, that it would be able to resist the force of the wind, and not be blown down by it. The mill at the last California State Fair, and whose written testimony to that effect can be seen on application to me. The advertisers also say that the mill has always "taken the premiums at all the Agricultural and Mechanical Fairs, wherever introduced." At the last Agricultural Fair, in California, it was awarded the second premium. The Awarding Committee consisted of three gentlemen, and proof can be made to the satisfaction of any person who will call on me, that two of that Committee were satisfied, and so expressed themselves, that my mill would run through heavy wind and sudden gusts, with a steady and uniform motion; while that of Hyde & Brother would stop, and run with a rapid motion, and then stop. Why the premium was awarded to mine, and not to theirs, is a matter which I leave to the public to judge—if they can. If the premiums taken at other Fairs are of the same nature, they certainly cannot be deemed very valuable testimonials. Hyde & Brother challenge comparison with all other mills in the State. I have made frequent endeavors, verbally and in writing, to secure such a comparison, and I now renew such offers, and pledge myself to make an experiment, or series of experiments, between their mill and mine, for the purpose of testing the relative merits of the same, on Telegraph Hill, in San Francisco, or any other suitable point in the State.

Hyde & Brother also say, in the April number of the California Farmer, that "the large numbers of these windmills are in use in Benicia and vicinity, and give entire satisfaction." Only two of the windmills in use in Benicia or vicinity have been put up by Hyde & Brother, or Hyde & Brother, and arrangements have been made with me to supply my invention, in place of the so-called "Phillips," to all others now running in that place; and if the owners are satisfied with the two put up by Hyde & Brother, then they must be very carefully selected. Numerous sales of my Mills were made last year. Engagements for the ensuing year: more than double the number sold last. In every case, perfect satisfaction has been and will be given. I can boast no prestige derived from the name of a foreign patentee, but I offer the

Invention of a California Mechanic for the critical judgment of the world. My Mills can be seen in operation in Benicia and vicinity, and at the Manufacture, in Benicia—where any and all persons desirous to obtain the best, simplest, most perfect, and cheapest Wind Power now in use, or ever invented, can do so at the following prices, which have been regulated to suit the times:

5 feet diameter, frame included, . . .	\$75 00
10 " " " " " " " " " " " "	125 00
12 " " " " " " " " " " " "	150 00
14 " " " " " " " " " " " "	180 00

WM. J. TUSTEN, Benicia.

N. B. It is my particular request that all Orders or Letters be sent to me by Mail. 12

PHILIPS' SELF-REGULATING WIND POWER.

WE CHALLENGE A COMPARISON WITH ALL OTHER MILLS IN THE STATE.

This power is in truth what it certifies to be, a PERFECT SELF-REGULATING WIND POWER. It has been tested and proved for the last four years in the Eastern States in driving Grist Mills, Tanneries, Turning Shops, Circular Saws, Churning and Pumping, and it has taken the premiums at all the Agricultural and Mechanical Fairs wherever introduced, and is universally pronounced superior to anything of the kind yet invented. Its simplicity, simplicity and cheapness of it must recommend it to every farmer and mechanic.

We call attention to those beautiful Wind-mills in Benicia. They are the mills. The regulating power is simply the force of the wind acting on a wind-lever, which adjusts the wings exactly to the force of the wind, so that the stronger the wind blows the safer and steeper the mill becomes, presenting to a sudden gust nothing but sharp edges to its forces.

But its crowning excellence over all other wind power is, that it not only regulates itself, but it can be set to regulate itself to any desired speed, and that by a process so simple that a child can manage it.

Having the PATENT, none for the States on the Pacific, we are now prepared to furnish them at prices according to the size and power required. County rights for sale—also Oregon and Washington.

The prices at the shop for those adapted to agricultural and mechanical purposes, are as follows:

5 feet diameter, with 30 feet wind surface, . . .	\$125
10 " " " " " " " " " " " "	150
12 " " " " " " " " " " " "	180
14 " " " " " " " " " " " "	200

We are also prepared to Manufacture and Repair all kinds of Agricultural or other Machinery, near Steamboat Wharf, Benicia.

HYDE & BROTHER.

SHEEP FOR SALE.

Several Parcels of EWES. Also a Few Hundred of HALF-BLOOD EWES—if called for immediately. Apply at this Office. 12

A. B. SOUTHWORTH,

DEALER IN

AGRICULTURAL IMPLEMENTS,

44 BATTERY STREET,

(Between California and Pine), and

BROADWAY, NEAR DAVIS STREET,
(Opposite Steamboat Landing),

SAN FRANCISCO.

10 Russell's Thrashers,

With Pitt's Power, made at Massillon, Ohio.

10 Case's Thrashers,

With Pitt's Power, made at Racine, Wisconsin.

50 McCormick's Reapers,

5-12, 6 and 7 feet cut, warranted latest improvements.

50 Easterly's Combined Self-Raking Reaper and Mower.

Straw Stackers and Extras,

For Thrashers and Reapers; all for sale at the lowest rates.

A liberal credit will be given on approved Paper. (1)

HARVEST-1860.

J. D. ARTHUR & SON,

NOW OFFER

THE VERY BEST ASSORTMENT OF
Agricultural Implements
IN THIS CITY.

200 Of the Celebrated

REAPERS

AND

COMBINED MACHINES,

Made by WARDER & CHILD, of Springfield, Ohio, expressly for this market, with all the improvements for 1860. The space to take off the grain is adapted to the largest growth, which most of the Reapers in use are not. The Platform is level, while the raker stands upright, thereby working with ease. The Machine is light and strong; no breakage from any source reported last season. Out of Four Hundred in use, not twenty dollars worth of extras of any kind were called for. Without exception, the above Reapers are the best machines on this coast.

PITT'S THRASHERS,

Made with extra care, with Improvements, expressly to our order, by Nourse, Mason & Co., Massachusetts.

HILL'S THRASHERS,

Got up to suit the wants of this market as to strength and durability; also, four and six-horse Thrashers, all of the best make.

Horse-Powers, Extra Castings for Thrashers,

With a large and full assortment of

ALL KINDS OF AGRICULTURAL IMPLEMENTS,

FOR SALE

As LOW as can be Purchased in this City.

J. D. ARTHUR & SON,

Importers and Dealers,
Corner Washington and Davis streets.

I'VE SEEN THEM!

THE FARMERS APPROVE THEM!

ESTERLY'S PATENT COMBINED

SELF-RAKING REAPER AND MOWER,

IMPROVED FOR 1860,

AND FOR SALE IN STOCKTON.

THE PROPRIETOR TAKES PLEASURE IN OFFERING a Combined Self-Raking Reaper and Mower to the public, which he is confident will give entire satisfaction to all who use it, all the usual objections being entirely obviated, which are:

1. Too heavy draught.
2. Trouble and expense of having two separate mills—one for reaping and one for mowing.
3. The undisturbance—that is to say, they cannot be raised and lowered while in operation.
4. The Rake and Platform being stationary fixtures, the relative position cannot be changed.
5. They can only be used as Self-Rakers. In case of accident much time is lost.

All these Objections are Obviated in my Machine.

1. The draught is lighter than any Hand-Raker.
2. Only one Single-Sick is used for reaping and mowing.
3. It is perfectly adjustable, as will be seen by reference to the cut; any boy can raise and lower it while in motion.
4. The Rake and Platform are not stationary fixtures, but can be adjusted to suit the light you wish to cut, which is very important.
5. Instead of being only a Self-Raker, it can be changed, in case of accident of any kind, in five minutes, and make a much better Hand-Raker than it was before the Self-Raking Attachment was put on.

PRICES WILL BE LOW, TO SUIT THE TIMES.

The Machines are set up in the Lot opposite the Weber House, Stockton.

For sale by J. N. STRETEL, Agent for San Joaquin County.

BONE DUST,

FOR FARMERS.

BONE DUST is the best form for the use of farmers, as a quick fertilizer, can be had in

Lots to Suit,

AT

FIFTEEN DOLLARS PER TON,

AT THE

SUGAR REFINERY,

Corner of Price and Harrison streets, San Francisco.

This article will be found of great value to gardeners, orchardists, vineyards, and farmers generally.

Those in want will apply at the office of the Sugar Refinery, Nos. 55 and 61 Sansome street, San Francisco. 9-3m

LIZZIE WILBY WARREN, M. D., EDITRESS.

THERE'S NO DEARTH OF KINDNESS.

BY GERALD HASKET.

THERE'S no dearth of kindness
In this world of ours;
Only in our blindness
We gather thorns for flowers!
Outward, we are sparing—
Trampling one another!
While we are busy yearning
At the name of "Brother!"

There's no dearth of kindness
Or love among mankind,
But in darkling loneliness
Hooded hearts grow blind!
Full of kindness longing,
Soul is shut from soul,
When they might be mingling
In one kindred whole!

There's no dearth of kindness,
Though it be unspoken,
From the heart it buildeth
Rainbow smiles in token—
That there be none so lowly,
But have some angel-touch:
Yet, nursing loves unholly,
We live for self too much!

As the wild rose bloweth,
As runs the happy river,
Kindness freely floweth
In the heart forever.
But if men will hanker
Ever for golden dust,
Kingliest hearts will canker,
Brightest spirits rust.

There's no dearth of kindness
In this world of ours;
Only in our blindness
We gather thorns for flowers!
O, cherish God's best giving,
Falling from above!
Life were not worth living,
Were it not for Love.

Life and its Laws.

We copy an article from "The Laws of Life," on "Life and its Laws." This journal is comparatively new, and we welcome it to the field of labor and usefulness, with great hope and assurance of its success, on the principle that "Truth always prevails."

The article referred to will give our readers an idea of the value of such a paper for family reading. This journal is edited by Miss Harriet N. Austin, M. D., and published at Danville, Livingston county, N. Y. It is furnished to subscribers at seventy-five cents a year.

The strong love of life which is planted in the very center of man's instincts—the tenacity with which he clings to it, when to the beholder it seems stripped of every attraction, should teach him that it has great intrinsic value and significance. And yet, abstractly, it is held at a very low estimate. Man cheats himself with the idea that life in this world is of very little consequence. Our very religion teaches us that it is a poor, vain thing, calls our bodies "vile houses of clay," and represents that to escape from them is blessed. When little infants, or persons in the beauty and vigor of youth, or in the strength and dignity of mature life, die, it regards them as having made a very desirable change, in leaving a world of suffering, sorrow and toil, for one of happiness and holiness. Christian parents talk about giving back their little ones to God, and while every fiber of their hearts quivers with anguish, they endeavor to gather comfort from the reflection that "What is our loss is their gain. Though we suffer, they are infinitely better off." According to this philosophy, the best use that can be made of life, is to dispose of it as soon as possible.

We think these are very mistaken views. And we think so, because we believe that God is wiser than man. He created man to live long on the earth—made every provision, and arranged every plan, to secure such a result. The earth, air, water, trees, fields, fruits, snow, ice, rain, sun, moon and stars, all conspire to furnish him with the means of existence, to give him health and vigor, and to make his dwelling-place cheerful and beautiful. So strong is the power of life in him, that the feeblest has to struggle hard to throw it off. Often we see one in whom life seems nearly extinct, the vital spark just ready to depart, and the person longing and striving to die, and yet such a one lives on and on for years.

We do not believe that God would have made so minute and complete provision for the continuance of human life, if in His mind it were not of great worth. He undoubtedly might have created our spirits and placed them in Heaven at once, if He had conceived that to be the better way. But He chose to fit up this earth for our temporary abode, and to make us up in part of earthly material, with the design that we should stay here till the spiritual of us had, in accordance with the laws of its nature, grown and developed to that degree that it was ready for another state, when the earthly should drop off easily and quietly as any other natural process takes place. It is true that by reason of sin and sorrow, life becomes toilsome and tiresome, and oftentimes burdensome, but that does not justify us—certainly it does not justify the Christian, in longing to lay it down, or in concluding that we should be a great deal better off if we could get out of this world. We are not to be excused from duty simply because we are tired of it. We are not entitled to go to Heaven till we have served our full time on earth. What is here, we know; what is beyond, we cannot know till we pass onward. And no being on earth has yet attained to so great wisdom as to be able to estimate the consequences of one's passing from this life into the next in infancy or youth—to calculate how different is his position and relation to existence from what it would have been if he had received that education which his residence here was designed to give him.

Holding these views, life appears to us a sacred thing; a thing to be cherished and honored. But how shall it be secured? All around us we see human beings dying—in infancy, in childhood, in youth, in manhood, in ripen life, when all the powers of body and soul have reached their highest point of vigor, and not one in a thousand dying in old age. How can all this be, if God has thrown such securities around life? Simply because life has its laws, and men constantly violate them. If the Creator had left everything at hap-hazard, then it might have made no difference. One might as well have lived one way as another, and he would not have died till his time came. But in His great wisdom and goodness, He has made human life subject to exact laws, and thus given it its security and dignity. And the very nature of law is to cause suffering by its infringement. One of these laws is that man shall have sleep; another, that he shall have food; another, that certain substances if taken as food shall nourish the body, while certain other substances so taken shall destroy its life. Another of these laws is that he shall have a constant supply of atmospheric air,—and so on. A complete disregard of these regulations will cause immediate death; and a partial disregard is mischievous in proportion to its extent. One cannot depart from them in one instance without diminishing his life-power. We can judge, then, how

great this power originally is, when we see persons violating every law of their constitutions daily, and still living for many years. We can see, too, the folly and impiety of saying that a man who dies at fifty, of dyspepsia, or rheumatism, or gout, dies by the providence of God. It is as much his own act as if he had destroyed his life at once by taking arsenic. And if it were not for his ignorance, it would be as great a shame to him as if he died of *delirium tremens*.

This ignorance need not exist. The laws of our life are not so hidden in mystery that they cannot be discovered. They are not more difficult to ascertain than the laws which regulate the motions of the planets; and surely a knowledge of them is as important to the welfare of humanity. "Nature as a mistress is gentle and holy," and she does not shut up her secrets from those who seek obediently and patiently to know them. Men have sat at her feet, and have learned of her. We, the editors of this journal, know that we have obtained more correct ideas of her operations than are generally entertained. Hence the existence of this journal. We wish to give these ideas to the people. They need them, and to the extent of our influence they shall have them.

But we have another object. We think the means generally used to restore sick persons to health are in themselves directly and powerfully calculated to destroy life; that thousands of persons die annually who would recover but for the medicine given them; and that thousands who do not die have their whole lives rendered wretched and useless by the terrible effects of these medicines upon their systems. Believing so, we are at deadly hostility to every system of medical practice which administers to sick persons as remedies substances which are injurious to persons in health; and we are determined, by every means in our power, and to the extent of our ability, by reason, by argument, by science, by philosophy, by facts, to show the people the wickedness of such a system. And to this end, also, will this journal be devoted. It will go to many who have been readers of "The Letter-Box," and who understand our position; but it will go, also, to many who are strangers to us, and hence it is proper that in this first issue we should make a statement of its objects. We shall give to it our best labors and our most earnest thoughts, and we hope so to conduct it that many who receive it now as a stranger, shall in the future be glad to welcome it as a true friend.

"Put some Gin in it."

"Oh dear, I am so tired, and that child is crying again for something to eat. Don't seem to me fifteen minutes since the nurse fed it."

"Bridget, Bridget, (there, that stupid girl is dozing—not much wonder too, for she was up all last night with the baby), Bridget, do you hear the baby crying? Take it up; bring it to me, and I will try to hold it, while you warm the milk."

"Call the stewardess to get you a tin cup of milk, so you can set it on the stove."

"Oh me, I do wonder if this night is a sample of all the nights, between this and home. Here I have only been traveling a day and part of one night, and am almost sick now: what shall I do by the time I get to New York? I wonder if the hot weather at the Isthmus will affect the baby much? (It's so cross though—I presume it will not be influenced by the temperature of the climate), however, I shall take every precaution for its health. Here, Bridget, don't forget to put some gin in it."

"Yes, ma'm, I have already."

"Well, do hurry, the baby is screaming, as though it will go into spasms."

We overheard the preceding soliloquy by a mother, with her child, but a few months old, on her way to San Francisco, to take the steamer for the Eastern States.

It is altogether probable that the child will not live to reach its destiny, and even if it should live to adult-life, its last condition will be worse than its first, if that "put some gin in it" is persisted in. And, from all appearances, it was a very important and seemingly indispensable ingredient in every cup of nutriment prepared for the child. It is quite bad enough to fill a child's stomach every fifteen minutes or half-hour with its natural aliment; but it seems almost intolerable to one who knows the results thereof, when the food is merely a substitute and adulterated with gin! Does not that mother ever think it would be better, infinitely better to throw her child overboard, or kill it outright by a short method, than to give it gin and have it suffer all the agonies of a *taper*, and die of *delirium tremens*, ultimately? Or, better it should be killed suddenly now, by some accident, than to live to adult-life, and be a drunkard? The propensity for unnatural stimulation being the most powerful in the organization, and there is no remedy for it; it being as much a part of the nature of that man as the blood which courses in his veins.

When will mothers realize that every action and word are indelibly impressed on their children, either for good or evil; and any wrong done in any way, either mentally, physically, or morally, to the child, it, in consequence, can never be so good and happy as it would have been, had not that wrong been done.

It is not one great influence that constitutes a man what he is; but the combined little influences of every-day life. As a collegiate education, or a back-wood's education, either, is not what makes a man; but the little every day education of his whole life—that constitutes his soul, great or small.

(For the California Farmer.)

A Stray Leaf.

WRITTEN ON RECEIVING MY FATHER'S DAGUERRETYPE IN A LETTER.

So you have arrived safely at your destination, at last! A hard ride has that overland stage given you; the blemish upon the picture proves to me that the Butterfield route is not exactly a field of butter; on the contrary, that you have had many a hard rub, and that you ever did arrive, we may well congratulate you.

Welcome! welcome! thrice welcome!

"Oh! that those lips had language!" They seem now ready to speak; and the little look of smile in the eye rather tells me that I might get an answer I was not expecting. The firmness exhibited in the mouth, as the lips are pressed, show to me the key to the success in managing so many big, strong boys, and saucy, romping girls.

The likeness of my Father is before me! What a rush of thoughts crowd into my mind, as I look into that kind old face, upon the finely formed head, the small penetrating eye, the bold Grecian nose, the firmly made mouth. This is my Father. The same blood that courses his veins is part of this hand that now guides this pen—though thou-

sands of miles apart, and oceans roll between us. What innumerable scenes of joy and sorrow, cares and pleasures, and everything which goes to make a lifetime, has he experienced. What would be the value of his long experience of seventy years, could it be imparted to a youth just starting in life!

I think my Father a great man. What child has not that right? Others think so sometimes—or, at least, a great Father,—when I tell them that sixteen times has he taught the infant lips to speak his name. Does not that justly entitle him to the envied name?

Of the six sons who grew to manhood, four pursue the honorable calling of their father before them (one of them, however, has long since found rest. Peace be to his ashes). The other two pursue equally honorable callings. All of the sons have married "good" wives, and have reasonably perpetuated their father's name. Of the six daughters who have grown to womanhood, all are living, and I trust are a blessing to their aged parents. All are parents and know a mother's love, which is like none other.

The rigid puritanical rules by which we were governed sometimes seemed severe, in days long since gone by; but now all are ready to exclaim, with uplifted hands, "It was right! it was right!" As we assume the responsibility as parents, we begin to see and appreciate, where we were once blind and prone to find fault. It should be the worthy ambition of every parent, with the increased advantages, to do as well as their parents before them. Should all do this, not so many would bring shame upon their name. My brothers! my sisters! shall we do this? If we do, we are sure to hit we shall neither bring shame or discredit upon our State's proud name.

We welcome you—thrice welcome you to this golden land, and only regret it is not the original, instead of the Daguerreotype, of our old father, and grandfather to our little ones, who only know you from faint recollections and from oft-repeated tales. The little grand-baby, that now lies in the cradle, may never be permitted to look upon his face or lip his name, yet shares his love.

The lines I see about the eyes and around the mouth—the swan's-down-like beard under the chin—the slight, thin gray hair—all tell me that age is creeping on, and Time will do its work. May Heaven grant many long years yet, added to the three score and ten which have past, and more, and that we may be permitted to meet face to face again on earth, is the sincere wish of the

April, 1860.

(For the California Farmer.)

"Daughters are Dowers."

So said once to me a dear sister who had laid low in her last resting-place, the only one, a fair child of three summers, and was congratulating me on the possession of four bright, blooming girls. "Daughters are dowers, and richly are you dowered in yours." My heart echoes her words, as I see "our eldest" gliding about my sick-room with noiseless tread, arranging my pillows that I may take a comfortable nap, and bringing fresh rose-buds and mignonette to breathe their perfume on the air, now robbing the dainty form of the little one whose advent among us has opened a new "well-spring of pleasure," and anon, bending her head over the sacred page as she reads to me in soft, low tones, words of divine love and truth.

"Daughters are dowers," I repeat as Kate and Annie vie with each other in the performance of various household duties, that sister May can have more time to devote to me and baby. And then, when the morning work is all attended to, take the little ones out on the hills for flowers, that mother need not be fatigued with their noise. And "daughters are dowers," once more I say, as a little voice whispers by my bed-side at night, "mother, have I been of any use to you, to-day?"

"Daughters are dowers," but do mothers ever think now much it rests with themselves whether they shall be so or not? As is the impress you make upon the fair page of their young minds, so will the character stand forth in pure rays of living light and virtue, or dimmed by shades of selfishness, ignorance, and it may be, vice. Is your highest ambition for your daughters that they may make a fine establishment in the world—that a brilliant match is the *summum bonum* to be attained? Then educate them for a life of frivolity and fashion. Let the adorning of their persons be their first object, and the cultivation of light accomplishments their highest pursuit. Or, are you only desirous to see them notable housewives? to have them excel in all the mysteries of cake and pastry, of jellies and pickles? to be known in the circle of your acquaintance as the most faultless of housekeepers? Then train them to this end, but expect nothing more. All this is very well in its place, but "it is not all of life." It is well that the house be "swept and garnished," but let not the immortal mind be empty.

Would you have your daughters dowers, the ornaments of your home, a blessing and a perfume upon your path? Then build upon a noble foundation of truth and integrity, a superstructure in which every grace of a lovely christian character shall receive its due development, and find its appropriate place.

Cultivate their affections. Let the first home-lesson be that of love, "love, their cradle song." Teach them both by precept and example that kind words and gentle tones make the sun-light of home, while selfishness and discord would mantle the fairest abode with gloom.

Cultivate their taste for all that is beautiful in nature and art. Teach them to love birds and flowers, all beautiful objects, all sweet sounds, and God in everything.

Cultivate in them a taste for reading. Select their books, and converse with them of what they read. Then shall they be the congenial companions of your leisure hours, and no matter how secluded may be your situation, how isolated your society, you will not feel lonely.

Cultivate their moral perceptions, while you inculcate the most undeviating regard for truth, and the strictest sense of honor; refine also their taste for "whatsoever things are lovely and of good report." Let the fountain be pure, and the waters that flow therefrom will be pure also. Then shall no word that is unseemly sully their lips, no unchaste action their lives.

Above all, let religion be the ruling spring of all their actions, the bible their daily study and guide. Then shall your "daughters be as corner-stones, polished after the similitude of a palace." Then shall they be "dowers" indeed. F. A. O.

EDUCATIONAL.

ACADEMY OF NOTRE DAME,
SAN JOSE.

THE NINTH ANNUAL SESSION of this Institution will
commence on THURSDAY, August 1st.
The course of instruction embraces all the branches of a
polite and useful education. Its aim is to form young ladies to
virtue, accustom them to early habits of order and economy,
and to cultivate in them those qualities which render virtue
both amiable and attractive.

TERMS:

Entrance, to be paid but once.....\$ 15
Board and Tuition, per session.....25
Washing and mending of articles washed, per session.....10
Physician's fees per session (unless it be preferred to pay
the bill in case of sickness).....10
Piano, Vocal Music, Drawing and Painting forms extra
charges, but there is none for the French, Spanish or German
Languages, nor for Plain Sewing and Fancy Needlework.
Payments are to be made half a session in advance, and no
deduction will be made for half a session commenced, except
in case of sickness.
Pupils will find it much to their advantage to be present
at the opening of the session.

DAY SCHOOL.

There is a Day School attached to the Academy for the con-
venience of those parents in the neighborhood who may prefer
that their children should return home every day.

TERMS:

Tuition, including the branches specified.
Senior Class, per month.....\$6
Junior Class, per month.....4
Primary Class, per month.....3
Letters may be addressed to the

SUPERIORESS,
Academy of Notre Dame, San Jose.

SANTA CLARA COLLEGE.

THE NINTH ANNUAL SESSION of THIS IN-
stitution will commence on MONDAY, August 22d.
The plan of instruction embraces two regular Courses—the
Classical and the Commercial, besides a Preparatory
Department.

TERMS.

Entrance, to be paid but once.....\$ 15
Board and Tuition per session.....35
Washing and mending of articles washed, per session.....10
Stationary, per session.....45
Medical attendance and medicines, (unless it be
preferred to pay the bill in case of sickness,) per
session.....10
Vacations, if spent at the College.....35
N. B.—When there are more than two brothers, each
one over two pays only half price.
Use of Instruments in Chemistry and Natural Philoso-
phy, Vocal Music, Piano, Violin, and Drawing, form
extra charges. School Books are furnished at store
prices. No extra charge for any of the languages.
Payments to be made half a session in advance.
For further information apply to the President of
Santa Clara College, Santa Clara, Cal., or to Rev. A.
Marachei, S. J., St. Ignace Church, Market street, be-
tween Fourth and Fifth, San Francisco.

THE COLLEGIATE INSTITUTE,
AT BENICIA.

THE Next Semi-annual Session will commence
Jan. 10th, 1860. Parents are requested to send their
sons so that they may be present, if possible, at the opening
of the session.
For full particulars in regard to prices, teachers, &c., ad-
dress the Principal for a circular.

C. J. FLATT, Principal.

Advertisements and Subscriptions must be paid for in advance.

JOB WORK—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

Insects and how to Destroy Them.

Folsom, May 12th, 1860.

EDITOR FARMER: I see in your last number a very good item inviting your subscribers to send insects and vermin that infest the trees and vines. My grape-vines are infested with a little green fly with white wings, and I know it is common through the State (Mr. Davis, of Yolo, speaks of it in Agricultural Report of 1859), and thinking you to be acquainted with it I do not send the specimens. It sucks the juice from the under side of the leaf, and it curls and dies. Please tell me, if you know, how to destroy them, how long they live, and where they are likely to lay their eggs. Tobacco juice does little or no good. The insect is about the size of a common flea, and about as active in its habits. Mr. Davis' plan of prevention, I am satisfied, is good. I only wish to know what is best to do now. Yours truly, D. H. T.

In reply to our correspondent, we publish from the valuable work by Choberton, facts and information that can be made available to destroy any or all the insects that infest the vine. The fly that our correspondent names is the insect called "Thrip." Stryking with "cold water" is one of the best remedies. This can be done by a powerful hand-syringe, taking pains to throw the water up under the leaves. Where a force-pump can be had, and the hose used, it would be preferable, as the more power the better. Remember, this is to be done at evening. Water around the roots to too great quantities causes injury of another character. We hope to hear further from our friend and all others upon insects of all kinds, on fruits and vines.

Where the treatment described in the foregoing pages has been adhered to, there will be little trouble with insects in the late graper, but in early forced houses, with the most careful watchfulness, they sometimes make their appearance during the middle and after-part of summer; also in the vineyard and all out-door culture of the grape, either one kind or other will, at times, commit great ravages, or do much mischief if they be not speedily destroyed; and "prevention is better than cure," was never more *appropos* than in this case, for if a plant of any kind is suffered to remain infested with these pests, you may bid good-bye to health and productiveness. Therefore be on the look-out, and when the enemy shows his advance-guard, rest assured that if not speedily routed, a numerous army will follow. Attack his out-posts, carry war into his centre, destroy his flank and rear, and completely annihilate him, or you will find that he will continue to give annoyance. Give him no quarter, for he keeps no truce, and so long as he has one helpmate of the opposite sex, he will persevere in bringing up his myriads of offspring, which are soon ready for active operation and renewed destruction.

The insects which attack our present subject, are red spider (*acarus*), several species of *coccus*, as brown turtle, and white scaly bug, mealy bug, brown and white tortoise-shell scale, black and green fly (*aphids*), thrips, fretters (*cycaide*), cock-chaffer, &c., and occasionally the caterpillars of some moths.

The red spider is a very small, dark red insect, almost invisible to the naked eye, which locates on the under side of the leaves; it delights in a dry, hot atmosphere, and if left long unmolested, will spread over the whole house, spinning an elegant network, among which it travels with the greatest facility, feeding upon, poisoning, and disfiguring the plant. It may be destroyed by syringing and a damp air, and can be completely eradicated by the use of sulphur, used as advised for mildew. Indeed it is doubtful if it will exist at all if sulphur be exposed occasionally to a high temperature, without being ignited. The writer applies it at times in his plant houses, and is never troubled with either red spider or mildew; even among roses when forcing in the winter, and the only trouble is, to sprinkle a small quantity over the hot water pipes, or coolest end of the flues, three or four times during the season. If proper use be made of the syringe, the sulphur will not always be required, but when applied it answers the double purpose of preventing the spread of both red spider and mildew.

The different species of *coccus* and mealy bugs may be destroyed by the preparation recommended for the vines as the wash to be used in the fall, page 65. The scales generally adhere to the bark, and the brown ones are often so near the color of it as to require a close look to see them; here they stick, sucking the juices, and ejecting their sugary excrement, which spreads over the leaves, and stops up the breathing pores. The mealy bug is to be found in the crevices between the bark, in the joints, and among the bunches, in the form of little cottony-looking substances, in which case it should be taken out with a small brush or pointed stick, for if left in its lurking places, the bunches among which it is located will be disfigured and too dirty for use. The tortoise-shell scale is more solitary in habits, and in appearance like a small tortoise-shell; it is to be found in the same places as the brown scale, lives upon the juices of the vine, and can be destroyed

by the same means. *Aphids*, or green and black fly, are small insects, sluggish in movement, having prominent antennae, a large abdomen, and a long proboscis, with which they pierce the cuticle of the tender shoots, and draw out the sap, which quickly brings decrepitude into the advancing extremities. They are viviparous and gregarious, and increase amazingly fast.

Thrips are small, active, linear-shaped little insects, which congregate on and run over the under surface of the leaves, disfiguring them, and eating the epidermis or outer covering; and the *fretters* (a species of *cycaide*) move by short flights, or rather jumps when disturbed; they are somewhat linear and triangular in form, small, and of a palish yellow color, and like the last they feed on the outer covering of the leaves. All the last three varieties can be destroyed by fumigating with tobacco, but care should be used in the operation, so as not to apply too much while the leaves are young and tender, for in that state they are soon injured.

The rose bug is a lightish brown little beetle, with a small head, and long proboscis. In some parts of the country it is very destructive to hardy grape-vines, before and about the time of blossoming. It congregates through the daytime often in great numbers, and eats the tender flower stems, thus destroying all future prospects for the season. The most effectual way of keeping this troublesome customer in check, is by hand-picking, at intervals through the day, more particularly early in the morning, for although it may be caught at any time when at rest upon a plant, it is more sluggish before the heat of the day commences. Being only the visitors of a period, annually, a careful watching for three or four weeks is requisite at this time, after which it disappears, and is no more trouble. The cockchafer beetles are larger, more oval in form than the foregoing, and of several colors; they attack the leaves and young shoots through the season, but are not so destructive. The same process (hand-picking) will have to be resorted to for their destruction. There are also several kinds of the larva of humming-bird moths that occasionally feed upon the young stems and edges of the leaves, and which, being so near the color of the parts they feed upon, and cylindrical in form, are somewhat difficult to find; consequently, when it is seen that injury is being done, a sharp look-out ought to be practiced, and a quick eye will soon get accustomed to the detection of these, and any other kind of caterpillars that occasionally may be annoying. And here we may state that the best advice which can be given in this matter in a general way is, to remember the old saying that a "stitch in time saves nine;" and if we do not wish to cultivate our destructive propensities, by having to destroy an immensity in number of God's links in creation, we ought to have a benevolent feeling, and recollect that the earliest and first onslaught upon the precocious sapling will render unnecessary the putting to death of countless myriads afterward, each of which, in the true sense of reason, has as good a right to live as ourselves.

With regard to the graper under glass, if the insect world is "legion," and the generations quick in succession, they are easily kept down, and nothing but gross negligence or ignorance will permit them to get ahead. Use water freely during the earlier periods of growth, drive it into all crevices of the house, and judiciously over the vines, and you may generally defy all the host of them. If after the fruit begins to ripen they should make an attack, the sulphur and tobacco may be applied as recommended, when their comparatively small numbers will be speedily put to the rout.

We find the following in the Columbia Times (Tuloume county), of the 10th inst., in relation to insects on fruit trees:

Quite a large number of peach and plum trees in this vicinity have perished, within a few weeks, from causes it is not possible at present to discover. We have observed that several of our exchanges refer to diseases or blight among the fruit trees in their neighborhood. The San Joaquin Wheatman traces it to an insect somewhat like a weevil, which bores into the very heart of the tree, and affects its vitality. We have examined many of the diseased and dead trees in this locality, but can find no trace of such an insect. In the garden of W. F. Hassell, Esq., we saw well grown peach trees, which, but three weeks ago, were covered with bright and healthy-looking blossoms, but now are completely dead and withered, from root to branch—the wood, when broken, presenting the appearance of having been dead for years, being quite rotten. If the insects described are the cause of the blight in the San Joaquin Valley, we feel certain that other causes must be sought for it, up here in the mountains. With reference to the graper, which each year increases in importance, owing to its increased culture on our hillsides, great complaints are made of the ravages of a small fly, which made its appearance, for the first time, on the vines in this district, last season, in some cases entirely destroying the crop of fruit, and more or less affecting the vine in every direction.

We have tried several experiments, with the view of discovering an exterminator for the pest, which threatens to materially retard the culture of the grape in this section. The best remedy we could find, was a solution of aloes and tobacco, made very weak, which effectually killed them, while fumigating them with sulphur and tobacco, as recommended by some, merely causes them to fall to the ground, when they shortly after recover, and appear to act with redoubled energy on the leaves of the vine. The insect which infests the vine in this neighborhood is of a pale straw-color, with semi-transparent wings, on which are several black or brown spots. Under the magnifying glass, we observe it to have two pairs of wings, the outer ones being longer and thicker than the inner. Its head is furnished with hair-like antennae, while the whole shape of its head being very similar to that of a grasshopper; its powers of locomotion appear to be limited to a sort of jump, which it makes when the leaves on which they are are shaken. It propagates very rapidly, by depositing small, transparent, gummy-looking eggs, which are always separate and at a distance from each other, on the under-side of the leaf, mostly near the midrib. As the subject is of much importance, we shall feel obliged to any of our friends who can

furnish us with any information about it, for publication.

Since writing the above, we have been informed by one of the most practical gardeners in our county, that peas, planted between the vines, will remove the fly from them.

The Tuloume Courier says: We are sorry to observe, that our whole crop of grapes is threatened this year with that dreaded vineyard pest, the grape-fly. It would appear that throughout the whole country around us, among the gardens, ranches and vineyards, the fly is observable in immense quantities. This fly was first noticed here, the year before the last, attacking the grape late in the season, when the fruit was nearly ripe. Last year they came earlier, when the grape was well set, and now, when the vines are but just out of blossom, and in numbers beyond anything of the kind ever seen here before. Our readers would like to know of a sure remedy for this evil, which has been tested by experience. We believe that a strong suds, made of whale-oil soap, if syringed upon the leaves and vines, would kill the insect; but this method is a very tedious one; yet it is better to do this than to lose our grapes. Can any one inform us of a better method?

Alameda County Agricultural Society.

PREMIUM LIST.

For Second Annual Fair and Cattle Show of the Alameda County Agricultural Society, to be opened in the City of Oakland, on Tuesday, June 5, 1860, and continue five days.

The following premiums will be awarded to successful competitors, subject to the rules and regulations hereinafter named. When desired, Medals or Diplomas will be awarded instead of the cash premiums.

[N. B.—The premiums below are for the best article, or animal, in each department; and where the same premium is offered for several different articles, or animals, in any of the numbers, the said premium is only placed at the end of the list, to avoid repetition, where it applies to each.]

CLASS I.—HORSES.

In making the awards in this class, the general good qualities, such as style, action, constitution, powers of endurance, as well as speed of the animals, are to be taken into consideration.

No. 1.—Thorough-bred. Stallion, 4 yrs old and over, \$50; 3 yrs old and under 4, \$25; 2 yrs old and under 3, framed diploma; 1 yr old and under 2, diploma. Mare, 4 yrs old and over, \$30; 3 yrs old and under 4, \$20; 2 yrs old and under 3, framed diploma; 1 yr old and under 2, diploma.

No. 2.—Roadsters. Stallion, 4 yrs old and over, \$40; 3 yrs old and under 4, \$20; 2 yrs old and under 3, framed diploma; 1 yr old and under 2, diploma. Mare, 4 yrs old and over, \$30; 3 yrs old and under 4, \$20; 2 yrs old and under 3, framed diploma; 1 yr old and under 2, diploma.

No. 3.—Draft Horses. Stallion, 4 yrs old and over, \$30; 3 yrs old and under 4, \$20; 2 yrs old and under 3, framed diploma; 1 yr old and under 2, diploma.

No. 4.—Match Stallions. Span Roadsters, and Span Draft Horses, \$10 and diploma each.

No. 5.—Speed. The test of speed will be made under the supervision of the "Oakland Jockey Club," upon whose award the premiums will be paid.

Running, Trotting, Pacing and Walking—single mile, each \$50; Span Trotters, and Span Pacers, single mile, \$50. An entrance fee of \$10 will be charged all competitors in the trial of speed.

No. 6.—Grade Stock. Matched Geldings, 4 yrs old and over, in harness, matched Mares, 4 yrs old and over, each \$20. Geldings, under 4, \$10; Mares, under 4, each framed diploma. Single Gelding, single Mare, and single Saddle Horses, each dip.

No. 7.—Ponies, Jacks and Mules. Span Ponies, framed diploma; single Pony, diploma; Jack, \$20; span Mules, framed diploma; single Mule, diploma. Sweepstakes.—Stallion, \$100; Mare \$50; sucking Colt, framed diploma and \$15; Cal. Horse, dip.

CLASS II.—CATTLE.

Authenticated pedigrees will be required of all animals entered as thorough-bred.

Bull and two Cows or Heifers, \$40; Bulls 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and 1 yr old and under 2, each diploma; Cow, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and Heifer, 1 yr old and under 2, each diploma.

No. 9.—Duroc Stock. Bull and two Cows or Heifers, \$40; Bull, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and 1 yr old and under 2, each diploma. Cow, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and Heifer, 1 yr old and under 2, each diploma.

No. 10.—Ayrshire Stock. Bull and two Cows or Heifers, \$40; Bull, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and 1 yr old and under 2, each diploma. Cow, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and Heifer, 1 yr old and under 2, each diploma.

No. 11.—Hereford Stock. Bull and two Cows or Heifers, \$40; Bull, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and 1 yr old and under 2, each diploma. Cow, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and Heifer, 1 yr old and under 2, each diploma.

No. 12.—Alderney Stock. Bull and two Cows or Heifers, \$40; Bull, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and 1 yr old and under 2, each diploma. Cow, 4 yrs old and over, \$20; 3 yrs old and under 4, framed diploma; 2 yrs old and under 3, and Heifer, 1 yr old and under 2, each diploma.

No. 13.—Work Oxen. Work Oxen, 4 yrs old and over, framed diploma; 3 yrs old and under 4, diploma.

No. 14.—Fat Cattle. Bullock, framed diploma; Cow, diploma.

No. 15.—Calves. Pen of Calves, not less than five, by one exhibitor, framed diploma.

Sweepstakes.—Bull, framed diploma and \$50; Cow, diploma and \$25.

CLASS III.—SHEEP.

No. 16.—Long Woolled. Buck, 2 years or over, framed diploma and \$10; three Ewes, diploma and \$10.

No. 17.—Middle Woolled. Buck, 2 yrs old or over, framed diploma and \$10; three Ewes, diploma and \$10.

No. 18.—Saxon. Buck, 2 yrs old or over, framed diploma and \$10; three Ewes, diploma and \$10.

No. 19.—French Merino. Buck, 2 yrs old or over, framed diploma and \$10; three Ewes, diploma and \$10.

No. 20.—Spanish Merino. Buck, 2 yrs old or over, framed diploma and \$10; three Ewes, diploma and \$10.

No. 21.—Grade Breeds. Buck, 2 yrs or over, framed diploma and \$10; three Ewes, diploma and \$10.

No. 22.—Fat Sheep. Three, 2 yrs old or over, framed diploma; three, under 2 yrs old, diploma.

CLASS IV.—SWINE.

No. 23.—Large Breed. Boar, 2 yrs old or over, framed diploma; 1 yr old and under 2, diploma. Sow, 2 yrs old and over, framed diploma; 1 yr old and under 2, diploma.

No. 24.—Small Breed. Boar, 2 yrs old and over, framed diploma; 1 yr old and under 2, diploma. Sow, 2 yrs old and over, framed diploma; 1 yr old and under 2, diploma.

No. 25.—Other Breeds. Boar, 2 yrs old and over, framed diploma; 1 yr old and under 2, diploma. Sow, 2 yrs old and over, framed diploma; 1 yr old and under 2, diploma.

No. 26.—Pigs. Six pigs, 6 months old and under 10, framed diploma; under 6 months, diploma.

No. 27.—Fat Hogs. Fat Hog, 2 yrs old and over, framed diploma; under 2 yrs, diploma.

CLASS V.—POULTRY.

No. 28.—Fowls. Collection of one exhibitor, framed diploma; three each, Red and Buff, Black, White, or Gray Shanghai, Black Spanish, White Dorking, Hamburgs, White Crested Black Polish, or Bantams, each diploma.

No. 29.—Turkeys. Pair domestic Turkeys, diploma.

No. 30.—Ducks. Pair domestic Ducks, Muscovy ducks, common Ducks, Top Knot Ducks, each diploma.

No. 31.—Geese. Pair Bremen, Chinese, Wild, or domestic Geese, each diploma.

No. 32.—Miscellaneous. Pair Guinea Fowls, Swans, or Pigeons, each diploma.

Diseases. Essay describing the prevailing diseases among poultry in California, and their proper remedies, \$25.

CLASS VI.—FARM PRODUCTS.

No. 33.—Field Crop of 1859. Best crop, not less than 2 acres each, of Wheat, Barley, Oats, Corn, Rye, Buckwheat, 1 acre Peas, Beans, Potatoes, Flax, Broom-Corn, Onions, Cabbages, Squashes, Pumpkins, Sugar-Beets, Rutabagas, Mangel-Wurtzel, Carrots, Chufas, Hops, each diploma.

No. 34.—Samples. Sack each of Sonora, Australian, Chili, or Egyptian Wheat, Barley, Oats, Rye, Buckwheat, Corn, Peas, Beans, Flax-Seed, Onions, Potatoes, Clover-Seed, Timothy-Seed, Red-top-Seed, sample Wheat, Barley, Oats, or Rye, in head, each diploma.

CLASS VII.—FRUIT.

No. 35.—General Collection. Largest collection of Fruit, framed diploma.

No. 36.—Apples. Largest variety, growth of 1859, or best dish, each framed diploma.

No. 37.—Peaches. Display of Peaches, or single variety, each framed diploma.

No. 38.—Plums. Display of Plums, or single variety, each framed diploma.

No. 39.—Cherries. Largest number of varieties, single variety, or hand-some and most prolific branch, each framed diploma.

No. 40.—Strawberries. Largest collection of varieties, best variety, five varieties, single dish, seedling, or largest display of Strawberries, each framed diploma and \$10.

No. 41.—Raspberries. Largest collection of varieties, best variety, five varieties, single dish, or seedling, framed diploma.

No. 42.—Currants. Largest collection of varieties, best variety, five varieties, single dish, or seedling, each framed diploma.

No. 43.—Gooseberries. Largest collection of varieties, framed diploma; best variety, five varieties, single dish, or seedling, each diploma.

No. 44.—Grapes. Display of Grapes, diploma.

No. 45.—Blackberries. Varieties, single dish, or seedling, each diploma.

No. 46.—Other Fruits. Exhibit of any new and desirable fruit, diploma.

No. 47.—Preserved Fruits. Exhibit of Preserved Fruits, Stone-Fruits, Small Fruits, Domestic Wine, Cordials, Jams, Jellies, Pickles, or Dried Fruits, each diploma.

Corn-Sheller, Scythe-Snath, Hay-Press, Churn, Cheese-Press, Garden Tools, Wheelbarrow, Bee-Hive, Ox Yoke, one-horse Wagon, two-horse Wagon, one-horse Carriage, two-horse Carriage, Team Harness, Carriage Harness, Saddle, Ladies' Saddle, or Windmill, each diploma.

Field Contests. Best Reaper (to be tested in the field), Mower, combined Reaper and Mower, Plow, or Gang of Plows, each gold medal.

CLASS XII.—DOMESTIC MANUFACTURES.

Best 100 pounds Flour, 100 pounds Corn Meal, 100 pounds Buckwheat Flour, 25 pounds Farina, barrel Crackers, barrel Soda Biscuit, barrel Pilot Bread, 10 pounds Butter, 25 pounds Cheese, 25 pounds Sugar made from cane, 25 pounds Beet Sugar, Sirup, 25 pounds ground Coffee, 10 pounds Mustard, 10 pounds ground Pepper, 10 pounds ground Allspice, 25 pounds Lard, 25 pounds Soap, Olive Oil, 25 pounds Candles, 10 pounds Starch, Leather (best and fancy finished), Honey, Vinegar, Corned Beef, Salt Pork, Hams, Bacon, pickled Fish, Brick, Granite, Furniture, Blacksmith Work, Tin Work, Brooms, Pottery, Boots and Shoes, Hats and Caps, Salt, Catsup, Raisins, or specimens, each diploma.

CLASS XIII.—HOME INDUSTRY.

Tailor Work, Millinery, Sewing Machine for family; Machine, Shell, Hair, Bead, and Needle-work; Shirt, Quilt, Dress, Crochet; Embroidery in Cotton, Silk, and Worsted; Knitting, each diploma. Domestic Baking (including bread, pies, cakes, etc., open to all), framed diploma and \$25. Bread, diploma; Domestic Baking (including bread, pies, cakes, etc., by "Miss" under eighteen years of age), framed diploma and \$25; Bread, by "Miss" under eighteen years of age, diploma.

CLASS XIV.—ARTS.

Landscape (California scenery), Portrait, Oil Painting on canvas, Painting, Sign, Water-color Sign, Drawing, Engraving on Wood, Lithograph, Copperplate, Daguerreotypes, Photographs, Amphotypes, Printing, Book-work, Newspaper, Cards, etc., Penmanship, Marble Monument, Marble Mantle, Plaster-work, Wax Fruit, Wax Flowers, Leather Work, Drafting, Sketching, each diploma.

CLASS XV.—FARM, ORCHARD, ETC.

Improved Farm, Stock Ranch, Dairy, Orchard, Nursery (Fruit-trees), Nursery (Ornamental), Strawberry Fields (ten acres or over), Raspberries (five acres or over), Apiary, and Swarm of Bees—each framed diploma.

Any animals, or articles, not enumerated in the foregoing list, if deemed worthy by the Committees, will be awarded special premiums.

Competition in the above list is open to all, and we cordially invite citizens of other counties to exhibit at our Fair.

CLASS XVI.—RULES.

I. Each member of the Society will be furnished with a badge, at the office of the Secretary, upon presentation of certificate of membership, and will be expected to wear the same, during the Fair, and which shall not be transferable.

II. Price of single admission to the Fair, or Cattle Show, fifty cents. Single admission to both, one dollar. Season tickets, admitting a gentleman and lady to all the exercises of the Fair, and at the Show Ground, three dollars. Clergymen, editors, and delegates from Agricultural Societies, will be presented with a complimentary card of admission, on application to the office of the Secretary.

III. All exhibitors, who intend to compete for the premiums of the Society, must become members of the same, and have their articles, or animals, entered at the office of the Secretary, as follows: For the Pavilion Department not later than 10 o'clock, a.m., of Tuesday, the 1st of June; for Cattle Ground, not later than 4 o'clock, p.m., of same day. This rule will be rigidly enforced.

IV. The Society will not be responsible for the omission to exhibit any article, or animal, not entered strictly in accordance with its rules.

V. No article, or animal, entered for premium, can be removed or taken away, without special permission, before the close of the exhibition. No premiums will be paid on articles, or animals, removed in violation of this rule.

VI. All articles and animals entered for exhibition must have cards attached, with the name and number of the exhibitors, as entered at the Secretary's desk; and exhibitors, in all cases, must obtain their cards previous to placing their articles, or animals, on exhibition.

VII. Those who wish to offer animals, or articles, for sale during the Fair, must notify the Secretary of such intention, at the time of entering, and have a card attached, with the owner's name, price, &c.

VIII. The Board of Managers will use every precaution in their power for the safe preservation of all articles and stock on exhibition, but will not be accountable for loss or damage. Exhibitors must give attention to their articles or animals during the Fair, and at the close of the exhibition attend to their removal.

IX. Judges will be selected with reference solely to the highest order of fitness, provided always that no person will be permitted to act as Judge in the department where he is a competitor.

X. In all cases, can the Judges award special or discretionary premiums, but will recommend to the Board of Managers any articles in their class which they may deem worthy of special notice, and for which a premium has not been offered.

XI. The Judges on animals will have regard to the symmetry, early maturing, thorough breeding and character of the breed which they judge. They will make proper allowances for the age, feeding, and condition of the animals, especially in the breeding classes, and will not give encouragement to over-fed animals.

XII. No person will be allowed to interfere with the Judges during the adjudications.

XIII. The Superintendent will attend each set of Judges in their respective departments, and point out the different animals to be examined; will attach price-cards to the articles, or flag up the successful animals, after the report of the Judges have been made up and delivered to the Chairman of the Board of Managers.

XIV. The Judges will withhold premiums on animals, or articles, which, in their opinion, are not worthy.

XV. The Chief Marshal, with efficient aids, will be in attendance during the hours of Exhibition, to keep proper order.

XVI. Animals, when duly entered, will be well provided for by the Society, without charge to the owner, and cannot be removed during the hours of Exhibition, except by permission of the Board of Managers.

XVII. All machines, implements, or other products of mechanical art, must be exhibited by their respective makers, or inventors, or improvers, or their assignees, or from whom only premiums on such articles will be awarded.

XVIII. The Chief Marshal will call the Judges at 10 o'clock on Wednesday morning, the sixth of June, assemble them at the Society's room, furnish them with blank books, in which to register their awards, and to have the Judges conducted by the Assistant Marshals to their respective departments of the Exhibition.

ALP. H. MYER. ALP. RED LUELLING. HARRY LINDEN. LOUIS BRUGHIÈRE. ROBERT BLACOW. FRANK F. FARGO. J. W. DOUGHERTY. Board of Managers.

Farmers, Remember your Bags.

GRAIN-GROWERS, don't postpone getting your drilling-bags ready in season. Owing to the immense crop of grain, bags may rise.

CALIFORNIA NOTES.

BY ALEX. B. TAYLOR.

THE INDIANOLOGY OF CALIFORNIA
(CONTINUED.)No. 11 San Miguel Mission Indians
(Lower California).

Vocabulary of the Indians living near the Mission of San Miguel, in Lower California, thirty miles south of San Diego on the Ocean Coast, taken by the Author in November 1856.

leaf	hayal-lumum		

The foregoing vocabulary of the Indians of San Miguel Mission, formerly belonging to the Dominicans, and situated on the Ocean Coast some thirty miles south of San Diego, was given to me by an Indian neophyte about forty-five years of age. His appearance was similar to the Monterey Indians, but much taller and more spirited; the iris of the eye was of the usual coffee-brown. He was in his youth more or less acquainted with the Indians of the neighboring Missions of Santo Thomas, San Vicente, Santo Domingo, Santa Rosaria, and San Fernando Villacata, the last one within a hundred miles of San Miguel to the south. Another Mission, that of Santa Catalina, was in a valley on the eastern side of the mountains, not far from the mouth of the river Colorado. The Indians of Santo Thomas spoke nearly the same language as those of San Miguel, as also did many of those living at Santa Catalina. This last had neophytes of several different tribes, but they were chiefly Yumas and others of the Colorado bottoms. These Indians were very large men, treacherous, quarrelsome and warlike; they once burnt the Mission of Catalina, as they had previously done that of San Pedro, and killed several of the priests and many soldiers.

The Indians of the first-named five Missions all spoke about the same language, and it seems there are many words in the San Miguel language which are spoken by the Yumas of the Colorado, as given by Lt. Whipple in 1849, and those of San Diego. The rancherias of the San Miguel Mission were Otat, Hawai, Ekquall, one in the mountains, Hassasi one on the sea beach, Inomasi was another on the beach, and Nellmole and Mattawottis were others. It seems by Padre Junipero's Journey, in 1769, from Loreto to San, Diego, by land, that these Coast-districts were very populous with Indians.

Our Indian states to us that the women of these clans and rancherias were of light color and very good looking, and the men were tall and robust. He says his father used to tell him that the Indians were very numerous in his day. When a death took place, the body was burnt, and a great time of wailing was held. All the affiliated tribes had the same custom, and they all had their dances and songs of war, love, death, marriage, frolic, etc. They all used boats of reed, or carisso, with which they fished. They lived on fish, whale-meat, muscles, aloues, acorns and grass-seeds; but they never planted maize, or any thing else for food. They had an indigenous kind of dogs which they used for food, which were very much like those now found on the ranchos in the southern part of the State. Muscles, aloues, and other shell-fish, were also abundant, and also ground-squirrels, hares and rabbits.

The Missions south of San Fernando Villacata to San Jose, of Cape St. Lucas, were founded by the Jesuits, between 1690 and 1767, in which last year they were expelled from Lower California by the Spanish government. Between 1767 and 1772 these Missions were placed under the charge of the Franciscans of San Fernando College. When the Franciscans were given the charge of Christianizing the Indians of Alta California, the Government at Mexico gave the old Jesuit establishments up to the Dominicans of the College of Santiago in the city of Mexico, who took possession about the year 1772, and extended the Missions of Lower California as far up as San Miguel, along the Pacific coast, and finally to the east, about 1816, as far as Santa Catalina. The Mission of San Pedro el Martyr had been founded by Padre Cayetano Pallos, about 1787, near the junction of the Gila and Colorado, to keep open the communication with Sonora; but it was destroyed by the Yumas a few years afterwards.

A highly interesting account of the travels and sufferings, in 1827, of an American company of trappers, from New Mexico, under Capt. Paty, to the Gila and Colorado, who were taken prisoners by the Spanish authorities at Catalina Mission, and finally passed over to San Miguel and San Diego, was published by his son in Cincinnati, about 1831, after his return from California, his father having died in prison in San Diego. This book has now become very scarce; in many respects, it is a very valuable work.

Following down south, the Indians of Lower California, on the 1851 map of Mexico, Texas, and California, by the Geographical Institute of Weimar, Germany, are named as follows: From San Miguel to San Vicente, they are called Icas; from San Domingo to San Francisco Borgia, in latitude 27°, they are named Uchitas; from thence to San Ignacio, in 26°, they are known as Lamioines; from thence to Loreto, they are named Cochimes; from Loreto to La Paz they are called Monquis; from La Paz to Cape St. Lucas, in latitude 24°, they are termed Coras, or Perceus. The territories of these last four tribes were the scene of the Jesuit labors, and these names are doubtless from their authorities. We have no account of any of these languages being preserved in published works, though the Jesuits and Dominicans are said to have prepared careful manuscript vocabularies of all the Indian nations they converted, in Lower California and Sonora, for religious purposes, and there is very little doubt, valuable manuscript vocabularies, grammars, etc., of all the tribes of those countries are existing in the old archives of the Peninsula, and of the towns and churches of the State of Sonora. Indeed, we have been told the old Jesuit and Spanish archives of Lower California were secreted by the Mexicans, at the Real de San Antonio, during the American Occupation of 1847 and 1848.

It has been stated to me, on many occasions, by the refugees of 1848 from the Peninsula, several of them foreigners speaking English, that they never met with, within the districts of the old Jesuit establishments from San Ignacio to Cape St. Lucas, a single California Indian, young or old, who had been baptized by the Jesuit priests; they had all died out of the country. And this was the assertion also of several fifty-years-old natives of Lower California, who are yet living in Monterey. The country below San Ignacio is the most populous and wealthy, and has very little connection with the frontiers north and east of San Fernando Villacata, which is very thinly peopled even by Indians or rancheros, unless we except the Indians of the country on the Gulf-head, and Colorado borders. In 1802, Humboldt makes the entire population of the Peninsula (except the Colorado vicinity) at 3000 persons; but Forbes says this is too low, and that "he can state with confidence, the population of all classes does not exceed 14 or 15,000." We have no means of proving the correctness or incorrectness of either Forbes or Humboldt, on the population of Lower California, from 1802 to 1859. At any rate, the population of that country is decidedly of Indian and Spanish mixed blood, without any reminiscences of their Indian extraction—doubtless, like the poorer class of Alta Californians, they were the children of Spanish and Mexican soldiers, fathers and Indian women of the Missions.

There is one thing to say of the preservation of the archive papers of the Californians and Sonora, and indeed of all the dry parts of Mexico, that unless burnt or stolen, there is little other danger to encounter from mold or decomposition, if kept in proper places, two hundred years. There are said to be very valuable manuscript works on the Indian languages and history, and the early settlement of Sonora, by the celebrated German Jesuit Missionary, Father Francisco Kino, and his companions, from 1690 to 1765, still well preserved in the pueblo of Oquitos, near the city of Altas and other places in that State, which it is to be hoped will one day be disentombed and given to the world.

(TO BE CONTINUED.)

A picker-up of loose coal in the streets of New York recently purchased a farm near the city for \$8000, and "retired from business." What a lesson for the thousand loafers and idlers that hang around the drinking saloons and other attractions for such kind of men on Montgomery street in our city. How much better for them to pick up coal, rags, or old junk, and earn a living, than like a parasite to feed on others.

[From the Philadelphia Farmer and Gardener.]
Scab-Louse, or Pear-Tree Scale (Coccus San-gulineus).

BY S. S. BATHYON.

This insect has increased so rapidly, and has been so injurious to my pear trees—or, rather, my pear tree—and also the other fruit trees, that I have thought it might be of some interest to some one to have its character and its private doings shown up for the benefit of whom it may concern.

The scientific name is only given approximately, and was adopted on account of the bloody color of the insect and its eggs, and especially on account of the bloody appearance presented by the trees, when rubbed by a brush or other instrument, to remove them. About five years ago, a next-door neighbor informed me that he had a young pear tree that was suffering from some cause which he alleged he could not discover. The bark became scurfy, the leaves languid, and the fruit wilted and comparatively tasteless; besides ripening very imperfectly. I examined the tree very casually, and saw that the bark of a great part of the tree, and especially the smaller branches, was covered pretty thickly, with small scales, of white cottony tissue. A friend recommended a scrubbing with alkali, two or three applications of which turned it a blood-red, and finally killed it; but whether its demise was caused by the insects or the alkaline scrubbing, I did not learn at the time. I had a fine young Pound Sweet apple tree, that stood a few feet north of where my neighbor's pear tree stood. This tree had borne a maiden crop of nine fine large sized apples. My neighbor removed his pear tree, and the next season my apple tree looked sickly. It had the same mangy appearance that the pear tree previously had, but all this time I had no suspicion that the white cottony scales had an insect under them. I applied a solution of salt with a stiff brush, but after a year or two, the vitality of the tree became too weak to force out the leaves and the bloom. It was then that I pruned it off even with the ground, and burned the trunk and the branches. A wild rose, that stood immediately north of the apple tree, ten or twelve feet, shared the same fate. In the meantime I had reared a fine pear tree—grafted on quince—to a bearing condition, having borne two crops. This tree began early to exhibit the same appearance as the former ones did, which led me to make a closer examination of the cause; and placing some of the scales under a strong magnifier, I discovered that each one contained a scab-like insect, and from ten to fifty crimson-colored eggs or animals. The adult insect is very simple in its organization, being fastened by apparent suction at the one end, to the tenderest branches of the tree; the other end being loose and surrounded by the eggs or young.

I have examined them at various periods, from March to September, and have not been able to find any more highly organized than those represented in the accompanying drawings, which leads me to infer that what seemed to be the eggs were really the young insect, and that, like some other species, they propagate by *diagenesis*, that is, by "alternation of generation," like the aphids, or perhaps altogether *inc. concebitur*, without the intervention of a male, or at intervals of long periods. In the course of two or three years my pear tree was so encrusted that the fruit would not ripen, although I every spring gave it a thorough scrubbing with a solution of soap and salt. Of course after it had leafed and blossomed I could do little more scrubbing, for fear of doing "more harm than good," as the insects during the summer scattered themselves over the young and tender ends of the branches, as they increased in growth. The parts of the tree from whence they were removed turned first reddish-brown, and then almost black, raising up the bark in blisters.

Although I have been paying some attention to them for the three years past, yet I have never seen any that I could recognize as male insects, all having been accompanied by a greater or lesser number of eggs. After the eggs are all deposited, the parent insect shrivels up into the merest atom. I believe that by great care and thorough cleansing during the season when the trees are without leaves, and until they have attained a vigorous growth and a rough heavy bark, they can be reclaimed; for then the insect could not do them much harm in moderate numbers. But until then, it behooves fruit-culturists to attend to them before their numbers multiply too greatly to be removed with certainty, for it really appears that every year, or every cycle of years, develops some new enemy to the various vegetable and fruit productions of the earth.

I am persuaded this insect is not the "Apple Bark-Louse" (*Aspidiotus conchiformis* Gmt.) alluded to by Dr. Fitch in his "Reports," and yet this insect, or one very similar to it, exists in New York State, and has been illustrated in the "American Agriculturist" of last year. The insect is much smaller than the apple bark-louse, and appears like a small black dot at the upper end of the cottony scale,—which resembles, in texture, material and the manner of adhesion, the little disc with which some species of spiders cover their eggs, except in shape, being ovoid, whereas the spiders are spherical. The eggs at first are pale red, and as the season advances become a blood or crimson red, and also increase in size. This appearance they retained until late in the season, when my observations were interrupted by their removal from the tree, by an application of soap and tobacco. But the following spring they appeared just as I had seen them the previous summer, and to get rid of them effectually, in despair I also pruned this tree even with the surface of the earth, and burnt it, since which time I have not observed the insect on any of my other trees, which, however, are very few in number.

Neither is this insect the "Pear Bark-Louse" alluded to by Fitch and Harris (*Leucanium Pyri* Slenk.), which grows to the size of a "half pea," and is always found on the under side of the branches. I have therefore called it the "pear tree-scale" or "scab-louse," to distinguish it from other species of bark-lice that infest the different fruit and ornamental trees. On further observation it will doubtless have to be, ultimately, referred to some other genus than *Coccus*—perhaps *Diapira* or *Aspidiotus*. Whatever its name may eventually be can have very little effect upon its character,—which is a notorious bad one about our houses—other than that we may be able to identify it as the same individual, whenever, or under whatever circumstances we may find it. If these remarks elicit the observations and experiments of others upon the same subject, it is about all the merit I claim for them.

There are 20,000 acres of land under cultivation in Siskiyou county. 90,000 bushels of wheat; 91,250 bushels of barley; 135,000 bushels of oats; 10,000 bushels of rye; 10,000 bushels of corn; 6,250 bushels of buckwheat, and 12,500 tons of hay were raised by the farmers last season.

At what time of day was Adam created? A little before Eve.

On Cranberries.

Editor Farmer: While many desire to know what resources Oregon contains, many of those who have cranberry land, or swails, scarcely believe them worth cultivating, and really do not know what valuable properties they contain. As now is the time to set our cranberries where there are none, let me suggest to your readers a few hints on their culture:

1st. The land must be prepared by taking off the top soil of a swail, then plow the soil beneath it, and reserve the sod for an embankment around the land so plowed.

2d. Cart on the plowed land about forty cart-loads to the acre of sand, and spread it all over equal.

3d. Get your cranberry sets from the swails or swamps where they grow, set them about two feet apart each way, and keep running water through the patch; but embank the patch up, and at each end have a flood-gate to let the water in or out; lightly flood the patch in spring and summer, until the blossoms appear, then let off the water, and about September rake them with a cranberry-rake to gather them.

A man and a boy can rake about thirty bushels a day. When raked, they have to be washed to get out the leaves, straws and dirt; then placed in a barrel, and fill the barrel with water, and the cranberries will be fit for sale, and will keep good for one year.

In Boston, cranberries were worth, last fall, \$15 a barrel; Philadelphia, \$16 50; San Francisco, \$18; and London, England, \$21.

Each acre will generally produce thirty bushels the first year; forty-five to sixty the second year; seventy to one hundred bushels the third; and frequently as high as three hundred bushels an acre in succeeding years.

The only attention required, after the first year in cultivating them, is to clean out the weeds until the vines cover the whole surface, and manure each spring with sand. In winter, they should be overflowed, to protect them from frost.

Cranberries can be found wild and fit for sets in the following places: On Clatsop Plains, in the Scappoose and Klaskanine Mountains, near the road leading from Tualatin Plains to St. Helens, all in Oregon; and in swamps near Lewis river, at the back of Vancouver, in Stoke's Prairie near Cowlitz, and in various parts of the swails and swamps near the Cowlitz, all in Washington territory.

Farmers, who can, ought to cultivate this most excellent berry. It is good for jam, for pies and tarts, and for preserving generally. They also make good home-made wine and vinegar. Let those who can, try to raise one-fourth of an acre each year, and they will be amply repaid for their trouble.—[G. M. E.] in Oregon Farmer.

A Mountain Ranch.

A fine place, located near Red Bluffs, and called the "Star Ranch," is described by the Beacon, as follows: "This is one of the best gardens in the State. It is picturesquely situated, about half a mile above town, on the west side of the river; on the south and west rise high hills, which are now covered with the dense foliage of the oak and the manzanito; to the north stretches a well-timbered plain, while at the eastern base flows the Sacramento, the banks of which are lined with majestic cottonwoods. Standing, or reclining either, upon the grassy bluffs, a magnificent view is had of this gorgeous panorama of nature, assisted, it is true, by the skill and industry of man, in bringing some of its choicest beauties to perfection. At our feet lies the lovely garden, neatly arranged, yet with enough of irregularity to make it appear natural; the rarest flowers, exotic and indigenous, of every hue, are blooming in profuse luxuriance. Fruit-trees, plants and vegetables, occupy a large space, their verdure giving variety to the scene, rather than detracting from its harmony. The little field of wheat in the background, waving to and fro in the gentle evening breeze, lends an additional charm to the picture; while, over all, the wide-spreading oaks here and there rear their lofty heads, affording a most agreeable shade to the visitor, after a ramble through the garden and adjacent grounds. Here is a miniature farm, under the highest state of cultivation, delightful in itself to look upon, and reminding one of the far-off homestead where our joyous childhood was passed. But turn the eye to every point of the compass, and you gaze upon a landscape which, for grandeur and loveliness, cannot be excelled—the green fields, wooded glens, and snow-capped mountains, now tinged with the golden rays of the declining sun, no pen can accurately describe, no pencil delineate. Messrs. Furness & Co. have leased the 'Star Ranch' for a term of three years, and are sparing neither labor nor expense in beautifying the grounds, and in making them useful to our citizens and profitable to themselves. The soil is rich, and the arrangements for irrigation are excellent; the reservoir is capacious, and abundance of water is conveyed to it from the river, by machinery of similar construction to that invented by Dr. Tiersan. Before their lease expires, these gentlemen will have been liberally rewarded for their energy, guided by intelligence and experience."

FICKLE AS WOMAN'S FANCY.—It would be hard to conceive of a more variable, fickle, changeable half-day, in a meteorological point of view, than was the first half of this third day of May. Slight mist, moderate showers, heavy rain, a little cloudy, bright sunshine, hailing and quite stormy, have all been allowed a short reign, and just now as we write, we are at a loss to find a term that will indicate with any degree of definiteness, the existing "Condition of the State," of the atmospheric elements. But it is decidedly windy, and perhaps would be called by the acutely weatherwise, who, of course would name it right or wrong "unsettled."—[Sac. Eve. Post, May 3.]

Well, gallant editors, your simile may or may not be true, whenever you liken the weather to woman. But if woman is changeable or unsettled, let us look for the cause. In nature these change are not by derangement of laws, but in accordance with them, and the results are good. But what are the causes of disturbance in the atmosphere that surrounds woman? Who sends the clouds over the heart of woman? Who creates the storms? Who produces showers (of tears), and who could make the blessed sunshine upon the soul of woman, more than man? and yet the ungallant editors of the Post have attributed all the unsettled condition of society to a natural law; when, if they would only look into the cause rationally, they would see the fatal error they have made. We hope they will receive some letters from the other sex that will teach them a wholesome lesson.

As the "great" Barnum has paid every clock debt of his, he will probably hereafter avoid doing business on tick. Jo Cose says that's the tick-et.

Sequoia vs Washingtonia.

A WONDERFUL NATIVE AMERICAN.

Much discussion has been had in various quarters as to the proper name for the "Big Tree" of this State. Some English botanist applied the name of Wellingtonia; but this could not be endorsed by patriotic Americans, and the name of Washingtonia was applied by the latter, as being much more proper and deserving. But *Sequoia Gigantea* is claimed to be the correct name, as the trees belong to the same genus as our famous Redwood, namely, *Sequoia*. In support of the appropriateness of this last name, we find an interesting communication in the Philadelphia Gardener's Monthly, and which also gives a sketch of the remarkable genius of a Cherokee Indian. The writer says:

Your readers have all heard of the great trees of California; those remarkable productions which for size and magnificence are unequalled by any others known. One of these monsters measures 93 feet in circumference, and 300 feet in height. Another, prostrated, measured 40 feet in circumference 300 feet from the butt, and must have been between 450 and 500 feet long.

For the great tree, "big" trees, many call it incorrectly, the names of Washingtonia and Wellingtonia have been proposed; but it has been found to belong to the genus *Sequoia*, which contain the celebrated Redwood of California. Much has been written concerning the age of these giants, one writer making them of considerable size at the time of Moses. A section of the trunk of the tree first noted above, which was bored down with pump-saugers and upset with battering-rams and wedges, was carefully examined by Prof. Torrey, who counted all the rings and could discover but about eleven hundred. Still, they are sufficiently old to command respect; and should they be preserved to future ages, will continue most wonderful representatives of the vegetable kingdom.

Whence is the name *Sequoia* derived? Has it been intentionally applied, or is it an accident that this American tree commemorates the name of an American, of whom, perhaps, but few white men have ever heard. Away with the misnomers Washingtonia and Wellingtonia, and all honor to *Sequoia*, the American *Cadmus*, the inventor of the Cherokee Alphabet. Surely, if the genus were not named in his honor, it should be so now. History does not furnish forth a parallel to this untalented, this self-taught Indian, who struck out, as it were, at a blow, a perfect system of written speech; and these unrivaled trees may fully hand him up to fame.

Sequoia (or *Sequoia*), or George Guess, the inventor of the Cherokee Alphabet, was a half-breed, his father being a white and his mother a Cherokee. He was, at the time of the invention, not only unacquainted with letters, but entirely ignorant of any other language but his own. His invention appears more remarkable since he received no instruction from without, but by the unaided force of his reasoning and inventive powers, placed in the hands of his tribe the instrument by which they have advanced beyond all other Indians to a respectable degree of civilization. He appears to have possessed a reputation for talent when very young, and was especially expert in the manufacture of ornaments in silver, which were the admiration of his people. As an artist in colors he was excellent, drawing from nature with surprising accuracy. A man of extraordinary shrewdness, of diversified talent: passing from metaphysical and philosophical investigations to mechanical occupation with the greatest ease.

He early understood and felt the advantages the white man had long enjoyed, of having the accumulation of knowledge from generation to generation, stored up by means of written language, while the Red man could transmit his thoughts and discoveries by uncertain tradition alone. To remedy this difficulty, and place in the hands of his people the instrument of progress, was one of the great aims of his study; one which he accomplished beyond that of any other who ever existed in a rude state of nature.

The story of his invention is told as follows: *Sequoia* was present when a letter which had been found upon a prisoner was wrongly read by him to the Indians. Reflecting upon the power of the White man to impress his thoughts upon paper, the question arose whether the mysterious gift of the talking leaf was derived directly from the Great Spirit or the discovery of the White man himself. Most of his companions were of the former opinion, while he strenuously maintained the latter.

At one of the council-fires, at which the recollection of their fellow-tribes who had perished as if blighted by the touch of civilization; the retrospect of their former extent compared with the present limits of Indian power, filled the chiefs with gloomy forebodings, and disposed them to savor the influence of that civilization which rendered the white man immeasurably their superior. *Sequoia* arose from his seat and pointing to a book told them that there lay the secret of the white man's power; that it was by recording his thoughts and observations he had been enabled to effect the wonders they witnessed; and that if the Indians could but invent a method of writing their language, their inferiority would no longer be felt.

Having become disabled by lameness from partaking of the excitement of war and the chase, opportunity presented during his confinement for deep reflection upon the power of speaking by letters; the very name of which was not to be found in his language. From the cries of wild beasts, the talents of the mocking-bird, the voice of his children and companions, he knew that feelings and passions were conveyed by different sounds from one intelligent being to another. He at first attempted to represent these by pictorial signs, but finding them to multiply infinitely he abandoned the method. He possessed a stamp which had been made for him by a white man, with which he marked his work. He knew that the white man could express himself by signs; and he had a fragment of a book, a sealed book to him, for he did not know how these signs expressed the sound in English. His next effort was made to find a sign for every sound in the Cherokee language, but these became too numerous. At length his way appeared more clear. He found that many sounds were variously combined; that words could be divided into syllables; and that those same syllables aided in forming many words; and that his language was made up of but a few sounds variously arranged. Could he give a sign for each of these sounds, his end would be attained. He was living apart from his people, absorbed in his labor, seeing but one attendant who supplied him with food. He had reached the right track and made rapid advances and already believed he had completed his labors.

His daughter, however, possessed a more acute ear, and on teaching her the new alphabet, she detected differences which he had not perceived, and pointed out compound sounds he had supposed to be simple. By these joint analyses the language was reduced to eighty-five monosyllables, for each of which he had assigned a separate letter. This invention was made in 1821. Considerable improvement was afterwards made in the formation of the letters. In 1827 a font of type was cast and the first number of a paper called the *Cherokee Phoenix* issued.

The paper was originally printed partly in Cherokee and partly in English, and I am not aware that the plan has been changed. The alphabet, which is before me, is composed mainly of

English Capitals, Roman and Italian, small letters advanced to the dignity of capitals, Arabic numerals, some resembling the Greek letters, the remainder inventions and combinations of English, and new forms bearing no analogy to any ancient language, but allied to the inventions of the phonographer.

Like all other inventors, *Sequoia* was not permitted to pursue his investigations undisturbed. Alone, secluded from his fellows, who passed his wigwam without entering it, he persevered amid ridicule and the imputation of witchcraft and mystery. Without the knowledge of the pen as an instrument, he made his characters on a piece of bark with a knife or nail. Afterwards he procured pen and paper from an Indian trader. The ink he supplied from some bark whose coloring properties he had previously known. After seeing the construction of a pen he learned to make one, but the first being without a slit, his own sagacity soon removed the difficulty.

He was now prepared to bring his invention before the assembled wisdom of his nation, and demonstrate that he had indeed made a discovery with which no supernatural agency was concerned. His daughter, as yet his only pupil, was ordered to go beyond hearing distance, while he requested his friends to name a word or sentiment which he wrote out. She was then called in and read it to them. The father then retired, and the daughter wrote with similar success. The Indians were wonder-struck, but not satisfied. "I have learned to talk on paper, and hereafter the Indian may do what the white man has done," said *Sequoia*. "I will prove it to your satisfaction." He proposed to select several of the brightest young men of the tribe, to whom he might communicate the mystery. This was agreed to, not without a lurking suspicion of necromancy aiding the business. The tribe watched the youth for several months, and when they offered themselves for examination, the feelings of all were wrought up to the highest pitch. The boys were separated from their master and from each other and watched with great care. The untalented directed what the master and pupils should write to each other, and the tests were varied so as to prove their accuracy and freedom from any collusion except a common knowledge of the signs invented by *Sequoia*, and to firmly fix their faith. *Sequoia* became at once distinguished. A great feast was prepared, in which he was made conspicuous. He became at once, school-master, professor, philosopher and chief. His countrymen were proud of his talents, and held him in reverence as one favored by the Great Spirit. The council of the nation voted him a money reward which he declined. A silver medal was obtained for him by the delegation to Washington City, in 1824, but what inscription it contained I have not learned.

From this hour the progress of the Cherokees has been onward and upward. Their system of government is republican, their religion the Christian; bringing the attendant blessings in their train—public schools and seminaries of high grades, for both sexes are in operation. Bible societies and agricultural associations prosper, and under the wise government of their chief, John Ross, every stimulus is given to aid in developing the resources of the country, and a wise improvement of the manifold social, intellectual and political privileges they are permitted to enjoy, and by which they have made so wonderful a progress in the pursuits and knowledge of civilized life.

Honor to the inventor, to the man who pioneered the path of civilization and enlightenment, and sowed the seeds of innumerable blessings, to be reaped by millions unborn. Let the name of *Sequoia* whose genius towers aloft above that of every other native of this inventive land, live forever in the majesty of the deities of the primeval forest that bear his name in the *Sequoia*.

To the above, the editor of the Gardener's Monthly adds:

Edinburgh does not give, in his *Synopsis Coniferarum*, where he names and describes the genus, any reason for his choice of the name, and as he was no less noted for his philological knowledge than his botanical, it is not at all unlikely that he knew *Sequoia*'s history, and that L. has hit on the secret.

The history is one of the most interesting we have had the pleasure of recording in our columns. Our intelligent correspondent, himself having family relationship with the Cherokees, renders the history the more reliable. With regard to *Wellingtonia*, we believe all European botanists have united in considering that Dr. Lindley was mistaken in dividing it from *Sequoia*, and no botanist has described it as *Washingtonia*. It is gratifying to the national feeling that *Sequoia* stands in the pleasant association L. has found for it.

IMPRISONED IN A VAULT EIGHTEEN YEARS.—A newspaper published in Colima, Mexico, on the 24th of October, tells the following frightful story, and calls upon the public to punish the criminals: "When Gen. Pueblita entered the town of Ayo, in September last, he exacted a forced loan from the people, and a share of it fell upon the curate of the place. The curate acted as though he would pay, but he did not make his appearance at the point designated for payment, and Gen. Pueblita ordered his arrest. A party of men went to his dwelling and knocked at the door. There was no answer, and they broke in. They found no one in the house and were about to leave it, when they heard a frightful voice, proceeding from the ground, saying, 'I am hungry!' The officer in command reported this to General Pueblita, who appointed a commission to examine the house. This commission went to the curate's dwelling, and after a careful examination, they found a movable stone in the floor, and under this was a stairway, leading down to a vault, which was entirely dark, and had no connection with the air, save by the staircase and a small hole that served as a ventilator. In this vault they found some books, a few articles of furniture, and a woman, who had been shut up there eighteen years. She was taken to Gen. Pueblita's quarters. When brought into the light, where she saw a number of persons, she fainted. After she had returned to her senses, a thousand questions were asked of her, to which she replied she had been buried in the vault for eighteen years, without going out for a moment; that she had been married and had children by her husband, but she knew nothing of their fate; that, while imprisoned in the vault, she had had children by the curate, but she did not know what had become of them. After saying this much, she became obstinately silent. While this was passing, a sergeant of the Pueblita brigade, then present, discovered that this woman was his mother, and she recognized him as her son and embraced him. The son then ran for his father, who came and recognized his wife. The husband, fifteen years ago, was imprisoned three years, under the charge of having murdered his wife, this woman."

SCORPION SILVER-MINING COMPANY.—A new French company, styled the "Scorpion Silver-Mining Co.," has been formed and incorporated in this city, for the working of their lead, near the Comstock Lead, in the Virginia mining district, Washoe Valley. Their office in this city is at No. 93 Merchant Street.—[Alta.]

Very appropriate name for a Washoe mine. We think, before Washoe is forgotten, there will be several mines that will prove scorpion mines to hundreds, if not thousands.

Baltimore-Made Agricultural Implements,
VERSUS EASTERN.

WE notice that Messrs. R. Sinclair Jr. & Co., of this city, received FIRST PREMIUMS for their deservedly famed Agricultural Implements at the recent Agricultural Exhibitions and Fairs held in Maryland, Virginia, North Carolina, and the South-western States, namely:

By the Maryland State Agricultural Society,
FOURTEEN PREMIUMS.

By the Virginia and North Carolina Agricultural Society,
NINE PREMIUMS.

By the Sea-board Agricultural Society, held at Norfolk,
TWELVE PREMIUMS.

Also, awarded to Sinclair & Co., by the KENTUCKY and TENNESSEE STATE AND COUNTY FAIRS, FOUR (4) PREMIUMS on Sinclair's Patent Mower, for mowing and cutting corn-stalks, straw, etc., making in all

Thirty-Nine First Premiums

In favor of Sinclair & Co's Wares,

and showing a decided preference by the judges in favor of Baltimore-Made Implements.

Included in the above premiums were Sinclair's Patent Reaping and Mowing Machine, Sinclair's Patent Straw and Fodder Cutters, Sinclair's Patent Spiral Threshing Machine, Wheat Drill with Gears, Attachment, Serrated Clod Roller, Corn Shellers, Corn Drills, etc.

In the above estimate of premiums the following were not included in the different contests, all having received their quota of premiums at Fairs previously held, viz:

Horse-Powers, Spur and Level Graders, Corn-Mills, Bars and Iron, Fanning-Mills, Rolling-Screens, Agricultural Furnace, Chain-Pumps, Lime-Spreaders, Garden-Tools, etc., etc.

The Agricultural Implements and Machinery manufactured by us are constructed in the most substantial and durable manner, great capacity, and particularly adapted for Southern use and usage. Planters and Merchants wanting supplies will be furnished with Price Lists on application.

ALEXANDER H. TODD,

Produce and General Commission Agent,

No. 45 CLAY STREET, NEAR DAVIS,

SAN FRANCISCO.

ALEXANDER H. TODD has been engaged in selling

Grain and Produce for five years past in this market

—was the Pioneer Expressman of California in 1849—has

an extensive acquaintance, and possesses advantages un-

surpassed for Buying or Selling. Has permission to refer

to many of our most substantial merchants in the city,

and also to a large number of farmers throughout the

country.

N.B.—My terms for buying and selling produce are:

For amounts under \$5,000, 24 per cent; for \$5,000 and

upwards, 2 per cent.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Hall's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question,

The Very Best Harvester in Use.

SICKLE SECTIONS.

SICKLE SECTIONS for McCORMICK'S, HUSSEY'S, BURRILL'S, SEYMOUR & MORGAN'S, PALMER & WILLIAMS', and MANN'S (with Wood's Improvement) REAPERS. Also—EXTRA CASTINGS AND BRASS BOXES FOR THE ABOVE MACHINES.

HORSE RAKES.

WHITE'S PATENT STEEL-TOOTHED BUGGY HORSE RAKE;
WILCOX'S REVOLVING HAY RAKES, 8, 10 and 12 feet.

BOYER'S FARM MILLS, for Feed, Corn Meal or Flour; requiring but two-horse power. The cheapest farm mill in use.

PREMIUM FANNING MILLS, of our own make and the best imported.

INGERSOLL'S PATENT HAY PRESSES.

GRANT'S GRAPE-VINE GRAIN CRADLES.

KIMBALL'S PATENT SCYTHES and SNATHS, notched heels; the very best patterns in use.

HAY FORKS, BARLEY FORKS, both steel and wood.

WILCOX'S THREE-BOWED HAND RAKES.

HOVEY'S HAY CUTTERS, all sizes.

RUBBER BELTING, all widths.

MONKEY WRENCHES.

GARDEN HOES and RAKES.

SKELTON CLOD-CRUSHER OR FIELD ROLLER (home manufacture).

GRINDSTONES, all sizes.

PATENT ATMOSPHERIC CHURNS; the best churn in use (home manufacture).

CHEESE-PRESSES, self-acting (home manufacture).

LACE LEATHER; LUBRICATING MACHINE OIL.

LILLIE'S CHILLED IRON SAFES.

EXTRA POWERS, 1, 2, 4, 6, 8 and 10 Horse.

EXTRA TRUCKS and EXTRA LEVERS.

REPAIRING DONE ON SHORT NOTICE.

J. S. HARBISON'S PATENT BEE-HIVES, which took the FIRST PREMIUM at the State Fair, and which is the very best bee-hive in use, are for sale; and, also, persons wishing to manufacture these Hives can purchase the Right of use.

THOS. OGG SHAW,

83 SACRAMENTO STREET,

San Francisco.

We, the undersigned, members of the State Agricultural Society of California, have seen and examined the newly improved CALIFORNIA COMBINED REAPER AND MOWER, manufactured by THOMAS OGG SHAW, of San Francisco, California, for which a patent has been applied for; and, in our judgment, we consider it one of the greatest improvements that has ever come under our observation, of the kind; and we cheerfully recommend to the farming community (as it is purely a California invention) this machine, as one of the best Combined Reapers and Mowers now in use, as it contains many decided and valuable improvements.

SACRAMENTO, January 18th, 1860.

The California Farmer.

SAN FRANCISCO:
FRIDAY, MAY 18, 1860.

Direct our Letters and Exchanges.

Will our correspondents please be particular and address to us at SAN FRANCISCO, not Sacramento. Several of our Exchanges from the old States continue to direct to Sacramento; we ask them to please alter the direction and oblige us? Please also direct letters to "Col. Warren, California Farmer Office," as there are frequent miscarriages for want of having the office upon the letters.

LETTERS BY OVERLAND MAIL.—Will our friends in the old States please write us by the Overland Mail, as often as convenient. It greatly facilitates our plans.

SEND THE FARMER AROUND.—How many persons could confer a very great pleasure, as well as a real and lasting benefit, upon their kindred and friends in the Atlantic States, by sending them a copy of the California Farmer. Every business man, every person engaged in manufactures, or the mechanical pursuits, that has kindred in other States, or Europe, should examine our journal. We feel assured they could not do a better thing to advance the interests of the State or gratify their friends, than by sending them copies of the FARMER. Just leave your names and the amount, at our office, and we will mail the papers for you, free of postage.

THE "LADIES' DEPARTMENT," of this journal, under the charge of Mrs. Lizzie Wiley Warren, M. D., will be found on the sixth page, and to which we call especial attention.

OURSELVES—A SPECIAL NOTICE.

The undersigned, the original and present Editor and Proprietor of the CALIFORNIA FARMER, feels called upon to ask the public not to mistake his name for another which is often before the public. Having always been known and addressed by many people as *Oleander Warren*, and seldom by his initial letters, he has adopted that in all his business, for brevity sake, never supposing any one could make a mistake in the matter. But as some very serious mistakes have recently occurred, as well as many letters and parcels miscarried, and as the undersigned has learned with deep regret that his initial letters have been supposed other than they really are, and that he has been mistaken for another party, he refers to his full name below, and hopes that those who have made errors in the past will have the kindness to correct them, so that in future no mistakes or injustice may come to any one.

JAMES L. F. WARREN,
Original Founder and present Editor and Proprietor,
CALIFORNIA FARMER.

Heavy Stockton Wagons.

Stockton is famous for her immense wagons, and heavy loads of merchandise. No part of our State where so much teaming is done, or where there is such long and tough roads as lead from Stockton to the mines, and the trading posts that do their business with Stockton, and we can add no place where such perfectly trained animals, complete harnesses, or teamsters who thoroughly understand their business or manifest the real pluck and grit.

We have often seen four, six, eight, and ten tons of merchandise upon one load, and six, eight, ten, and even twelve mules; and once there were fourteen mules attached to three wagons conveying freight to Mariposa—the entire gross amount of freight and wagons as follows:

1st wagon.....	18,000 lbs. freight.
2d ".....	6,000 " "
3d ".....	1,714 " "
Weight of feed.....	3,500 " "
	29,214 " "
Add weight of wagons—	
1st wagon.....	4,500 " "
2d ".....	2,500 " "
3d ".....	1,500 " "
Total.....	37,714 " "

This immense load of nearly forty tons was drawn by Mr. Warren, a "crack" teamster of Stockton. This we believe was the largest load ever hauled any distance from Stockton or from any other city. That it may be understood by those not familiar with this kind of teaming, it should be remembered that the three wagons are all lashed together, and the mules all attached to the first wagon, and thus with fourteen mules and three mountain teams of the heaviest make, fourteen tons are hauled over the hardest roads of our State, a distance of one hundred miles. As we have often said, the best mule-teams, the best wagons, and the best teamsters in our State are found in Stockton; the largest finest and best wagon we ever saw was built at the shop of W. P. Miller, who is known far and wide as a wagon-builder.

The Oakland Fair.

We present the Premium List of the Alameda County Agricultural Society for their June Fair, which commences June 5, and lasts five days. The List of Premiums embraces every important article, animal, and production, with works of Art and Household Manufacture. It is to be hoped that a widely extended interest will be manifested, and that this Fair will be crowned with complete success. To do this however, requires the active and earnest cooperation of all the friends of the enterprise, which alone can accomplish it.

Ship your Grain.

We are delighted to see the Wheat and Flour being sent out of our State. This will work a blessing to the grain-growers of our State. No matter if all the old crop goes out, and the new crop rise greatly in value—so much the better. Don't hold on for a rise—sell now—the rise by and by will pay you much better than a rise now. Ship it away; get every bag out of the country you can—and you will rejoice in the future.

Another Rain.

AGAIN the Rain falls! Last evening and this morning the rain came down gently for several hours. Generally, it was acceptable—only to the few the rain was unwelcome.

The fruit comes in slowly, by reason of cool weather. Cherries have made their appearance, at three dollars a pound—some less; Strawberries, scarce to-day, at 37 to 50 cents a pound. A few days of hot sun, and Strawberries will be abundant at 25 cents a pound.

TO CONTRACTORS AND BUILDERS.—We call attention of contractors and builders to the Patent Plumb Level which is on exhibition at our office. It is believed to be one of the best implements ever invented. Rights for sale at this office.

The Industrial School.

The visit of many citizens, together with the President of the Board of Supervisors, and other officers of the City Government and several of the clergy of our city, editors, etc., was a source of pleasurable interest to all; and we were glad to see so many ladies present on the occasion, without any special effort, other than a general notice in the papers of the day. About one hundred citizens convened at the Institute, to see, hear and speak for themselves of the worth of such a charity to our city. We may add, noble charity, as well as a noble duty. We noticed in this morning's Herald and Call, most ungenerous and uncalled-for remarks touching this school, and as we were present on this occasion, we feel that our city papers have done great injustice in thus speaking.

The company assembled, after viewing the fine grounds, which are now well planted, were invited into the dining-room of the building, where the boys were partaking of their noon repast; and a good one it was. From thence, all were assembled into the school-room, where, under directions of the teacher, Mr. Peck, the boys (about twenty-five in number) went through reading, spelling, etc., exhibiting also their writing-books, and their proficiency in singing. In all these branches, they manifested a great improvement. Very great advance has been made in all departments of labor, study, care and exercise, since our last visit, some eight months since.

Mr. Rankin presented the school and its claims upon the public for their sympathies, in brief but appropriate remarks. Rev. Thomas Starr King addressed the friends present, the officers of the Institute, and the people, in his usual apt and most applicable remarks, bringing the subject on which he was speaking home to all.

Among the evidences of merit in the pupils under this system, we notice with much interest the oratorical abilities of a young colored boy, whose natural talent for public speaking is of an uncommon order. His bright eye gleamed with the hidden fire of his spirit enegies. We should like to hear the history of this boy.

We believe, with the entire assembly present, that this Institute demands, as it really deserves, the cordial support of every good citizen, and if there have been faults-finders, let them be just. If there have been desertions or difficulties at this place, it should be remembered that there have been more desertions and greater difficulties at institutions of our State that have cost millions; and that, too, when there was but little hope of reformation. With the young there is hope—good hope,—for, like the seedling tree, a good bad will make the whole tree good; whereas, an old tree requires every limb to be grafted, and the chances are ten to one in favor of the young. These, too, saved now, the other institutions will not be wanted.

We believe that great praise is due to the officers of this school, for their untiring efforts in behalf of the erring youth of our city. Our City Government should be cheered on in such works—not censured. To Captain Leonard and his daughters much praise should be given, for the manifest improvement in every department. We believe that, with a just show of kind feeling from our citizens, the Industrial School will ere long support itself.

GRAIN BAGS FOR FARMERS.—Now is the time for harvesters to see that their grain bags are ready. Do not put off this preparation till harvest day comes; then they will cost more. Now prepare; purchase good heavy drilling by the bale; then purchase a sewing machine and make the bags in the family; a farmer who has 2000 or 3000 bags of grain to harvest can save enough in this way to purchase a sewing machine; and this will be a good present for his wife and daughters who labor with him during harvest. Grain growers must remember that shippers of grain will not purchase grain for shipping that is put up in poor bags. Poor bags affect not only the price of the grain, but retard the sale. Be sure and buy a good sewing machine that will sew the bags strong, so they will not rip. We hear most excellent accounts of Grover & Baker's machines, especially for grain bags. We intend to have experiments made and report some for public good.

GO AND DO LIKEWISE.—Not long since, two prominent and respectable citizens met in a drinking saloon. One of them had imbibed too freely. The conversation turned upon personal matters, and in consequence of the spiritual influences, hard words passed, and a collision was only prevented by the forbearance of one of the parties and the timely advice of mutual friends. Next day they met: the aggressive party apologized and stated that it was all owing to the liquor. Whereupon both parties forthwith went and joined the Dashways as the surest safeguard for the future.—[Sac. Ev. Post.]

How glorious such examples! Would they were increased a thousand-fold; and when the wreck of mind, that proceeds from the use of Tobacco shall be duly considered also. We hope the Put-aways will also remove this disgusting evil that is sending its thousands to an early grave.

THE NEW BAKERY.—Families should take notice of the advertisement of Messrs. Wm. Horr & Co.'s New Bakery on Battery street. This is the largest bakery of the kind in our State, and will afford pleasure to any who visit it. Every kind of choice Hard-bread and Fancy-crackers, and of very extra quality may here be found. Having been over the whole establishment, we can attest to its excellence, and having eaten of the bread and cakes, we can attest to their excellence. The Graham Crackers are made here. These with other excellent kinds of bread are made to order for family use. See advertisement.

CALIFORNIA BEEF AND PORK.—Now that we have a "State Inspector of Provisions," we shall have a safeguard from being poisoned by much of that miserable still-fried pork, which has been sent to this country. We will venture the assertion that more than half the pork which has been imported into California the last few years, was more or less poisoned, by reason of its being the carcasses of hogs fed on distillery slops. We have some startling facts which we shall give on this subject soon. Buy only California Inspected Provisions.

The Yosemite Valley.

We would take this opportunity to present a series of facts that have been furnished us from Coulterville, relative to the present condition of the Yosemite trail and Valley, the route, and the conveniences for visitors to that famous place. At the present time there is considerable snow on the route, and the valleys are cold and chilly. In addition to this, the preparations in the Valley are not complete, nor can horses be had so readily at Coulterville the present moment, because the feed is not good on the route and in the Valley, and the exposure greater, and stables are not desirous to send horses at present. Another and greater objection to attempting the visit early: The snow on the mountains is still very heavy, and the rush of water over the falls will be much greater in June and July. This, added to better conveniences in the valley, more accommodations on the route, better-roads, and a much milder atmosphere, induces us to recommend a delay of a few weeks to visitors. Our experience, having visited the valley twice, and spent much time, enables us to speak confidently upon this subject, and therefore would recommend parties to delay until June 1, or during that month and July. In our next, we will give a sketch of the different routes, with distances, and point out places of accommodation. Several advertisements will be found in our columns, to which we call attention. We have information from the first parties that have visited the Valley, and they report very cold weather, little real pleasure, no feed for horses, and a severe cold time of it. They had a snow-storm up that way last Friday, and probably more since.

DOCUMENTS RECEIVED.—We are indebted to many friends for valuable public documents, by last steamer. From Hon. Isaac I. Stevens, we have received his valuable Letter of Address upon the Pacific Railroad (the Northern route), with estimates of cost and description of the route, and much valuable information, from which we shall make extracts, with many valuable documents Congressional, for which we express our thanks. From Hon. Senators Gwin and Latham, we have valuable documents, and from Hon. Representatives Scott and Birch, we have also valuable papers—to each and all, we express our thanks for their kind favors. We have received the Seventh Annual Report of the Mercantile Library Association. This Report reflects great credit upon the Association; it shows the very prosperous state of the Institution; the interest which the members, the citizens, and the entire public, take in the welfare of this truly noble Institution. The Report shows the real condition of the Society, and presents, in tabular form, the whole minutiae of the Association, which must be highly pleasing to all the friends of our State. When such Institutions as the Mercantile Library and the Mechanics' Library show such evidence of entire success, it speaks well for our State.

T. OGG SHAW'S REAPER.—We have spent some little time in the Manufactory of this "Home Worker," and we have been among the workmen, and have seen the quality of the work on his Reaper and Mower. It CANNOT BE BEATEN in this or any other State; and we are pleased to learn that Mr. Shaw has orders always a head of his ability to supply. More than \$4000 a day has been sold recently. We hope the energy and perseverance of Mr. Shaw will meet with a liberal reward: for he deserves it.

BEAUTIFUL PICTURES.—Lovers of the beautiful should step into the handsome and well-supplied Book and Stationery store of Messrs. Wilson & Ford, in "Tucker's New Building," on Montgomery street. They will see a collection of gems, being copies of some of the finest works of art. Each picture will bear hours of examination and still new beauties be found in them. Mr. Wilson will show many beautiful specimens of stationery entirely new.

TO APPIANTISTS.—We invite the special attention of all apiarists to the card of Messrs. Hobbs, Gilmore & Co., who are now prepared to furnish Bees-Hives to any pattern and in any quantity. Persons holding "Patent-rights" can make favorable contracts with Messrs. H. G. & Co., for the manufacture of their Hives, and all who raise Bees can be supplied at their factory.

FRUIT BOXES.—Fruit-growers should now make their contracts for Fruit Boxes. Now is the time. Never wait till the day you pick your fruit. Contract for your Boxes; have them ready. Go down to Hobbs, Gilmore & Co.; they have a great Manufactory and can supply you in any quantity, and on the very best terms, too.

CALIFORNIA WOODS.—BEAUTIFUL.—Splendid black Walnut, Madrone, Olive, Cedar, and Sycamore, all of the most estimable quality, with Mahogany and other valuable Woods, on this Coast, can now be found at Hobbs, Gilmore & Co.'s Lumber Yard and Box Factory. Some of these Woods are the finest in the world.

GOOD DRILLING BAGS FOR WHEAT.—Grain-growers should bear in mind that common thin bags for wheat injures the sale; the bags burst and cause waste. Good drilling bags will pay; the wheat will always sell better. Purchasers to export will not take grain in common bags. Farmers, remember this.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—This noble corps of young Christians are again preparing to unite for a "Floral Fair," which is to be held in this city on the 22d, 23d, 24th, 25th and 26th of this month. We hope our gardeners and florists will aid as liberally as they can, to make this Fair a happy and a prosperous one.

COVEN ONE.—We have received from T. Thibault, Esq., a sample of copper ore found eight miles from Crescent City. The samples appear well. They are from the Evoca mines.

PATENT MURKETO BAR.—A new invention. Rights for sale for families, cities and counties, at this office.

T. Starr King's Lecture.

The Second Lecture of this able divine was given on Tuesday evening, to a densely crowded house, and never has it been more evident than now, that the citizens of San Francisco know how to appreciate a high order of entertainment. During the entire time of the lecture (one hour and a half) the almost breathless audience received the glowing words and original thoughts of the speaker, and one striking feature of the interest felt to hear Mr. King is seen in the fact that the seats are all taken half an hour before the time set for the lecture, and we particularly noticed the fact that only four persons came in after eight o'clock. We hope this good influence may affect all public assemblies. The whole lecture was a splendid effort, but how strange a picture was drawn of the Great Philosopher that thousands in boyhood had pictured as the Great Sage, held up before us like a Washington, now presented as a barefooted run-about, and yet most truly shown.

Although the press are requested not to publish his lectures we see that several papers have attempted to do so. This cannot be done. To enjoy these lectures they should be heard. We hope they will long continue. The next lecture is on Monday evening next, at the same place, when all must go early if they would secure seats.

Jarvis' Ranch.

This fine Ranch is located on the stage-route from Vallecito to Columbia, Tuolumne County. The San Andreas Independent gives these notes of a visit to the Ranch: Upon reaching the summit of the southern mountain which incloses the Stanislaus river, the eye is most pleasantly relieved from the unmixered barrenness and desert aspect of the four or five miles over which it has just wandered. On the right are the unmistakable evidences of once rich mines, that even now afford profitable employment to a large number of men. On the left, with its orchard of peach, pear, plum, apple, nectarine, cherry, fig, vines, and all manner of fruits that will grow in this climate, skirting the road for several hundred yards; its neat, cozy, little cottage residence, embowered in an Eden of roses and honeysuckles; with here and there a clump of majestic oaks that have withstood the storm and sunshine of five centuries, lies the far-famed "Jarvis Ranch." It is the most tastefully cultivated horticultural farm anywhere to be seen in the Southern Mines, embracing an area of about 600 acres inclosed, and containing near 20,000 grape-vines and about 15,000 fruit-trees of various kinds, all of which are watered from springs that bubble up through the marble substratum that underlies the entire surface of this part of the country. A visit to this place about nightfall, with a short ramble over the well cultivated grounds, in company with the courteous proprietor, who is a son of New England, imbued with all the nice fancies and delicate tastes which characterize the home-life of his country-people, amply repaid the fatigues of a two-mile walk. We noticed one oak which measured twenty-seven feet in circumference, standing among a cluster of some eight or ten, the least of which cannot be less than six feet in diameter. These magnificent trees are all kept in a good state of preservation carefully guarded from the ax of the vandals who have desolated the surrounding forests. We believe it would be a safe rule to estimate the civilization of any people from the care with which they preserve their forest ornaments; and we hope the day is not distant when Californians will exhibit as much real veneration for the grand old oaks which kind nature has scattered over our sun-scorched hills, as the New Englander does for his elms, or the Carolinian for his catpalas.

Fine Stock—How it is Produced.

The Messrs. Blacow, of Centerville, Washington township, passed through Oakland last week (says the Alameda Gazette) with six of their splendid full-blood Durham cows, en route for Petaluma, where they are taking them to obtain the service of the valuable short-horn bull "Sir George," recently imported by J. D. Patterson, Esq., of New York.

The Messrs. Blacow are among the most enterprising and successful fine stock-growers in the State. Having the advantage of a thorough training in youth, under the best English breeders, together with an extensive experience in stock-growing on their own account, in Illinois and Missouri, and having some of the finest animals ever brought to California, they are improving every opportunity that offers an improvement in their stock. No pains or expense is spared to obtain the very best strains of blood that can be secured, and having a thorough knowledge of their business, they have no trouble in growing the choicest animals.

The expense incurred in securing the service above referred to is six hundred dollars, and yet they deem the investment a good one, as "Sir George" is probably the best animal of the kind ever brought to the State, and the cows of the Blacows are not equalled on the Pacific, so that it is fair to suppose that animals of no ordinary character will be bred by the means used by the enterprising proprietors. We are assured by a gentleman familiar with English herds, who recently visited the fields of the Messrs. Blacow, that he never has seen in England a lot of cows that will compare with this. It is their aim to grow only the best, and possessing the ability to discriminate between a good and an indifferent animal, and having the means to secure an improvement, they are determined to excel in their vocation. They have a herd now of nearly or quite 100 head of cattle, which may be regarded as the foundation of a certain fortune, which is truly merited, and which we wish them most heartily. The lovers of fine stock will find a visit to this herd one that will compensate for the trouble.

MORE RAIN.—This may be considered a remarkable season for the quantity of rain in May. It seems as easy to rain now as at any time during the winter. A lively rain poured down here most of last night, and appearances are favorable for more. These late rains seriously interfere with haying operations, as they are unexpected.

The Supervisors of Sacramento are endeavoring to ascertain the best mode, cost considered, of draining the city. The Bee suggests negative artesian wells for the purpose, they having been found to work admirably in many if not in all instances in which they have been tried.

Awarding Committees of the June Fair at Oakland.

We publish below the names of the Committees which have been selected to act at this Fair. We trust that individuals who may be notified of their election, will make known their willingness and readiness to act on such Committees, and thus promote greatly the object of the Fair. They should also give time and study to that duty from this time to that of immediate action; and what we say of these Committees, will apply to all Committees over the State. Great delays and injustice have always resulted from persons failing to say they cannot act, or saying they will, and not acting. Another evil arises from appointing persons not qualified for that special duty. Persons knowing themselves totally unacquainted with the subject, should never accept.

Class I. Horses.—A. B. Forbes, Wm. Hayward, A. W. Swett, W. H. Graves, Sabin Harris.

Class II. Cattle.—S. B. Martin, Amos Hersey, John McCormick, John Llewelling, J. B. Watson.

Class III. Sheep.—John A. Hobart, R. S. Farrelly, Asa Walker, H. Haile, George Fleming, Sr.

Class IV. Swine.—Jno. Kelsey, Lemuel Wilson, Samuel Milbury, James Hawley, W. R. Richardson.

Class V. Poultry.—James Lansing, D. E. Hough, A. Staples, F. K. Mitchell, G. W. Parsons.

Class VI. Farm Products.—Jas. Shin, John B. Ward, Isaac Yoakum, A. M. Crane, A. J. Coffee.

Class VII. Fruits.—A. A. Cohen, Thomas Bridges, Dr. E. Gibbons, B. Ackery, W. H. Boyce.

Class VIII. Garden Products.—P. Van Winkle, M. Fallon, Alex. Beatty, A. W. White, I. B. Rufford.

Class IX. Flowers.—Dr. H. Gibbons, J. H. Branton, W. F. Boardman, H. I. Thornton, J. P. M. Davis.

Class X. Gardens and Greenhouse.—J. A. Mayhew, P. E. Edmondson, A. A. Cohen.

Class XI. Agricultural Implements.—John Chisholm, O. Simmons, F. Coggeshall, W. P. Toler, J. M. Moore.

Class XII. Domestic Manufactures.—I. A. Amerman, Jas. Lentell, J. D. Cook, D. L. Perkins, Geo. E. Grant.

Class XIII. Home Industry.—Mrs. J. B. Weller, Mrs. W. J. Wentworth, Mrs. S. E. Allen, Mrs. F. K. Shattuck, Mrs. Dr. Newcomb.

Class XIV. Arts.—Dr. Newcomb, Dr. R. E. Cole, Dr. J. P. M. Davis, Dr. R. Worthington, Dr. P. M. Randall.

Class XV. Farms, Orchards, etc.—J. A. Mayhew, P. E. Edmondson, A. A. Cohen.

Miscellaneous.—A. D. Eames, G. W. Fontaine, A. S. Hurlbutt, Edward Hoskins, F. K. Shattuck.

More of the Bee Business.

EDITOR FARMER: Your paper of the 11th inst., containing a communication, under the same date, from Mr. Harbison, did not reach me until this evening. The explosion of the great gun has had such an effect upon my nervous system, that I have determined to take a good night's rest, before attempting to reply; and as that will be too late for your next issue, I wish to say that in season for your paper of next week, I will pay my respects to the distinguished apiarian and great gun of California. I am fully sensible of the responsibility and the danger of handling fire-arms; but the case seems to require it. I shall in my next however confine myself principally to the use of the dissecting knife. I remain your obedient serv.

L. KENNEDY.

INDIAN WAR IN CARSON VALLEY.—The murders committed by Indians in Carson Valley, noticed last week, it seems was a prelude to a regular Indian war. Exciting news was received from that region, by telegraph on Sunday last. Several companies that had started out to chastise the murderers, were led into an ambush and surrounded by a large body of Indians. Being thus placed at great disadvantage, the whites had to fight their way out as best they could, and it was at first reported that some seventy-five out of a hundred were slain; but subsequent accounts reduce the killed to about twenty-five. As might be supposed, the news created intense excitement throughout the State, many of those reported killed having been prominent and well-known citizens of California. Meetings were held in various places, money contributed, companies volunteered, and immediate steps taken by the Governor and U. S. officers to send troops and ammunition to the relief of the residents of Carson Valley. Numbers of troops are now on the way, and some have already arrived there. The number of Indians concerned in this war, is at present unknown, but it is supposed to be large, and a protracted war is anticipated.

RAILROAD TO THE MISSION.—The Morning Call translates the following piece of information from the Echo du Pacifique:

"We learn that in consequence of negotiations recently concluded, the house of Piche & Baroque finds itself invested with the rights of those who hold the railroad franchise to the Mission. We consider this arrangement as good news in a double point of view. It is, in the first place, a guarantee that this railroad, so long promised, is at length about to become a reality; and furthermore, it creates the hope that a certain number of our countrymen will find useful employment in completing the work already commenced."

KENNEDY & BELL'S CARPET WAREHOUSE.—We can recommend our readers to call at this splendid Carpet Warehouse where all the goods are of the best quality. Our readers in the country must not forget this Warehouse when in San Francisco.

FARMERS, NOTE THIS.—In a cloudy morning, it is a matter of importance to the farmer to know whether it will be sunny or showery in the afternoon. If the ants have cleared their holes nicely, and piled the dirt up high, it seldom fails to bring a clear day to the farmers. Spider-webs will be very numerous about the tops of the grass and grain some cloudy mornings; and fifty years' observation has shown the writer of this that these little weather-guessers seldom fail in their predictions of a fair day.—[English paper.]

The prince and beggar smoke! Saint and sinner smoke! The sage and savage smoke! Bishop, doctors, deacons, lawyers smoke! Little ragged, dingy, thieving, swearing boys smoke! Blackguards smoke, here, there and everywhere! This is equality, to your heart's content.—[Track's Anti-Tobacco Journal.]

WHILE some farmers are too stingy to thrive or grow rich; others, by a course of true liberality, are always going ahead.

NO ALCOHOL.—That well known remedy for Dyspepsia, Indigestion, and General Debility, the Oxygenated Bitters, which has effected such remarkable cures, contains no alcohol; yet it is not affected by summer heat, or winter's cold; and retains its astonishing virtues in any climate.

STATE SUMMARY.

A frost, quite severe, occurred on Saturday last, on the lowlands near Sacramento, causing some damage to vines and vegetables.

Beef cattle are cheap at Sacramento, according to the Union of Monday, which reports sales at as low figures as six cents a pound, and dressed and delivered at that.

The Supervisors of San Joaquin county have levied a special tax of three cents on each one hundred dollars of taxable property in that county, for the benefit of the San Joaquin Agricultural Society.

The Supreme Court has decided that the decomposed or crumbled quartz adjoining a ledge pertains to the latter and to the company claiming the latter, and can not be entered upon by other parties for sluicing.

Monstrous weather, for the week ending the 12th, is thus given by the Laporte Messenger: Beautiful weather in the first part of the week; a pretty hard rain fell during Thursday night, which was followed by snow on Friday morning. Snowing as we go to press.

We understand from the Santa Cruz News, that H. Van Valkenburgh & Co. will immediately commence the erection of a paper-mill in that town. The material which it is the intention of the gentlemen to use in the manufacture of paper is ordinary straw.

The Petaluma Argus says: "The crops of grain and grass throughout the Big Valley, Tomales and Bodega sections of this county, give promise of a more abundant yield than any previous year. The late rain has been very beneficial to the late-sown grain."

The Sacramento Board of Education has determined that hereafter pupils in the grammar schools shall go to different schools, according to their sexes. The change is an important one, and the example is worthy of consideration and attentive study.

The Napa Reporter says: "Mr. William Harris, of Knight's Valley, has been very destructive upon the panthers in his neighborhood. Within ten days he has killed five, one of which weighed one hundred and twenty-five pounds, and measured eight feet in length. Besides these, he killed two wildcats."

A TRAVELING impostor lately vaccinated the child of a hard-working man named Ellison, at Grass Valley, and the vaccination caused erysipelas, convulsions, and finally produced death. The National is justly severe upon the vagabond vender of the vaccine matter.

The settlers of Big Valley and Tomales, Sonoma county, held a public meeting on the 20th inst., to consult on the Muldrow-Welby Claim, and after due deliberation, resolved that they had no faith in it, and would not recognize it, and also that they would not permit any United States surveyors to survey through their farms.

At Mariposa, the Gazette says, Friday and Saturday last, were extremely cold, and a frost is reported in various places. The grape crop has undoubtedly suffered severe injury by this cold spell. At Colorado, only four miles from this place, snow fell five inches deep, about May 4th.

The editor of the Shasta Courier has seen a pig with one head, one month, one pair of eyes, and two bodies, four ears, eight legs and two tails. The two bodies of this remarkable specimen of juvenile swine commenced uniting about the navel, from which point upward they gradually run into each other, until they terminate in one head.

Says the Calaveras Chronicle: On the 10th inst. the rain fell copiously—more so than at any late a period in the season for several years. Fruits, grain and garden vegetables never were more flourishing, or promised a more abundant yield, but it is feared that heavy rains will greatly injure the hay harvest. The quantity of grass is abundant, but the difficulty of caring unusual.

The Hydraulic Press says, peaches will be plentiful in the gardens and orchards of San Juan, in spite of Jack Frost's late visit. Early vegetables were considerably clipped, and some planting must be repeated. The late storm did considerable damage to advanced hay and grain crops in the valleys, but was immensely beneficial to mountain meadows and cultivators.

NEARLY the entire peach crop appears to be destroyed in the vicinity of Oakland, by what is called "the curled leaf." The Alameda Herald says trees that blossomed very full, and set their fruit bountifully, are now shedding the same, which has been caused by this blight. This disease is supposed to be caused by sudden and extreme changes of the temperature of the atmosphere, after the foliage appears in the spring.

A WRITER from Murphys, under date of May 9th, states that a gentleman had just returned from Carson Valley, over the Big Tree road. He met Capt. P. B. Connor, who says that pack animals can now safely cross as fast as they please. Any amount of goods can easily be transported across on rough sleighs, by driving the teams tandem. The person alluded to above left the Captain at Grizzly Bear Valley, on Monday night last. Connor expected to be in Carson Valley in four days from that time.

Know the San Jose Reporter, we learn that the wonderful cave lately discovered near Rattlesnake Bar, in Placer county, has been rented by the discoverer, Mr. Gwinn, to Moore and Smith, for a term of two years, with the privilege of seven, for one-fourth of the entire proceeds. No liquor is to be kept near, and preaching upon the Sabbath is to be had as often as practicable in the cave, and the proceeds, after defraying the expense of lighting, accrues to the benefit of the Church whose pastor officiates.

A REAPER and MOWER has been invented and patented by Messrs. Sheets and Pressey, which is described as follows: The peculiarity of their invention is, that the knives cut directly forward, instead of transversely, as in other machines, thus doing away with all the gear necessary to produce a transverse motion. The simplicity of the gear and the strength and durability of the machines will enable the inventors to furnish their work at a great reduction on present prices.

SOME-BIRDS, says the S. A. Independent, are multiplying with wonderful rapidity all through the mining settlements. A few years ago they were rarely seen here; now every bush is musical with their songs. Swallows and the little black martins are crowding into the villages, building under the eaves, and chattering from their lodging-places incessantly, all day long. They are a lot of "social cusses," but do not seem to be aware that by their chirping and their mad habits, they too great familiarity is apt to breed contempt, if not worse.

In accordance with the laws of the State, the Governor, Secretary of State and State Treasurer counted the money in the Treasury, on Friday last, and found \$339,318 15 at the close of business, apportioned in the different funds as follows: General fund, \$193,203 43; school fund, \$17,722 94; hospital fund, \$5,794 81; military fund, \$382 85; library fund, \$178 94; interest and sinking fund of 1857, \$194,121 63; swamp-land fund, \$110,527 31; State school land fund, \$10,058 71; estate of deceased persons, \$39 09; H. Smith, Jr., absent heir, \$3,119 29. Total, \$339,318 15.

Don Guillermo Castro, the grantee of a large tract of land in Alameda county, the Herald says, has recently commenced action against about eighty of the occupants upon it, to recover possession. Some of the parties, who have been cutting wood upon it, have been enjoined from further depredations, and we learn that those having growing crops will be enjoined from gathering them. The decision in these cases will settle an important controversy to both of the parties litigant. Some of the lands sued for are very valuable, being under a high state of cultivation, and extensively improved. The occupants of such premises will either compromise for the title, or run the risk of losing valuable improvements.

WITHIN a year a notable addition has been made to Sierra County manufactures, says the Downsville Citizen, by erection of an iron works, including furnace and lathes, owned by S. and H. H. Purdy—Father and Son. They commenced casting nearly a year ago, and are now producing castings of every description required by local trade. From eighteen to twenty-five hundred weight of iron is melted at once, requiring about two hours blast; but with addition of a large fan which they are now procuring, a much greater quantity of metal can be wrought and in a shorter time. Their castings are equal to any produced in the State, and the lathes work is equally complete. A blacksmith-shop and a large stone turned by water completes their establishment. Charcoal is chiefly used, at a cost of from 22 to 30 cents a bushel; stone coal, delivered here, is worth \$90 a ton, and costs about one-fourth more than the former, though blacksmiths say they can work more expeditiously with stone coal.

THOROUGH-BRED

French Merino Sheep

AND

BERKSHIRE SWINE.

The undersigned would offer a valuable collection of the above kinds of stock, imported and bred by himself, and guaranteed to be equal to any stock that can be found.

ALSO:

NEW MILCH COWS,

Of superior quality, being the selections from the herds of blood stock in this State, and also the best breeds of stocks in the Atlantic States.

The undersigned also intends to import from Europe these classes of Breeding Stock of the highest grade. To these will be added, from time to time, the highest grades of Durham and Hereford Stock—both Bulls and Cows.

In the first class of Stock named—

THOROUGH-BRED MERINO SHEEP—

the undersigned is confident that, with the experience of over thirty years as a Sheep-Breeder in Vermont, he has acquired a knowledge that will enable him to point out to the Sheep-Breeders of California those important and material points that it is necessary to observe to become a successful Sheep-Raiser, even to a climate and with facilities unparalleled in any country. On these points, we hope to speak to Stock-Raisers of this State often, through the columns of the CALIFORNIA FARMER.

The undersigned will be prepared to supply to Sheep-Raisers, who wish to COMMENCE SHEEP-RAISING, a

Choice Selection of Pure American Ewes,

for the purpose of crossing up, when they are not prepared to commence with Thorough-Breds at once.

HALF-BLOOD MERINO BUCKS,

raised under my own eye, can also be furnished, when wanted, with the assurance that every animal, of every kind, will have the full guarantee of the undersigned as to what they are.

The above are offered for sale at Brannan's Ranch, Feather River, opposite Nicolaus, Butte county, by

A. L. BINGHAM.

WILLAMETTE

Woolen Manufacturing Company,

SALEM, OREGON.

HAVE NOW ON HAND, AND WILL CONTINUE TO

manufacture the following ALL-WOOL GOODS, viz:

Superior fine FAMILY BED BLANKETS, large size;

" MINERS' and INDIAN do;

" FLANNELS, white, red, gray, &c, plain & twilled;

" TWEEDS—assorted colors and styles;

" CASSIMERES—heavy and light;

" STOCKING-YARN—assorted colors.

All of which we propose to sell AS LOW AS THOSE IMPORTED of like description. Orders solicited.

LUCIEN E. PRATT, Agent.

WANTS N OPPORTUNITY!

A YOUNG MAN, of good experience, wants an opportunity

To Take Charge of a Ranch on Shares,

where his experience, labor and entire interest and earnest desire for success may secure to him a just reward.

A SHEEP-RANCH

would be preferred. The best of references can be given.

Address, H. H. U., at the Farmer Office. 13-3m

BEE-HIVE MANUFACTORY,

HARVEST--1860.

J. D. ARTHUR & SON,

NOW OFFER

THE VERY BEST ASSORTMENT OF

Agricultural Implements

IN THIS CITY.

200 of the Celebrated

REAPERS

AND

COMBINED MACHINES,

Made by WARDER & CHILD, of Springfield, Ohio,

expressly for this market, with all the improvements for

1860. The space to take off the grain is adapted to the

largest growth, which most of the Reapers in use are not.

The Platform is level, while the raker stands upright,

thereby working with ease. The Machine is light and

strong; no breakage from any source reported last season.

Out of Four Hundred in use, not twenty dollars' worth

of extras of any kind were called for. Without exception,

the above Reapers are the best machines on this

coast.

PITT'S THRASHERS,

Made with extra care, with Improvements, expressly

</

Ladies' Department.

LIZZIE WILEY WARREN, M. D., EDITRESS

THERE IS MUCH IN THIS LIFE AFTER ALL.

There's much in this life, after all,
That's pleasant, if people would take it.
On some of us trouble must fall;
But, I am sure, most of us must make it.
Let us look for the ups and the downs,
And try to take things as we find them;
And, if we are met by the frowns,
Believe that the smile is behind them.

What have we, we did not receive?
Is not the world sufficiently roomy?
Then, why should we wish to believe
We were sent into life to be gloomy?
We may meet with some rubs in our way;
But don't let us tremble for fear of them—
Rather hope they'll not come in our way,
And do all we can to keep clear of them.

There are regions of quicksands and rocks,
And it's difficult, too, to steer round them.
A good plumb-line might save us some knocks;
But, it's no easy matter to sound them.
For our needle may point the wrong way,
And our chart do no more than mislead us,
Till we find that "each dog has his day,"
And a friend's all alive to succeed us.

But there's much in this life, after all,
That's pleasant, if people would take it.
Though on some of us trouble must fall,
Full sure I am most of us make it.
Let us look for the ups and the downs,
And try to take things as we find them;
And, if we are met by the frowns,
Believe me that a smile is behind them.

LIVE FOR SOMETHING.

Live for something, be not idle;
Look about thee for employ!
Sit not down to useless dreaming;
Labor is the sweetest joy.
Folded hands are ever weary,
Selfish hearts are never gay,
Life for thee hath many duties—
Active be, then, while you may.

Scatter blessings in thy pathway!
Gentle words and cheering smiles,
Better are than gold and silver,
With their soft and dispelling wiles.
As the pleasant sunshine falleth,
So, let sympathy and kindness
Gladden well the darkened hearth.

Hearts there are oppressed and weary;
Drop the tear of sympathy,
Whisper words of hope and comfort,
Give, and thy reward shall be
Joy unto thy soul returning,
From this perfect fountain head,
Freely, as thou freely givest,
Shall the grateful life be shed.

Moral Atmosphere.

An eminent divine once said: "Hope is as necessary to our existence as the atmosphere we breathe"—implying that breathing atmosphere is an indispensable prerequisite to living. He might have added, with quite as much earnestness and truth, that a pure moral atmosphere is as necessary to a healthy religion as a pure physical atmosphere is to the aeration of the blood.

Every individual, of any degree of normal sensibility, feels the effect of an impure atmosphere when near a stagnant pool, or in an alley or narrow filthy street of a crowded city. The effect is seemingly a temporary one, and often apparently momentary, as it is not perceptible after breathing a short time the pure air again; yet it is, in one sense, an eternal thing, because you have been deprived of so much pure air, which is the first cause of a legion of injurious effects—such as imperfect aeration of the blood, a deposit of carbonic acid in the system, which otherwise would have escaped; in short, a slight disturbance of the harmony of all the functions of the animal economy. A repeated and continual coming in contact with impure physical atmosphere degenerates the organism in proportion to the power of resistance on the part of the individual and the quality and intensity of the impurity of the air.

This law of our organization, by which we detect instinctively and so acutely the impurities around us, is one of the greatest safeguards to the preservation of health. So it is with *pain*, that great dread of humanity; it is one of the greatest blessings of the physical system. If there were no such monitor, we would be a bruised, mangled, distorted set of beings, taking no cognizance of broken limbs, crooked spines, or mangled faces, or bullet-holes. It is not the incapacity of locomotion or the distorted features, which render the fear of these things an ever-present safeguard to us. It is the dread of the pain they give.

Now, is there not, inherent in every soul, a corresponding perception of moral and spiritual impurities around it? 'Tis true that this perception has its degrees of acuteness, owing to the health and education of the soul, but it is most certainly as natural an element of the soul as the power to detect an undue amount of carbonic acid gas is inherent in the body. Those who live actual lives—who dwell in the "internal" and study the "innermost," and have cultivated moral perceptions; who have always breathed pure moral atmospheres—readily detect the ever-varied influences of everyday life. They cannot but experience that there is not one whom we meet—even friends and children—who does not exert an influence, either good or evil, on our characters; just as the physical atmosphere affects, healthily or unhealthily, the body.

We may even say, further, that probably we have never met a single human being who has not, in a greater or less degree, rendered our future different from what it otherwise would have been, so close is our relationship, and so intimately connected spiritually are the children of the All-Father, though we blindly refuse to recognize the brotherhood. Is there a woman, who realizes and recognizes her soul's life, who does not shrink, with involuntary dread, from a face she has seen, only for a moment perhaps, in some insane hospital, or even in everyday life? In our crowded streets, are there not faces of wrecked souls that you wish to forever shut out of your memory? Do we not all remember a face so base and ignoble, impressed with its criminal life, is it not so indelibly impressed on us that we cannot mistake it for one beautiful—one whose beauty and purity shed a halo of glory about it? No! not these moral atmospheres are quickly perceived and indelibly impressed on every soul.

Children receive their first impressions of moral

atmosphere from the mother. How they scrutinize her every act and word. Their perceptions are more acute than they will be in any period of adult life, and they consequently read character, receive impressions, and are moulded by the influence of the mother. They receive their moral tone from her. Then with what care should they be trained, as it is a great struggle and very difficult for those of the soundest bodies and healthiest souls to happily and successfully meet the conflict of a moral life. Whatever temporarily affects the mother must permanently affect her children.

Disobedience, ingratitude and defiance are constitutional with many children, bred in their bones, organized into every fiber of their being, because of the unhappy and ill conditions of their mothers. Take into consideration the innocence of a child, its utter helplessness, and entire dependence on its mother, who holds the power by the moral atmosphere which emanates from her soul and internal life, to make it a beautiful child in every sense—to secure to its soul, tenderness, truth, justice, generosity and love; or she can make it revengeful, mean and false. She can impress on its moral nature the stamp of divinity, or the stamp of thief and murderer.

We must inevitably suffer when we come in contact with those of a grosser organization than ourselves—those whose moral atmosphere is denser and more impure than that which we are accustomed to breathe. So, when we meet those of higher and purer moral lives, we are conscious of inhaling a purer moral atmosphere, and when we meet a generous philanthropist, if it is only once in our whole life, we are permeated with the elevating and purifying atmosphere, and we are better always for this blessed interview and the influence it sheds over our life.

As a happy illustration of the facts we have stated relative to the influence of the moral atmosphere of different persons, witness the attention paid to the popular lectures of Rev. T. S. King. Contrast the attention of his audience with those at ordinary public entertainments—theatrical exhibitions and popular shows—now offered to the public, which seem in and of themselves to be highly entertaining; yet the contrast plainly demonstrates the superior tone and influence of such moral atmosphere which emanates from such a man and the themes he promulgates. Every one feels it is "good to be there."

THE ANGEL ON THE HEAVEN—"Come to me, darling; papa's cross to-night," said a young mother, as she extended her arms affectionately to a little girl of three years, who had left her toys and playthings, to climb upon her father's knee. The child, who had a puzzled look at that dark, stern countenance, and without a glance of reassurance, stole softly to his side. Not a word was spoken, and the gloomy man sat sad and sullen, his mind wholly absorbed with the busy world's excitements. Although a husband and a father, he was evidently in no humor to participate in the pleasures of a "home circle." The child, not at all discouraged by the forbidding look of her parent, crept gently upon his knee, and placing one tiny arm about his neck, the other glided affectionately over the opposite cheek, while her innocent lips pressed gently the troubled brow. In a subdued breath she whispered, "Nalle loves papa so much!" and she drew her little soft hand caressingly down either side of that care-worn face, until they met beneath the heavily bearded chin. Observe the effect: 'twas electrical; the stern features relaxed, the sullen gloom disappeared, and the whole countenance assumed a lively, animated expression. The scene was most touching. Words fail to express the exquisite beauty of such a picture. As the transformed parent drew the little girl to his bosom and pressed a kiss upon that innocent, upturned face, the finer feelings of his manly nature were in his voice as he said, "No, my child, I could never be cross, with such a lovely daughter to calm the heart the world has tortured into despair."

POSITION IS SLEEP.—It is better to go to sleep on the right side, for then the stomach is very much in the position of a bottle turned upside down, and the contents are aided in passing out by gravitation. If one goes to sleep on the left side, the operation of emptying the stomach of its contents is more like drawing water from a well. After going to sleep let the body take its own position. If you sleep on your back, especially soon after a heavy meal, the weight of the digestive organs, and that of the food, resting on the great vein of the body, near the backbone, compresses it and arrests the flow of blood more or less. If the arrest is partial, the sleep is disturbed, and there are unpleasant dreams. If the meal has been recent or hearty, the arrest is more decided, and the various sensations, such as falling over a precipice, or the pursuit of a wild beast, or other impending danger, and the desperate effort to get rid of it, arouse us; that sends on the stagnating blood, and we awake in a fright, or trembling, or perspiration, or feelings of exhaustion, according to the degree of stagnation, and the length or strength of the effort made to escape the danger. Eating a large, or what is called "a hearty meal," before going to bed, should always be avoided; it is the frequent cause of nightmare, and sometimes the cause of sudden death.

BE GRATEFUL EVER.

Is worldly good around thee spread
In rich profusion, falling never?
Then, to the Power which o'er thy head
Still watches: Be thou grateful ever!

If days are dark, and fortune frowns,
Threatening thy fate from peace to sever—
Be not dismayed. God's mercy crowns
Sad souls with joy: Be grateful ever!

A young gentleman of our acquaintance says he thinks that young ladies who refuse good offers of marriage are too "No"-ing by half.

Oh, Misses—
The ladies, dear creatures, have certainly done it,
By donning the fashionable "scoop" of a bonnet.
And Misses—
But more foolish are gentle—shame on them for that—
They take after the "scoop" with a "swell" of a hat!

Love Yarns.—The editor of the Woburn Budget says he got the mitten once—not a woolen one, but just as real. Didn't you feel scorching when you got it, though?—[South Boston Register.]

We couldn't help thinking it was cruel.

Clocks, Clocks.—A small friend of ours has laid a large egg on our table, for which he has our honest thanks.

He alone is an acute observer, who can observe minutely without being observed.

MRS. LIZZIE WILEY WARREN, M. D.,
ELECTRICIAN AND HYDROPATHIST.

Would inform her friends, patrons and the public that she proposes to commence the practice of her profession in San Francisco.

Wishing to practically demonstrate the theories and doctrines she preaches through the columns of this journal, she will be pleased to make engagements by the year, to families requiring a better knowledge of the laws of health and the means of its preservation, as well as medical attendance and advice.

Mrs. Warren proposes to teach her patrons the means of attaining and preserving health, rather than the usual practice of physicians, of doctoring the sick. Believing in the old adage: "An ounce of prevention is worth a pound of cure," and also that the remedies used to eradicate disease are more deleterious to the human organization than the diseases themselves, therefore she dispenses with the use of drugs, relying on the curative power within the living organism and the applying such conditions as the natural remedial agents afford. The natural remedies: Air, Diet, Exercise (Water and Electricity). The beneficial effects of water, properly used, are now generally understood, but the remedial effects of electricity are comparatively unknown. By the knowledge and application of a certain law, which recognizes hitherto unknown relations of the positive and negative forces to the functions of life, electricians are enabled to make a beneficial application to the disturbed physical equilibrium, thereby rendering electricity the most powerful therapeutic agent; the most potent and all-pervading element which can be used, as it approximates to the principle of life, apparently identical with vitality. Its therapeutic uses are reasonable and wise, and may be relied upon wherever a cure or improvement is possible.

Those wishing to avail themselves of Mrs. Warren's advice will find her at her residence, on the south-east corner of Mason and Pacific streets.

MRS. WARREN makes use of the New and Highly Improved BOSTON ELECTRO-MAGNETIC BATTERY, one of the MOST PERFECT Electrical Machines on this Coast.

MRS. ANNIE L. AVERY,
HOMEOPATHIC PHYSICIAN,
Residence, 249 Pacific Street (two doors from Stockton Street).
SAN FRANCISCO.

Special attention paid to diseases of women and children.

Galvanic Batteries and Medical Works.

MRS. LIZZIE WILEY WARREN, M. D., has received from the manufacturers and publishers the latest improved Galvanic Batteries, which she offers for sale to her patients; both the Smith and Boston patterns. Also, rare and valuable Medical Works, such as are not usually found on sale. Apply at her residence, corner of Mason and Pacific streets.

Valuable Patents.—We call the attention of parties who are interested in PATENT RIGHTS to those advertised by us. Each of them will secure a very handsome sum to any person of enterprise and energy. The models and rights can be shown and explained, by calling at our office, when the price and terms will be made known.

WANTED, TO LEASE, ETC.

WANTED TO BE KNOWN
As a Mill-Wright.

THE undersigned would respectfully submit for the consideration of merchants and farmers, that being lately from the States, with the experience he has had in Mill building, he can construct a more effective Mill for flouring wheat, with much less expense than is usually incurred.

The improvement of this mill can be exhibited, cannot fail to secure approbation. Owners of mills, merchants, or farmers will be favored with an interview, or a response to any communication, exhibiting all particulars.

Letters addressed W. W. and left at this office will be promptly attended to.

The advertiser is permitted to refer to Col. Warren, Editor of the FARMER.

TO SHEEP FARMERS.

THE undersigned, having had many years' experience as a PRACTICAL SHEEP FARMER (in Australia and California), offers his services to the undersigned, who has been afflicted with Scab, Footrot, &c., or would take a situation to Superintend a Sheep Ranch. Having cured some badly diseased sheep in California, he can give satisfactory references. Address, by express, W. M. H. T. KIRBY, Taylor and Greenleaf streets, San Francisco.

Reference—L. Haskell, Jr., California and Front streets; Col. Warren, Ed. Cal. Farmer; Edw. Boag, No. 93 Merchant street.

This is to certify that Mr. W. M. H. KIRBY has effectively cured my flock of Merino sheep of the worst possible form of Scab, after that had considered them past all cure, and had despair of raising a single head. It is now two years since he gave them up to me, and the disease has not made the slightest appearance in even one. I can hereby recommend him as being a person deserving the entire confidence of any person who may require his services, and as being the only person whom I can name that makes successful cures of the scab in sheep.

ALBERT E. FIELD.

MISSION SAN JOSE, Feb. 15, 1890.

WANTED.

BY AN AMERICAN FARMER, WHO UNDERSTANDS Stock-raising and dairy business, a SITUATION to take charge of a large Ranch; or would be willing to take a better day on a small, in a locality suitable for honey-bees. Please address "M. D. CALIFORNIA FARMER OFFICE, San Francisco. References given and required.

A FINE CHANCE FOR A DAIRYMAN.

THE ADVERTISER WOULD LIKE TO SELL ONE HUNDRED FINE DAIRY COWS, with a good Milk Business. Also, would sell

A Ranch of 500 Acres of Good Land,

situated two miles from an interior city. The Ranch will keep 150 head of stock and cut 200 tons of Hay, at any ordinary price. The Ranch is well fenced.

Good HOUSE, CORNERS, MILKING UTENSILS, MILK WAGONS, HORSES, etc.

Will sell the Cows and Milk Business and lease the Ranch, or will sell all together, on reasonable terms. Address G. W. P., California Farmer Office. 10-3m

Who Wants a Farm Cared For?

A PERSON fully qualified to take charge of a large Farm, Orchard, or Vineyard, with a reasonable amount of stock on hand, would like to secure a chance to take such a place on shares. The advertiser has been in the business for over 20 years. Any person who may have such a place, can hear of a responsible party by addressing a note to W. B. and forwarding it to the FARMER OFFICE.

PATENT RIGHTS FOR SALE.

The following Patent Rights of very new and valuable inventions for the purpose of showing their value are now offered for sale. We hold the rights for the States of California and Oregon, and Utah and Washington Territories.

No. 1. A New Rotary Subsoil Plow.

This invention completely pulverizes the soil after lifting it, a very valuable implement, and one which will receive universal commendation.

No. 2. A Corn Cultivator.

With this implement the soil is first thoroughly plowed and deeply pulverized, and upon the return it smoothly and perfectly lifts up and harrows the ground between the rows. A very new and valuable implement.

No. 3. An Improved Clothes Reel and Bar.

This valuable domestic piece of furniture can be used in the Laundry, the Kitchen, the Nursery or Chamber, and can be made plain or ornamental; standing in the same position as a piece of important furniture as does Wheeler & Wilson's Sewing Machine; just when used and ornamental when not in use.

No. 4. The Mechanic's Spirit Level.

This implement will be of great value to Contractors and Builders, being one of the most valuable inventions yet put out, and is ordered for the New York market just before the model.

No. 5. A Musket Bar.

This will be much wanted in California. It is simple in its construction, perfect in its working, and can be shot very cheap at all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver.

A most excellent labor and money-saving machine, for which we have no equal in the world. It is simple in its construction, perfect in its working, and can be shot very cheap at all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

Also, Hyde's Patent Post-Driver.

A most excellent labor and money-saving machine, for which we have no equal in the world. It is simple in its construction, perfect in its working, and can be shot very cheap at all styles of bedsteads. Hotels, public houses and private families will find it a useful invention.

[For the California Farmer.]
LEAVES FROM MY JOURNAL—No. 13.

[It will, perhaps, be remembered that the first warm spring weather of 1860 was remarkably beautiful, even for California. The moonlight recalled Salvador Rosa's pictures of Italian night scenery, so effulgent were its rays, and the breeze, as it mingled with the fragrance of myriads of wild flowers. D. and myself were approaching the Institute, after a long walk. We had been talking of scenes on the continent of Europe, and when in bidding me good-night, he said: "Such an evening should inspire you; I think you said Miss J. requested some original lines for her Album, let us suggest the theme." I answered, "It is indeed a subject that makes even prose poetical; I will try; although I do not profess to be a poet, I sometimes think in rhyme; thank you." The bell of the Pacific works chimed ten—eleven—twelve—and when the "Lady Moon" smiled a good-night, I finished these verse verses.]

1.
Night again in solemn beauty
Drops its mantle over earth,
Hushed to sleep as days rude noises,
Silent both its grief and mirth.

2.
But the wind is sighing sweetly,
Through the green fields of plume-like grain,
As if earth had not a sorrow,
As if life were free from pain.

3.
And its breath by May-flowers perfumed
Purs its, as a baby's kiss:
Now, its lips are gently pressing
Mine and thrilling me with bliss.

4.
Hark! I hear the song of waters,
As they play upon the shore;
Soft they laugh, no hint of victims
Who return to life no more.

5.
While I listen, fairy Fancy
Builds me castles in the air;
And I dream that I am happy,
Mid real scenes so bright and fair.

6.
Far off—see! the bright stars glitter,
World-thoughts of Almighty God!
Silent, as when first their splendor
Blazed on earth by man untrod.

7.
Over all, the Moon is shining,
Deluging the world with light;
Oh! with all thy gloomy shadows,
Thou art glorious! Lovely Night!

8.
For, although the Sun has vanished;
Hid are singing birds and flowers:
Yet, the softest light is making
Almost magical, night's hours.

9.
Lo! it tinges dusky shadows;
Dances on the darkest waves;
Showers proud old King Diabolo;
Hides Benicia's hill-top graves.

10.
How it powders fair Martinis,
With its shining snow-like flakes,
As o'er every peeping cottage
In a gust of light it breaks.

11.
Look, how charming the perspective,
Glancing 'twards San Pablo bay,
Where "Night's Queen," with silvery footsteps,
Hurries on her Western way.

12.
Even o'er our slumbering village,
Bright her rays disfigure fall,
As she hides the dusky by-ways,
Underneath her tissue pall.

13.
So, in life, it hath its changes:
Night is sure to follow day.
If we will, each hath a beauty,
That will chase all gloom away.

14.
When our day of life is closing,
When its gorgeous light has flown,
May Death's right be robed in silver,
Floating down from His "white throne."

COLLEGIATE INSTITUTE, April 1860.

THE FIRST FLY OF THE SEASON.—A late number of the Louisville Journal has an article in which it alludes to the first fly of the season thus: "He perched upon our fingers, danced around our pen, and seemed to claim our special notice as an old acquaintance. The little fellow gave a cordial turn of his head, and held out his antennae as if he desired to shake hands; he took an antepast from the ink on the nib of our pen, and then flew off to regale himself on the paste-board. We really think we can recognize him as that one of the musca genus who dropped his transparent wings last fall, and laid down for his winter torpor among the papers on our table. At all events, he seemed very much at home in our society, and as he alighted on our hands, we were sensibly tickled at his appearance. We hope to spend many happy days of spring and summer in each other's society."

CAN any one tell how men live and support their families, who have no income and don't work, and why others, who are industrious and constantly employed, half starve?

Can any one tell how it is, that a man who is too poor to pay ten cents a week for a good daily paper, is able to pay fifty cents a day for tobacco and cigars, to say nothing of an occasional drink?

Can any one tell what interest we have in asking these questions, which we know no one can tell?

INFANT EDUCATION.—A mother once asked a clergyman when she should begin the education of her child, which she told him was three years old. "Median," was the reply, "you have lost three years already. From the first smile that gleams over an infant's cheek, your opportunity begins."

We will go a year and a half further back.

FORBES, the tragedian, has expended over \$100,000 in his attempts to free himself from his wife. It costs something to break natural laws. The effort is not yet over; and the great tragedian is not out of the woods (Forbes) yet; besides, he should keep his clear, if he would prosper.

A man asked another, "Which is the heaviest, a quart of gin or a quart of water?" "Gin, most assuredly, for I saw a man who weighs two hundred pounds staggering under a quart of gin, when he could have carried a gallon of water with ease."

Why is a man climbing up Mount Vesuvius like an Irishman who wishes to kiss his sweetheart? Because he wants to get at the mouth of the "crater."

"What is that?" asked a school-teacher, of a little girl, pointing to the letter X. "Why, that's papa's name; I've seen him write it ever so many times."

The mixture of plaster-of-paris and coal-tar, in proportion of hundred to three, forms an efficacious disinfectant, lately discovered and highly approved of in Paris.

It is stated, upon reliable authority, that at present there is not less than sixty thousand dollars worth of fancy trotting horses in the possession of the horse-fanciers in Cincinnati.

HOTEL INTERNATIONAL.

Jackson street, above Montgomery,
SAN FRANCISCO, CAL.

FIRST-CLASS HOTEL!

THE TABLES OF THIS HOUSE ARE
UNIVERSALLY ACKNOWLEDGED TO
BE THE BEST ON THIS COAST.

THE ROOMS AND BEDS

Are always Clean, Airy, and Sweet, and better provided with SPRING AND CURED HAIR MATTRESSES AND LINENS than any other House in the State. It is one of the largest Hotels in California; a fire-proof building, and provided with Benesley Water throughout the House. It has a frontage on Jackson street of 87 1/2 feet, by 175 feet deep. There are no dark rooms in this house, all having free and open frontage, with pure air, which is of great advantage to a California climate, there being no large buildings adjacent thereto.

The undersigned invites the attention of the Traveling Public, and Strangers in particular, to the merits of this House. It was established under its present Management, on the 1st of January, 1857, as a

First-Class Hotel,

IN EVERY PARTICULAR.

The Lessee and Manager, with a delicate not wishing to encroach upon the merits of other Houses, cannot but recall the marked favor with which his enterprise has been received by a discriminating public, in a constantly increasing patronage, of the FIRST RESPECTABILITY, showing conclusively the SUPERIOR MODE in which the Hotel is conducted.

It is contiguous to all of the most Popular Places of Amusement, the Principal Thoroughfares, the Fashionable Promenades and Steamboat Landings; Thus rendering it at all times the most

DESIRABLE STOPPING PLACE FOR FAMILIES AND SINGLE GENTLEMEN.

During their sojourn in this city.

For a year past we have studied how we can maintain a FIRST-CLASS HOTEL, and at the same time effect some reduction of price below three dollars per day to our friends. We are happy to announce to you that we have succeeded in our efforts. We have obtained a reduction of our heavy rental; and we have now under cultivation, in the suburbs, a Rancho, which produces our Vegetables from the ground; with a Dairy that secures us the purest Milk and Cream, and a stock of Forest that supplies Eggs and Poultry always fresh; with many other economical advantages. By this means we can promise our friends that we shall even improve upon the proverbial excellence of our Table; and the same matches Bed, and solicitous attention to the comforts of our Guests, will continue to be the pride of the Hotel International.

We have Elegant Suite of Family Rooms, together with highly furnished single apartments for Families or Single Gentlemen, which, together with the untiring energy of the Proprietor, makes this House one of the most Popular Hotels in the United States. For comfort and luxury this house is not surpassed.

JOHN J. HALEY, Proprietor.

The International Coach will always be found at the landing of the steamers, to carry passengers to the Hotel. [15

CALIFORNIA FARMER

JOURNAL OF USEFUL SCIENCES.

VOLUME XIII.

SAN FRANCISCO, CALIFORNIA: FRIDAY MORNING, MAY 25, 1860.

NUMBER 14.

The California Farmer.

AND JOURNAL OF USEFUL SCIENCES.

COLONEL WARREN, Editor and Proprietor.

PUBLISHED EVERY FRIDAY MORNING.

Office—No. 130 Washington street (up stairs), San Francisco.
TERMS.—By mail, for one year, \$5; for six months, \$3. For a club of five new subscribers, a sixth copy will be sent gratis. To City subscribers, delivered by carrier, 12 1/2 cents a number, or \$6 a year in advance.

Advertisements and Subscriptions must be paid for in advance.

JOB-WORK.—Of every description, done with promptness, at fair rates; orders will be faithfully attended to.

On the Endless Bee Subject.

MARTINVILLE, May 22, 1860.

EDITOR FARMER: When I penned my letter to you of the 20th April, over the signature of "L. Kennedy," I did not suppose it would disturb the equanimity of anybody, however nearly balanced might be his head and heels. I hoped merely to provoke discussion, and draw out facts relative to the introduction into California of a disease among bees known as "foul brood"—or whether, indeed, such a disease is here at all. But it seems I was mistaken. The very individual from whom I was expecting much of the desired information, puts on an air of offended dignity, and says "the stupidity and ignorance exhibited over the signature of 'L. Kennedy,' is only equalled by his presumption in intruding a notice of his own private operations before the public, in the manner which he has done." Now, I wish to say, once for all, that "L. Kennedy" is my real name, and that it was my name for more than fifty years previous to my coming to California. I have done nothing elsewhere, and it is my purpose to do nothing here, to make me ashamed of it.

But where am I? And who is this, who speaks with so much assurance about the "stupidity and ignorance," and "presumption" of one who happens to cross his track? I have been supposing myself in the glorious State of California—bright, beautiful and free California! where, as I had been told, the people were open-hearted and open-handed. But I could almost imagine myself "Where Africa's sunny fountains Roll down their golden sands,"

and where there is said to be a king who requires all his subjects to fast, until his majesty has eaten dinner, when a messenger is sent forth, with a trumpet, proclaiming "The great King has eaten dinner!—now all the world may eat!" But I hear my native tongue spoken, and see the star-spangled banner floating in the breeze, and conclude, therefore, that I have a right to express my sentiments upon any subject which may come before the public. Nor am I to be silenced, by any "puss-in-boots" dignitary, who may arrogate to himself the right to decide all questions, without a why or wherefore. This very modest gentleman (?) goes on to say—"It was unnecessary for him to come out in a second article and acknowledge that he knows all about the disease, and tacitly admit that his bees had it, he having previously put on the fitting shoe." Now, if I have made any such admission, I am too "ignorant" to know it. I have said I did not believe there was any "foul brood" in Marysville, and have expressed strong doubts whether there is any in the State. But Mr. Harbison says there is, and that no man will risk his reputation by doubting his statement. I have called for the proof, but am answered by being pronounced "stupid and ignorant." I have seen such men before; having been wonderfully successful in some enterprise, they seem unwilling to have their word questioned upon anything—their opinions must be law. Mr. Harbison also goes on to say, that I am "one of a class of men who are laboring to have the facts suppressed, so as to enable them to sell their bees, and thus divide their loss with the public. Honorable, is it not?" What is meant by such a statement, I am certainly too "stupid" to divine. I have met with no loss, and of course have nothing of the kind to divide with the public, and the man who can unblushingly make such a statement, and call it honorable, can never, in his own estimation, do a dishonorable thing. I have offered to compare my fifty hives of bees with the same number taken from Mr. Harbison's apiary. He may discover in this an admission of "foul brood." But I did not intend to compare them with bees sent to Stockton by Mr. H., and should like to see a report of his speech made at the Apian Convention, held at Sacramento; more especially that portion of it which refers to this shipment to Stockton.

Failing to obtain any proof of the existence of "foul brood," I am perfectly willing to trust the subject with the apianians of California. I am quite certain that no man's dictum is to pass for law or logic, in this age of free discussion. But the most singular part of Mr. Harbison's last communication, is contained in his "Words to the public in regard to the Italian Honey Bee." "It has been stated," says he "by different writers, that it is difficult to find the pure breed in their native country, is it then to be supposed, that they can be kept so here? To do so, would require an amount of skill and perseverance that but few persons are capable or willing to devote

to it, particularly if they can palm off mixed for pure blood." (Are bees blooded stock?) "One of the merits claimed for this bee, is superior industry; that it will rob the common neighboring bees. If this be true, it will be a very undesirable acquisition, till they can be simultaneously introduced into all our apiaries, and at the same time throwing out all our common bees. The propensity to rob would expose them to dangers of the disease more frequently than the common bee, they being equally subject to it."

I say nothing about the literary (?) merits of the above quotation. It may be in imitation of Addison. But if there is any argument or proof against the introduction of the Italian Bee, I must confess my "stupidity and ignorance" prevent my discovering it. Why was not the same logic used upon the introduction of the pure merino, and other blood sheep; or the pure Durham cattle, or the pure Suffolk pigs? Success in the cultivation of these animals, requires as much care and attention as in the cultivation of the honey-bee. But nobody objects to their introduction on this ground, while the cross of those imported animals with the native, is admitted to be a great improvement on the common stock. Those who wish for the pure, will look to those who have established a character for high breeding, avoiding those who would, if they could, "palm off mixed for pure blood." So, with the Italian Bee. Its cross with the native must be an improvement, although the pure Italian may be preferred. By the way, I should hardly expect to find objections made to crosses by the inventor of a bee-hive, which all good judges pronounce a cross between the Langstroth and the Huber hives.

What is said about the robbing propensities of the Italian Bee, is evidently for buncombe. No man, with half the pretensions of Mr. Harbison, could be made to believe this a serious objection. But here comes up the bugbear of "foul brood," and these bees are such great robbers, they must of course be more exposed to the dangers of this disease. Yet if this disease is so fatal, and the Italian Bee so undesirable, they must destroy themselves, and perhaps rid the country of two pests at the same time—for if the common bee adopts Mr. Harbison's opinion, it will be sure not to venture into the hive of an Italian stock.

But let me say to the public, what you, Mr. Editor, very well know, that the quality of the Italian Honey-Bee is now too well understood in this country, to be affected by anything which even the distinguished apianian of California may say against it. Let me quote from a letter, dated in Paris, from a distinguished American gentleman:

"It cannot be doubted, that Italian Bees will entirely take the place of our common species, for the reasons, First—that they will endure the cold better; Second—that they swarm twice as often; Third—that their queens are abundantly more prolific; Fourth—that the workers begin to forage earlier, and are more industrious; Fifth—that they are less apt to sting, and may be easily tamed by kind treatment; Sixth—that the queen may be so educated as to lay her eggs in any hive in which she is placed, while the bees of such a hive, deprived of their own queen, will readily receive her; Seventh—that its proboscis is longer, and it can reach the depths of flowers which are entirely beyond the efforts of the common bee. The importance of the last superiority cannot be too highly appreciated. Eighth—that a young queen once impregnated, will continue fertile during her life—from four to seven years. This quality will insure pure blood till the whole country is filled with them. Ninth—that they are far more brave and active than the common bee; will fight with great ferocity, and more effectually keep the moth out of the hive."

"They can be easily distinguished by a broad yellow band around the abdomen."

I might add to this extract another fact: An Italian queen, though impregnated by a common drone, will produce pure Italian drones.

The same writer remarks—"I believe this bee will soon prevail in the United States. This will result from a conviction every where, of the large profits to be derived from its propagation and its labor."

I see no advantage to the public by continuing this discussion, unless the gentleman (?) will so far stoop from his high position, as to give us some proof of the existence of "foul brood" in California. If it is known to be in the State, those interested in bee culture should be told where it is, that they may avoid it, and what it is, and how it looks, that they may know it when they see it; and if he will stoop half as low as he did when he penned his last article, common people may be able to shake hands with him.

I remain, your ob't serv't,
L. KENNEDY.

Harvest Commenced.

We learn that the grain harvest in the interior has already commenced. On the Stanislaus river considerable barley has already been cut, and the first of this week, thrashing machines were actually at work taking out the grain. So the new barley will soon be in market. The wheat harvest will commence in some sections in a few days.

SAMPLES OF SEWING FOR GRAIN-BAGS.—The heavy drilling of the right kind for grain-bags, sown by the Grover & Baker Sewing-Machine (the only machine that can be used for this purpose), can be seen at our office.

Swarming of Bees.

THE "Bee Question" is one of moment at this time, as this is the season of swarming, we now publish from "Quincy" a chapter from which much good can be derived if properly applied.

The subject now before us is one of thrilling interest. To the apianian the prospect of an increase of stocks is sufficient to create some interest, even when the phenomena of swarming would fall to awaken it. But to the naturalist this season has charms that the indifferent beholder can never realize.

All Bee-keepers should understand it as it is.

As a guide in many cases, it is important that the practical apianian should understand this matter as it is, and not as said to be by many authors. I shall be under the necessity of differing from nearly all in many points.

Means of understanding it.

This is another case of "when doctors disagree, who shall decide?" You, reader, are just the person. There is no need of a doctor at all in this matter. I will endeavor to give a test for most of my assertions. To make this subject as plain as possible in this place, I may repeat some things said before. The facts related have come under my own observation. I have probably taken more pains than most bee-keepers, to understand this matter to the bottom from the beginning (I mean the bottom of the cells). But few apianians have made the number of examinations that I have to get at the *modus operandi* of swarming. Perhaps I ought not to expect full credit for veracity, when I assure the reader that I have inverted more than one hundred stocks to get a peep at the royal cells, some of them near a dozen times in one summer. I have inverted them frequently for the purpose of obtaining cells. But generally to see when such cells are being made, when they contain eggs, when these eggs are sufficiently matured for swarming, or abandoned and destroyed, etc.

By these signs I predict with certainty (almost) when to expect swarms, and when to cease looking for them.

Inverting a Stock rather formidable at first.

To a person that has never inverted a hive-full of bees, even to overflowing, or never has seen it done, it appears like a great undertaking, as well as the possibility of ruining the stock! But after the first trial, the magnitude of the performance is greatly diminished, and will grow less with every repetition of the feat, until there is not the least dread attending it. Without tobacco-smoke I hardly think it practicable, but with it, there is not the least difficulty. It would be very unsatisfactory to turn over a hive and nothing to drive the bees away from the very places on the combs that you wish particularly to inspect. The smoke is just the thing to do it. As for the bad effects of such overturning and smoking, I never discovered any.

Requisites before preparation of Queen's Cells.

I have found the process for all regular swarms something like this: Before they commence, two or three things are requisite. The combs must be crowded with bees; they must contain a numerous brood advancing from the egg to maturity; the bees must be obtaining honey either by being fed or from flowers. Being crowded with bees in a scarce time of honey is insufficient to bring out the swarm, neither is an abundance sufficient, without the bees and the brood. The period that all these requisites happen together, and remain long enough, will vary with different stocks, and many times do not happen at all through the season, with some.

These causes then appear to produce a few queen-cells, generally begun before the hive is filled (sometimes when only half-filled, but usually remain as rudiments till the next year, when the foregoing conditions of the stock may require their use).

State of Queens' Cells when used.

They are about half-finished when they receive the eggs; as these eggs hatch into larvae, others are begun, and hatch into eggs at different periods for several days later. The number of such cells seems to be governed by the prosperity of the bees; when the family is numerous, and the yield of honey abundant, they may amount to twenty; at other times perhaps not more than two or three; although several such cells may remain empty. I have already said that a failure (or even a partial one), in the yield of honey at any time from the depositing of royal eggs to the sealing of the cells (which is about ten days), would be likely to bring about their destruction. Even after being sealed, I have found a few instances where they were destroyed.

State when Swarms issue.

But when there is nothing precarious about the honey, the sealing of these cells is the time to expect the first swarm, which will generally issue the first fair day after one or more are finished. I never missed a prediction for a swarm forty-eight hours, when I have judged from these signs in a prosperous season. When there is a partial failure of honey, the swarm will sometimes wait several days after finishing them.

Clustering outside not always to be depended upon.

The clustering out of the bees I find to be but a poor criterion to judge from, further than full hives do swarm—many such do not.

Examinations.—The Result.

I will detail a few circumstances, that have led to these conclusions. Some years ago the honey began to fall, when only about one-third of my good stocks had cast swarms; and all at once the issues began to be "few and far between." I had previously examined, and found they had gone into preparations pretty extensively; by having not only constructed cells, but occupied them with royal eggs and larvae. Now I examined again, and found five out of six had destroyed them (at the same time the bees clustered out extensively).

This put an end to all hopes of swarms here. Some few had finished their cells, and these, I had some hopes, would send out the swarms; but the dry weather caused some misgivings. After waiting three or four days and none coming, I found these cells destroyed also, and had no more swarms that season. Subsequent observations have fully confirmed these things. One season some of the hives commenced preparations at two different periods, and then abandoned them without swarming at all, through the summer. The first time it was the last of May, the next in July.

Remarks.

The failure of honey was the cause, without any doubt. And who shall say these bees were not wise in their conduct? What prudent man would emigrate with a family, if the prospect of a famine was plainly indicated, when, by remaining at home there was enough, at least for the present? Who can help but admire this wise and beautiful arrangement? The combs must contain brood; the bees must find honey during the rearing of the queens. If a swarm were to issue at the moment of obtaining honey, the consequence might be fatal, as there would not be a numerous brood to hatch out, and replenish the old stock with bees sufficient to keep out the worms. Were they to issue at any time, as soon as the bees had increased enough in numbers to spare a swarm, without regard to the yield of honey, they might starve.

Conflicting Theories.

I find many theories conflicting with these views, which appear to call for some remarks. It is generally supposed that a young queen must be matured to issue with the swarms, and the old one with the old bees are permanent residents of the old hive.

Both Old and Young leave with Swarms.

It is probable that no rule governs the issue of workers. Old and young come out promiscuously. That old bees come out may be known sometimes, by so many leaving that not a quarter as many will be left, as commenced work in the spring. That young bees leave, any one may be satisfied on seeing a swarm issue; a great many too young and weak to fly, will drop down in front of the hive, having come out now for the first time, and perhaps some of them had not been out of the cell an hour; these very young bees are known by the color.

Cause of the Queen's inability to fly suggested.

The old queen often gets down in the same way, but I would assign another cause for her inability to fly; that is, I would suggest it to be her burden of eggs.

How to Prevent the Effects of Late Frosts on Grapevines.

SOME complaints have been made this season of injury to the grapevine, in the vicinity of the mountains, by frosts, and it is expected the crop will be diminished in consequence. In view of this, the following plan to prevent the effects of late frosts, by Mr. Delanque, the proprietor of a vineyard in the Department of Dordogne, France, (to the Journal of Practical Agriculture at Paris) may be of some benefit in future, if too late to be put in practice this season:

I write conformably to your request relative to the practice adopted in the Southwest to prevent the effects of late frosts on the grapevines. You must note, however, that the vineyards of this region are less injured by late frosts than those of other portions of France, that are more elevated, and further from the influence of the sea, and consequently more exposed to extremes of temperature. If we could so arrange it that the vines would only vegetate after the late frosts, it would be evident that the problem of saving the crop would be solved. We may gain this end, if we select (not the late varieties) but only the branches or shoots which are latest in pushing forth their buds in the spring. This plan, however, can only be used at the risk of losing the best qualities of the wine made from the part, and cannot be generally applied. The influence of pruning, in this case, on the contrary, is constant and general. It has been found that we can retard very considerably the vegetation of the whole vine, by pruning at the time of the latest frosts and when the upper buds or those at the ends of the branches have begun to leaf out, and have even been injured by frost, whilst the inferior buds in the lower part of the branches are as yet dormant and undeveloped. The cutting-in of the long vine-shoots, whilst in full growth, is evidently mutilation of the vine, which is sensibly felt, but we have, by this operation, succeeded in retarding the growth of the buds of the vine for a time, and rendered them safe from the effects of late frosts, and consequently they are developed with great rapidity, at a time when the cold is not feared. But, you will probably ask, why this operation, so simple, so old, and so efficacious, is not employed everywhere and always? That is easily comprehended, when you bear in mind that it is materially impossible in a country exclusively vine-growing thus to prune all the vines in a few days, which must be the case, if the remedy is to be generally applied. Our mechanical appliances have not yet enabled us to lessen this difficulty. It results from this state of things that the vine-growers the most convinced of the excellence of late pruning, are obliged to reserve for it only the vineyards of the highest value, and those most exposed to the effects of the late frosts; and this method succeeds perfectly. Reduced even to these modest proportions, the services rendered by this simple method are so great, that it is desirable it should be known and put in practice wherever it is as yet unused.

AMERICAN EXCHANGE.—This hotel is now as every, receiving a full and liberal share of the public favor. Mr. Seymour, the new proprietor, but long active and popular book-keeper and cashier, looks and acts just as natural as ever, and receives his patrons smilingly, knowing they will always be satisfied with the American Exchange.

Willamette Woolen Manufactory.

We are always happy to make record of the progress of communities or men. We are especially glad to announce the steady and sure progressive developments of the manufacturing art on the Pacific coast, and, although our partialities are for our own adopted State, yet we will always yield the palm to our sister State, Oregon, when she sets us a noble example, as she did, in establishing the first Woolen Manufactory on the Pacific shores. Her example aroused us here, and we rejoice to know, that now, California can also boast of her Woolen Manufactory, and in a most prosperous condition, consuming the grand amount of five thousand bales of wool per annum. The woolen manufactory at Salem, Oregon, exhibited a collection of splendid blankets at the State Fair last fall, which gave universal satisfaction, and reflected high honor upon Oregon and the company that had established the factory; they also exhibited an assortment of coarse cassimers, that found a ready sale.

By the last steamer from Oregon, we have received from Lucien E. Pratt, Esq., the agent of the company, samples of the different styles of cloths now made, being quite a novelty, both in quality and style. The samples sent on are light and dark checked kerseys and cassimers, plain and twilled; light and dark mixed coatings; blue, brown, mixed and drab pantaloons stuffs. All the samples are handsome in style, excellent in quality, and highly honorable to the company. These samples are the best evidence we could ask of the success of this manufactory. In our columns will be found the advertisement of the Willamette Company, and we trust their goods will soon be found in our market, so that our citizens can wear cloths manufactured on the Pacific coast. We shall patronize Home manufactures the first moment we can obtain these cloths for wear, and hope others will—until our own State shall manufacture, and duty demands us to give trade directly to that made here. We rejoice at the success of our friends in Oregon.

These samples can be seen at our office.

Seeds Received.

We are indebted to A. T. Langton, Esq., well known as a pioneer expressman, of Downieville, for samples of seeds, of the following kinds, which he selected at the Patent Office, when in Washington, D. C.

Lentils, from Egypt.—This vegetable might be grown here, with advantage. They were highly esteemed in ancient days. These are the brown variety, were used for soups; grown in light sandy soil, like the pea, which it resembles.

White Beans, from Egypt, also.—We should think beans from Egypt would be black—as the old saying is, "Black as Egypt." These beans are full, round, and similar in size to the Cranberry Bean; we think an excellent bush variety.

Prolific Cow Pea, from Mississippi.—These are a small, brownish, flat pea; by their appearance, should think a great producer; to be used green, pod and all.

True King Phillip Corn, from Lake Winnepesaukee, N. H.—This variety is most decidedly the best variety for California known, and we are glad to know that a large quantity has already been planted the present year. This weather is favorable for planting corn, and we hope a large area will still be planted with the King Phillip Corn. It will pay well. Let our farmers try it.

Mountain Plums.—We received, also, a parcel of plum pits, from the mountain plum shrubs or bushes that grow so abundantly in the mountains. These were from the vicinity of Downieville. We hope the present year our friend will send us the pits with the flesh on them; we think they would taste better. However, we are truly obliged for the favor already received, and will be happy to supply those who may want samples of these seed for trial.

FALLOW PLOWING.—Let our farmers not fail to improve the present opportunity furnished by these copious rains, to set their plows to work, and make ready as much land as they possibly can, upon which they may work to get their grain early this fall. Every acre of land now deeply and well plowed, having the grass and stubble turned well under, will secure to them a crop twenty-five to fifty per cent more, than land that remains to harden and dry, and plowed this fall, perhaps a month or two later than the grain should be sown.

All lands now plowed and thus secured for early planting, are enriched in various ways, besides being thus prevented from lying to bake and harden and burn up. Every farmer who has land that he can plow for this purpose, and fails to do so, deserves a short crop the next year.

THE CONTINUED RAIN.—The very unusual character of the rains, and their long continuance have aroused a great anxiety for the immense crops to which all eyes are now turned. It is certainly a cause of earnest inquiry how much these rains do affect the crops, and to what extent, and we would be gratified if our farmers would give us from every section of the State their most carefully expressed opinions, based upon a strict examination of the conditions of the hay and grain crops.

CALIFORNIA NOTES.

BY ALEX. S. TAYLOR.

THE INDIANOLGY OF CALIFORNIA.

(CONTINUED.)

Addenda.

A voluminous Indian Vocabulary of La Purisima Mission written out by one of the old Friars, was in existence only a few years ago, as I am informed by one of the Noriegas of Los Alamos in Santa Barbara county.

An old American settler of Sonoma, of the ante 1840 times, informed me that Padre Quijas, who had charge of that Mission from 1835 to 1842, wrote out an extensive vocabulary of the Sonoma and other Indians of that vicinity. He was an intelligent observer, and once remarked that not less than twenty languages or dialects were spoken between Yerba Buena and the Sacramento River. This Vocabulary is very likely still existing at Sonoma or San Rafael, but among rubbish of old books and papers, as most probably is the case of the San Gabriel Vocabulary of Padre Zalvidea made in 1820-25. Such things were not thrown away formerly, but laid aside.

It is noteworthy that the language of the Yumas extended from the Gila and Colorado to the Ocean at San Diego, and for some one hundred miles south, down on the Lower California Coast; probably this language also had its affiliations as far up as San Luis Rey, and as far down as even Cape San Lucas.

The entire tribes of the California Indians appear to have had a great devotion and veneration for the Condor or Yellow-headed Vulture (*Sarcophaga*). A word is always found for it in all their languages. Besides the Indian names noted for it in the California Farmer of July 1, 1859, we may here mention that those of Santa Cruz Mission (the Aninimes), called it *Cayas*; those of San Diego called it *Isai* or *Esoy*, and the Ukias or Yobios of Petaluma, etc., called it *Kahoy*; this last Indian language seems to have extended far up into Mendocino county.

Dr. Heerman, in the 10th volume Railroad Reports (pub. 1859) says the Indians of the Tuolumne informed him partly where they had found a Condor's nest and young, and he himself found two other nests, one on the head-waters of the Merced river, and another at Warner's Ranch in San Diego county, the effluvia from which was overpowering; this did not however prevent the Indians from plucking the eggs and capturing the young to fatten them by long feeding to grace their annual carousals and feasts. The size this immense bird grows to when at mature age or very old, must strike the simple Indian with awe. Several of them are mentioned in the 1859-Condor-Notes of the Farmer, from eleven to fourteen feet spread of wing. These accounts have been questioned, but a reference to the transactions of the California Academy of Sciences for December 17, 1855, will show that a Condor killed in the Redwoods of Contra Costa county, and carefully observed, measured from tip to tip of wing, thirteen and a half feet. This is nearly as large as the Condor of Chili; indeed larger than those noted by Darwin and others—the accounts of the Chilian and Peruvian bird, as noted in the Summary of fourteen accounts from 1800 to 1855 in the same number of the Farmer, being stated at from eight to eighteen feet stretch of wing.

The power, strength, and appearance, of such a bird, and its mysterious floating in space at such immense altitudes, over plains and sierras in the most elegant evolutions in the clear atmosphere of California, must have always made it an object of veneration and admiration to the Indians of the country. The size, weight, and elegant form, of the bird's egg, together with its revivifying contents of transparent white and golden yolk, which are perfectly sweet and inodorous, made it always the great prize of prizes of the brave, ambitious, or cunning, as eating it raw, was supposed to endow the eater with all these qualifications.

The Indians of the Santa Barbara country and the islands thereabout used a fine species of Soapstone, got on the islands of San Clemente and Santa Catalina, for the purpose of making bowls, pots, and other utensils. The Indians generally of this county, at Purisima, Sta. Inez, Santa Barbara, and San Buenaventura, were much more ingenious in making mortars, bowls, arrows, boats, baskets, etc., than any other tribes of California. To this day they are much cleaner and livelier than the other Mission Indians. The sandstone statues still preserved at Santa Barbara Church, were executed by a Mission Indian. They are meant to represent the Apostles, and of life-size, and are very creditable to the Indian artist.

Indians of the Delta of the Tulare Lakes and of the Neighboring Sierra Nevada.
The following vocabulary of the San Joaquin Indians in the vicinity of Four Creeks, published in the San Francisco Wide West, in July 1856, by a writer signing himself "T. H. R.", is of great interest and value, as very few observations have been made on the Autochthones of that section. It seems probable that all the Indians of the Southern Sierra Nevada, the west bank of the San Joaquin, and the Delta of the Tulare Lakes, are Cognate tribes, speaking a general language in different dialects. The Spanish officers and soldiers, who first explored the Valley, prior to 1820, and the old fur-trappers and hunters, from 1824 to 1830, always stated that the tribes, clans, and rancherias of Indians thereabout, were very numerous and populous, and the means of subsistence extremely abundant. Capt. Estudillo of the Spanish army, from Monterey, explored the Tulare Lake district in 1819, and made a map of the country, which the curious can see at the office of the U. S. Surveyor General, at San Francisco—it is very detailed and full.

THE INDIAN TRIBES KAH-WE-YAH AND KAH-SO-WAH.

The Indians now scattered in small bands or families throughout the mining districts of California, formerly constituted a great family or nation, of one common origin. They were, it is true, divided into petty tribes, selecting particular locations favorable for hunting and fishing, over which they appear to have exercised some tacitly acknowledged preemptive right. The customs and characteristics of all these tribes are very similar, but in language there is a great dissimilarity. There must be a great number of dialects spoken by the Indians of Oregon, Washington Territory and California, as I find them differing very much indeed. Even within our own bounds I find very material differences in the dialects of the Northern and Southern tribes, and again between them and the Indians of the Coast Range.

The dialect of the Kah-we-yah is very simple, and only gains strength in compound words. There is no sound of the letter R in the language, and in using a foreign word possessing it, they always substitute the sound of the letter L. Some of their names are beautiful, soft and poetic. For example: Loy'-e-mah, Bowers; hoo'-lo-wen,

birds; o'-pah, the sky; yan'-o-pah, clouds; hee'-a-mah, the sun; and many others. The true aboriginal names are those of natural objects, most other words having been introduced by foreigners. The exceptions to this are, when any new article of luxury, or necessity, is introduced amongst them. If it bears any resemblance to a familiar object, it will likely be so named; as, for example, the reader will observe in the Vocabulary a resemblance between to'-le, blankets, and to'-le, or too'-lee, bulrushes. The latter article they weave into a sort of rough matting, and it is frequently used as a covering to their butts. Since the introduction and use of blankets have become so general, they, after wearing them a few days, appropriate them to the same purpose as the bulrush mats. Hence, the similarity in names for articles at first apparently so widely differing. Again: oo'-woon is prepared food; ow'-woo, the mouth; and it strikes me that the connection of one with the other is quite natural.

Then again, as it is oftentimes a difficult matter for persons speaking different languages to understand each other perfectly, or even to catch correctly the sound of a word, so mistakes have arisen in the names given to rivers, and which were evidently derived from the Kah-we-yah dialect. Who was in fault, I know not, but I will give instances in point. Wokel'mootee is the name in Kah-we-yah for river. Is not this word the origin of the name given to the Mokelumne river? Ko-sun'-moo, salmon. Can we not detect a similarity with the name Cosumne, also a name of a river? Tu-al'-um-ne is also a soft and melodious name, but I am ignorant of its meaning. Ham'-ite, falls, rapids; yo-ham'-ite, a cataract; the prefix yo meaning high, lofty.

The limits of the Kah-we-yah and Kah-so'-wah tribes appear to have been from the Feather river in the northern part of the State, to the Tulare lakes of the south. As we advance further north, a most decided difference is observable with the dialects of the various tribes inhabiting that portion of the country; while on the contrary, as we go south, we observe a similarity in words with even the Aztecian or ancient Mexican language.

For example:
Fire, in the Aztecian language, is Ah'-kee.
" " Kah-we-yah " " Wo'-ka.
Water " " " " Ke'-koo.
" " Aztecian " " Quack'-kee.
What is the cost? in Kah-we-yah, is Me-to'-kah.
" " Aztecian " " Mee'-yah.
Who buys? " " Ah-mo'-nee.
Do you wish to buy? in Kah-we-yah, is Ah-mo'-nee.

We might multiply these instances, but our limits prevent, and we proceed at once to introduce the

Vocabulary of the Kah-we-yah and Kah-so'-wah Indians.

[The syllable to be emphasized in pronunciation is indicated by the accent—']

NUMERALS.

Keng'-ah—once. O'-te-go—two.
To-ler'-ko-soo—three. Oy-is'-four.
Mo'-soo-kah—five. Tah'-moo-kah—six.
Ken-neck'-koo-koo—seven.
Kah-woon'-tah—eight. Wo'-bah—nine.
Nia-ach'-ah—ten. Keng'-ah-te—eleven.
O-tuck'-soo-ka-na—twelve.
To-ler'-soo-ka-na—thirteen.
Oy-ick'-soo-ka-na—fourteen.
Mo-sook'-soo-ka-na—fifteen.
Tah-mook'-soo-ka-na—sixteen.
Ken-neck'-soo-ka-na—seventeen.
Kah-woon'-tah-se—eighteen.
Wo-hah'-ka-se—nineteen.
Ni-atch'-ah, O'-te-go, nem—twenty, or two times ten.
Ni-atch'-ah, or To-ler'-kor-soo, nem—thirty, or three times ten.
Ni-atch'-ah, Oy-is'-sah, nem—forty, or four times ten. And so on to one hundred, which is expressed by

Niatch'-ah, Ni-atch'-ah, nem.
Above a hundred, they count naturally by decimals; any indefinite number, by holding up their hands, and, whilst exclaiming energetically "Ni-atch'-ah Ni-atch'-ah," rapidly opening and closing the ten fingers.

PARTS OF THE HUMAN BODY.

Han'-oh—head. You'-sah—hair.
Soon'-too—eyes. Nee'-to—nose.
Ow'-woo—mouth. Koo'-too—teeth.
Oui'-ko-soo—chin. Soo'-mo-choo—beard.
To'-ko-soo—ears. Tee'-soo—hands.
Lo'-lo-see—fingers, or toes.
Sa'-lah—nails. Oo'-toon'-dah—thumb.
Hot'-tah—feet. Ho'-cho-noo—legs.
Lee'-te-poo—thighs. Hif'-te-wah—hips.
Moo'-zoo—breasts. Oong'-i-you—chest.
Too'-you-pe—shoulders. Tee'-se-ni—elbows.
Pah'-cha-loo—arms. Kah'-woo—back.
Cho'-ko-noo—belly. To'-kah—posterior.
To'-lo-loo—gen. organ, mas.
Wock'-o-ta—gen. organ, fem.
Nong'-ah—man. O'-sah—woman.
Esh'-el-to—child.
Esh'-el-to Koo'-chee—good child.*
Koo'-chee O'-sah—good woman.
Oo'-soo-too, Nong'-ah—bad man.
Nong'-ah Kah-woo'-wah—powerful man.
Koo'-chee, signifying good, Oo'-soo-to, bad, and Kah-woo'-wah, power, strength, ability.
Hoo'-chee Nong'-ah Mee-wah—a good honorable man.

Hi-yah'-poo Koo'-chee Mee-wah—a friendly chief.
Hi-yah'-po—a chief.
Mee'-wah—friendly, honorable.
Wal'-lee—a friend.
Ko'-chah } house, hut, lodge or wigwam.
Oo'-chah }

Hoo'-yan-nee—a village or collection of huts.
Too'-no-tee—covering or shelter.
Te'-le—blankets.
Hoo'-woo-too—beads, wampum.
Ong'-a-lee—bow. Mith'-ka-loo—arrows.
You'-wah-loo—quiver. Kah-lan'-no—to dance.
Too'-a-lee—to sing. Too'-yem—to sleep.
Soo'-ye-nem—to wake. Choo'-sock—to rest.
Oo'-nee—to come. Wook'-soo—to go.
Wo'-num—to walk. Hoo'-yah—traveling.
Mook'-koo—road or path.
Hoo'-lah—foot-paths, trail.
Tan'-oo-gock—fatigue. To'-leni—relief.
Chah-muck—General name for food.
Oo'-woo—prepared food.
Hah'-ki'-yin-nem—I am hungry.
Hoot'-or Hoot'-too—yes. No—no.
Net'-net—this. Na'-wa—that.

Winn'-nee—where or whence.
Win'-nee Wook'-soo—where are you going?
Win'-nee Oo'-nee—whence do you come.
Ee'-zum—up or above.
Ah'-lo'-wen—down, or below.
Kah'-lo'-wen—over, across, the other side.
Woo'-alitch—let us go. O'-kas-see—thank you.
Wook'-sam—good-bye. Wee'-kum—to get rid of.
Hoo'-yah-koo—how do you do?
Koo'-chee O'-kas-see—very well, thank you.
Paw'-too-luck-sick—expression of admiration or surprise.

Shaw'-pet—expression of contempt.
Kah'-nut—expression of disgust.
Toke'-to-kah—a pest, a bad smell.
Ta-mas'-kah—hot bath or sweat-house.
Me-to'-kah—how much? what is the cost?
Ah-mo'-nay—do you wish to buy?
Tee'-may—what do you call it?
Woo'-hoo Ah-wong'-ah—let us remove or change our dwelling.

Woo'-hoo Ah-wong'-ah Kah-to-wen—let us remove to the other side of the river.
Woo'-hoo Wee'-kum na Toke'-to-kah—let us get rid of this pest or nuisance.

Koo'-chee, Skotch'-ya—very good indeed.
Tee'-may, Net'-net—what do you call this?
Ko-sun'-moo, Wal'-lee—a salmon, friend.
Koo'-chee Chah'-muck—is it good to eat?
Hoot'-too, Koo'-chee Skotch'-ya—yes, very good indeed.
Hah'-ki'-yin-nem, Chah'-muck, Wal'-lee—I am very hungry, give me food, friend.
O'-kas-see, Wook'-ditch, Wal'-lee, Wook'-sum—thank you, we are going, friends, good by.

THE ELEMENTS, ANIMALS, TREES, ETC.
He-a'-mah—the sun.
Oo'-nee He-a'-mah—sunrise.
Wook'-soo He-a'-mah—sunset.
Ko-mah—the moon. To'-lah—earth.
Too'-soo-sah—air. Wo'-ka—fire.
Ke'-koo—water. O'-pah—sky.
Yan'-o-pah—clouds. No'-kah—rain.
Ka'-lah—snow. Wook'-loo-too—heat.
Ka'-lah-wah—snowy mountain.
Si-wah—table mountain.
Wo'-kel'-moo-tee—a river.
Se'-sah—a creek.
Ah'-kah'-wa-loo—a spring of water.
O'-lo-loo or to'-lo-loo—a spout or jet of water.
Ham'-i-te—rapids or falls.
Yo-ham'-i-te—a cataract.

To'-le, or Too'-lee—bulrush.
Tow'-sa—a game of chance played with small sticks. J. H. R., Hi-yah'-po.

* The placing of the adjective before the substantive seems to be governed solely by euphony.

The Indians of the Tulare Lakes very likely made incursions into the territories of their neighbors of the Coast-range, between San Antonio and San Luis Obispo, prior to the arrival of the whites, and vice versa, as there are several good mountain passes in the above named district. This section of the State is still very little known to the public; the sheep-men and hunters say it contains much good pasture land—we mean the country east of the Salinas river, from San Miguel, as far as the opening of the Tulare plains. Some of the old Spanish soldiers have told us, that the Tulare Indians and those of the Mission of San Miguel had had a similar language to each other. How far this is true, we are unable to say.

(TO BE CONTINUED.)

Sprayed Cows.

The following valuable article, published in the Boston Transcript, we give our readers. By the signature we recognize the pen of the able Corresponding Secretary of the Massachusetts Horticultural Society, Eben. Wright, Esq., to whom all have been indebted for many valuable communications, and to whom we have been under obligations for many valuable documents.

The article here offered is one of great moment, and is worthy the careful perusal of all stock-raisers:

The spraying of cows is no new feature. As practiced in former days it seemed a cruel performance; but, since the alleviating influence of ether, the term cruelty can no longer be applied, for, in five minutes the animal is so fully under its effect as to be insensible to pain, and in twenty minutes the operation is completed and the animal is quietly making way with her allowance of feed.

Yesterday I was present to witness the operation of spraying of five cows of the herd belonging to Edward R. Andrews, Esq., Home Farm, West Roxbury. This farm is devoted entirely to the production of milk for the Boston market. Mr. Andrews had previously had eight cows sprayed, and after one year's trial, so satisfactory in all respects had been the result, that he was determined to subject other animals to the same operation as they came into full milking, until his entire herd, consisting of some fifty head, should in like manner be made remunerative.

At 10 o'clock, A. M., the hour assigned, Dr. Dadd, accompanied by three of his students, commenced the operation by casting the first cow on a bedding of hay on the barn floor. Immediately a sponge, saturated with ether and chloroform combined, was applied to the nose and kept there in a leathern bucket, till the close of the operation. In five minutes the animal was so insensible to pain that the veterinarian commenced with his scalpel and bistoury, opening a place on the left side equi-distant between the lower rib and the hip, cutting through the cellular membrane and peritoneum, when he introduced his hand and removed the ovaries. The small quantity of blood which flowed during the operation was sponged out as the cutting progressed. The parts were stitched, the ether removed, and ere the tethers could be removed the animals was feeding off the litter on which she was lying.

It was a pleasure to learn that Dr. Dadd had been eminently successful in all like operations, whether performed for lactical or fattening purposes. Mr. Andrews' cows have continued in full milk, and have proved uniformly healthy and quiet, and this disposition to quietness may as a consequence give an enhanced value to milk, coming from the farm—at least for infants requiring to be fed from the same cow the year round.

Dr. Hayes, one of our most eminent chemists, has now on hand a can of milk from cows heretofore sprayed, with the view of testing its quality. The result of his analysis shall be handed you for publication.

Were I a citizen, and obliged to use milk in any form, I should congratulate myself on having made a visit to Mr. Andrews' farm, where neatness (to a nicety) pervades every department, even from the well-cared for cow, with her bright eye, (denoting health) down to the care in cleansing of the dairy utensils—a thing of no mean importance. There is really a pleasure in seeing animals thus cared for, after having visited like establishments in New York, where cattle were packed without a chance for ventilation, and looking the last remnant of diseased animal life, under the influences of still slopes.

E. W.

LIVE STOCK FOR CALIFORNIA.—Messrs. G. H. Gale and John Parker left Kalamazoo, Michigan, on the 16th of April, for California, by the Overland Route, taking with them some of the best blood stock to be obtained. Among their selections was a fine draft stallion, imported from England, a Messenger and Black Hawk stallion, thirty pairs of matched horses, several thorough-bred mares and fast-driving horses. There are 100 horses in all, and the company who will make the trip will number thirty-five persons.

(Read before the Progressive Gardener Society of Philadelphia.)

Trenching and Subsoiling.

BY C. H. MILLER, PHILADELPHIA.

Thus is a matter which has been much discussed and has led to the expression of a variety of opinions. Some have thought a general upheaving and reversion of the soil absolutely necessary. Others would content themselves with digging and deep plowing, as the case may be. Both these opinions will hold good in their proper places, or in relation to different localities; hence the various and conflicting opinions promulgated from time to time for the general benefit of those interested in the cultivation of the soil.

The subject of trenching and subsoiling has been recently freely discussed, showing the great importance attached to this mode of preparing the soil. At the agricultural lectures at New Haven, last month, and also at the Fruit-Growers' Convention, at Lancaster, Pa., an animated discussion on the subject took place, affording much desired and valuable information. Mr. Barry of Rochester believes the preparation of the soil for nursery and orchard purposes, by plowing and subsoiling to the depth of eighteen inches, amply sufficient, in good soil, without trenching and turning up the subsoil three feet deep, as recommended by some. Mr. Allen and others followed in the same track, declaring that the deeper the roots of fruit trees penetrate the subsoil beyond a depth of eighteen inches, the more injury they sustain. At the Fruit Growers' Convention, at Lancaster, one gentleman was opposed to deep stirring of the soil, except in soils impervious to moisture. Dr. Eshleman (as reported) remarked that by deep trenching the moisture was afforded a chance to rise to the surface, by capillary attraction, in the very driest time, and was of opinion that all soils would be benefited thereby. Mr. Harvey stated he had ground trenched two feet, for potatoes, at a cost of sixty dollars per acre, and found it paid well. Some other gentleman stated the cost of trenching by hand to be sixty-five dollars per acre, and that of subsoiling to a depth of eighteen inches, to be twenty-five dollars per acre—a difference of forty dollars; a considerable item against trenching.

Now, as regards the preparation of ground for potatoes, or any other field crop, my experience has led me to the conclusion that subsoiling to the depth of eighteen inches is quite sufficient, and, when the difference of cost is taken into consideration, I am inclined to doubt the superior benefit of such deep trenching, firmly believing that as good a crop of potatoes, or any ordinary field or grain crop, can be secured from ground subsoiled to the depth of twelve to eighteen inches, as from a depth of two or three feet, all other things being equal.

The principal advantage of trenching and subsoiling, is their effect in accelerating the growth of young trees, vegetables, cereals, etc. This is especially manifest in the majority of garden crops, where a rapid development is required to produce excellence. For trees, deep tillage is all important, especially in their earlier stages, facilitating their growth—a matter of no small importance to gentlemen wishing to see the result of their labors. Trenching is undoubtedly the best mode of preparing the ground for fruit trees, in orchard culture. Eighteen to twenty inches is sufficient, if properly done at the time of planting. I will remark, also, that I consider the system of cultivating in orchards with the plow, after the first season, to be highly injurious; preferring to sow orchard-grass or clover, supplying manure to the surface in the summer around the trees, as soon as the grass crop is taken off, and cultivating around the trees with a fork in spring.

Trenching is a mode of preparing the soil for various crops by digging a trench and filling it up again. In filling the trench, or rather succession of trenches, the substratum should be allowed to remain at the bottom, or rather should not be taken out, but well loosened to the depth required, as it is a well known fact that seeds will not vegetate so well or so rapidly, when planted in newly trenched ground where the substratum has been thrown on the surface. This I have verified by actual experiments. There are few soils that can not be improved by artificial means, but there are some subsoils that cannot be sufficiently aerated and warmed by any amount of subsoiling or drainage; and there are sometimes good soils where trenching or subsoiling would be a positive injury without a thorough system of drainage. Such intractable soils are often found on flat, level grounds, by the side of lakes or streams. In these the soil may be excellent, while the subsoil is incurably damp and cold. There the late spring and early autumn frosts are injurious, to a greater extent than on more elevated lands. The crops of early vegetables are consequently retarded, and the bloom of fruit trees often destroyed. In such soils deep trenching would be anything but beneficial, unless, as I said before, a thorough system of under drainage had been employed. In such localities, deep tillage would promote the absorbing powers of the soil, and consequently attract the late spring and early autumn frosts to an injurious extent. Vegetables would be coarse and rank, and cereals more productive of straw than grain.

In vegetable gardens and orchards the drainage and tillage should, if possible, be more complete than is generally employed for agricultural purposes. To most horticultural operations, a complete well aired and warmed soil is essential, and this can only be accomplished by thorough drainage and deep tillage. Cold, damp ground yields only inferior vegetables and unproductive trees, a state of matters to be deplored, and not unfrequently seen in gardens of considerable pretensions. Soils that absorb the most moisture are the most fertile. Sir Humphrey Davy remarks: "I have compared the absorbent powers of many soils, with respect to atmospheric moisture, and I have always found it greatest in the most fertile soils." Now, as we are given to understand, by most writers on the subject, the earth is not the food of plants, but they constitute the stomach, analogous to the stomach of animals, in which vegetable and animal matter is received and digested, and, with the aid of leaves or lungs, transformed to animal substance. The best soil for this digestive process is that which comprehends the greatest absorbent qualities, and this indispensable absorbent power is attained by a thorough system of draining, trenching, and subsoiling.

AN EXCELLENT CEMENT.—Five years ago, we applied a cement composed of white lead paint, whitening and dry white sand, to a small tin roof that leaked like a sieve; it soon became nearly as hard as stone, has never scaled off, and has kept the roof since then perfectly tight. It was put on about the consistency of thin putty. Slaters' cement, for stopping the leaks around chimneys, is composed of linseed oil, whitening, ground glass, and some brick-dust. It is a good cement for this purpose; also for closing the joints of stone steps to houses.

As we rise from childhood to youth, we look with contempt on the toys and trifles upon which our heart has hitherto been set.

A Description of the New Cave.

The editor of the Sacramento Bee lately visited the new cave discovered by Mr. Gwinn, at his marble quarry, in El Dorado county. The following description is published by him in the Bee:

Arriving at the entrance, which is rather small, you descend a few steps—your guide says, "What do you think of that?" The cave has been lighted up by a large number of candles. There they are, in niches, in crevices, on points, corners and projections. The men who have taken all this trouble for our especial benefit are reclining in easy natural attitudes, enjoying our surprise and the beauty of the scene. And such a scene! grand and picturesque beyond description. You see the work of ages, and for a while can make no reply to the question put by your guide. The entrance is at the end of a cave of parallelogram shape, extending north toward the center of a mountain, measuring at least three thousand feet in diameter at its base. The roof is nearly perfectly level, and stalactites of various colors hang from it in all directions. The floor is very uneven, and the visitor should be careful, or his sacrilegious foot will crush the delicate stalagmites which surround him on every side.

Although it was nine o'clock in the evening when we visited the cave, we found the atmosphere extremely warm, and the perspiration rolled down our faces in streams. This is no doubt owing to the fact that there is no circulation of air; an evil however which will soon be remedied. We were unable to obtain a thermometer, but think it would have shown 75°.

Passing up this, which is called the Audience Chamber, about midway our attention was called to the cupola, which extends upwards in nearly a perpendicular direction, to the height of sixty or seventy feet. Observations have been made, and it is intended to open this at the top, and by allowing the heated air to escape, increase the circulation of air and add to the comfort of the cave. Proceeding, against the wall at the right hand and nearly up to the extremity of this chamber, stands the Pulpit, which is the general object of admiration. It is shaped like a goblet, and stands fifteen feet high. The conchations have so formed about it that it looks as if wound with rich drapery. A little alteration will form a most appropriate flight of steps to this pulpit. At the further end of this chamber, the floor drops and loses itself in two lakes extending at obtuse angles.

Parallel with the audience chamber, to the right, is the main chamber, which is reached by a low shelving aperture, nearly opposite the cupola above referred to. You bend your back, as you pass under, and as you straighten up, "Lot's Pillar" stands before you. This is a column of petrification, four and a half feet in height and about five inches in diameter, standing erect from the floor—having been formed by droppings from the roof. So far as explored, this is the grand chamber, inasmuch as it measures two hundred feet long by one hundred wide. The petrifications here are very gorgeous, and it would take a week to describe them all, even if description were possible. The further end of this chamber also terminates in a lake, which extends back from seventy to eighty feet—its greatest depth being seven feet. At the extremity of this lake a small opening was discovered, just large enough to admit a boy about six years of age. The boy reported that he had discovered a room of larger dimensions and much greater beauty than the other two. The water has receded about eight inches in the cave since its discovery. Should this continue a week or two longer, a thorough exploration will probably be made. At the other end of this main chamber, that is, the end nearest the road, a shelf extends over the hall, which is called the Music Gallery. As it is intended to make a dancing hall of this chamber, the gallery may be considered well-named. This shelf stands seven or eight feet from the floor, and it was only by the aid of a stout young man, who allowed us to mount his shoulders, and the assistance of Mr. Smith, who showed us ahead, that we were enabled to reach this recess of beauty, and gaze on the enchanting scene which lay above, beneath, beyond and around us. As we gazed, we thought of Arline's dream, and felt a degree of satisfaction that for the nonce at least, we were dwelling in marble halls.

The latests intend forming the grand entrance to the cavern by opening a passage way which leads from this main hall seventy-five feet in a southerly direction toward the road. This opening will be a short distance above that used at present. The passage-way is arched, and requires but little labor to be placed in complete order. Its floor will be of gentle descent, and while passing through it, the visitor will obtain an idea of what he is soon to behold. As it was getting late, we were compelled to bring our visit to a close, but before leaving, we ascertained that there was no perceptible current in the water, and sat down to enjoy the sight before departing. All was still, except the dripping, dropping of the water, the noise of the workman who for ages had been carrying on the solitary work, compared with which, frescoed wall and fretted roof dwindle into insignificance.

A KIND ELEPHANT.—This animal, in the absence of his keeper, was one day amusing himself with his chain in an open part of the town, when a man who had committed a theft, and was pursued by a great number of people, despairing of all other means of safety, drew for protection under the body of the elephant. Delighted with the poor fellow's confidence, the elephant immediately faced about to the crowd, erected his proboscis, and threw his chain in the air, as is the manner of these creatures when engaged with the enemy, and became so furious in the defense of the criminal, that, notwithstanding the gentle arts made use of by the surrounding multitude, neither they nor even his keeper, to whom he was fondly attached, and who was sent for to manage him, could prevail upon him to give up the malefactor. The contest had continued above three hours, when at length the governor, hearing the strange account of it, came to the spot, and was so much pleased with the generous perseverance of the honest quadruped, that he yielded to the elephant's interposition, and pardoned the criminal. The poor man in an ecstasy of gratitude, testified his acknowledgments by kissing and embracing the proboscis of his kind benefactor, who was apparently so sensible of what had happened, that, laying aside all his former violence, he became perfectly tame in an instant, and suffered his keeper to conduct him away without the smallest resistance.—[Morris.]

LIFE'S HAPPIEST PERIOD.—Kingsley gives his evidence on this disputed point. He thus declares: "There is no pleasure that I have ever experienced like a child's midsummer holiday. The time, I mean, when two or three of us used to go away up the brook, and take our dinners with us, and come home at night tired, dirty, happy, scratched beyond recognition, with a great nosegay, three little trout, and one shoe, the other having been used for a boat, till it had gone down with all hands out of soundings. How poor our Derby-days, our Green-wing-dinners, our evening-parties, where there are plenty of nice girls, after that? Depend upon it, a man never experiences such pleasure or grief after fourteen as he does before, unless in some cases in his first love-making, when the sensation is new to him."

FORMALITY.—The more polished society is, the less formality there is in it.

REIMER & O'HARE,
Proprietors.

From the Baltimore American.
Baltimore-Made Agricultural Implements,
VERSUS EASTERN.

WE notice that Messrs. R. Sinclair & Co., of this city, received FIRST PREMIUMS for their deservedly famous Agricultural Implements at the recent Agricultural Exhibitions and Fairs held in Maryland, Virginia, North Carolina, and the South-western States, namely:

By the Maryland State Agricultural Society,
FOURTEEN PREMIUMS.

By the Virginia and North Carolina Agricultural Society,
NINE PREMIUMS.

By the Sea-board Agricultural Society, held at Norfolk,
TWELVE PREMIUMS.

Also, awarded to Sinclair & Co., by the KENTUCKY and TENNESSEE STATE AND COUNTY FAIRS, FOUR (4) FIRST PREMIUMS on Sinclair's Patent Mangle, for mangle and cutting corn-stalks, straw, etc., making in all

THIRTY-NINE First Premiums
in favor of Sinclair & Co's Wares,

and showing a decided preference by the judges in favor of Baltimore-Made Implements.

Included in the above premiums were Sinclair's Patent Reaping and Mowing Machine, Sinclair's Patent Straw and Fodder Cutters, Sinclair's Patent Spiral Threshing Machine, Wheat Drill with Gears Attachment, Rotted Clod Roller, Corn Shellers, Corn Drills, etc.

In the above estimate of premiums the following were not included in the different contests, all having received their quota of premiums at Fairs previously held, viz:

Reaper-Powers, Spur and Bevel Gears, Corn-Mills, Bar and Iron, Fanning-Mills, Rolling-Screens, Agricultural Furnace, Chain-Pumps, Lime-Spreaders, Garden-Tools, etc., etc.

The Agricultural Implements and Machinery manufactured by us are constructed in the most substantial and durable manner, great capacity, and particularly adapted for Southern use and usage. Planters and Merchants wanting supplies will be furnished with Price Lists on application.

R. SINCLAIR JR. & Co.,
Manufacturers, Baltimore, Md.

REMOVAL.
The undersigned having removed his

STEAM SHIP-BREAD AND CRACKER BAKERY
To the commodious building of Messrs. RANKIN & Co., on

BATTERY STREET, Between Pacific & Broadway,
SAN FRANCISCO,

Where, having increased facilities, he will be enabled to furnish to the trade, a

SUPERIOR ARTICLE OF BREAD,

On favorable terms. Particular care is given in the preparation of

Soda Biscuit,
Butter and Water Crackers,
Jenny Lind Cakes,
Ginger Snaps,
And Family Crackers.

Of the best kind. Also—

GRAHAM CRACKERS.

These can always be had fresh, for family use, in any quantity. Thankful for past favors, he respectfully solicits a continuance of the same.

WM. HERR.

Bees, Bee-hives, Honey!

REV. L. L. LANGSTROTH'S
MOVABLE-COMB HIVE!

HIRAM HAMILTON, of SANTA CLARA,
APIARIST AND AGENT

For the above named Patent Hive, for California, Oregon and Washington.

Persons wishing can obtain Individual RIGHTS within said States and Territory by sending \$25, by Wells, Fargo and Co's Express, to the undersigned.

HIRAM HAMILTON.
Santa Clara, Feb. 15, 1860. 2-3m

R. S. TORREY'S MAINE STATE BEE-HIVE!

PATENTED JUNE 7TH, 1859.

THIS BEE-HIVE, WHICH HAS BEEN IN USE FOR several years, has attracted the attention of Apiarists wherever it has been introduced, who have unanimously given it the HIGHEST APPROBATION, and testified to its decided superiority over all others in use.

The MAINE STATE BEE-HIVE has taken the first premium at all State and County Fairs where it has been exhibited; also, the first premium at the Mechanics' Fair, Portland, 1859. Its principal advantages are as follows:

1. Its form and size are just right, neither too high nor too low, and very economical.

2. The surplus honey can be taken away without disturbing the bees.

3. The condition of the bees can be seen at any time, in front, in rear, and at the top of the hive.

4. The most scientific, perfect, common-sense method of Ventilation.

5. Size of boxes suited to the market.

6. The platform, which is quite essential to the health of the bees.

7. No difficulty in changing the combs.

8. The feed-troughs protected from other bees.

9. Bees domesticated in one week.

10. Fighting among bees prevented.

11. Bees transferred in thirty minutes.

12. Bees can get to the store honey-boxes with less travel than in other hives now in use.

13. No foul smelling prevented, in most cases, when deemed desirable.

14. Moisture is taken from the hive by a condenser, constructed for that purpose.

15. The facility it affords for feeding the bees through tubes with a funnel, without disturbing the hive, which is a sure guard against starving.

16. The bees indicate to the apiarist when they are in need of food.

17. A moth-trap, which prevents the ravages of moths.

18. No fifth and dead bees accumulate between the comb in winter.

The undersigned will sell Individual, Town and County Rights for California. Individuals desirous of purchasing Single, Town or County Rights, can ascertain terms by addressing

S. H. CASE, Petaluma.

The California BEE-HIVE!

The BEST, and hence the CHEAPEST
Hive ever offered to Bee-keepers.

The above hive was awarded the FIRST PREMIUM at the State Fair held at Marysville in 1859, and also by the Mechanics' Institute of San Francisco, held the same year. And again at the State Fair, 1859, the FIRST PREMIUM, also a SPECIAL PREMIUM was awarded by a Committee named by the parties exhibiting the Langstroth hives. There were SIX DIFFERENT HIVES in competition at the latter Fair.

Bee-keepers wishing to purchase HIVES, or RIGHTS to MAKE and USE, will please address the undersigned or either of the following Agents:

L. WARNER, Sacramento (General Agent).
THOMAS OGG SHAW, San Francisco.
SAMUEL MORRISON, Santa Clara.
CHAS. C. WARNER, Stockton.
E. A. SHERMAN, Los Angeles.
JACOB V. HOAG, Washington, Yolo county.
R. H. HOAG, Napa.
E. C. WINCHELL, Millerton, Fresno county.
G. W. HARRISON, Marysville.

The Price of INDIVIDUAL RIGHTS is \$15, which may be forwarded through Wells, Fargo & Co., at my expense.

County or State Rights will be sold on terms advantageous to the purchaser.

The Specifications and Claims of my Patent will be given to the public in due time.

Notice is hereby given, that I will DEFEND any legitimate suit commenced by L. L. Langstroth or his assigns, against persons using my Hives under authority from me.

J. S. HARBISON, Patentee.
SACRAMENTO, March 1, 1860. 4-1m

BEE-HIVE MANUFACTORY.

THE UNDERSIGNED HAVE ESTABLISHED A portion of their works for the manufacture of BEE-HIVES, of every pattern now known.

Having the Agency of several of the most prominent Apiarists of our State, and having made large numbers for them, we can now make Hives with the greatest expedition, so as to supply demands at an urgent moment.

All Patentees will find it for their interest to arrange with us, as we can co-operate with them in the dissemination of every good improvement.

We can furnish Individual Rights for the "Langstroth Hive," and can furnish facilities for all kinds of Hives, in the Rough Material.

HOBBS, GILMORE & CO.,
MARKET STREET,
Between Beale and Main sts., San Francisco.

HOBBS, GILMORE & CO.,
BOX-FACTORY

The undersigned are now prepared to manufacture BOXES, of all kinds and all dimensions, at the shortest notice.

Having superior facilities for working up lumber, with all the newly improved machinery, orders to any extent can always be filled, on the best terms.

LUMBER of all kinds, for making Boxes, to any extent.

HOBBS, GILMORE & CO.,
Market street, between Beale and Main,
San Francisco.

HARVEST--1860.

J. D. ARTHUR & SON,
NOW OFFER
THE VERY BEST ASSORTMENT OF
Agricultural Implements
IN THIS CITY.

200 of the Celebrated REAPERS
AND
COMBINED MACHINES,

Made by WARDER & CHILD, of Springfield, Ohio, expressly for this market, with all the improvements for 1860. The space to rake off the grain is adapted to the largest growth, which most of the Reapers in use are not. The Platform is level, while the raker stands upright, thereby working with ease. The Machine is light and strong; so breakage from any source reported last season. Out of Four Hundred in use, not twenty dollars' worth of extras of any kind were called for. Without exception, the above Reapers are the best machines on this coast.

PITT'S THRASHERS,
Made with extra care, with Improvements, expressly to our order, by Nourse, Mason & Co., Massachusetts.

HILL'S THRASHERS,
Got up to suit the wants of this market as to strength and durability; also, four and six-horse Thrashers, all of the best make.

Horse-Powers, Extra Castings for Thrashers,

J. D. ARTHUR & SON,
Importers and Dealers,
Corner Washington and Davis streets.

TO THE AGRICULTURAL PUBLIC:

THE SUBSCRIBER DESIRES TO EXPRESS TO HIS FRIENDS AND PATRONS, HIS WARM and unreserved thanks for their kind and much-needed support during the past year, which has far exceeded his most sanguine expectations, and which he hopes to retain by pursuing such a course as may be satisfactory to his Patrons and honorable to himself.

He desires therefore to call their attention to a list of some of the leading articles which he will offer for sale for 1860:

THRASHERS:

PITTS' GENUINE BUFFALO THRASHER, 8 and 10 horse-power, with an attachment for measuring and registering the number of bushels thrashed, and bagging the grain.

C. M. Russell's Massillon, Ohio, Thrasher, 8 and 10 horse-power.

Ball's Celebrated Canton, Ohio, do 8 and 10 do

The Albany, New York, do 1 and 2 do

The above Machines were Made Expressly to Order for the California Market.

Also, have on hand, extra Castings, Drapers, Elevators, Cylinder Teeth, &c., &c., or all the above machines.

THE CALIFORNIA COMBINED REAPER AND MOWER!

To which was awarded the FIRST PREMIUM over the New York Reaper, on trial as a Combined Reaper and Mower, at the Alameda County Agricultural Fair, held in June last. Also, the same award was made at the State Fair, held at Sacramento, in September last; and at the Santa Clara County Fair, held in San Jose, in October last.

Your attention is also called to a notice given it, below, by numerous members of the State Agricultural Society.

PECK'S HEADER AND HARVESTER!

To which was also awarded the FIRST PREMIUM at the State Fair, and at the Santa Clara County Fair.

With the experience of the past season, this machine is so improved as to be, without question, **The Very Best Harvester in Use.**

SICKLE SECTIONS.
